

READING THE FIVE FIELDS

200 Graded Passages That Build What the SAT Assumes

Two hundred passages · five fields · fifty strands · four levels

A companion to Words in Context

What this book is for

The SAT does not test knowledge of history or science. It does test reading, and it does so with short passages drawn from history, social studies, the humanities, literature and science. A student who has met the subject before reads such a passage faster, guesses unknown words better, and is not stopped by a name.

That is not a claim about intelligence. It is the most reliable finding in the research on reading comprehension. Recht and Leslie, working with sixty-four junior-high students in 1988, found that weak readers who knew baseball recalled more of a passage about a baseball game than strong readers who did not. The study has been over-read and criticized, and the direction of the effect has held up: a systematic review of twenty-three studies in 2021 found more domain knowledge produced better comprehension of text in that domain.

For a reader working in a second language there is a condition attached. Background knowledge pays only once enough of the words are known, a point the research literature calls the linguistic threshold. Work on second-language listening finds that learners below a certain vocabulary level get no benefit at all from knowing the topic. The usable version of that finding is the coverage figure attributed to Hu and Nation: about ninety-eight per cent of the running words need to be known for unassisted reading, and about ninety-five per cent for minimally acceptable comprehension.

So this book has to do two things at once. It has to raise knowledge, and it has to stay inside the threshold while doing it. Ninety-eight per cent of three hundred words is where the arithmetic lands: at most six words per passage may fall outside the level's assumed vocabulary, and at the first two levels every one of them is explained where it stands.

The figures above reached this book through secondary sources. Clarke, Hu and Nation, and Recht and Leslie should be checked at source before any of them is quoted in a classroom.

How the book is built

Five fields, ten strands in each, four levels in each strand. A strand is one thread of content followed through all four levels, so each strand receives twelve hundred words of treatment and can be read downward as well as across.

The four levels do four different jobs, in the same order every time. This is what makes the coverage graded rather than merely longer.

Level 1, Foundation — phenomenon. One concrete case, named and dated: what happens and what it looks like. Sentences average 13 to 18 words; vocabulary is assumed to the top 16,000 most frequent word forms.

Level 2, Developing — mechanism. How it works and how much: cause, comparison, magnitude. Sentences average 16 to 21 words; vocabulary is assumed to the top 22,000 most frequent word forms.

Level 3, Target — evidence. How anyone knows: the study, the document, the measurement, and its limits. Sentences average 19 to 24 words; vocabulary is assumed to the top 30,000 most frequent word forms.

Level 4, Stretch — dispute. What is contested: two readings of one body of evidence, and the writer's stance. Sentences average 21 to 28 words; vocabulary is assumed to the top 40,000 most frequent word forms.

So one strand in biology runs: a reindeer herd that reached six thousand and then forty-two (phenomenon), the growth curves and the lag that let a population pass its own ceiling (mechanism), the Hudson's Bay fur returns and what a trapping ledger can and cannot show (evidence), and the experiment that found food and predators acting together rather than separately (dispute).

Every one of the two hundred target words from Words in Context appears somewhere in these passages, in the same field and at the same level, used in running prose. A student can meet a word here and meet it again as a question.

How to use it

Read across or read down. Reading across means taking all ten passages of one field at one level, which gives a survey of the field in three thousand words.

Reading down means taking one strand through its four levels, which shows the same subject treated four ways and is the better use of the book for anyone with time.

Each passage ends with three lines headed what this passage is for. Read them after the passage, not before. If none of the three is a surprise, the passage has done its work and can be left. If one of them is, the passage is worth a second reading, and the sentence it came from is worth finding.

Do not look up every unfamiliar word. The passages are built so that no more than six words in three hundred fall outside what a reader at that level is assumed to know, and the technical ones are explained in the sentence where they appear. A reader who stops at every name will never find out that the names do not matter.

Keep a list of the field terms rather than of the hard words. Appendix B collects every term the book explains, with its explanation and the passage it appears in, and that list is the actual content of the book.

What this book is not

These passages are not past papers and they are not a syllabus. The College Board publishes no list of subjects and no reading list, so the five fields and the fifty strands are a curricular judgment, informed by what the test is described as covering. The passages were written from general knowledge and checked for standard figures; a reviewer who intends to assert any particular fact in a classroom should verify it first.

Contents

Level 1 — Foundation · phenomenon

History and Civics	passages 1-10
Biology and Earth Science	passages 11-20
Physical Science	passages 21-30
Humanities	passages 31-40
Social Science	passages 41-50

Level 2 — Developing · mechanism

History and Civics	passages 51-60
Biology and Earth Science	passages 61-70
Physical Science	passages 71-80
Humanities	passages 81-90
Social Science	passages 91-100

Level 3 — Target · evidence

History and Civics	passages 101-110
Biology and Earth Science	passages 111-120
Physical Science	passages 121-130
Humanities	passages 131-140
Social Science	passages 141-150

Level 4 — Stretch · dispute

History and Civics	passages 151-160
Biology and Earth Science	passages 161-170
Physical Science	passages 171-180
Humanities	passages 181-190
Social Science	passages 191-200

The fifty strands

Appendix A — strand index

Appendix B — the field terms explained

Appendix C — where the vocabulary words appear

Appendix D — reading log

The fifty strands

Each line is one strand. The four entries under it are the four levels, in order: phenomenon, mechanism, evidence, dispute.

History and Civics

S01 The Declaration and the claim of natural rights

July 1776 in Philadelphia: what the document is, who wrote it, what it lists.
 The argument's shape: self-evident truths, consent, and the right to alter government.
 What the drafts show: Jefferson's deleted passage on the slave trade, and what the edit tells us.
 Whether the Declaration promised equality or only independence: Douglass and Calhoun read the same sentence.

S02 The Constitution's machinery

Three branches, named, with one power each that the others can block.
 Why the machinery was built that way: faction, and Madison's remedy in Federalist 10.
 Hamilton on a single executive in Federalist 70, and what the ratification debates record.
 Whether the checks protect liberty or produce paralysis: two readings of the same design.

S03 Who counts as a citizen

Seneca Falls, 1848: a convention, a declaration, and a list of grievances.
 How the franchise actually widened: property, race, sex, age, and the amendments that did it.
 Reading the suffrage record: petitions, poll books, and what a signature count can show.
 Whether rights are won in courts or in the street: the suffrage movement's own quarrel.

S04 Abolition and the argument against slavery

Frederick Douglass at Rochester, 1852: the Fourth of July speech and its question.
 The argument from natural rights, and the proslavery answer from property and order.
 The evidence abolitionists used: narratives, ledgers, ship manifests, and their reliability.
 Whether moral suasion or political power ended slavery: Garrison against the Free Soilers.

S05 Reconstruction and the retreat from it

1865 to 1877: three amendments, the Freedmen's Bureau, and what was built.
 How the retreat worked: violence, the courts, the 1876 bargain, and disenfranchisement.
 What the sources say: Congressional testimony, registration rolls, and the gap between them.
 Whether Reconstruction failed or was defeated: Du Bois against the Dunning school.

S06 Industry, labor and the regulating state

The Triangle fire, 1911: a locked door, 146 deaths, and what followed.
 How regulation spread: inspection, liability, hours laws, and the cost of each.
 The evidence behind factory law: commission reports, mortality tables, and their gaps.
 Whether regulation raised wages or cost jobs: the same statistics, two conclusions.

S07 Civil rights: courts, statutes and the street

Montgomery, 1955: a bus, a boycott, and a year of walking.
 How the law changed: Brown, the 1964 Act, the 1965 Act, and the mechanism of each.

What the record holds: court transcripts, registration figures, and FBI files.
 Whether the movement's gains came from law or from pressure: King's own argument with himself.

S08 Empire and independence

Salt at Dandi, 1930: a march, a handful of mud, and sixty thousand arrests.
 How empires were run and how they ended: revenue, railways, soldiers, and debt.
 Reading colonial records: tax rolls, famine reports, and whose numbers they are.
 Whether independence was granted or taken: Attlee's account against Nehru's.

S09 War, emergency and civil liberty

Executive Order 9066, 1942: an order, a map, and 120,000 people moved.
 How emergency powers work: suspension, detention, censorship, and the usual arguments.
 The evidence at the time: the Ringle report, the Munson report, and what was withheld.
 Whether security ever justifies the suspension of rights: Korematsu and its dissents.

S10 The press, the vote and public opinion

The penny press, 1833: a cheap paper, advertising, and a new kind of reader.
 How a story becomes news: sources, deadlines, competition, and what gets left out.
 Measuring opinion: the 1936 Literary Digest poll, its two million replies, and its failure.
 Whether the press leads opinion or follows it: two readings of the same campaign.

Biology and Earth Science

S01 Natural selection and variation

Peppered moths on Manchester bark: two forms, soot, and a changing count.
 The mechanism in four conditions: variation, heredity, differential survival, time.
 The Galapagos finch record: thirty years of beak measurements through drought and flood.
 Whether selection or chance shapes most change: the neutral theory argument.

S02 Inheritance, from pea plants to genomes

Mendel's garden at Brno: tall and short peas, and a ratio that kept appearing.
 How the ratio arises: two copies, dominance, and the shuffling at each generation.
 From chromosome maps to sequencing: what each method can and cannot resolve.
 Whether genes explain traits or only correlate with them: heritability misread.

S03 The cell and its energy

A yeast cell in a warm sugar solution: what goes in, what comes out, what rises.
 Respiration and fermentation compared: oxygen, yield, and the cost of going without.
 How the energy path was worked out: labeled atoms, poisons, and isolated mitochondria.
 Whether the cell is a machine or an ecology: two ways to read the same organelles.

S04 Ecosystems: who eats whom, and how much

Yellowstone, 1995: wolves returned, and the willows along the creeks grew back.
 Trophic levels and the ten per cent rule: why there are few wolves and many voles.
 Exclosure experiments and isotope ratios: how a food web is actually traced.
 Whether predators or rivers rebuilt the willows: the trophic cascade dispute.

S05 Populations: growth, limit and collapse

Reindeer on St. Matthew Island: 29 animals, then 6,000, then 42.
 Exponential and logistic growth: the ceiling, the overshoot, and the lag.
 The Hudson's Bay fur returns: a ten-year cycle across a century, and what a ledger can show.
 Whether food or predators drive the hare cycle: fifty years of disagreement.

S06 Microbes and disease

Broad Street, 1854: a pump, a map, and a handle removed.
 How transmission works: dose, route, incubation, and the reproduction number.
 Koch's postulates, and the organisms that refuse to satisfy them.
 Whether the germ or the ground matters more: Snow, Pettenkofer, and modern echoes.

S07 Plants, soil and the nitrogen cycle

A clover field and a wheat field in rotation: why the wheat does better after clover.
 Fixation, nitrification, uptake and loss: the four steps and their rates.
 The Rothamsted plots: 180 years of the same treatments on the same soil.
 Whether fertilizer feeds the world or exhausts it: two readings of the yield curve.

S08 Carbon, climate and the record of it

Mauna Loa, 1958 to now: one instrument, one graph, a sawtooth that climbs.
 The mechanism: absorption bands, residence time, and the ocean's slow uptake.
 Ice cores, tree rings and corals: three proxies, three error bars, one picture.
 Whether the record settles attribution: how a signal is separated from noise.

S09 The restless Earth: plates, rock and deep time

Iceland's rift at Thingvellir: two walls of rock moving apart an inch a year.
 Plate motion and its consequences: ridges, trenches, faults and mountains.
 How the age of the Earth was fixed: lead ratios, half-lives, and Holmes's meteorites.
 Whether catastrophe or slow change built the landscape: the old quarrel, revived.

S10 Water, ocean and ice

The Thwaites glacier front: a cliff of ice, a warm current, and a retreating line.
 Why warm water does the work: latent heat, salinity, and the shape of the sea floor.
 Satellite gravimetry and tide gauges: two ways to weigh an ice sheet, and their limits.
 Whether the retreat is reversible: the marine ice-cliff argument.

Physical Science**S01 Measurement, error and uncertainty**

Weighing the same stone eleven times and getting eleven answers.
 Random error against bias: what averaging fixes and what it cannot.
 Calibration chains: how a laboratory balance is tied to a national standard.
 Whether a measurement can ever be separated from its theory.

S02 Forces and motion

A dropped hammer and a dropped feather on the Moon, 1971.
 The three laws at work in one braking truck: mass, friction and distance.
 How gravity's constant was measured: Cavendish's torsion balance and its error.

Whether Newton was wrong or incomplete: what Mercury's orbit decided.

S03 Energy: stored, moved and lost

A reservoir above a town: water, a pipe, a turbine, and lit houses.

Forms and conversions: how much is lost at each step, and where it goes.

Measuring efficiency: input, output, and the hard problem of the boundary.

Whether efficiency saves energy: the rebound argument.

S04 Heat, gases and the second law

A bicycle pump that grows hot in the hand.

Pressure, volume and temperature: the gas law and what it predicts.

Joule's paddle wheel: how the mechanical equivalent of heat was pinned down.

Whether the second law is a law of nature or of bookkeeping.

S05 Electricity and the circuit

A house fuse that blows, and the kettle that blew it.

Current, voltage, resistance and power: why the thin wire gets hot.

How a national grid is kept in balance, second by second, and how it is measured.

Whether the grid should be large or local: two readings of the same blackout.

S06 Waves, light and sound

A straw that looks bent in a glass of water.

Refraction, reflection and diffraction: one rule, three effects.

Measuring the speed of light: from Fizeau's wheel to a defined meter.

Whether light is wave or particle: what the two-slit result forced.

S07 Matter: atoms, bonds and reactions

Steel wool that burns, and a steel bar that does not.

Bonds, energy barriers and rates: why surface area and heat change everything.

The periodic table as prediction: gallium, germanium, and Mendeleev's gaps.

Whether chemistry reduces to physics: the argument over emergence.

S08 Materials: strength, failure and choice

The Tay Bridge, 1879: cast iron, a gale, and seventy-five deaths.

Stress, strain, yield and fracture: four numbers that decide a design.

Testing to destruction: how a safety factor is actually arrived at.

Whether failures are technical or organizational: two inquiries, one bridge.

S09 The nucleus, radiation and dating

A radium dial painter's jaw, 1925, and what the X-rays showed.

Half-life, dose and shielding: the three numbers that govern exposure.

Carbon-14 dating: the method, the calibration curve, and what it cannot date.

Whether low doses are safe: the linear no-threshold dispute.

S10 Distance, light and the scale of the sky

Why the Moon takes 1.3 seconds to reach us and the Sun eight minutes.

Parallax, brightness and the ladder of distance.

Cepheid variables: how Leavitt's law turned brightness into a ruler.

Whether the expansion rate is known: the tension between two good measurements.

Humanities

S01 Who is telling this: narrator and point of view

Two openings of one scene: the maid's account, then the mistress's.
 First person, third limited, omniscient: what each can and cannot report.
 How critics establish an unreliable narrator: the textual evidence they cite.
 Whether a narrator's judgment is the author's: the quarrel over irony.

S02 Character, motive, and the gap between them

A man who gives away his coat and cannot say why.
 How writers build motive: action, speech, gesture, and what is withheld.
 Reading a character from the manuscript: what the deleted paragraph shows.
 Whether characters have psychology or only functions: two schools reading one novel.

S03 Image, figure and the physical word

A poem that is four objects and no statement.
 Metaphor, simile and metonymy: three moves and the work each does.
 How an image is traced through a text: concordances, repetition, and pattern.
 Whether imagery carries meaning or only mood: the argument over symbolism.

S04 Form: the line, the stanza, the turn

A sonnet counted out: fourteen lines, a rhyme scheme, a hinge at line nine.
 How form creates expectation, and how breaking it produces meaning.
 Scansion as evidence: what a metrical analysis can actually prove.
 Whether free verse has form: Whitman's defenders and his critics.

S05 The stage as a machine

A trapdoor, a balcony and a bare platform: the Globe and what it could do.
 How a playhouse shapes a play: entrances, asides, daylight, and the crowd.
 Reading the promptbook: cuts, business, and what a production actually did.
 Whether a play belongs to its author or its stage: the directors' quarrel.

S06 Genre and what a reader expects

A locked room, a body and a detective: the shape of a kind of story.
 How conventions work, and what an author gains by refusing them.
 Tracing a genre's history: first appearances, borrowings, and bibliographies.
 Whether genre limits a writer or enables one: two critical positions.

S07 Painting and the trained eye

One room of a Dutch house, painted in 1658, and everything in it.
 How a picture directs the eye: line, light, scale and the diagonal.
 What conservation reveals: X-rays, pigment analysis, and repainted hands.
 Whether a painting means what its age meant by it: the iconography argument.

S08 Music: pattern in time

A tune of eight bars, repeated, altered, and repeated again.
 How tension is built and released: key, cadence, rhythm and expectation.
 What a manuscript shows: revisions, performance marks, and the editor's choices.

Whether a score is the work or a set of instructions: the performance debate.

S09 Architecture and the shaped city

A nineteenth-century arcade: glass, iron, shops and shelter from rain.

How a street is made to work: frontage, width, sightlines and use.

Measuring a city: counts of footfall, surveys, and what each misses.

Whether the block or the tower serves a city better: Jacobs against Le Corbusier.

S10 Criticism: how arguments about art are made

Two reviews of one first night, printed the same morning.

What a critical argument needs: a claim, evidence from the work, and a standard.

How a judgment is tested: counter-examples, context and the record of reception.

Whether judgments of art can be true: taste, standards and the long argument.

Social Science

S01 Asking people things: surveys and their traps

Two wordings of one question, and the twenty-point gap between the answers.

Sampling, response rate and question order: three ways a survey goes wrong.

How a modern poll is actually built: frames, weights and margins of error.

Whether polls can be fixed or should be replaced: after 2016 and 2020.

S02 Experiment, control and the drawing of lots

A school that gave half its pupils breakfast and measured the other half.

Why lots matter: what randomization does that matching cannot.

Field experiments: the Oregon lottery, the Perry preschool, and what each shows.

Whether randomized trials are the gold standard: the external validity objection.

S03 Correlation, cause and confounding

Towns with more bookshops have fewer burglaries, and why that proves nothing.

Confounding, selection and reverse causation: three reasons a pattern misleads.

Natural experiments: twins, lotteries, border effects, and what they buy.

Whether observational data can ever establish cause: smoking and the long argument.

S04 Samples, averages and spread

A street where the mean income is high and nobody is rich but one.

Mean, median, spread and skew: four numbers and what each hides.

Confidence intervals: what a margin of error actually says.

Whether the average is a useful object at all: the distributional objection.

S05 Incentives and how people answer them

A city that made the first hour of parking free and emptied its curbs.

Price, salience and substitution: why a small fee can beat a large campaign.

Measuring a response: before-and-after, control cities, and the elasticity estimate.

Whether incentives crowd out motives: the blood-donation argument.

S06 Norms, groups and conformity

An office where nobody sits at the window table, and no rule says so.

How a norm is enforced: watching, gossip, exclusion, and the cost of breaking it.

The conformity experiments: Asch's lines, their replications, and their limits.
Whether norms are chosen or inherited: two accounts of the same village.

S07 Cities, movement and where people settle

A tram line opened in 1890, and the houses that followed it out of town.
Rent, commuting time and the trade-off that decides where people live.
Reading a census: boundaries, undercounts, and the problem of comparison.
Whether building more houses lowers rents: two readings of the same city.

S08 Work, wages and the labor market

A dockside where men waited each morning to be picked for a day's work.
Supply, demand, bargaining power, and what sets a wage.
The minimum wage studies: New Jersey, Pennsylvania, and the method that started a fight.
Whether a minimum wage costs jobs: thirty years of contested estimates.

S09 Inequality and how it is measured

Two neighborhoods three miles apart with an eleven-year gap in life expectancy.
Income, wealth, mobility: three different inequalities and their different causes.
The Gini coefficient and its rivals: what each measure is blind to.
Whether inequality or poverty is the problem: the argument over the top one per cent.

S10 Judgment under uncertainty

A doctor, a test that is ninety-nine per cent accurate, and a rare disease.
Base rates, anchoring and availability: three predictable errors.
How the heuristics were demonstrated: the original problems and their replications.
Whether people are irrational or merely economical: the two camps.

LEVEL 1

Foundation

phenomenon

One concrete case, named and dated: what happens and what it looks like.

Passage length — 288 to 312 words

Sentences — averaging 13 to 18 words

Vocabulary assumed — the top 16,000 most frequent word forms

Words above that — at most 6, each explained in place

Clue to the reader — Read for the case itself. Every passage names one thing that happened, or one thing that is so, and holds to it. If the reader can say afterward what the passage was about in a single sentence, the passage has done its work.

History and Civics

Passages 1 to 10

1

HIS · S01 · phenomenon

Four Days in Philadelphia

The Second Continental Congress met in Philadelphia through the summer of 1776. On July 2 the delegates voted to separate from Britain. Two days later they approved the text that explained why. The Declaration of Independence was printed that night in a shop a few streets away. Copies were read out in public squares within the week, and in some towns the reading ended with a bonfire. Fifty-six men signed the parchment copy, most of them on August 2, by which time the war had been running for more than a year.

Thomas Jefferson wrote the first draft in about two weeks. A committee of five was named to do the work, but the others left most of the writing to him, and Congress then cut about a quarter of what he produced. The document has three parts. The preamble, which is the opening section that states a purpose, makes a general claim about where any government gets its power. The middle section is a list of grievances, meaning formal complaints, against George III. He had shut down elected assemblies, kept soldiers in the colonies in time of peace, and closed off their trade with other countries.

The grievances take up most of the page. That surprises readers who know only the opening lines. Congress was building a legal case, and a legal case needs particulars. Each complaint named something the king had actually done, on a date, in a place. Together they argued that he had broken the agreement by which he ruled, and that the colonies therefore owed him nothing further. Congress had no army fund and no treasury of its own that July; it established both within the year. News of the vote took six weeks to cross the Atlantic. The parchment copy is now kept in Washington under filtered light.

WHAT THIS PASSAGE IS FOR

- The vote for independence and the text explaining it were two separate acts, two days apart.
 - Most of the document is a list of particular complaints, not a statement of principle.
 - The argument is legal: the king broke an agreement, so obedience ended.
-

Questions 1.1 to 1.10

on passage 1, Four Days in Philadelphia

1.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Copies of the Declaration were printed and read aloud across the colonies within a week of its approval
- B) Most of the Declaration is a list of particular complaints, because Congress was building a legal case against the king
- C) Thomas Jefferson wrote the Declaration alone, and Congress approved his draft without altering it
- D) The Declaration proves that every government everywhere draws its power from the people it rules

1.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did Congress do with the draft that Jefferson produced?

- A) It approved the draft without making changes to it
- B) It returned the draft to a committee of five to be rewritten
- C) It added the list of grievances to the draft itself
- D) It cut about a quarter of what he had written

1.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the Declaration was written as a legal argument rather than as a statement of principle?

- A) “Congress was building a legal case, and a legal case needs particulars”
- B) “Thomas Jefferson wrote the first draft in about two weeks”
- C) “Copies were read out in public squares within the week”
- D) “He had shut down elected assemblies, kept soldiers in the colonies in time of peace”

1.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The Declaration was approved on July 4, 1776, but Congress had no army fund and no treasury of its own that July. It established both within the year, which suggests that the vote to separate ____

Which choice most logically completes the text?

- A) was delayed until the institutions it required already existed
- B) had little effect on how the Congress afterward spent its time
- C) created obligations the Congress was not yet equipped to meet
- D) was carried out by Thomas Jefferson without the other delegates

1.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “established” most nearly mean?

- A) demonstrated as true
- B) brought into being
- C) made peace with
- D) took control of

1.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the third paragraph in the text as a whole?

- A) It explains why the bulk of the document is taken up by complaints
- B) It lists the grievances that the second paragraph had only named
- C) It describes how copies of the document were distributed and read
- D) It corrects the account of the drafting given in the paragraph before

1.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 51 of this book. It argues that the second paragraph of the Declaration moves from premises to a conclusion in order, and that the grievances are offered as evidence for a factual claim rather than as argument about principle.

Text 1 reports that the grievances take up most of the document. Based on Text 2, how would its author most likely explain that proportion?

- A) The grievances were the only part of the document Congress could agree on
- B) The opening principles were added after the complaints had been drafted
- C) The document was shortened by a quarter, which left mostly complaints
- D) The premises needed no proof, so the space went to the factual claim

1.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Congress had no army fund and no treasury of its own that July. ___ it established both within the year.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) Likewise,
- C) Nevertheless,
- D) In other words,

1.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The Declaration of Independence was printed in a shop a few streets from the room where Congress had voted ___ copies were read out in public squares within the week.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) voted; copies
- B) voted, copies
- C) voted copies
- D) voted: copies

1.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The grievances take up most of the page.
- Congress was building a legal case, and a legal case needs particulars.
- Each complaint named something the king had actually done, on a date, in a place.
- Readers who know only the opening lines are surprised by the proportion.

The student wants to explain to an audience unfamiliar with the subject why the document contains so many complaints. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The Declaration has three parts, and the middle one is a list of grievances against the king
- B) Readers who know only the opening lines are surprised, although the grievances take up most of the page
- C) The Declaration gives most of its space to grievances because Congress was making a legal case, which needs named particulars
- D) Congress named each complaint on a date and in a place, and the war had already run for more than a year

ملخص المقطع 1 بالعربية

خلاصة: اجتمع المؤتمر القاري الثاني في فيلادلفيا صيف عام ألف وسبعمئة وستة وسبعين، وصوّت المندوبون في الثاني من تموز على الانفصال عن بريطانيا، ثم أقرّوا بعد يومين النص الذي يشرح الأسباب. كتب توماس جيفرسون المسودة الأولى، وحذف المؤتمر نحو ربعها. وتتألف الوثيقة من ثلاثة أقسام: مقدمة تقرّر مصدر سلطة أي حكومة، وقسم أوسط يسرد المظالم على الملك جورج الثالث، ثم الخاتمة. المعنى: المعنى الأساسي أن الوثيقة بُنيت مرافعة قانونية لا بيان مبادئ. فالمظالم تشغل معظم الصفحة لأن القضية القانونية تحتاج تفاصيل محدّدة: فعل بعينه، في تاريخ، وفي مكان. وهذا يفسّر ما يفاجئ من يقرأ السطور الأولى وحدها. الأهمية في المجال: في مجال التاريخ والنظام المدني تمثل هذه المادة مستوى الظاهرة: واقعة مؤرّخة ومسماة يُبنى عليها لاحقاً فهم الآلية والدليل والخلاف. ومن دون معرفة ما تقوله الوثيقة فعلاً يصعب تقييم أي حجة تُبنى عليها. الصلة بالاختبار: في اختبار سات تتكرّر النصوص التأسيسية كثيراً، ويُسأل عنها عادةً في الفكرة المركزية والدليل النصي وبنية المقطع. والفخ الشائع اختيار تفصيل صحيح لا يجيب عن السؤال، كذكر طباعة النسخ أو قراءتها في الساحات بدل سبب طول قائمة المظالم. ويقترن هذا المقطع بالمقطع الحادي والخمسين ليكونا نصين متقابلين.

Three Branches and One Lock

The Constitution written at Philadelphia in 1787 divides the work of government among three branches, and gives each of them something the other two cannot do. Congress makes law. The President carries it out. The courts decide what the law means in particular cases. Each branch also holds at least one way of stopping the others, and the men who drew up the plan put those blocks in deliberately. The first printing of the finished text ran to four pages.

Congress holds the money. No federal dollar may be spent unless Congress has passed an appropriation, which is a vote that releases funds, so a President with a plan and no appropriation has nothing. The President may veto a bill, meaning return it to Congress without signing, and Congress can then pass it anyway only with two thirds of each chamber. The Senate must agree to treaties and to senior appointments, judges included. The courts may hold that a law conflicts with the Constitution and refuse to apply it, a power called judicial review. Federal judges are appointed for life and cannot be removed for rulings that prove unpopular.

None of this was an accident of drafting. The men at the convention had watched a king rule without consent, and had then watched state assemblies do much as they liked. They wanted authority to be real but answerable, so they gave each branch a lock on part of the work of the others. The result is slow by design. A measure that two branches want and the third does not will usually fail, while a measure all three want can move in a week. Readers meeting the system for the first time often expect a chain of command. What the document sets up instead is a standing argument among equals.

WHAT THIS PASSAGE IS FOR

- The three branches are defined by function: making, executing and interpreting law.
 - Each branch holds at least one power that can stop another.
 - The slowness is deliberate, not a defect of drafting.
-

Questions 2.1 to 2.10

on passage 2, Three Branches and One Lock

2.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Constitution was written at Philadelphia in 1787, and its first printing ran to four pages
- B) Federal judges are appointed for life so that unpopular rulings cannot cost them their posts
- C) The Constitution gives each branch a power that can block the others, and the resulting slowness is deliberate
- D) The three branches of the federal government were designed to work as a chain of command

2.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what must happen before a federal dollar can be spent?

- A) Congress must pass an appropriation
- B) The Senate must agree to the treaty
- C) A court must find the spending constitutional
- D) The President must sign the measure into law

2.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the slowness of the federal system was intended rather than accidental?

- A) “The first printing of the finished text ran to four pages”
- B) “None of this was an accident of drafting”
- C) “The courts decide what the law means in particular cases”
- D) “Readers meeting the system for the first time often expect a chain of command”

2.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A measure that two branches want and the third does not will usually fail, while a measure all three want can move in a week. A government built this way therefore ____

Which choice most logically completes the text?

- A) cannot pass any law without wide public support
- B) places the courts above the other two branches
- C) was intended to be run by a single executive
- D) acts quickly only where agreement is already wide

2.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “authority” most nearly mean?

- A) expert opinion
- B) written permission
- C) power to govern
- D) legal custody

2.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the second paragraph in the text as a whole?

- A) It argues that the courts have become the strongest of the three branches
- B) It gives the particular powers by which each branch can block the others
- C) It explains why the men at the convention distrusted state assemblies
- D) It describes how long the finished text was when it was first printed

2.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 52 of this book. It presents Federalist 10, in which Madison treats faction as impossible to prevent and aims instead at controlling its effects, using the size of the republic and representation as his two mechanisms.

Text 1 describes a system that is slow by design. Based on Text 2, how would its author most likely justify that slowness?

- A) It forces a majority to persist through more than one season of opinion
- B) It keeps the courts from reviewing the work of the other two branches
- C) It ensures that faction is removed from political life altogether
- D) It lets a single executive act without consulting the other branches

2.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The Senate must agree to treaties and to senior appointments, judges included. ____ the courts may hold that a law conflicts with the Constitution and refuse to apply it.

Which choice completes the text with the most logical transition?

- A) For example,
- B) As a result,
- C) In other words,
- D) In addition,

2.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The President may veto a bill ____ Congress can then pass it anyway only with two thirds of each chamber.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) bill, Congress
- B) bill, but Congress
- C) bill Congress
- D) bill; but Congress

2.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Congress makes law, the President carries it out, and the courts decide what the law means.
- Each branch holds at least one way of stopping the others.
- A measure that two branches want and the third does not will usually fail.
- The first printing of the finished text ran to four pages.

The student wants to emphasize why a measure can fail even when much of the government supports it. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The Constitution divides the work of government among three branches, each with a task of its own
- B) The finished text of the Constitution ran to four pages when it was first printed
- C) Each branch of the federal government holds at least one way of stopping the other two
- D) Because each branch can block the others, a measure that two branches want will usually fail if the third does not

ملخص المقطع 2 بالعربية

خلاصة: تقسم الوثيقة الدستورية المكتوبة في فيلادلفيا عام ألف وسبعمئة وسبعة وثمانين عمل الحكومة بين ثلاث سلطات: الكونغرس يشرع، والرئيس ينفذ، والمحاكم تفسر القانون في القضايا. ولكل سلطة وسيلة واحدة على الأقل لإيقاف الآخرين: الكونغرس يملك المال، والرئيس يملك حق النقض، والمحاكم تملك مراجعة دستورية القوانين.

المعنى: المعنى أن البطل ليس عيباً في الصياغة بل قرار مقصود. فواضعو الخطة رأوا ملكاً يحكم بلا رضى ثم رأوا مجالس ولايات تفعل ما تشاء، فأرادوا سلطة حقيقية لكن قابلة للمحاسبة، فجعلوا كل فرع يقفل جزءاً من عمل الآخر.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: وصف آلة الحكم كما كتبت، قبل الانتقال إلى سبب بنائها هكذا وإلى الخلاف حول نتائجها. وفهم الأقفال الثلاثة شرط لقراءة أي نقاش لاحق عن الجمود.

الصلة بالاختبار: في اختبار سات يكثر سؤال الفكرة المركزية حول نصوص تأسيسية كهذه، ويكثر معه فخ توقع تسلسل قيادة بدل توقع نزاع بين أعداد. وتصلح تفاصيل مثل حق النقض ونسبة الثلثين لأسئلة التفاصيل، كما يصلح المقطع للاقتراح بالمقطع الثاني والخمسين في أسئلة النصوص المتقابلة.

A Convention at Seneca Falls

In July 1848 about three hundred people came to a chapel in Seneca Falls, a small town in western New York. The meeting had been announced a few days earlier in a county newspaper, and no one had time to travel far. Elizabeth Cady Stanton and Lucretia Mott had called it to discuss the condition of women. Forty of those who came were men, and one of them was Frederick Douglass, who ran an abolitionist newspaper, that is, a paper campaigning for the ending of slavery, in Rochester.

The convention produced a document called the Declaration of Sentiments. Its form was borrowed on purpose. It opened with the words of the Declaration of Independence, changed to read that all men and women are created equal, and then set out a list of complaints in the same manner as 1776. Married women could not own property in their own names. They could not keep the wages they earned. They had almost no standing in court, little access to higher education, and no vote. Sixty-eight women and thirty-two men put their names to it, and some later asked for their names to be removed.

Eleven resolutions, that is, formal proposals put to a vote, came before the meeting. Ten passed easily. The one that asked for the vote was argued over and nearly lost. Several of those present thought that a demand to expand the franchise, meaning the right to vote, would make the rest of the list look ridiculous. Douglass spoke for it and it carried by a narrow margin. Newspapers treated the whole affair as a joke for weeks. The vote arrived seventy-two years later, in 1920, by which time only one of those who signed was still alive to use it.

WHAT THIS PASSAGE IS FOR

- Seneca Falls borrowed the form of the Declaration of Independence deliberately.
 - The demand for the vote was the one resolution that nearly failed.
 - The gap between the demand and the Nineteenth Amendment was seventy-two years.
-

Questions 3.1 to 3.10

on passage 3, A Convention at Seneca Falls

3.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Seneca Falls convention met in a chapel in a small town in western New York
- B) Frederick Douglass ran an abolitionist newspaper in Rochester and attended the convention
- C) The Declaration of Sentiments was treated as a joke by the newspapers of the period
- D) A convention in 1848 borrowed the form of the Declaration of Independence and nearly failed to demand the vote

3.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how many of the eleven resolutions passed easily?

- A) All eleven of them
- B) Ten of the eleven
- C) Only the one about the vote
- D) Fewer than half of them

3.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the convention's own supporters resisted the demand for the vote?

- A) "Newspapers treated the whole affair as a joke for weeks"
- B) "Married women could not own property in their own names. They could not keep the wages they earned"
- C) "a demand to expand the franchise, meaning the right to vote, would make the rest of the list look ridiculous"
- D) "Sixty-eight women and thirty-two men put their names to it, and some later asked for their names to be removed"

3.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The vote arrived seventy-two years later, in 1920, by which time only one of those who signed was still alive to use it. The work of the convention therefore ____

Which choice most logically completes the text?

- A) outlasted almost everyone who had done it
- B) was abandoned by its organizers within a decade
- C) secured its full list of demands in 1848
- D) mattered less than the newspaper coverage it drew

3.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "expand" most nearly mean?

- A) explain in more detail
- B) push outward by force
- C) do away with entirely
- D) widen to take in more people

3.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence reporting that the document's form was borrowed on purpose?

- A) It concedes that the convention produced nothing original
- B) It explains why newspapers treated the convention as a joke
- C) It marks the borrowing as a deliberate argumentative choice
- D) It introduces the eleven resolutions that came before the meeting

3.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 53 of this book. It argues that voting in the United States was restricted by four separate barriers, that each came down at a different time, and that a constitutional amendment settles the rule and settles nothing else.

Text 1 ends with the vote arriving in 1920. Based on Text 2, how would its author most likely qualify that ending?

- A) The amendment of 1920 removed the other three barriers at the same time
- B) The amendment settled the rule and left the machinery of exclusion standing
- C) The vote had in fact been secured by the convention itself in 1848
- D) Property requirements were the last of the four barriers to fall

3.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Ten of the eleven resolutions passed easily. ____ the one that asked for the vote was argued over and nearly lost.

Which choice completes the text with the most logical transition?

- A) However,
- B) Therefore,
- C) For instance,
- D) In addition,

3.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Frederick Douglass ____ spoke for the resolution that asked for the vote.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) who ran an abolitionist newspaper in Rochester
- B) who ran an abolitionist newspaper in Rochester;
- C) , who ran an abolitionist newspaper in Rochester,
- D) , who ran an abolitionist newspaper in Rochester

3.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Eleven resolutions came before the meeting, and ten passed easily.
- The one that asked for the vote was argued over and nearly lost.
- Several of those present thought the demand would make the rest of the list look ridiculous.
- Newspapers treated the whole affair as a joke for weeks.

The student wants to explain why the demand for the vote was the most contested item at the convention. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The resolution asking for the vote nearly failed because people at the convention feared it would make their other demands look ridiculous
- Eleven resolutions came before the meeting in 1848, and ten of them passed easily enough
- Newspapers treated the convention as a joke for weeks after the meeting had ended
- The resolution that asked for the vote was argued over and nearly lost at the meeting

ملخص المقطع 3 بالعربية

خلاصة: في تموز عام ألف وثمانمئة وثمانية وأربعين اجتمع نحو ثلاثمئة شخص في كنيسة صغيرة في سينيكا فولز بغرب نيويورك، بدعوة من إليزابيث كادي ستانتون ولوكريشا موت. وأصدر المؤتمر وثيقة سماها إعلان المشاعر، استعارت عن قصد مبيعة إعلان الاستقلال وبدلت جملته لتقرأ أن الرجال والنساء خلقوا متساوين، ثم سردت المطالبات على المتواليات نفسها.

المعنى: المعنى أن أشد البنود إثارة للخلاف كان المطالبة بحق الانتخاب. فمن أحد عشر قراراً مرّت عشرة بسهولة، وكاد قرار الانتخاب يسقط، لأن بعض الحاضرين خشي أن يجعل بقية القائمة تبدو سقيمة. وقد تحقق الحق بعد اثنتين وسبعين سنة.

الأهمية في المجال: في مجال التاريخ والنظام المدني تقف هذه المادة في مستوى الظاهرة: واقعة مؤرخة ووثيقة محدّدة وقائمة قرارات معروفة، يُبنى عليها لاحقاً تحليل كيف اتسع حق الانتخاب فعلاً وما حدود ما يصنعه تعديل دستوري.

الصلة بالاختبار: في اختبار سات يُسأل عن مثل هذه الوثائق في الفكرة المركزية وفي الدليل النصي وفي وظيفة جملة بعينها. والفخ المتوقّع هنا أن يُحسب عداء الصحف على أنه المقاومة المقصودة، مع أن المقاومة الحقيقية جاءت من داخل المؤتمر نفسه. ويقترب المقطع بالمقطع الثالث والخمسين لأسئلة النصّين المتقابلين.

A Fourth of July Speech

On July 5, 1852, Frederick Douglass spoke in Corinthian Hall in Rochester, New York. The invitation came from the Ladies Anti-Slavery Society, an abolitionist group, meaning one working for the ending of slavery. About six hundred people paid to hear him. Douglass had been born into slavery in Maryland and had escaped fourteen years earlier. He taught himself to read as a boy, bought his own freedom with money raised in Britain, and by 1852 owned and edited a newspaper.

He began mildly. For twenty minutes he praised the men of 1776, called them brave, and said their work deserved the respect of their children. Then he turned. The holiday, he told the hall, was theirs and not his. He asked what the Fourth of July meant to an American slave, and answered that it revealed to such a man, more than any other day in the year, the wrong done to him. The speech ran for nearly two hours, and the audience is reported to have stood at the end.

Douglass did not reject the founding documents. That is the part readers miss. He argued the opposite case, that the Declaration said exactly what he wanted said, and that the country was failing its own words rather than keeping them. Near the end he turned to the churches, the press and the political parties in turn, and named the share of each one in the failure. The address was printed as a pamphlet, which is a short work sold cheaply, within a few weeks, and it sold widely in the North. It is now usually published under a title that Douglass himself never gave it. The hall where he spoke was pulled down in 1898. His newspaper, the North Star, had about four thousand readers at its height, many of them in Britain. Douglass lived another forty-three years and advised two presidents.

WHAT THIS PASSAGE IS FOR

- Douglass praised 1776 for twenty minutes before turning on his audience.
 - His argument was that the country failed its own founding words, not that the words were wrong.
 - The speech named churches, press and parties as sharing the failure.
-

Questions 4.1 to 4.10

on passage 4, A Fourth of July Speech

4.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Douglass praised the founders and then argued that the country was failing its own words
- B) Douglass was born into slavery in Maryland and escaped fourteen years before the speech
- C) Douglass rejected the founding documents as worthless to an American slave
- D) The hall in which Douglass spoke was pulled down in 1898

4.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how did Douglass begin the speech?

- A) By asking what the Fourth of July meant to an American slave
- B) By naming the share of the churches and the press in the failure
- C) By praising the men of 1776 and calling them brave
- D) By describing his escape from slavery in Maryland

4.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that Douglass treated the founding documents as being on his side?

- A) "About six hundred people paid to hear him. Douglass had been born into slavery in Maryland"
- B) "The speech ran for nearly two hours, and the audience is reported to have stood at the end"
- C) "Near the end he turned to the churches, the press and the political parties in turn"
- D) "the Declaration said exactly what he wanted said, and that the country was failing its own words rather than keeping them"

4.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Douglass was invited by an anti-slavery society, about six hundred people paid to hear him, and he spent his first twenty minutes praising the men of 1776. That opening therefore ____

Which choice most logically completes the text?

- A) showed that he had changed his view of the founders
- B) secured the goodwill that the turn would spend
- C) was the part of the speech that was later printed
- D) warned the audience that the speech would be hostile

4.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "opposite" most nearly mean?

- A) directly contrary
- B) facing across from
- C) equally weighted
- D) closely matching

4.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence reporting that Douglass did not reject the founding documents?

- A) It records a concession he made to the hall that had paid to hear him
- B) It explains why the address sold widely in the North as a pamphlet
- C) It reports the title under which the speech is now usually published
- D) It corrects a misreading that the text expects of its own readers

4.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 54 of this book. It sets out the antislavery case, which rests on the claim that a human being is not a kind of property and that unalienable rights cannot be transferred by any bill of sale, against a defense arguing from order and from the existing Constitution.

Text 1 says Douglass argued that the country was failing its own words. Based on Text 2, what makes that argument more than a complaint?

- A) It shows that the Constitution had recognized slavery in three clauses
- B) It proves that the southern arrangement was crueler than wage labor
- C) If rights cannot be transferred, then no statute can make a sale of them valid
- D) It establishes that abolition would destroy a great deal of property

4.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The address was printed as a pamphlet within a few weeks, and it sold widely in the North. ___ it is now usually published under a title that Douglass himself never gave it.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) However,
- C) For example,
- D) Likewise,

4.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He taught himself to read as a boy ___ bought his own freedom with money raised in Britain, and by 1852 owned and edited a newspaper.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) boy; bought
- B) boy bought
- C) boy, and bought
- D) boy, bought

4.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Frederick Douglass spoke at Corinthian Hall in Rochester on July 5, 1852.
- For twenty minutes he praised the men of 1776.
- He asked what the Fourth of July meant to an American slave.
- He argued that the country was failing its own words rather than that the words were wrong.

The student wants to introduce the speech to an audience that has never read it. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Douglass spoke for nearly two hours, and the audience is reported to have stood at the end
- In an 1852 address at Rochester, Douglass praised the founders and then asked what their holiday meant to an American slave
- Douglass argued that the country was failing its own words rather than that the words were wrong
- Corinthian Hall, where Douglass spoke in 1852, was pulled down in 1898

ملخص المقطع 4 بالعربية

خلاصة: في الخامس من تموز عام ألف وثمانمئة واثنين وخمسين تحدّث فريدرىك دوغلاس في قاعة كورنثيان في روتشستر بنيويورك، بدعوة من جمعية نسائية مناهضة للعبودية، أمام نحو ستمئة شخص دفعوا لسمعوه. وكان قد وُلد في العبودية في ماريلاند وفَرَّ قبل أربعة عشر عامًا، وعَلِمَ نفسه القراءة، وصار يملك صحيفة ويحرّرها.

المعنى: بدأ هادئًا: عشرون دقيقة في الثناء على رجال عام ألف وسبعمئة وستة وسبعين، ثم انقلب فقال إن العيد عيدهم لا عيده، وسأل ما يعنيه الرابع من تموز لعبد أميركي. والمهم أنه لم يرفض الوثائق التأسيسية، بل قال إن البلد يخون كلماته هو، لا أن الكلمات خاطئة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: خطبة مؤرخة بمكان وجمهور وحجة واضحة، تُبنى عليها لاحقًا دراسة شكل الحجّة المضادة للعبودية والخلاف حول ما أنهاها فعلًا.

الصلة بالاختبار: في اختبار سات تتكرّر الخطب والمقالات، ويُسأل عن الحجّة والجمهور وعن وظيفة جملة بعينها. والفخّ الشائع هنا أن يُقرأ الخطاب رفضًا للوثائق التأسيسية، وهو عكس ما يقوله النصّ صراحةً. ويقترن المقطع بالمقطع الرابع والخمسين في أسئلة النصّين المتقابلين.

What Was Built After 1865

The war ended in April 1865. Four million people who had been held as property were free, with no land, no schooling and no standing in law. The twelve years that followed are called Reconstruction. A great deal was built in them, in a hurry, by a Congress that had just won a war and did not expect to keep its majority for long.

Three amendments were added to the Constitution. The Thirteenth ended slavery. The Fourteenth made anyone born in the country a citizen, and required every state to give equal protection of the laws. The Fifteenth banned the denial of the vote on grounds of race. A federal agency, the Freedmen's Bureau, set up schools, wrote labor contracts and ran courts where state courts would not sit. Black men voted in large numbers across the South. More than fifteen hundred held public office, including sixteen seats in Congress and two in the Senate. South Carolina had a legislature with a Black majority. The first public school systems in several southern states date from these years.

None of it lasted in the form it was built. Northern interest declined through the 1870s as other matters took the front page and as the cost of keeping soldiers in the South rose. The last federal troops were pulled out in 1877. Within thirty years nearly every state in the region had written new voting rules that removed most Black voters from the rolls without mentioning race at all. Among them were poll taxes, which are charges that had to be paid before a person could vote, and reading tests set by local officials. The three amendments stayed in the Constitution, never repealed and largely not enforced, for another sixty years. Mississippi wrote the first of the new constitutions in 1890. Black turnout in Louisiana fell from about ninety-five percent to under two percent in eight years.

WHAT THIS PASSAGE IS FOR

- Three amendments ended slavery, created birthright citizenship and barred racial denial of the vote.
 - Reconstruction put more than fifteen hundred Black officeholders into office.
 - The amendments survived while their enforcement did not.
-

Questions 5.1 to 5.10

on passage 5, What Was Built After 1865

5.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Freedmen's Bureau set up schools and wrote labor contracts across the South
- B) Reconstruction built a great deal quickly, and almost none of it survived in the form it was built
- C) The three Reconstruction amendments were repealed within thirty years of the war
- D) Black turnout in Louisiana fell from about ninety-five percent to under two percent

5.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happened to the three Reconstruction amendments after 1877?

- A) They were repealed one after another
- B) They were replaced by new state constitutions
- C) They were enforced by federal troops until 1890
- D) They stayed in the Constitution and were largely not enforced

5.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the new voting rules were written to exclude Black voters without saying so?

- A) “new voting rules that removed most Black voters from the rolls without mentioning race at all”
- B) “The last federal troops were pulled out in 1877”
- C) “The first public school systems in several southern states date from these years”
- D) “Mississippi wrote the first of the new constitutions in 1890”

5.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The three amendments stayed in the Constitution, never repealed and largely not enforced, for another sixty years. A right of that kind therefore ____

Which choice most logically completes the text?

- A) ceases to exist as soon as it is ignored
- B) can be removed only by a further amendment
- C) depends on something beyond its own wording
- D) was never written into the Constitution at all

5.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “declined” most nearly mean?

- A) refused an invitation
- B) fell away steadily
- C) bent toward the ground
- D) spread outward quickly

5.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence reporting that the Congress of those years did not expect to keep its majority?

- A) It explains the haste with which Reconstruction was built
- B) It accounts for the withdrawal of federal troops in 1877
- C) It introduces the three amendments listed in the next paragraph
- D) It shows that the Congress of 1865 had no popular support

5.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 55 of this book. It argues that Reconstruction was reversed by four instruments working together: organized violence, narrow court rulings, the national political settlement of 1876, and new state law, each covering a weakness in the others.

Text 1 says that Northern interest declined through the 1870s. Based on Text 2, how would its author place that decline?

- A) It was the single cause of the reversal of Reconstruction
- B) It followed from the new state constitutions written after 1890
- C) It made the three amendments legally void in the southern states
- D) It was one instrument of four, and it removed the political cost of doing nothing

5.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

More than fifteen hundred held public office, including sixteen seats in Congress and two in the Senate. ___ South Carolina had a legislature with a Black majority.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In other words,
- C) In addition,
- D) By comparison,

5.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The war ended in April 1865 ___ four million people who had been held as property were free.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) 1865, and
- B) 1865 and
- C) 1865; and
- D) 1865,

5.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Three amendments were added to the Constitution between 1865 and 1870.
- More than fifteen hundred Black men held public office.
- The last federal troops were pulled out in 1877.
- Black turnout in Louisiana fell from about ninety-five percent to under two percent in eight years.

The student wants to stress how quickly the gains of Reconstruction were undone. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Three amendments were added to the Constitution, and more than fifteen hundred Black men held public office
- The last federal troops left the South in 1877, twelve years after the war had ended
- Black men held more than fifteen hundred public offices, and within eight years Louisiana turnout fell from about ninety-five percent to under two percent
- Reconstruction added three amendments to the Constitution between 1865 and 1870

ملخص المقطع 5 بالعربية

خلاصة: انتهت الحرب في نيسان عام ألف وثمانمئة وخمسة وستين، وصار أربعة ملايين إنسان كانوا يملكون أحرارًا بلا أرض ولا تعليم ولا صفة قانونية. وفي الاثنتي عشرة سنة التالية، المسماة إعادة الإعمار، أضيفت ثلاثة تعديلات دستورية، وأنشئ مكتب المعتوقين، وتولى أكثر من ألف وخمسمئة رجل أسود مناصب عامة، منها ستة عشر مقعدًا في الكونغرس.

المعنى: المعنى أن ما بُني بسرعة لم يبقَ على صورته. فقد تراجع الاهتمام الشمالي خلال سبعينيات القرن، وشُحبت القوات عام ألف وثمانمئة وسبعة وسبعين، وكتبت الولايات قواعد انتخاب جديدة أزلت معظم الناخبين السود دون ذكر العرق أصلًا. وبقيت التعديلات في الدستور غير ملغاة وغير منقذة سِتِّين سنة أخرى.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: جرد لما بُني ولما انحَلَّ، بأرقام ومواعيد، قبل الانتقال إلى آلية التراجع وإلى الخلاف حول هل فشلت إعادة الإعمار أم هُزمت.

الصلة بالاختبار: في اختبار سات يكثر هذا النمط: نص يقرّر إنجازًا ثم يقرّر انحلاله، ويُسأل عن الفكرة المركزية وعن استنتاج يكمل النص. والفخ الشائع قراءة عدم التنفيذ على أنه إلغاء، وهو ما ينفيه النص صراحةً. ويقرن المقطع بالمقطع الخامس والخمسين في أسئلة النصين المتقابلين.

A Locked Door on Washington Place

The Triangle Shirtwaist factory filled the top three floors of a ten-floor building off Washington Square in New York. On Saturday, March 25, 1911, a few minutes before the end of the shift, a fire started in a bin of cloth scraps on the eighth floor. Within eighteen minutes it was over. One hundred and forty-six workers were dead, most of them women, many of them under twenty, and some of them fourteen.

The building was not especially old and the stairs were not especially narrow. What killed people was a set of ordinary decisions. One of the two stair doors was kept locked, because the owners wanted to check bags at a single exit to prevent theft. The fire escape was a light iron structure that gave way and threw about twenty people into the yard below. The fire department ladders reached the sixth floor. There were no sprinklers, which are ceiling pipes that release water in a fire, and the company had turned down an inspection offered two years earlier.

Two hundred thousand people walked in the funeral march. The state appointed a commission, meaning a body set up to investigate and report, and it spent two years visiting factories across New York. The reform that followed was unusually quick. Between 1911 and 1914 the legislature passed more than thirty laws. They required fire drills, unlocked exits, water pipes in tall buildings and limits on hours for women and children. They also set up an inspection service with the power to enter without warning. Several of the people who ran that commission spent the next thirty years in national office. The New York rules became the pattern for federal law in the 1930s. The factory building itself still stands and belongs to a university.

WHAT THIS PASSAGE IS FOR

- A locked exit door, kept locked to check bags for theft, was central to the death toll.
 - The fire killed 146 workers in about eighteen minutes.
 - More than thirty state laws followed within three years.
-

Questions 6.1 to 6.10

on passage 6, A Locked Door on Washington Place

6.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Triangle factory building still stands and now belongs to a university
- B) The fire escape was a light iron structure that gave way under the weight of workers
- C) Ordinary decisions rather than an unusual building produced the death toll, and a quick wave of law followed
- D) The fire department's ladders were the single cause of the deaths in the factory that day

6.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why was one of the two stair doors kept locked?

- A) So that bags could be checked at a single exit
- B) So that the fire escape would carry the whole shift
- C) Because the stairs beyond it were too narrow to use
- D) Because an inspection two years earlier had required it

6.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the building itself was unremarkable?

- A) "The fire department ladders reached the sixth floor"
- B) "The building was not especially old and the stairs were not especially narrow"
- C) "Two hundred thousand people walked in the funeral march"
- D) "The factory building itself still stands and belongs to a university"

6.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The company had turned down an inspection offered two years earlier, and the law that followed set up an inspection service with the power to enter without warning. That change therefore ____

Which choice most logically completes the text?

- A) made inspections cheaper for the state to carry out
- B) left the choice of inspection with the employer
- C) applied only to factories above the sixth floor
- D) removed the power of an employer to refuse one

6.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "reform" most nearly mean?

- A) a change of personal habits
- B) a return to an earlier practice
- C) a change made in the law
- D) a formal public apology

6.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes what the second paragraph adds to the account of the fire?

- A) It names the people who died and gives their ages
- B) It replaces an explanation from the building with an explanation from decisions
- C) It reports the size of the funeral march that followed the fire
- D) It lists the thirty laws passed between 1911 and 1914

6.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 56 of this book. It sets out four instruments a state can use to make factories safer, a rule with an inspector behind it, liability for injury, insurance pricing and a limit on hours, and reports that no single instrument did much on its own.

Text 1 reports that more than thirty laws followed the fire. Based on Text 2, how should that wave of law be judged?

- A) It worked because several instruments were operating at once
- B) It worked because liability for injury had at last been established
- C) It failed because inspection is too expensive to cover a whole city
- D) It mattered less than the insurance pricing that came after it

6.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The building was not especially old and the stairs were not especially narrow. ____ what killed people was a set of ordinary decisions.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) For example,
- C) Similarly,
- D) Instead,

6.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A fire started in a bin of cloth scraps on the eighth floor ____ within eighteen minutes it was over.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) floor within
- B) floor; within
- C) floor, within
- D) floor: within

6.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- One of the two stair doors was kept locked so that bags could be checked at a single exit.
- The company had turned down an inspection offered two years earlier.
- Between 1911 and 1914 the legislature passed more than thirty laws.
- The new laws required unlocked exits and set up an inspection service able to enter without warning.

The student wants to show that the law changed because the deaths were traced to decisions rather than to bad luck. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The fire killed one hundred and forty-six workers in about eighteen minutes
- B) Between 1911 and 1914 the legislature of New York passed more than thirty laws
- C) The company had turned down an inspection that had been offered two years earlier
- D) Because a locked door and a refused inspection had cost lives, the new laws required unlocked exits and inspectors able to enter without warning

ملخص المقطع 6 بالعربية

خلاصة: كان مصنع ترايانغل شيرتويست يشغل الطوابق الثلاثة العليا من مبنى من عشرة طوابق قرب ساحة واشنطن في نيويورك. وفي السبت الخامس والعشرين من آذار عام ألف وتسعمئة وأحد عشر، قبل دقائق من انتهاء الوردية، اشتعلت النار في صندوق بقايا أقمشة في الطابق الثامن، وانتهى كل شيء في ثمانى عشرة دقيقة، وقتل مئة وستة وأربعون عاملاً، أكثرهم نساء.

المعنى: المعنى أنَّ المبنى لم يكن استثنائياً في قدمه ولا في ضيق سلالته؛ ما قتل الناس جملة قرارات عادية: باب سلم مُقفل لفحص الحقائق عند مخرج واحد، وسلم نجا حديدي خفيف النهار، وسلالم إطفاء لا تبلغ إلا الطابق السادس، ورفض تفتيش غرض قبل سنتين.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: حادثة محدّدة بأرقامها ونتائجها التشريعية، قبل الانتقال إلى آليات تنظيم المصانع وإلى الخلاف حول أثر التنظيم على الأجور وفرص العمل.

الصلة بالاختبار: في اختبار سات يشيع هذا النمط: نص يستبعد تفسيراً متوقعاً ثم يقدم تفسيراً آخر، ويُسأل عن الفكرة المركزية وعن وظيفة الفقرة. والفح الشائع أن يُختار سبب واحد من عدة أسباب مذكورة ويُعامل كأنه السبب الوحيد. ويقترن المقطع بالمقطع السادس والخمسين في أسئلة النصّين المتقابلين.

A Year of Walking in Montgomery

On December 1, 1955, Rosa Parks was arrested in Montgomery, Alabama, for refusing to give up her seat on a city bus. She sewed clothes for a living, and she was also the secretary of the local branch of the National Association for the Advancement of Colored People. She had spent part of the previous summer at a training school for organizers in Tennessee. Three other women had been arrested on the same ground that year.

The response was ready within three days. Printed sheets went out calling for a one-day boycott, meaning an organized refusal to ride, on the Monday. About forty thousand Black residents stayed off the buses, which was close to every one of them, and they made up about three quarters of all riders. That evening a meeting at the Holt Street church voted to carry on. A minister of twenty-six named Martin Luther King Jr. was chosen to speak for the campaign, partly because he was new in town and had made no enemies in it.

The boycott lasted three hundred and eighty-one days. Carpools, which were shared cars run from church basements, moved people to work and back. Drivers were arrested for small traffic offenses, insurance companies canceled their policies, and the house where King lived was bombed. What finally ended segregation on the buses was not the boycott itself but a lawsuit, *Browder v. Gayle*, which the Supreme Court upheld in November 1956. The campaign had done something no court could do. It had shown that a whole city could unite behind one demand and hold together for a year. The bus company lost about two thirds of its income in that year. Parks lost her job at the department store within a month of the arrest, and left Alabama in 1957.

WHAT THIS PASSAGE IS FOR

- Parks was an experienced NAACP officer, not an accidental protester.
 - The boycott ran 381 days, with carpools run from church basements moving people to work.
 - Segregation on the buses ended by court ruling, not by the boycott alone.
-

Questions 7.1 to 7.10

on passage 7, A Year of Walking in Montgomery

7.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Rosa Parks lost her job at the department store within a month of her arrest
- B) The bus company lost about two thirds of its income during the boycott year
- C) The boycott ended segregation on the buses of Montgomery by itself
- D) A prepared campaign held a city together for a year, and a lawsuit ended the segregation

7.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why was Martin Luther King Jr. chosen to speak for the campaign?

- A) Because he had organized the one-day boycott himself
- B) Because he was new in town and had made no enemies
- C) Because he was the secretary of the local branch
- D) Because the Holt Street church had just elected him

7.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the response to the arrest had been prepared in advance?

- A) "Parks lost her job at the department store within a month of the arrest"
- B) "The bus company lost about two thirds of its income in that year"
- C) "She had spent part of the previous summer at a training school for organizers in Tennessee"
- D) "A minister of twenty-six named Martin Luther King Jr. was chosen to speak for the campaign"

7.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

About forty thousand Black residents stayed off the buses, which was close to every one of them, and they made up about three quarters of all riders. The boycott therefore ____

Which choice most logically completes the text?

- A) could not be absorbed by the accounts of the company
- B) depended on support from the white riders of the city
- C) was smaller than the organizers of it had hoped
- D) ended within a single day, as the sheets had asked

7.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "unite" most nearly mean?

- A) join in marriage
- B) agree in private
- C) merge into one body
- D) act together

7.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence naming *Browder v. Gayle*?

- A) It gives the date on which the boycott itself began
- B) It explains why the carpools were run from church basements
- C) It corrects an account of what ended the segregation
- D) It reports the cost of the boycott to the bus company

7.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 57 of this book. It argues that Brown v. Board of Education created no enforcement machinery and so moved at the speed of litigation, while the Voting Rights Act of 1965 created machinery that worked without a plaintiff, and that a right without an administrator is a right that waits.

Text 1 reports that a lawsuit ended bus segregation in Montgomery. Based on Text 2, what is the limit of a remedy of that kind?

- A) A court ruling cannot reach a private business at all
- B) It moves only as fast as cases can be brought and argued
- C) It requires a federal examiner in every covered county
- D) It is overturned whenever a later court narrows it

7.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Printed sheets went out calling for a one-day boycott on the Monday. ___ about forty thousand Black residents stayed off the buses.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) Nevertheless,
- C) For example,
- D) In other words,

7.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Rosa Parks sewed clothes for a living ___ she was also the secretary of the local branch of the National Association for the Advancement of Colored People.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) living she
- B) living, she
- C) living, and she
- D) living: and she

7.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The boycott lasted three hundred and eighty-one days.
- Carpools run from church basements moved people to work and back.
- What finally ended segregation on the buses was a lawsuit, *Browder v. Gayle*.
- The Supreme Court upheld that ruling in November 1956.

The student wants to correct the impression that the boycott alone ended segregation on the buses. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Although the boycott held for three hundred and eighty-one days, segregation on the buses ended with *Browder v. Gayle*, upheld in November 1956
- The boycott lasted three hundred and eighty-one days and was supported by carpools run from church basements
- Carpools run from church basements moved people to work and back throughout the boycott
- The Supreme Court upheld a ruling in November 1956 that concerned the city of Montgomery

ملخص المقطع 7 بالعربية

خلاصة: في الأول من كانون الأول عام ألف وتسعمئة وخمسة وخمسين اعتُقلت روزا باركس في مونتغمري بالآباما لرفضها التخلي عن مقعدها في حافلة. كانت تخطط للثياب لكسب عيشها، وكانت أيضًا أمينة سرّ الفرع المحلي للجمعية الوطنية لتقدم الملونين، وقضت جزءًا من الصيف السابق في مدرسة تدريب للمنظمين في تينيسي.

المعنى: المعنى أن الاستجابة كانت معدة سلفًا: خلال ثلاثة أيام وُزعت أوراق تدعو إلى مقاطعة يوم واحد، فامتنع نحو أربعين ألف ساكن أسود عن الحافلات، وهم نحو ثلاثة أرباع الركاب. ودامت المقاطعة ثلاثمائة وواحدًا وثمانين يومًا، لكن ما أنهى التمييز في الحافلات كان دعوى قضائية أقرتها المحكمة العليا.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: حركة مؤرخة بأسمائها وأرقامها، قبل الانتقال إلى آلية تغيير القانون وإلى الخلاف حول مصدر المكاسب: القانون أم الضغط.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يصحح انطباعًا شائعًا، ويسأل عن الفكرة المركزية وعن الدليل النصي وعن وظيفة الجملة. والفح هنا أن يُنسب إنهاء التمييز إلى المقاطعة وحدها، وهو ما ينفيه النص. ويقترن المقطع بالمقطع السابع والخمسين في أسئلة النصين المتقابلين.

A Handful of Mud at Dandi

Under British rule in India it was against the law for an Indian to make salt. The government held a monopoly, which is the sole right to produce and sell, and it taxed what it sold. Salt is not a luxury in a hot country where most people work outdoors. The tax therefore reached every household, including the poorest, and it had been collected in one form or another for most of a century.

On March 12, 1930, Mohandas Gandhi left his settlement near Ahmedabad with seventy-eight followers and walked toward the coast. The walk took twenty-four days and covered about two hundred and forty miles. Reporters went with him. The crowds grew at every village along the road, and by the end they were enormous. On the morning of April 6 he waded into the sea at Dandi, picked up a handful of salt-crusted mud, and held it up. The act was useless as trade and perfect as argument. He had broken a law that nobody could defend in public without looking foolish.

All along the coast people began boiling sea water in pans. Something like sixty thousand were arrested in the months that followed, Gandhi among them. The tax was not lifted, and the march won nothing at the time. What it did was force a choice. A government that arrests a man of sixty for picking up mud on a beach has rejected its own claim to rule by consent. Photographs of those arrests appeared in newspapers from London to New York within the week. Independence came seventeen years later, in 1947, after a world war had emptied the British treasury. The salt tax itself was abolished in 1946. Gandhi walked about twelve miles a day and was sixty years old at the time.

WHAT THIS PASSAGE IS FOR

- The salt monopoly taxed something nobody in a hot country can do without.
 - The march was designed as an argument, not as a way of getting salt.
 - Roughly sixty thousand arrests followed, and no immediate concession.
-

Questions 8.1 to 8.10

on passage 8, A Handful of Mud at Dandi

8.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A march that won nothing at the time broke a law that could not be defended in public
- B) Salt is not a luxury in a hot country where most people work outdoors
- C) Photographs of the arrests appeared in newspapers from London to New York
- D) The salt tax was abolished in 1946, a year before independence

8.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how long did the walk to the coast take?

- A) Twelve days
- B) Seventy-eight days
- C) Twenty-four days
- D) Most of a century

8.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the march was designed as an argument rather than as a way of getting salt?

- A) “Something like sixty thousand were arrested in the months that followed”
- B) “Gandhi walked about twelve miles a day and was sixty years old at the time”
- C) “All along the coast people began boiling sea water in pans”
- D) “The act was useless as trade and perfect as argument”

8.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The tax was not lifted, and the march won nothing at the time. What it did was force a choice, because a government that arrests a man of sixty for picking up mud ____

Which choice most logically completes the text?

- A) has shown that the law was worth enforcing
- B) has given up its claim to rule by consent
- C) has lost the support of its own police force
- D) has abolished the monopoly it had held for a century

8.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “rejected” most nearly mean?

- A) given up
- B) thrown back
- C) refused entry to
- D) found fault with

8.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the first paragraph of the text?

- A) It describes the route that the marchers would later follow
- B) It gives the number of people arrested in the months that followed
- C) It reports the year in which the salt tax was finally abolished
- D) It explains why a tax on salt reached every household in India

8.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 58 of this book. It argues that British India was governed by about a thousand British officials over three hundred million people, that the arrangement required the colony to produce a surplus, and that by 1945 Britain owed India about thirteen hundred million pounds.

Text 1 says independence came seventeen years after the march. Based on Text 2, what best explains that interval?

- A) The salt tax had to be abolished before independence could be granted
- B) The march had already removed the legal basis of British rule
- C) The cost of holding on only later came to exceed any plausible return
- D) Indian officials had refused to serve in the administration after 1930

8.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The tax was not lifted, and the march won nothing at the time. ____ what it did was force a choice.

Which choice completes the text with the most logical transition?

- A) For example,
- B) Still,
- C) Therefore,
- D) Likewise,

8.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The government held a monopoly ____ the sole right to produce and sell ____ and it taxed what it sold.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) monopoly, which was the sole right to produce and sell
- B) monopoly which was the sole right to produce and sell
- C) monopoly; which was the sole right to produce and sell
- D) monopoly, which was the sole right to produce and sell,

8.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The salt tax reached every household, including the poorest.
- Gandhi picked up a handful of salt-crusted mud at Dandi on April 6.
- The act was useless as trade and perfect as argument.
- The tax was not lifted, and the march won nothing at the time.

The student wants to explain to a reader why the march mattered even though it won no concession. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The salt tax reached every household in India, including the very poorest of them
- B) The march won no concession, yet by breaking an indefensible law in public it worked as an argument rather than as trade
- C) Gandhi picked up a handful of salt-crusted mud at Dandi on the sixth of April
- D) The tax was not lifted, and the march won nothing at all at the time

ملخص المقطع 8 بالعربية

خلاصة: تحت الحكم البريطاني في الهند كان صنع الملح محرّمًا على الهنود، إذ احتكرته الحكومة وفرضت عليه ضريبة. والملح ليس كمالًا في بلد حارّ يعمل أهله في الهواء الطلق، فبلغت الضريبة كلّ بيت حتى أفقره، وجمعت نحو قرن. وفي الثاني عشر من آذار عام ألف وتسعمئة وثلاثين خرج موهنداس غاندي مع ثمانية وسبعين مرافقًا نحو الساحل، فصار أربعة وعشرين يومًا ونحو مئتين وأربعين ميلًا.

المعنى: المعنى أنّ الفعل كان عديم القيمة كتجارة وتأملاً كحجة. فقد رفع غاندي حفنة طين مشبعة بالملح في داني، فخالف قانونًا لا يستطيع أحد الدفاع عنه علنًا دون أن يبدو سخيًا. ولم تُرفع الضريبة، ولم يُحقّق السير شيئًا وقتها، لكنه فرض خيارًا على حكومة تعتقل رجلًا في الستين لأنه رفع طينًا من شاطئ.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: مسيرة مؤرخة بمسافرتها وأعداد معتقليها، قبل الانتقال إلى حسابات تمويل الإمبراطورية وإلى الخلاف حول هل مُنح الاستقلال أم انثُرِع.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يفصل بين الأثر المباشر والأثر الرمزي، ويُسأل عن الفكرة المركزية وعن الدليل النصي. والفخّ الشائع أن يُقاس نجاح الحدث بما حقّقه فورًا، مع أنّ النص يقرّر أنّه لم يحقق شيئًا وقتها. ويقترن المقطع بالمقطع الثامن والخمسين في أسئلة النصين المتقابلين.

An Order, a Map and a Suitcase

On February 19, 1942, ten weeks after the attack on Pearl Harbor, President Franklin Roosevelt signed Executive Order 9066, which is a written instruction from a president that carries the force of law. The order named no group at all. It gave the army power to declare military areas and to restrict who could live in them. Within weeks the whole Pacific coast had been declared such an area, and the people removed from it were almost entirely of Japanese descent.

About one hundred and twenty thousand men, women and children were given between six days and two weeks to settle their affairs. Two thirds of them were American citizens by birth. They could take only what they could carry. Farms, shops, boats and houses were sold for whatever price could be got in two weeks, or left with neighbors, or simply abandoned. A piano went for five dollars in Seattle. The families were held first at race tracks and fair halls, then moved to ten camps built inland, in deserts and on wet ground, with thin wooden barracks, shared washrooms and wire fences.

Nobody of Japanese descent in the United States was ever charged with spying or sabotage during the war. The records of the time include two reports to the government saying as much, and both were set aside. Meanwhile a regiment of Japanese American soldiers, the 442nd, fought in Italy and France and became the most decorated unit of its size in the army. Some of its men had volunteered from inside the camps where their parents were still held. The last camp closed in 1946. Congress apologized in 1988 and paid twenty thousand dollars to each surviving person who had been held. About eighty-two thousand people received payments. One of the camps, Manzanar, is now a national historic site.

WHAT THIS PASSAGE IS FOR

- The order named no group; the army's area declarations did the work.
 - Two thirds of those removed were American citizens by birth.
 - No person of Japanese descent in the United States was charged with espionage during the war.
-

Questions 9.1 to 9.10

on passage 9, An Order, a Map and a Suitcase

9.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The 442nd Regiment became the most decorated unit of its size in the army
- B) An order that named no group was used to remove a population that was almost entirely of one descent
- C) Congress apologized in 1988 and paid twenty thousand dollars to each survivor
- D) A piano was sold for five dollars in Seattle during the two weeks allowed

9.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what power did the order itself grant?

- A) The power to intern citizens without charge for the duration of the war
- B) The power to seize farms, shops and boats along the Pacific coast
- C) The power to try those removed before military rather than civilian courts
- D) The power to declare military areas and restrict who could live in them

9.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the removal was not supported by the evidence the government then held?

- A) “The records of the time include two reports to the government saying as much, and both were set aside”
- B) “They could take only what they could carry. Farms, shops, boats and houses were sold for whatever price could be got”
- C) “The families were held first at race tracks and fair halls, then moved to ten camps built inland”
- D) “About one hundred and twenty thousand men, women and children were given between six days and two weeks”

9.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The order named no group at all. It gave the army power to declare military areas and to restrict who could live in them, and within weeks the whole Pacific coast had been declared such an area, which shows that ____

Which choice most logically completes the text?

- A) the army had exceeded the authority it was granted
- B) the order applied equally to every resident of the coast
- C) a neutral instrument can produce a selective result
- D) the declaration of military areas was never carried out

9.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “restrict” most nearly mean?

- A) explain narrowly
- B) place limits on
- C) draw tightly together
- D) set apart for study

9.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence reporting that nobody of Japanese descent was ever charged with spying?

- A) It removes the justification offered for the removal
- B) It explains why the last camp did not close until 1946
- C) It introduces the record of the 442nd Regiment in Italy
- D) It accounts for the apology that Congress made in 1988

9.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 59 of this book. It argues that emergency power in a constitutional state works through three standard instruments: a broad delegation from the legislature to the executive, the suspension of ordinary procedure, and control of information through both censorship and classification.

Text 1 reports that two reports were set aside. Based on Text 2, which instrument does that illustrate?

- A) The delegation of broad authority to the executive branch
- B) The creation of a criminal offense for violating an order
- C) The suspension of ordinary procedure before a civilian judge
- D) The control of information through the withholding of evidence

9.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

About one hundred and twenty thousand men, women and children were given between six days and two weeks to settle their affairs. ___ they could take only what they could carry.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) Moreover,
- D) In short,

9.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Farms, shops, boats and houses were sold for whatever price could be got in two weeks ___ left with neighbors, or simply abandoned.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) weeks, or
- B) weeks or
- C) weeks; or
- D) weeks, or,

9.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The order named no group at all.
- It gave the army power to declare military areas and to restrict who could live in them.
- Within weeks the whole Pacific coast had been declared such an area.
- The people removed from it were almost entirely of Japanese descent.

The student wants to emphasize the gap between the wording of the order and its effect. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The order gave the army power to declare military areas along the Pacific coast
- B) Within weeks the whole of the Pacific coast had been declared a military area
- C) Though the order named no group, those removed under it were almost entirely of Japanese descent
- D) The army was empowered to restrict who could live in the areas it had declared

ملخص المقطع 9 بالعربية

خلاصة: في التاسع عشر من شباط عام ألف وتسعمئة واثنين وأربعين، بعد عشرة أسابيع من الهجوم على بيرل هاربر، وقع الرئيس فرانكلين روزفلت الأمر التنفيذي رقم تسعة آلاف وستين. ولم يسمِ الأمر أي جماعة، بل أعطى الجيش سلطة إعلان مناطق عسكرية وتقييد من يسكنها، فأعلن الساحل الهادئ كله منطقة كذلك، وكان المرخلون منه من أصل ياباني تقريباً بالكامل.

المعنى: المعنى أن المبالغة المجددة أنتجت نتيجة محددة جداً: نحو مئة وعشرين ألف شخص، ثلثاهم مواطنون أميركيون بالميلاد، مُنحوا من ستة أيام إلى أسبوعين لتصفية شؤونهم، ولم يحملوا إلا ما استطاعوا حمله. ولم يُتهم أحد منهم في الولايات المتحدة بالتجسس أو التخريب خلال الحرب.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: أمر مؤرخ وأرقام محددة ومصير موثق، قبل الانتقال إلى آلية سلطات الطوارئ وإلى الخلاف حول هل يبرر الأمن تعليق الحقوق.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يقابل بين نص القانون وتطبيقه، ويسأل عن الاستنتاج وعن الدليل النصي. والفخ الشائع أن يفهم أن الأمر نص على اليابانيين، مع أن النص يقول إنه لم يسمِ جماعة أصلاً. ويقترب المقطع بالمقطع التاسع والخمسين في أسئلة النصين المتقابلين.

A Paper for One Cent

Before 1833 a New York newspaper cost six cents and arrived by subscription, meaning payment in advance for a year of issues. That was most of a day's pay for a laborer. The papers were four pages of shipping lists, prices, political notices and long letters, and they were written for merchants and party men. Perhaps one household in fifty took one, and a single copy was often read by a dozen people in a coffee house.

In September 1833 a printer named Benjamin Day began selling the New York Sun on the street for one cent. He hired boys to shout the headlines. They were paid in bundles of papers, which they then sold at a profit. He filled the sheet with police court reports, fires, accidents, crimes and conflict of every ordinary kind. Within two years the Sun was selling about fifteen thousand copies a day, more than any paper in the city had ever sold, and three rivals had copied the formula.

The penny papers made their money from advertising rather than from readers, and that changed what they printed. A paper paid for by the people who take it answers to them. A paper paid for by advertising needs the largest crowd it can gather. Crowds are gathered by stories that anyone can follow. The new papers also hired reporters, which the old ones had barely done. They sent them out to courts, docks and police stations to look for material. Within one generation the idea that a newspaper should carry news, gathered by its own employees, had replaced the older idea that it should carry opinion, supplied by friends. The Sun also printed a series of invented reports about life on the moon in 1835, and sales rose.

WHAT THIS PASSAGE IS FOR

- A six-cent subscription paper was priced beyond most wage earners.
 - Advertising, not subscription, became the source of revenue, which changed the content.
 - Paid reporters sent out to gather news were a new institution.
-

Questions 10.1 to 10.10

on passage 10, A Paper for One Cent

10.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A New York newspaper cost six cents before 1833 and arrived by subscription
- B) The Sun printed a series of invented reports about life on the moon in 1835
- C) A cheap paper paid for by advertising changed both who read the news and what counted as news
- D) Advertising revenue was what allowed the Sun to lower its price to one cent

10.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how were the boys who sold the Sun paid?

- A) In bundles of papers that they then sold at a profit
- B) At one cent for every copy that they managed to sell
- C) By the hour, out of the printer's own counting house
- D) From the advertising the paper had already sold

10.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the source of a paper's revenue shapes what it prints?

- A) "Perhaps one household in fifty took one, and a single copy was often read by a dozen people in a coffee house"
- B) "A paper paid for by advertising needs the largest crowd it can gather. Crowds are gathered by stories that anyone can follow"
- C) "He hired boys to shout the headlines. They were paid in bundles of papers, which they then sold at a profit"
- D) "Within two years the Sun was selling about fifteen thousand copies a day"

10.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A paper paid for by the people who take it answers to them. A paper paid for by advertising needs the largest crowd it can gather. The shift to advertising therefore ____

Which choice most logically completes the text?

- A) made newspapers cheaper to produce than they had been
- B) returned control of the paper to its own readers
- C) reduced the number of papers printed in the city
- D) changed whom the paper had to satisfy

10.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "conflict" most nearly mean?

- A) armed warfare between states
- B) a clash of professional duties
- C) quarrels and disputes
- D) a contradiction in the evidence

10.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the third paragraph of the text?

- A) It lists the kinds of story that filled the new cheap papers
- B) It explains how the source of revenue altered the content
- C) It reports the price at which the Sun was first sold
- D) It describes the invented reports about life on the moon

10.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 60 of this book. It argues that news is a selection from whatever reached a newsroom in usable form before a deadline, and that deadline, competition and the need for a narrative each favor a particular kind of event, so that slow processes go systematically underreported.

Text 1 reports that the penny papers sent reporters out to gather news. Based on Text 2, what limit would remain on what those reporters found?

- A) Events in places where no reporter was assigned would still arrive late or never
- B) Advertising revenue would have to be replaced by subscription income again
- C) Reporters would be unable to reach the courts, the docks and police stations
- D) Crime coverage would fall as police practice became more regular

10.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The new papers also hired reporters, which the old ones had barely done. ____ they sent them out to courts, docks and police stations to look for material.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In short,
- C) For instance,
- D) In turn,

10.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Before 1833 a New York newspaper cost six cents ____ arrived by subscription, meaning payment in advance for a year of issues.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cents it
- B) cents and
- C) cents; and
- D) cents, it

10.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Before 1833 a New York newspaper cost six cents and was sold by subscription.
- The Sun sold for one cent on the street and reached about fifteen thousand buyers a day.
- The penny papers made their money from advertising rather than from readers.
- A paper paid for by advertising needs the largest crowd it can gather.

The student wants to explain to a reader why the penny press changed what counted as news. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Before 1833 a New York newspaper cost six cents and was sold by subscription only
- B) The Sun sold about fifteen thousand copies a day within two years of its founding
- C) The penny papers made their money from advertising rather than from their own readers
- D) Because the penny papers lived on advertising they needed the largest crowd they could gather, and news came to mean whatever a crowd would follow

ملخص المقطع 10 بالعربية

خلاصة: قبل عام ألف وثمانمئة وثلاثة وثلاثين كانت صحيفة نيويورك تُكلف سبعة سنتات وتُباع بالاشتراك السنوي، أي بأجر يوم عمل كامل تقريباً، وكانت أربع صفحات من قوائم الشحن والأسعار والإعلانات السياسية، مكتوبة للتجار ورجال الأحزاب. وفي أيلول من ذلك العام بدأ المطابع بنجامين داي بيع صحيفة ذا صن في الشارع بسنت واحد.

المعنى: المعنى أن مصدر المال غير المحتوى. فالصحيفة التي يدفع ثمنها قارئها تُحاسب أمامه، أما التي يدفع ثمنها المعلن فتحتاج أكبر جمهور ممكن، والجمهور الكبير يُجمع بقصص يفهمها أي أحد. ومن هنا جاء توظيف المراسلين وإرسالهم إلى المحاكم والأرصدة ومراكز الشرطة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الظاهرة: تحول مؤرخ بسعره وأرقام توزيعه، قبل الانتقال إلى آلية صناعة الخبر وإلى الخلاف حول هل تقود الصحافة الرأي العام أم تتبعه.

الملة بالاختبار: في اختبار سات يكثر النص الذي يربط حافراً اقتصادياً بسلوك مؤسسة، ويُسأل عن الاستنتاج وعن معنى كلمة في سياقها. والفخ الشائع هنا قراءة كلمة الخلاف على أنها الحرب، مع أن القائمة المحيطة بها حوادث يومية. ويقترن المقطع بالمقطع الستين في أسئلة النصين المتقابلين.

BIO · S01 · phenomenon

Moths on a Sooty Wall

The peppered moth rests on tree bark by day with its wings open. Most of these moths are pale gray with small dark spots. A collector near Manchester recorded a nearly black one in 1848, and at the time it was a curiosity worth writing down. Fifty years later the black form made up more than nine in ten of the moths caught in that city. Nothing about the moths had changed in any obvious way. What had changed was the bark.

Coal smoke had killed the pale lichens, which are the crusty growths that cover healthy bark, and had left the trunks black with soot, which is the black powder left by burning coal. On a clean trunk a pale moth is almost invisible and a black one stands out. On a sooty trunk the reverse is true. Birds hunt these moths by sight, and they take whichever form they can see. The counts in rural Dorset, where the air stayed clean, stayed overwhelmingly pale through the same years.

Then the direction reversed. Britain passed a clean air law in 1956, coal smoke fell away over the next thirty years, the lichens came back, and the black moths became rare again. By the 1990s they were below five percent around Manchester. The same reversal happened near Detroit, which gives two records rather than one. A population that has adapted to one kind of background will swing back when the background changes, and the moths did it twice within living memory. The whole story can be read off a series of ordinary counts made with a light trap and a notebook. Collectors had been keeping such records since the 1830s, for reasons of their own, and the numbers were there when biologists came looking for them. Soot turned out to be the quiet agent in all of it.

WHAT THIS PASSAGE IS FOR

- A single moth population shifted from pale to black and back within 150 years.
 - The moths did not change; the bark they rest on did.
 - Clean air reversed the change, which gives two records instead of one.
-

Questions 11.1 to 11.10

on passage 11, Moths on a Sooty Wall

11.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Collectors had been keeping light trap records since the 1830s
- B) A moth population shifted toward the dark form and back again as its background changed
- C) The moths themselves changed in a way that made them harder to see
- D) Counts in rural Dorset stayed overwhelmingly pale through the same years

11.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how do birds find these moths?

- A) By the warmth of the trunk they rest on
- B) By the smell of the lichens that grow there
- C) By following them in flight at night
- D) By sight, taking whichever form stands out

11.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the reversal makes the case stronger than a single change would?

- A) “The same reversal happened near Detroit, which gives two records rather than one”
- B) “A collector near Manchester recorded a nearly black one in 1848”
- C) “Coal smoke had killed the pale lichens, which are the crusty growths that cover healthy bark”
- D) “Collectors had been keeping such records since the 1830s, for reasons of their own”

11.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Britain passed a clean air law in 1956, coal smoke fell away over the next thirty years, the lichens came back, and the black moths became rare again. The direction of change therefore ____

Which choice most logically completes the text?

- A) was fixed once the first dark moth appeared
- B) has never been measured outside Manchester
- C) depended on the trunks rather than on the moths
- D) reversed only after the lichens had died

11.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “adapted” most nearly mean?

- A) altered for a new use
- B) come to fit its surroundings
- C) changed its own appearance
- D) moved to a different place

11.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about rural Dorset?

- A) It supplies a place where the cause was absent and the effect did not appear
- B) It explains why collectors kept records from the 1830s onward
- C) It reports the proportion of dark moths around Manchester
- D) It introduces the clean air law passed in 1956

11.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 61 of this book. It argues that natural selection follows whenever four conditions hold at once: variation, heredity, differences in offspring left, and time counted in generations.

Text 1 reports fifty years of change in a moth population. Based on Text 2, which condition does that half century supply?

- A) Variation, since two forms of the moth existed
- B) Heredity, since dark moths bred dark offspring
- C) Differential survival, since birds hunted by sight
- D) Time, since the generation is one year long

11.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

On a clean trunk a pale moth is almost invisible and a black one stands out. ____ on a sooty trunk the reverse is true.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) For instance,
- C) By contrast,
- D) In other words,

11.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Coal smoke had killed the pale lichens ____ the crusty growths that cover healthy bark.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) lichens, which are
- B) lichens which are
- C) lichens; which are
- D) lichens: which are

11.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The dark form rose to more than nine in ten in Manchester.
- Counts in rural Dorset stayed overwhelmingly pale.
- The dark form fell below five percent by the 1990s.
- The same reversal happened near Detroit.

The student wants to explain to a reader why the moths are a good test case. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The dark form rose to more than nine in ten of the moths in Manchester
- B) Counts in rural Dorset stayed overwhelmingly pale across the same years
- C) The change ran up and then down in two cities while a clean-air area never moved at all
- D) The dark form had fallen below five percent again by the 1990s

ملخص المقطع 11 بالعربية

خلاصة: تستريح فراشة الفلفل على لحاء الشجر نهاراً وأجنحتها مفتوحة، ومعظمها رمادي فاتح بنقاط داكنة صغيرة. وسجل جامع قرب مانشستر فراشة تكاد تكون سوداء عام ألف وثمانمئة وثمانية وأربعين. وبعد خمسين سنة صار الشكل الأسود أكثر من تسع من كل عشر فراشات تُصاد في تلك المدينة، ولم يتغير شيء ظاهر في الفراشات بل تغير اللحاء.

المعنى: المعنى أن دخان الفحم قتل الأشنات الفاتحة وترك الجذوع سوداء بالسُخام. فعلى جذع نظيف تكاد الفراشة الفاتحة تكون غير مرئية والسوداء بارزة، وعلى جذع مُسَخَّم العكس صحيح، والطيور تصطاد بالبصر فتأخذ الشكل الذي تراه. ثم انعكس الاتجاه بعد قانون الهواء النقي عام ألف وتسعمئة وستة وخمسين.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: واقعة مؤرخة بأرقامها قبل الانتقال إلى آلية الانتقاء الطبيعي وإلى الدليل وإلى الخلاف. ويمكن قراءة القصة كلها من سلسلة عذات عادية أجريت بمصيدة ضوء ودفتر.

الصلة بالاختبار: في اختبار سات تتكرر تقارير العلوم: سؤال ومنهج ونتيجة. والفخ الشائع أن يُفترض أن الفراشات نفسها تغيرت، مع أن النص يقول إن ما تغير هو الخلفية التي تستريح عليها. ويقترن المقطع بالمقطع الحادي والستين في أسئلة النصين المتقابلين.

Peas in a Monastery Garden

Gregor Mendel was a monk and a science teacher in Brno, a city now in the Czech Republic. Between 1856 and 1863 he grew peas in the monastery garden and counted them. He chose seven features that came in two clear forms and nothing in between. Seeds were either round or wrinkled, and pods were either green or yellow. Plants were tall or short, with no middling heights. Over seven years he grew and counted something near twenty-eight thousand plants, by hand, in a plot about the size of a tennis court.

His method was simple and exact. He began with lines that bred true, meaning that tall plants from those lines always gave tall offspring. Then he crossed a tall line with a short one. Every plant in the first generation was tall, and yet the short form had not been diluted or lost. When he let that generation breed among itself, the short plants came back, and they came back in a steady proportion. For every three tall plants there was about one short plant. He got a ratio close to three to one for all seven features he had chosen.

Mendel published the work in 1866 in the journal of a local natural history society. Almost nobody read it. He sent copies to well-known scientists and received little in reply, became an abbot, and did no more breeding work. The paper sat unused for thirty-four years. In 1900 three separate researchers, working on their own plants, found the same ratios and then found his paper. What any inherited feature looks like in the next generation depends on rules of this kind. Mendel had those rules written down while other naturalists were still arguing about whether offspring simply blend their two parents together. He also chose his plant well. Peas pollinate themselves unless a breeder interferes, so every cross was controlled.

WHAT THIS PASSAGE IS FOR

- Mendel chose features with two clear forms and no middle ground.
 - The short form vanished in one generation and returned in a three to one ratio.
 - The work was published in 1866 and ignored for thirty-four years.
-

Questions 12.1 to 12.10

on passage 12, Peas in a Monastery Garden

12.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Mendel became an abbot and did no more breeding work
- B) Peas pollinate themselves unless a breeder interferes
- C) Careful counting of seven simple features produced a steady three to one ratio
- D) Three researchers in 1900 found the same ratios independently

12.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happened in the first generation of the cross?

- A) Every plant was tall, and the short form was still present
- B) The plants were of middling height between the two parents
- C) Three quarters were tall and one quarter short
- D) The short form was diluted and eventually lost

12.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the choice of plant was part of the quality of the method?

- A) “Over seven years he grew and counted something near twenty-eight thousand plants”
- B) “Peas pollinate themselves unless a breeder interferes, so every cross was controlled”
- C) “Mendel published the work in 1866 in the journal of a local natural history society”
- D) “He chose seven features that came in two clear forms and nothing in between”

12.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

He began with lines that bred true, meaning that tall plants from those lines always gave tall offspring. Starting from such lines therefore ____

Which choice most logically completes the text?

- A) guaranteed that the first generation would be mixed
- B) made the second generation unnecessary to count
- C) required that the plants be crossed by hand
- D) removed any doubt about what each parent carried

12.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “depends” most nearly mean?

- A) hangs down from
- B) relies on for support
- C) is determined by
- D) waits upon a decision

12.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the paper sitting unused?

- A) It explains why Mendel chose peas rather than another plant
- B) It marks the gap between the discovery and its reception
- C) It reports the size of the plot he worked in
- D) It introduces the seven features he had selected

12.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 62 of this book. It derives the three to one ratio from three facts: that a plant carries two copies of each gene, that the copies may be different versions, and that each sex cell receives one of them at random.

Text 1 says the short form was not lost in the first generation. Based on Text 2, why was it still there?

- A) Because each first-generation plant carried one copy of each
- B) Because the plants were allowed to pollinate themselves
- C) Because the second generation had not yet been grown
- D) Because the tall line had bred true for several years

12.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Mendel published the work in 1866 in the journal of a local natural history society. ____ almost nobody read it.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) Even so,
- C) In other words,
- D) Unsurprisingly,

12.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He sent copies to well-known scientists and received little in reply ____ became an abbot, and did no more breeding work.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) reply; he
- B) reply,
- C) reply, he
- D) reply he

12.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- He chose seven features with two clear forms and nothing in between.
- He began with lines that bred true.
- He counted near twenty-eight thousand plants over seven years.
- Peas pollinate themselves unless a breeder interferes.

The student wants to explain why the ratio could be trusted. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) He chose seven features that came in two clear forms and nothing between
- B) He began his work with pea lines that had bred true for years
- C) Peas pollinate themselves unless a breeder interferes with them
- D) Clear-cut features, true-breeding parents, controlled crosses and twenty-eight thousand plants together leave little room for accident

ملخص المقطع 12 بالعربية

خلاصة: كان غريغور مندل راهبًا ومعلم علوم في برنو، وبين عامي ألف وثمانمئة وستة وخمسين وثلاثة وستين زرع البازلاء في حديقة الدير وعدها. واختار سبع صفات تأتي بشكلين واضحين لا ثالث بينهما: بذور مستديرة أو مجعدة، وقرون خضراء أو صفراء، ونباتات طويلة أو قصيرة. وعلى سبع سنوات زرع وعدّ نحو ثمانية وعشرين ألف نبتة بيده.

المعنى: المعنى أن منهجه كان بسيطًا ودقيقًا. بدأ بسطور ثورث بأمانة، ثم هجن سطرًا طويلًا بقصير، فكان كل نبات الجيل الأول طويلًا، ومع ذلك لم يُخفّف الشكل القصير ولم يُفقد. وحين ترك ذلك الجيل يتناسل عادت النباتات القصيرة بنسبة ثابتة: لكل ثلاث طويلة نحو قصيرة واحدة.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: ما وجد بالعدّ قبل تفسيره. وقد نُشر العمل عام ألف وثمانمئة وستة وستين في مجلة جمعية محلية ولم يقرأه أحد تقريبًا، وبقي ثلاثًا وثلاثين سنة بلا استعمال.

الصلة بالاختبار: في اختبار سات يُسأل عن منهج التجربة وعن التفصيل. والفخّ الشائع أن يُفترض أن الشكل القصير اختفى في الجيل الأول، مع أن النص يقول إنه لم يُخفّف ولم يُفقد. ويقترن المقطع بالمقطع الثاني والستين في أسئلة النصين المتقابلين.

What a Yeast Cell Does

A teaspoon of dried yeast holds several billion cells, each one a single rounded cell about five thousandths of a millimeter across. Stirred into warm water with a little sugar, the powder begins to foam within ten minutes. The foam is gas. The cells are taking in sugar and giving back two things, carbon dioxide and alcohol, and a baker and a brewer want different halves of the same process.

In bread the gas does the work. Each bubble of carbon dioxide pushes the stretchy dough outward, and a loaf left in a warm kitchen roughly doubles in ninety minutes. The alcohol boils off in the oven. In beer and wine the alcohol is the point and the gas is allowed to escape, except in bottles that are sealed early on purpose. The same organism, *Saccharomyces cerevisiae*, has been used for both for at least five thousand years, long before anyone knew that a living thing was involved.

Yeast can work with air or without it. With oxygen available it burns sugar all the way down and gets far more energy from each molecule. Without oxygen it takes a short cut, called fermentation, and must release alcohol as a waste product because the chemistry stops halfway. The short cut yields less than a tenth as much energy, which is why yeast grows slowly in a sealed vessel and quickly in an open one. Louis Pasteur showed this difference in the 1860s by measuring how much sugar disappeared and how much yeast was produced in each case. The cell has no choice in the matter. The chemistry available to it is decided by what is dissolved in the liquid around it. A brewer controls that liquid deliberately. Air is kept out of the vessel, the temperature is held near twenty degrees, and the sugar is allowed to run down over several days.

WHAT THIS PASSAGE IS FOR

- Yeast takes in sugar and gives out carbon dioxide and alcohol.
 - Bakers use the gas and brewers use the alcohol from the same process.
 - Without oxygen the cell gets less than a tenth as much energy from the same sugar.
-

Questions 13.1 to 13.10

on passage 13, What a Yeast Cell Does

13.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Pasteur measured sugar and yeast in the 1860s to show the difference
- B) A brewer keeps air out and holds the temperature near twenty degrees
- C) The same organism has been used for bread and beer for five thousand years
- D) One organism gives out gas and alcohol, and what it yields depends on the air available

13.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the foam in the warm water consist of?

- A) Alcohol rising to the surface
- B) Carbon dioxide given off by the cells
- C) Sugar that has not yet dissolved
- D) Dried yeast cells floating upward

13.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the cell does not choose which path it takes?

- A) “Each bubble of carbon dioxide pushes the stretchy dough outward”
- B) “a loaf left in a warm kitchen roughly doubles in ninety minutes”
- C) “The chemistry available to it is decided by what is dissolved in the liquid around it”
- D) “Louis Pasteur showed this difference in the 1860s by measuring how much sugar disappeared”

13.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The short cut yields less than a tenth as much energy, which is why yeast grows slowly in a sealed vessel and quickly in an open one. A brewer who keeps air out therefore ____

Which choice most logically completes the text?

- A) accepts slow growth in order to get alcohol
- B) raises the energy each cell takes from the sugar
- C) prevents the yeast from producing any gas at all
- D) makes the dough rise faster than it would in air

13.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “release” most nearly mean?

- A) set free from a duty
- B) make available to buyers
- C) loosen a tight grip
- D) give out as waste

13.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the second paragraph of the text?

- A) It explains why the short cut yields less energy than the full path
- B) It reports the diameter of a single dried yeast cell
- C) It shows one process serving two different purposes
- D) It introduces the experiments carried out by Pasteur

13.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 63 of this book. It explains that a cell converts sugar into a molecule called ATP, that the first stage nets two units with or without oxygen, and that the oxygen path yields something near thirty.

Text 1 says the short cut yields less than a tenth as much energy. Based on Text 2, what are the two figures behind that fraction?

- A) Five thousand years against ninety minutes
- B) Two units without oxygen against about thirty with it
- C) Twenty degrees against the temperature of an oven
- D) Several billion cells against a single teaspoon

13.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

In beer and wine the alcohol is the point and the gas is allowed to escape. ____ in bread the gas does the work and the alcohol boils off in the oven.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) For instance,
- D) Accordingly,

13.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Without oxygen it takes a short cut ____ called fermentation ____ and must release alcohol as a waste product.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cut called fermentation
- B) cut; called fermentation;
- C) cut, called fermentation,
- D) cut, called fermentation

13.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The cells give back carbon dioxide and alcohol.
- In bread the gas does the work and the alcohol boils off in the oven.
- In beer and wine the alcohol is the point and the gas is allowed to escape.
- The chemistry available is decided by what is dissolved around the cell.

The student wants to explain to a reader why a baker and a brewer treat the same organism differently. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) One process yields two products, and each trade keeps the one it needs and lets the other go
- B) The cells of the yeast give back carbon dioxide and also alcohol
- C) In bread the gas does the work and the alcohol boils off in the oven
- D) The chemistry available to a cell is decided by the liquid around it

ملخص المقطع 13 بالعربية

خلاصة: ملعقة من الخميرة الجافة تحمل مليارات الخلايا، كل واحدة خلية مستديرة واحدة بقطر نحو خمسة من ألف من المليمتر. وإذا حُرِّكت في ماء دافئ مع قليل سكر بدأ المسحوق يرغو في عشر دقائق، والرغوة غاز. فالخلايا تأخذ السكر وتعيد شيئين: ثاني أكسيد الكربون والكحول، والخباز والمخمّر يريد كل منهما نصفاً مختلفاً من العملية نفسها.

المعنى: المعنى أن الخميرة تعمل مع الهواء وبدونه. فمع توفر الأكسجين تحرق السكر حتى النهاية وتحصل على طاقة أكبر بكثير من كل جزيء، وبدون أكسجين تأخذ طريقاً مختصراً يُسمى التخمر وعليها أن تُطلق الكحول نفايةً لأن الكيمياء تتوقّف في منتصف الطريق، فيكون المردود أقل من عُشر الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: ما تفعله الخلية فعلاً قبل الانتقال إلى حساب الطاقة وإلى كيف عُرف ذلك وإلى الخلاف. وللخلية لا خيار في الأمر، فالكيمياء المتاحة لها يحدّها ما هو مُذاب في السائل حولها.

الصلة بالاختبار: في اختبار سات تتكرّر تقارير العلوم القصيرة ويُسأل عن التفصيل والاستنتاج. والفخّ الشائع أن يُفترض أن الخميرة تختار طريقها، مع أن النص يقول إن السائل حولها هو الذي يحدّه. ويقترن المقطع بالمقطع الثالث والستين في أسئلة النصّين المتقابلين.

Wolves and Willows in Yellowstone

Wolves were shot out of Yellowstone National Park by the 1920s. The last known pair was killed in 1926. For the next seventy years the park had no wolves, and the elk, which are the large deer that wolves hunt there, lived in large numbers on the valley floors. Along the creeks the willows and young aspens were eaten down to stumps every year, and the beaver, which need willow, almost disappeared from the northern part of the park.

In 1995 and 1996 the park service brought thirty-one wolves from Canada and released them in the Lamar Valley. The animals were held in pens for ten weeks first, then let out. They bred quickly. Within ten years there were well over a hundred wolves in the park. Elk numbers on the northern range had fallen by more than half. Part of that was hunting by wolves, and part was that the elk now moved more and spent less time standing in open valleys.

Then the plants changed. Willows along some creeks that had been browsed flat for decades grew to two or three meters. Cottonwood seedlings survived their first years for the first time in living memory. Beaver colonies on the northern range rose from one in the early 1990s to nine by 2015. Each new dam held water back and made still more willow possible. Songbirds that nest in streamside bushes recovered along with them. The park service has photographs of the same stretches of creek taken in 1996 and in 2015, and the difference is not subtle. What is in dispute is not the change but its cause, and that argument is taken up later in this strand. The park keeps counts of wolves, elk and beaver every year, and has done so since the release. The willow measurements are taken at fixed points along the same creeks each summer.

WHAT THIS PASSAGE IS FOR

- Yellowstone had no wolves for about seventy years.
 - Thirty-one wolves were released in 1995 and 1996 and elk numbers later fell by more than half.
 - Willows, cottonwoods and beaver colonies all increased afterward.
-

Questions 14.1 to 14.10

on passage 14, Wolves and Willows in Yellowstone

14.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Wolves came back, elk fell, and the streamside plants recovered, though the cause is disputed
- B) The last known pair of wolves in the park was killed in 1926
- C) Beaver colonies on the northern range rose from one to nine by 2015
- D) The wolves brought from Canada were held in pens for ten weeks

14.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happened to elk numbers after the release?

- A) They rose as the willows grew taller along the creeks
- B) They stayed steady while the elk moved more often
- C) They fell by more than half on the northern range
- D) They were not counted until the photographs of 2015

14.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the text separates what is established from what is argued?

- A) “The animals were held in pens for ten weeks first, then let out”
- B) “Cottonwood seedlings survived their first years for the first time in living memory”
- C) “Beaver colonies on the northern range rose from one in the early 1990s to nine by 2015”
- D) “What is in dispute is not the change but its cause”

14.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Part of that was hunting by wolves, and part was that the elk now moved more and spent less time standing in open valleys. The fall in elk numbers therefore ____

Which choice most logically completes the text?

- A) was caused entirely by the wolves killing elk
- B) had more than one route running through it
- C) cannot be measured from the annual counts
- D) began before the wolves were released

14.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “recovered” most nearly mean?

- A) returned to former numbers
- B) got back something lost
- C) regained consciousness slowly
- D) were collected for study

14.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the park service photographs?

- A) It introduces the counts of wolves, elk and beaver
- B) It explains why the wolves were held in pens at first
- C) It reports which creeks the willow measurements cover
- D) It offers a form of evidence for the change just described

14.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 64 of this book. It explains that energy is lost at every transfer in a food web, that biomass falls by roughly a factor of ten at each step, and that a small number of wolves can affect a large quantity of plant.

Text 1 reports that few wolves changed a great deal of willow. Based on Text 2, what makes that possible?

- A) Four or five steps is the practical limit for a food chain
- B) Cold-blooded animals do better than warm-blooded ones
- C) Each wolf stands for a great deal of elk and of plant tissue
- D) Transfer efficiencies range from one percent to over thirty

14.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Willows along some creeks that had been browsed flat for decades grew to two or three meters. ___ cottonwood seedlings survived their first years for the first time in living memory.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) Likewise,
- C) In other words,
- D) Therefore,

14.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The park keeps counts of wolves, elk and beaver every year ___ has done so since the release.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) year; and
- B) year, it
- C) year and
- D) year, and

14.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Thirty-one wolves were released in 1995 and 1996.
- Elk numbers on the northern range fell by more than half.
- Willows grew to two or three meters and beaver colonies rose to nine.
- What is in dispute is not the change but its cause.

The student wants to describe the change for a reader without claiming to explain it. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Thirty-one wolves were released into the park in 1995 and in 1996
- After the release the elk fell by half and the willows and beaver rose, though what caused it is still argued
- Elk numbers on the northern range of the park fell by more than half
- What is in dispute about Yellowstone is not the change but its cause

ملخص المقطع 14 بالعربية

خلاصة: أُبديت الذئاب من حديقة يلوستون بالرمي حتى عشرينيات القرن العشرين، وقُتل آخر زوج معروف عام ألف وتسعمئة وستة وعشرين. وعلى مدى السبعين سنة التالية لم يكن في الحديقة ذئاب، وعاش الوعل بأعداد كبيرة في قيعان الوديان، وأكلت أشجار المصفاة والهور الصغير حتى الجذوع كل سنة، وكاد القندس يختفي من شمال الحديقة.

المعنى: المعنى أن خدمة الحديقة أعادت في عامي خمسة وتسعين وستة وتسعين أحدًا وثلاثين ذئبًا من كندا، فتكاثر سريعًا وصارت أكثر من مئة في عشر سنوات، وهبطت أعداد الوعل في المدى الشمالي بأكثر من النصف. ثم تغيرت النباتات: نما المصفاة إلى مترين أو ثلاثة، ونجت بادران الحور، وارتفعت مستعمرات القندس من واحدة إلى تسع.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: ما تغير بالقياس، لا سببه. والمتنازع عليه ليس التغير بل سببه، وذلك الجدل يُتناول لاحقًا في هذا الخط، وتحفظ الحديقة بعذات سنوية منذ الإعادة.

الصلة بالاختبار: في اختبار سات يُسأل عن التفصيل وعن حدود ما يثبت النص. والفخ الشائع أن يُقرأ تعاقب الأحداث إثباتًا للسببية، مع أن النص يقول صراحة إن السبب متنازع عليه. ويقترن المقطع بالمقطع الرابع والستين في أسئلة النصين المتقابلين.

Reindeer on St Matthew Island

St Matthew Island lies in the Bering Sea, about two hundred miles from the nearest other land. It is thirty-two miles long, treeless, and covered in moss, low grass and lichen, which is the slow crusty growth that reindeer eat. Nobody lives there. In 1944 the United States Coast Guard put twenty-nine reindeer ashore as an emergency meat supply for nineteen men stationed on the island. The war ended, the station closed, and the men left. The reindeer stayed.

They had no predators of any kind. No wolves, no bears, no hunters. The lichen on the island had been growing undisturbed for thousands of years and lay thick on the ground. A biologist counted the herd in 1957 and found about thirteen hundred animals in good condition. He counted again in 1963 and found six thousand. That is roughly two hundred times the number put ashore nineteen years earlier, on an island of fixed size.

The next count was in 1966. There were forty-two reindeer left, forty-one of them female and one male, and no young of that year. The winter of 1963 had been severe, with deep snow, but the important fact was underneath the snow. The lichen was gone, grazed down to bare rock and soil across most of the island, and lichen grows back at a rate measured in decades rather than years. The herd had eaten its own future. By the 1980s there were no reindeer on St Matthew Island at all. The whole episode took less than forty years from start to finish, and every number in it comes from counts made on the ground. A population can survive on borrowed capital for a while, and the bill falls due in one bad winter. Nothing about the island was unusual except the absence of anything that eats a reindeer. Mainland herds, hunted by wolves and by people, had held steady for centuries.

WHAT THIS PASSAGE IS FOR

- Twenty-nine reindeer were put on a remote island in 1944 with no predators.
 - The herd reached about six thousand by 1963 and forty-two by 1966.
 - The cause was the loss of the lichen, which regrows over decades.
-

Questions 15.1 to 15.10

on passage 15, Reindeer on St Matthew Island

15.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The island is thirty-two miles long and nobody lives on it
- B) A herd without predators grew enormously and then collapsed when its food was gone
- C) A severe winter with deep snow killed almost all the reindeer
- D) By the 1980s there were no reindeer on the island at all

15.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what was found in the count of 1963?

- A) About thirteen hundred animals in good condition
- B) Twenty-nine animals newly put ashore
- C) Forty-two animals, almost all of them female
- D) Six thousand animals on an island of fixed size

15.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the collapse came from damage the herd had done to its own food supply?

- A) “The lichen was gone, grazed down to bare rock and soil across most of the island, and lichen grows back at a rate measured in decades”
- B) “The winter of 1963 had been severe, with deep snow, but the important fact was underneath the snow”
- C) “They had no predators of any kind. No wolves, no bears, no hunters. The lichen on the island had been growing undisturbed”
- D) “every number in it comes from counts made on the ground. A population can survive on borrowed capital for a while”

15.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The lichen on the island had been growing undisturbed for thousands of years and lay thick on the ground. That stock of food therefore ____

Which choice most logically completes the text?

- A) renewed itself as fast as the herd could eat it
- B) had been maintained by grazing animals before 1944
- C) could support a herd far above what the island would sustain
- D) was the reason the station was closed after the war

15.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “survive” most nearly mean?

- A) outlive a particular rival
- B) keep going for a time
- C) escape from an accident
- D) remain after a loss

15.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the final sentence of the text?

- A) It supplies a comparison in which predators were present
- B) It reports the year in which the last reindeer disappeared
- C) It explains why the Coast Guard put the animals ashore
- D) It gives the rate at which the lichen grows back

15.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 65 of this book. It explains exponential and logistic growth, says the textbook picture assumes a population feels a shortage at once, and argues that a delay lets a population overshoot and damage its own ceiling.

Text 1 reports a herd of six thousand and then of forty-two. Based on Text 2, what feature of the animals explains the overshoot?

- A) Their food regrew at a rate measured in decades
- B) They had no wolves, bears or hunters on the island
- C) The winter of 1963 brought unusually deep snow
- D) A reindeer born in a good year goes on breeding for years

15.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

A biologist counted the herd in 1957 and found about thirteen hundred animals in good condition. ___ he counted again in 1963 and found six thousand.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In other words,
- C) Six years later,
- D) For example,

15.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

It is thirty-two miles long, treeless, and covered in moss, low grass and lichen ___ the slow crusty growth that reindeer eat.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) lichen, which is
- B) lichen which is
- C) lichen; which is
- D) lichen: which is

15.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Twenty-nine reindeer were put ashore in 1944 with no predators.
- The count reached six thousand by 1963.
- The lichen was grazed down to bare rock across most of the island.
- Lichen grows back at a rate measured in decades rather than years.

The student wants to explain to a reader why the herd collapsed so suddenly. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Twenty-nine reindeer were put ashore in 1944 and had no predators at all
- B) The herd had reached about six thousand animals by the year 1963
- C) The herd ate a food supply that takes decades to return, so once it was gone no number of animals could be fed
- D) The lichen was grazed down to bare rock across most of the island

ملخص المقطع 15 بالعربية

خلاصة: تقع جزيرة سنت ماثيو في بحر بيرنغ على نحو مئتي ميل من أقرب أرض أخرى، وطولها اثنان وثلاثون ميلاً، بلا أشجار، مغطاة بالطحالب والعشب المنخفض والأشنة التي يأكلها الرنة. ولا يسكنها أحد. وفي عام ألف وتسعمئة وأربعة وأربعين أنزل خفر السواحل تسعة وعشرين رنة مخزونة طارئة للحم لتسعة عشر رجلاً، ثم انتهت الحرب وأغلقت المحطة ورحل الرجال وبقيت الرنة.

المعنى: المعنى أنها لم يكن لها مفترسات من أي نوع، وكانت الأشنة قد نمت دون إزعاج آلاف السنين. فعُدّ القطيع عام سبعة وخمسين فكان نحو ألف وثلثمئة، وعُدّ عام ثلاثة وستين فكان سئة آلاف. وفي عام سئة وستين بقي اثنان وأربعون، منها إحدى وأربعون أنثى وذكر واحد ولا صغار لتلك السنة.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: أرقام عُدت على الأرض. وكانت الحقيقة المهمة تحت الثلج: الأشنة اختفت مرعية حتى الصخر، والأشنة تنمو من جديد بمعدل يُقاس بالعقود لا بالسنوات، فأكل القطيع مستقبه.

الصلة بالاختبار: في اختبار سات يُسأل عن التفصيل وعن الاستنتاج من سلسلة أرقام. والفخ الشائع أن يُنسب الانهيار إلى شدة الشتاء وحدها، مع أن النص يضع السبب المهم تحت الثلج. ويقترن المقطع بالمقطع الخامس والستين في أسئلة النصين المتقابلين.

The Pump on Broad Street

In late August 1854 people in Soho, a crowded district of London, began to die of cholera. The disease killed quickly, often within a day. Within a week more than five hundred were dead in a few streets. Most doctors believed that cholera traveled in bad air rising from drains and rotting matter. John Snow, a local physician, did not believe it, and he went out to look.

Snow collected the address of every death he could trace and marked each one on a street map as a small black bar. The bars piled up around one place: a public water pump at the corner of Broad Street. Houses a short walk away, but closer to a different pump, had almost none. He also found exceptions and chased them down. Workers at a brewery on the same street drank beer and water from the brewery's own well, and none of them fell ill. A widow in Hampstead, three miles off, died after a cart brought her a bottle of Broad Street water because she liked the taste.

On September 8 Snow persuaded the parish board to take the handle off the pump. Deaths were already falling, because many residents had fled, so the removal did not end the outbreak and Snow said so himself. What the map did was show that the disease had spread from a single source that people drank from, not from the air they breathed. Years later an inspection found a leaking cesspit, which is a pit for household waste, less than a meter from the well. Cloths from a sick baby had been washed into it. The water board did not accept the argument for another decade. Snow died in 1858 without seeing it accepted. The map itself is still reprinted in textbooks, and the pump site is marked with a replica on the street now called Broadwick.

WHAT THIS PASSAGE IS FOR

- Snow mapped each death as a bar on a street plan.
 - The brewery workers and the Hampstead widow were the exceptions that tested the case.
 - Removing the handle did not end the outbreak, and Snow said so.
-

Questions 16.1 to 16.10

on passage 16, The Pump on Broad Street

16.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The pump site is now marked with a replica on Broadwick Street
- B) Removing the handle from the pump brought the outbreak to an end
- C) A map of addresses showed that the disease came from water rather than air
- D) The water board did not accept the argument for another decade

16.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did the brewery workers escape the outbreak?

- A) They drank beer and water from a well of their own
- B) They lived a short walk from a different pump
- C) They had fled the district before the deaths began
- D) They were given water carried in from Hampstead

16.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that Snow tested his explanation rather than only illustrating it?

- A) “Within a week more than five hundred were dead in a few streets”
- B) “He also found exceptions and chased them down”
- C) “The map itself is still reprinted in textbooks”
- D) “Most doctors believed that cholera traveled in bad air rising from drains and rotting matter”

16.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Deaths were already falling, because many residents had fled, so the removal did not end the outbreak and Snow said so himself. The handle therefore ____

Which choice most logically completes the text?

- A) proves that the pump was not the source at all
- B) was removed before the first deaths occurred
- C) had been the only measure the parish board allowed
- D) cannot be credited with the fall that followed

16.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “spread” most nearly mean?

- A) laid out across a surface
- B) became more widely known
- C) passed from one place to others
- D) opened out to full width

16.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the widow in Hampstead?

- A) It reports the distance from Soho to the nearest clean pump
- B) It supplies a case far from the pump that still fits the explanation
- C) It explains why the parish board agreed to remove the handle
- D) It introduces the leaking cesspit found years afterward

16.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 66 of this book. It argues that an outbreak is governed by route, dose, the reproduction number and the incubation period, and that Snow could act on a map because cholera is waterborne and the source was fixed in one place.

Text 1 shows Snow acting on a map in 1854. Based on Text 2, which property of the disease made that possible?

- A) A waterborne route with the source fixed in a single place
- B) A reproduction number above one in a population with no immunity
- C) A dose requiring more than one organism to establish infection
- D) An incubation period long enough for contacts to be traced

16.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Snow collected the address of every death he could trace and marked each one on a street map. ___ the bars piled up around one place.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In other words,
- C) For instance,
- D) At once,

16.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Years later an inspection found a leaking cesspit ___ a pit for household waste ___ less than a meter from the well.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cesspit a pit for household waste
- B) cesspit, which is a pit for household waste,
- C) cesspit; a pit for household waste;
- D) cesspit, which is a pit for household waste

16.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The bars piled up around one public water pump.
- Houses closer to a different pump had almost none.
- Deaths were already falling because many residents had fled.
- Snow said himself that the removal did not end the outbreak.

The student wants to explain to a reader what the map did and did not accomplish. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The bars on the map piled up around one public water pump
- B) Houses that were closer to a different pump had almost no deaths
- C) Deaths were already falling because many of the residents had fled
- D) The map located the source in the water, though the removal of the handle cannot be credited with ending the outbreak

ملخص المقطع 16 بالعربية

خلاصة: في أواخر آب عام ألف وثمانمئة وأربعة وخمسين بدأ الناس في سوهو، وهي منطقة مزدحمة في لندن، يموتون بالكوليرا، وكان المرض يقتل سريعاً في يوم واحد غالباً. وفي أسبوع مات أكثر من خمسمئة في شوارع قليلة. وكان معظم الأطباء يعتقدون أن الكوليرا تنتقل في الهواء الفاسد الصاعد من المجاري، أما جون سنو فلم يعتقد ذلك وخرج ينظر.

المعنى: المعنى أن سنو جمع عنوان كل وفاة تمكن من تتبعها وعلمها على خريطة شارع بشرطة سوداء صغيرة، فتراكمت الشرطات حول مكان واحد: مضخة ماء عامة عند ناصية شارع برود. وتابع الاستثناءات أيضاً: عمال مصنع جعة على الشارع نفسه شربوا من بئر المصنع ولم يمرض منهم أحد، وأرملة في هامبستد ماتت بعد أن جلب لها قارورة من ماء برود.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: ما أظهرته الخريطة فعلاً. وما فعلته الخريطة هو إظهار أن المرض انتشر من مصدر واحد يشربه الناس لا من الهواء الذي يتنفسونه، ولم يقبل الاحتجاج من مجلس الماء إلا بعد عقد.

الملة بالاختبار: في اختبار سات يُسأل عن منهج الاستدلال وعن حدود ما يثبت. والفح الشائع أن يُنسب انتهاء الوباء إلى رفع يد المضخة، مع أن النص يقول إن الوفيات كانت تهبط أصلاً وأن سنو قال ذلك بنفسه. ويقترن المقطع بالمقطع السادس والسّتين في أسئلة النصّين المتقابلين.

Why Wheat Follows Clover

Two fields on the same farm can be given the same seed, the same rain and the same plowing and still produce very different crops of wheat. One useful predictor is what grew in each field the year before. Wheat sown after clover, which is a low plant of the pea family grown for hay, will usually beat wheat sown after wheat. The difference can be a third or more. English farmers knew this long before anyone could say why.

In the eighteenth century a rotation became standard across light soils in Norfolk. The farmer divided a field into four parts and moved the crops around them on a four-year cycle: turnips, then barley, then clover, then wheat. The turnips were a root crop lifted for winter feed. The clover was cut for hay or eaten by sheep, whose droppings stayed on the land, and the roots were then turned into the soil. Yields on such farms roughly doubled over the century. The system spread across northern Europe as the Norfolk four-course rotation.

The explanation is in the roots. Clover and other members of the pea family carry small swellings called nodules on their roots. Inside these nodules live bacteria that take nitrogen from the air and turn it into a form that plants can use. Wheat cannot do this and must consume what it finds in the soil. Clover leaves the soil richer than it found it; wheat leaves it poorer. A farmer who alternates the two runs a slow cycle of deposit and withdrawal. One who grows wheat on wheat is making withdrawals only, and the yields show it by the third or fourth year. The practice spread because it paid, not because the chemistry was understood. Nitrogen itself was not identified as the active element until the 1830s, two generations after the rotation had become normal.

WHAT THIS PASSAGE IS FOR

- Wheat after clover outyields wheat after wheat, often by a third.
 - The Norfolk four-course rotation moved turnips, barley, clover and wheat around one field.
 - Bacteria in clover root nodules take nitrogen from the air.
-

Questions 17.1 to 17.10

on passage 17, Why Wheat Follows Clover

17.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Nitrogen was not identified as the active element until the 1830s
- B) Yields on Norfolk farms roughly doubled over the eighteenth century
- C) The turnips in the rotation were a root crop lifted for winter feed
- D) Wheat does better after clover, and the reason lies in bacteria on clover roots

17.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happened to the clover in the rotation?

- A) It was lifted and stored as winter feed for the sheep
- B) It was cut for hay or eaten by sheep, and the roots turned in
- C) It was sown immediately after the wheat each year
- D) It was left standing through the winter to protect the soil

17.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the practice was adopted for reasons unconnected with the explanation?

- A) “Clover and other members of the pea family carry small swellings called nodules on their roots”
- B) “The farmer divided a field into four parts and moved the crops around them on a four-year cycle”
- C) “The practice spread because it paid, not because the chemistry was understood”
- D) “Inside these nodules live bacteria that take nitrogen from the air”

17.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Clover leaves the soil richer than it found it; wheat leaves it poorer. A farmer who alternates the two therefore ____

Which choice most logically completes the text?

- A) runs a cycle of deposit and withdrawal
- B) needs no winter feed for the sheep
- C) exhausts the field by the fourth year
- D) must apply nitrogen from outside the farm

17.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “consume” most nearly mean?

- A) destroy by burning
- B) buy for immediate use
- C) take up a great deal of time
- D) draw on what is available

17.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the opening paragraph about two fields on the same farm?

- A) It names the bacteria that live inside the root nodules
- B) It reports the four crops of the Norfolk rotation in order
- C) It sets up a difference that the rest of the text explains
- D) It explains why the rotation spread across northern Europe

17.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 67 of this book. It sets out fixation, uptake, breakdown and return as the steps of the nitrogen cycle, and names harvest, leaching and gas losses as the three leaks from a field.

Text 1 says a farmer who grows wheat on wheat makes withdrawals only. Based on Text 2, which leak does the harvest itself represent?

- A) Nitrogen washed below the root zone by rain
- B) Nitrogen removed in the grain and carried away
- C) Nitrogen returned to the air as gas by bacteria
- D) Nitrogen fixed industrially by the Haber process

17.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Wheat cannot do this and must consume what it finds in the soil. ____ clover leaves the soil richer than it found it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) In other words,
- D) Consequently,

17.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Wheat sown after clover ____ a low plant of the pea family grown for hay ____ will usually beat wheat sown after wheat.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) clover which is a low plant of the pea family grown for hay
- B) clover; which is a low plant of the pea family grown for hay;
- C) clover, which is a low plant of the pea family grown for hay,
- D) clover, which is a low plant of the pea family grown for hay

17.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- English farmers knew wheat did better after clover long before anyone could say why.
- Yields on Norfolk farms roughly doubled over the century.
- The practice spread because it paid.
- Nitrogen was not identified as the active element until the 1830s.

The student wants to explain to a reader why the rotation worked before anyone understood it. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The rotation paid for itself in doubled yields two generations before the chemistry behind it was known
- Yields on farms using the rotation roughly doubled over the century
- English farmers knew that wheat did better after clover had been grown
- Nitrogen was not identified as the active element until the 1830s

ملخص المقطع 17 بالعربية

خلاصة: حقلان في المزرعة نفسها قد يُعطيان البذر نفسه والمطر نفسه والحراثة نفسها ويُنتجان محصولي قمح مختلفين جدًا، وأحد المؤشرات المفيدة هو ما نما في كل حقل في السنة السابقة. فالقمح المزروع بعد البرسيم يتجاوز عادةً القمح المزروع بعد القمح، والفرق قد يبلغ الثلث أو أكثر، وقد عرف المزارعون الإنجليز ذلك قبل أن يستطيع أحد تفسيره.

المعنى: المعنى أن التفسير في الجذور. فالبرسيم وغيره من العائلة البقولية يحمل انتفاخات صغيرة تُسمى العقيدات على جذوره، وفي داخلها تعيش بكتيريا تأخذ النيتروجين من الهواء وتحوله إلى صورة تستطيع النباتات استخدامها. والقمح لا يقدر على ذلك وعليه أن يستهلك ما يجده في التراب.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: ممارسة زراعية مؤرخة بنتائجها. فدورة نورفولك الرباعية صارت قياسية في القرن الثامن عشر، وتضاعفت المحاصيل تقريبًا على مدى القرن، وانتشرت الممارسة لأنها كانت مربحة لأن الكيمياء كانت مفهومة.

الصلة بالاختبار: في اختبار سات يُسأل عن التفصيل وعن الاستنتاج ومعنى الكلمة في سياقها. والفجّ الشائع أن يُفترض أن الفهم الكيميائي سبق الممارسة، مع أن النص يقول إن النيتروجين لم يُعرف عنصرًا فاعلًا إلا في ثلاثينيات القرن التاسع عشر. ويقترن المقطع بالمقطع السابع والستين في أسئلة النصين المتقابلين.

One Instrument on a Volcano

Near the top of Mauna Loa, a volcano on the island of Hawaii, an instrument has been drawing air through a tube and measuring the carbon dioxide in it every hour since 1958. The site was chosen because it is far from cities, forests and factories, eleven thousand feet up, in air that has crossed thousands of miles of ocean. Charles David Keeling set up the first measuring system there and ran it for forty-seven years.

The record is one of the most familiar graphs in science. It does two things at once. It wobbles up and down each year, and it climbs. The yearly wobble has a sharp shape, like the teeth of a saw. Carbon dioxide falls through the northern spring and summer, when the forests and crops of the northern half of the world are growing and taking it in. It rises again through the fall and winter as leaves drop and rot. The swing is about six parts per million from peak to trough.

The climb is the other half. The first readings in 1958 were near three hundred and fifteen parts per million, which is the unit in which the measurement is reported. The figure passed four hundred in 2013 and has gone on rising since. The yearly wobble has not changed much, but the level around which it wobbles has shifted upward every single year of the record without exception. That is the part no one disputes, because it is a direct reading from an instrument rather than an estimate. Other stations, from Alaska to the South Pole, now run the same measurement and give the same climb with a slightly different wobble. The South Pole record shows almost no yearly wobble, because the southern half of the world has little plant life to drive one. Keeling nearly lost his funding twice in the 1960s.

WHAT THIS PASSAGE IS FOR

- One station on Mauna Loa has measured carbon dioxide hourly since 1958.
 - The yearly sawtooth comes from northern plant growth taking carbon dioxide in and releasing it.
 - The level has risen every year of the record, from about 315 to over 400 parts per million.
-

Questions 18.1 to 18.10

on passage 18, One Instrument on a Volcano

18.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) One instrument has recorded a yearly wobble and a yearly climb since 1958
- B) Keeling nearly lost his funding twice during the 1960s
- C) The South Pole record shows almost no yearly wobble at all
- D) The site was chosen because it is far from cities and factories

18.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why does carbon dioxide fall each northern spring?

- A) Because leaves drop and rot through the colder months
- B) Because the instrument is eleven thousand feet above the sea
- C) Because northern forests and crops are growing and taking it in
- D) Because the southern half of the world has little plant life

18.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the climb is harder to dispute than an estimate would be?

- A) “The site was chosen because it is far from cities, forests and factories”
- B) “The swing is about six parts per million from peak to trough”
- C) “Other stations, from Alaska to the South Pole, now run the same measurement”
- D) “it is a direct reading from an instrument rather than an estimate”

18.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The yearly wobble has not changed much, but the level around which it wobbles has shifted upward every single year of the record. The two features of the graph are therefore ____

Which choice most logically completes the text?

- A) the same process measured in two ways
- B) independent of one another in the record
- C) both produced by northern plant growth
- D) confined to the station on Mauna Loa

18.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “shifted” most nearly mean?

- A) moved steadily higher
- B) changed in shape
- C) swapped one thing for another
- D) slid sideways a little

18.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the South Pole record?

- A) It reports the first readings taken in 1958
- B) It explains why the Mauna Loa site was chosen
- C) It shows that the climb has been measured only in Hawaii
- D) It confirms the explanation offered for the yearly wobble

18.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 68 of this book. It explains that the ground radiates in the infrared, that water vapor and carbon dioxide absorb there, and that a substantial fraction of carbon dioxide stays in circulation for centuries.

Text 1 reports that the curve has no downward step in any year. Based on Text 2, which property explains that?

- A) The strongest parts of the absorption band are already saturated
- B) A warmer atmosphere holds more water vapor than a cold one
- C) A large share of the gas stays in circulation for centuries
- D) Methane breaks down in the atmosphere in about a decade

18.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Carbon dioxide falls through the northern spring and summer, when the forests and crops are growing and taking it in. ___ it rises again through the fall and winter as leaves drop and rot.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) Then in turn,
- C) In other words,
- D) For instance,

18.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The first readings in 1958 were near three hundred and fifteen parts per million ___ the unit in which the measurement is reported.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) million which is
- B) million; which is
- C) million: which is
- D) million, which is

18.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The record wobbles up and down each year and it climbs.
- The swing is about six parts per million from peak to trough.
- The yearly wobble has not changed much.
- The level around which it wobbles has shifted upward every year.

The student wants to help a reader read the graph without confusing its two features. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The record both wobbles up and down each year and climbs over time
- B) The sawtooth of about six parts per million has stayed the same size while the line it sits on has risen every year
- C) The swing is about six parts per million from its peak to its trough
- D) The level around which the record wobbles has shifted upward every year

ملخص المقطع 18 بالعربية

خلاصة: قرب قمة ماونا لوا، وهو بركان في جزيرة هاواي، يسحب جهاز الهواء عبر أنبوب وقياس ثاني أكسيد الكربون فيه كل ساعة منذ عام ألف وتسعمئة وثمانية وخمسين. واختير الموقع لأنه بعيد عن المدن والغابات والمصانع، على ارتفاع أحد عشر ألف قدم، في هواء عبر آلاف الأميال من المحيط، وأنشأ تشارلز ديفيد كيلينغ أول منظومة قياس هناك وأدارها سبعة وأربعين سنة.

المعنى: المعنى أن السجل يفعل شيئين في وقت واحد: يتذبذب صعودًا وهبوطًا كل سنة، ويصعد. فالتذبذب السنوي حاد الشكل كأسنان منشار: يهبط ثاني أكسيد الكربون في الربيع والصيف الشماليين حين تنمو الغابات والمحاصيل وتأخذه، ويرتفع في الخريف والشتاء حين تتساقط الأوراق وتتعتقن، والمدى نحو ستة أجزاء في المليون.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: قراءة مباشرة من جهاز لا تقدير. فالقراءات الأولى عام ثمانية وخمسين كانت نحو ثلاثمئة وخمسة عشر جزءًا في المليون، وتجاوز الرقم أربعمئة عام ألفين وثلاثة عشر، وارتفع المستوى كل سنة من السجل بلا استثناء.

الصلة بالاختبار: في اختبار سات يُسأل عن التعليق على رسم بياني موصوف بالكلمات. والفج الشائع أن يُخلط التذبذب السنوي بالمعود طويل المدى، مع أن النص يفصل بينهما فصلًا واضحًا. ويقترن المقطع بالمقطع الثامن والستين في أسئلة النصين المتقابلين.

A Rift You Can Walk Into

At Thingvellir in southwest Iceland there is a valley with a wall of dark rock on either side. The two walls are the torn edges of a crack in the crust, which is the outer rock layer of the Earth. A visitor can walk along the floor between them. The ground there is pulling apart at about an inch a year, which is roughly the rate at which a fingernail grows. Over a thousand years that is thirty feet, and the valley floor has dropped as the sides have moved away from each other.

The crack is part of a line that runs the length of the Atlantic Ocean, some ten thousand miles from north of Iceland to the far south. Almost all of it is two miles under water. Iceland is one of the few places where the line comes ashore, because an unusually hot region beneath the island has built up enough rock to stand above the sea. New ground is made along the crack: molten rock rises, cools and sticks to both edges, so the two sides grow outward from the middle.

Thingvellir has a second kind of history. Iceland's assembly met in this valley from the year 930 until 1798. That makes it one of the oldest meeting places in Europe. The chieftains who gathered there had no idea that they stood between two plates. The rock they used as a speaking platform is basalt, which is rock that was once liquid. Earthquakes are common and small. When the land moves suddenly rather than slowly, farms and roads are threatened, and Iceland's building rules reflect that. The slow pull continues whether anyone is watching or not. Surveyors have measured the width of the valley with satellite instruments since the 1990s. Those figures agree with the long-term average taken from the age of the rock on each side.

WHAT THIS PASSAGE IS FOR

- The valley walls at Thingvellir are the torn edges of a crack in the crust.
 - The ground is pulling apart at about an inch a year.
 - New ground forms along the crack as molten rock rises, cools and sticks to both edges.
-

Questions 19.1 to 19.10

on passage 19, A Rift You Can Walk Into

19.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Iceland assembly met in the valley from the year 930 until 1798
- B) A visitor can stand in a valley where two plates are pulling apart and new ground is made
- C) Satellite instruments have measured the valley since the 1990s
- D) The rock used as a speaking platform is basalt, once liquid

19.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how fast is the ground pulling apart?

- A) About two miles in ten thousand years of slow movement
- B) About an inch a century, which is slower than a fingernail
- C) About ten thousand miles from north of Iceland to the far south
- D) About thirty feet in a thousand years, or an inch a year

19.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that two independent methods agree on the rate?

- A) “Those figures agree with the long-term average taken from the age of the rock on each side”
- B) “Almost all of it is two miles under water”
- C) “The chieftains who gathered there had no idea that they stood between two plates”
- D) “New ground is made along the crack: molten rock rises, cools and sticks to both edges”

19.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

When the land moves suddenly rather than slowly, farms and roads are threatened, and Iceland building rules reflect that. The danger therefore ____

Which choice most logically completes the text?

- A) comes from the steady inch a year of separation
- B) has been removed by the rules now in force
- C) lies in the sudden movements rather than the slow pull
- D) is confined to the floor of the valley itself

19.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “threatened” most nearly mean?

- A) warned of a penalty
- B) put at risk of damage
- C) frightened into leaving
- D) promised a reprisal

19.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the hot region beneath the island?

- A) It explains why the line comes ashore in Iceland at all
- B) It reports how deep the line lies under the Atlantic
- C) It introduces the assembly that met in the valley
- D) It gives the rate at which the valley floor has dropped

19.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 69 of this book. It explains that there are only three kinds of plate edge, that plates moving apart build new crust and produce ridges and shallow earthquakes, and that collision and erosion set the height of a range.

Text 1 reports small, common earthquakes at Thingvellir. Based on Text 2, which kind of edge does that indicate?

- A) A collision in which one plate goes down beneath another
- B) A boundary where two plates slide past one another
- C) A range still rising because the collision has not finished
- D) A divergent edge, where new crust is being made

19.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

A visitor can walk along the floor between them. ____ the ground there is pulling apart at about an inch a year.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) All the while,
- D) For instance,

19.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The two walls are the torn edges of a crack in the crust ____ the outer rock layer of the Earth.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) crust, which is
- B) crust which is
- C) crust; which is
- D) crust: which is

19.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The two walls are the torn edges of a crack in the crust.
- The ground is pulling apart at about an inch a year.
- Almost all of the line is two miles under water.
- Iceland is one of the few places where the line comes ashore.

The student wants to explain to a reader why Thingvellir is worth visiting as a geological site. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The two walls of the valley are the torn edges of a crack in the crust
- B) The ground in the valley is pulling apart at about an inch each year
- C) A boundary that is otherwise two miles under water can here be walked into on foot
- D) Almost all of the line runs two miles beneath the Atlantic Ocean

ملخص المقطع 19 بالعربية

خلاصة: في ثينغفيلير بجنوب غرب أيسلندا وإد بجدار من صخر داكن على كل جانب، والجداران هما الحافتان الممزقتان لشق في القشرة، أي الطبقة الصخرية الخارجية للأرض. ويستطيع زائر أن يسير على الأرضية بينهما. والأرض هناك تتباعد بنحو بوصة في السنة، وهو تقريباً معدل نمو الأظافر، فذلك ثلاثون قدماً في ألف سنة.

المعنى: المعنى أن الشق جزء من خط يمتد بطول المحيط الأطلسي نحو عشرة آلاف ميل، وكله تقريباً تحت ميلين من الماء. وأيسلندا من الأماكن القليلة التي يصل فيها الخط إلى البر، لأن منطقة حارة بشكل غير معتاد تحت الجزيرة بنت صخوراً يكفي للوقوف فوق البحر. وتُصنع أرض جديدة على الشق: يصعد الصخر المنصهر ويرد ويلتصق بالحافتين.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: مكان يمكن الوقوف فيه ورقم يمكن قياسه. ولثينغفيلير تاريخ آخر: اجتمع مجلس أيسلندا في هذا الوادي من عام تسعمئة وثلاثين حتى عام ألف وسبعمئة وثمانية وتسعين، ولم يدر الزعماء أنهم يقفون بين صفيحتين.

الصلة بالاختبار: في اختبار سات يُسأل عن التفصيل ومعنى الكلمة وبنية المقطع. والفخ الشائع أن يُفترض أن الخطر من الحركة البطيئة، مع أن النص ينسب التهديد إلى الحركة المفاجئة. ويقترن المقطع بالمقطع التاسع والستين في أسئلة النصين المتقابلين.

A Cliff of Ice in West Antarctica

Thwaites Glacier sits in West Antarctica and reaches the sea along a front about eighty miles wide. The ice behind that front is more than a mile thick in places. If all of it melted, the water added to the ocean would raise sea level by roughly two feet. The glacier also acts as a plug for a much larger body of ice behind it. For that reason more field money has been spent on it in the last ten years than on any other glacier.

The front is not a cliff standing on rock. For the last part of its journey the ice floats, and the line where it lifts off the sea bed is called the grounding line. That line has moved inland. Radar and satellite measurements put the retreat at about nine miles between 1992 and 2011 in one part of the glacier. The floating ice in front, which gives the glacier behind it some shelter from the open sea, has thinned and cracked, and large pieces have broken away.

The reason is not warm air. Air temperatures over that part of Antarctica stay below freezing for most of the year. The reason is water. A current of relatively warm sea water reaches the underside of the floating ice. It is about two degrees above the freezing point of salt water. That is enough to melt the ice from below at tens of meters a year in places. In 2019 a team drilled through six hundred meters of ice and lowered a robot into the cavity, meaning the space under the floating ice. That is how the melting rate at the grounding line was first measured directly. The hole took five days to make with a hot-water drill. The robot sent back pictures of a staircase of ice overhead.

WHAT THIS PASSAGE IS FOR

- Thwaites holds enough ice to raise sea level by roughly two feet and plugs more behind it.
 - The grounding line, where ice lifts off the sea bed, retreated about nine miles in twenty years.
 - Warm sea water, not warm air, does the melting.
-

Questions 20.1 to 20.10

on passage 20, A Cliff of Ice in West Antarctica

20.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The hole drilled in 2019 took five days to make with a hot-water drill
- B) The robot sent back pictures of a staircase of ice overhead
- C) A glacier is retreating because warm sea water is melting it from below
- D) More field money has been spent on Thwaites than on any other glacier

20.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the grounding line?

- A) The line where the floating ice lifts off the sea bed
- B) The front along which the glacier reaches the sea
- C) The depth at which the warm current is found
- D) The edge where large pieces have broken away

20.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the cause of the melting is not the temperature of the air?

- A) “That line has moved inland. Radar and satellite measurements put the retreat at about nine miles”
- B) “Air temperatures over that part of Antarctica stay below freezing for most of the year”
- C) “The ice behind that front is more than a mile thick in places”
- D) “has thinned and cracked, and large pieces have broken away”

20.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A current of relatively warm sea water reaches the underside of the floating ice. It is about two degrees above the freezing point of salt water, and that is enough to melt the ice from below at tens of meters a year. Two degrees therefore ____

Which choice most logically completes the text?

- A) is colder than the air above the glacier
- B) would melt the whole glacier within a decade
- C) has been measured only since 2019
- D) is a small margin doing a great deal of work

20.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “shelter” most nearly mean?

- A) a roof over a structure
- B) a place of refuge for people
- C) protection from a force
- D) a legal exemption from tax

20.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the robot lowered into the cavity?

- A) It reports the width of the front at the sea
- B) It names how the melting rate was first measured directly
- C) It explains why the floating ice has thinned and cracked
- D) It gives the depth of the ice behind the front

20.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 70 of this book. It explains that water carries heat far better than air, that melt water rising along the ice draws more warm water in, and that a bed deepening inland makes a retreat accelerate.

Text 1 reports that the grounding line has moved inland. Based on Text 2, why does that matter beyond the distance involved?

- A) Because a deepening bed puts thicker ice into contact with the water
- B) Because air temperatures stay below freezing for most of the year
- C) Because the front is about eighty miles wide at the sea
- D) Because the hole took five days to drill with hot water

20.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The front is not a cliff standing on rock. ___ for the last part of its journey the ice floats.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) For instance,
- C) In short,
- D) Instead,

20.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

In 2019 a team drilled through six hundred meters of ice and lowered a robot into the cavity ___ the space under the floating ice.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cavity; meaning
- B) cavity, meaning
- C) cavity meaning
- D) cavity: meaning,

20.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- If all of it melted, sea level would rise by roughly two feet.
- The glacier acts as a plug for a much larger body of ice behind it.
- The grounding line retreated about nine miles between 1992 and 2011.
- More field money has been spent on it than on any other glacier.

The student wants to explain to a reader why this glacier receives so much attention. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The grounding line retreated about nine miles between 1992 and 2011
- B) More field money has been spent on it than on any other glacier
- C) If the whole of it melted, sea level would rise by roughly two feet
- D) It holds two feet of sea level itself and plugs a far larger body of ice, and its grounding line is already retreating

ملخص المقطع 20 بالعربية

خلاصة: يقع نهر ثوابتس الجليدي في غرب أنتاركتيكا ويبلغ البحر على جبهة عرضها نحو ثمانين ميلاً، والجليد وراء تلك الجبهة أسمك من ميل في أماكن. ولو ذاب كله لرفع الماء المضاف إلى المحيط مستوى البحر نحو قدمين، وهو يعمل أيضاً سداً لكتلة جليد أكبر بكثير وراءه، ولذلك أنفق عليه من مال الميدان في عشر سنوات أكثر مما أنفق على أي نهر جليدي آخر.

المعنى: المعنى أن الجبهة ليست جرفاً قائماً على مخر. فالجليد يطفو في الجزء الأخير من رحلته، والخط الذي يرتفع فيه عن قاع البحر يُسمى خط التأريض. وقد تحرّك هذا الخط إلى الداخل نحو تسعة أميال بين عام ألف وتسعمئة واثنين وتسعين وعام ألفين وأحد عشر في جزء من النهر.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الظاهرة: السبب ليس الهواء الدافئ بل الماء. فتتأثر من ماء البحر الدافئ نسبياً يصل إلى الوجه السفلي للجليد الطافي، وهو نحو درجتين فوق نقطة تجمّد الماء المالح، وذلك يكفي لإذابة عشرات الأمطار في السنة.

الصلة بالاختبار: في اختبار سات تتكرّر تقارير العلوم التي تستبعد سبباً متوقعاً وتقدّم آخر. والفحّ الشائع أن يُنسب الذوبان إلى حرارة الهواء، مع أن النص يقول إنّ الهواء يبقى تحت التجمّد معظم السنة. ويقترن المقطع بالمقطع السبعين في أسئلة النصّين المتقابلين.

PHY · S01 · phenomenon

Eleven Weighings of One Stone

A smooth stone from the bed of the river Aire is placed on a laboratory balance, which is an instrument that compares an unknown weight against a known one. The reading is 48.213 grams. It is lifted off and put back, and the reading is now 48.209. Eleven weighings in a row give eleven numbers. They differ in the third decimal place, and sometimes in the second. Nothing has been done to the stone between weighings. It has not been chipped, wetted or warmed. The stone has one mass, and the instrument has given eleven answers.

Some of the spread has obvious sources. A door opens and moves the air. The bench carries a slight vibration from a corridor. A fingerprint adds a film of oil that weighs something. The room is warming through the morning, and the metal parts of the balance expand as it does. None of these is a mistake in the ordinary sense. Nobody wrote the number down wrong. They are the limits of the arrangement being used.

What a careful worker does next is not to pick the reading that looks best. The eleven numbers are kept, and their average is taken, which here is 48.211 grams. The spread of the eleven is also recorded, because that spread is the honest statement of how well this balance can measure this stone in this room. A result given as 48.211 grams, plus or minus 0.002, says two things at once: a best figure and a width. A result given as 48.213 grams on its own looks more confident and tells the reader less. Every quantity in a science report carries a width of that kind, whether or not it is printed, and the habit of asking how wide is the beginning of reading such a report properly. Working laboratories record how many repeats were made.

WHAT THIS PASSAGE IS FOR

- One stone weighed eleven times gives eleven different readings.
 - The spread comes from the arrangement, not from mistakes.
 - An honest result states a best figure and a width.
-

Questions 21.1 to 21.10

on passage 21, Eleven Weighings of One Stone

21.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A door opening moves the air near the balance
- B) A measurement is a best figure together with a width
- C) A careful worker picks the reading that looks best
- D) The stone was taken from the bed of the river Aire

21.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what was the average of the eleven weighings?

- A) It was 48.213 grams, the first reading
- B) It was 48.209 grams, the second reading
- C) It was 0.002 grams, the stated spread
- D) It was 48.211 grams, the average taken

21.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the spread is not a record of carelessness?

- A) “Nobody wrote the number down wrong. They are the limits of the arrangement being used”
- B) “Eleven weighings in a row give eleven numbers. They differ in the third decimal place”
- C) “A result given as 48.213 grams on its own looks more confident and tells the reader less”
- D) “Working laboratories record how many repeats were made”

21.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

They are the limits of the arrangement being used. A worker who wanted a narrower spread would therefore have to ____

Which choice most logically completes the text?

- A) weigh the stone once and record that
- B) report the reading without any width
- C) change the balance, the bench or the room
- D) warm the stone before each weighing

21.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “measure” most nearly mean?

- A) take a careful step
- B) determine the size of
- C) judge the worth of
- D) mark out in portions

21.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of sources of spread?

- A) It shows that the spread has causes and not blame
- B) It introduces the average of the eleven readings
- C) It argues that the balance was badly built
- D) It reports the mass the stone actually has

21.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 71 of this book. It distinguishes random error, which falls as the square root of the number of readings, from systematic error, which is identical in every reading and survives averaging.

Text 1 records eleven readings of one stone. Based on Text 2, what would be added to that record?

- A) The spread should be reported along with the average
- B) Air movement and vibration each add to the spread
- C) Averaging eleven readings removes every kind of error
- D) A kind of error that averaging would not remove

21.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Some of the spread has obvious sources. ____ a door opens and moves the air.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) For example,
- D) In conclusion,

21.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The stone has one mass ____ and the instrument has given eleven answers.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) mass, and
- B) mass and
- C) mass; and
- D) mass and,

21.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Eleven weighings of the same stone gave eleven numbers.
- The average of the eleven was 48.211 grams.
- The spread of the eleven is recorded as well.
- A result given as one number alone looks more confident and tells the reader less.

The student wants to explain why a single reading tells a reader less. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Eleven weighings of the same stone gave eleven different numbers
- B) The average of the eleven weighings was 48.211 grams
- C) Eleven readings of one stone differ, so a figure without a spread hides how well the balance can do
- D) A result given as one number alone looks more confident

ملخص المقطع 21 بالعربية

خلاصة: حجر أُمّس من قاع نهر إبير يُوضع على ميزان مختبري، وهو آلة تقاييس وزنًا مجهولًا بوزن معلوم، فتكون القراءة ثمانية وأربعين غرامًا ومئتين وثلاثة عشر من الألف. ثم يُرفع ويُعاد فتتغير القراءة، وإحدى عشرة وزنة متوالية تعطي أحد عشر رقمًا تختلف في المنزلة الثالثة من الكسر وأحيانًا في الثانية.

المعنى: المعنى أنّ شيئًا لم يُفعل بالحجر بين الوزنات: لم يُكسر ولم يُبلّ ولم يُدقّ. فللحجر كتلة واحدة وقد أعطت الآلة أحد عشر جوابًا. ولبعض التبدّد أسباب ظاهرة: باب يُفتح فيحرك الهواء، ومنضدة تحمل رجفة من ممّر، وبصمة أصبع تضيف غشاءً من زيت له وزن، وغرفة تدفأ فيتوسّع معدن الميزان. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: ليست هذه أخطاءً بالمعنى المعتاد، ولم يكتب أحد رقمًا خطأ، وإنّما هي حدود الترتيب المستعمل، فيحتفظ بالأرقام كلّها ويؤخذ متوسطها ويُسجل تبدّداتها.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة القائمة وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُختار القراءة الأحسن مظهرًا، مع أنّ النصّ ينصّ على خلاف ذلك. ويقترن المقطع بالمقطع الحادي والسبعين في أسئلة النصّين المتقابلين.

A Hammer and a Feather

On August 2, 1971, at the end of the last walk of the Apollo 15 mission, David Scott stood in front of a television camera on the surface of the Moon. In his right hand he held a geologist's hammer that weighed about one and a half pounds on Earth. In his left he held a falcon feather. He let go of both at the same moment. They fell together and landed together, and the film runs for about one and a third seconds.

On Earth the same demonstration fails every time. A feather dropped beside a hammer drifts and turns and arrives much later. The reason is not weight. The reason is air. A feather has a large surface for its small mass, so the air it must push aside slows it a great deal, while the same air barely affects the hammer. Remove the air and the difference goes with it. Galileo had argued for this result in the 1630s without being able to produce it cleanly, because he had no way to remove the air from a room.

The Moon has no air to speak of. Scott had suggested the demonstration himself, and the flight planners agreed to it partly because it would be watched by schoolchildren. The fall also shows a second thing. Both objects reached the ground in about one and a third seconds from a height of about five feet, which is slower than the same drop on Earth. The Moon pulls less hard. A sensitive instrument can detect that difference without any dropping at all, but a hammer, a feather and a camera make it visible to anyone. The pull at the surface of the Moon is about one sixth of the pull at the surface of the Earth. Scott reported afterward that he had been slightly worried the feather would stick to his glove.

WHAT THIS PASSAGE IS FOR

- A hammer and a feather dropped on the Moon fell together.
 - On Earth the difference is caused by air, not by weight.
 - The fall is also slower than on Earth, because the Moon pulls less hard.
-

Questions 22.1 to 22.10

on passage 22, A Hammer and a Feather

22.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Scott had suggested the demonstration himself
- B) The hammer fell faster because it weighed more
- C) Removing the air removes the difference between the two falls
- D) The film of the drop runs for about a second

22.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why does the demonstration fail on Earth?

- A) The feather has a large surface for its small mass
- B) The hammer weighs about one and a half pounds
- C) The Earth pulls six times harder than the Moon
- D) The feather has more mass than the hammer

22.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the demonstration shows two things rather than one?

- A) “They fell together and landed together, and the film runs for about one and a third seconds”
- B) “The fall also shows a second thing. Both objects reached the ground in about one and a third seconds from a height of about five feet, which is slower than the same drop on Earth”
- C) “Galileo had argued for this result in the 1630s without being able to produce it cleanly”
- D) “A feather has a large surface for its small mass, so the air it must push aside slows it a great deal”

22.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A sensitive instrument can detect that difference without any dropping at all, but a hammer, a feather and a camera make it visible to anyone. The value of the demonstration is therefore ____

Which choice most logically completes the text?

- A) that no instrument could have measured it
- B) that it took place at the end of the mission
- C) that it corrected what Galileo had argued
- D) that it shows rather than reports the result

22.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “detect” most nearly mean?

- A) uncover a crime
- B) explain the cause of
- C) find by measurement
- D) watch on a screen

22.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the same demonstration on Earth?

- A) It introduces the pull at the surface of the Moon
- B) It sets up the question that the air then answers
- C) It argues that the lunar result was a trick
- D) It reports the date of the Apollo 15 walk

22.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 72 of this book. It explains that braking force from friction is roughly proportional to the weight on the tires, and that braking distance roughly quadruples when speed doubles because kinetic energy rises with the square of speed.

Text 1 shows two objects falling alike. Based on Text 2, what would be added to that showing?

- A) Where weight does make a difference after all
- B) Air resistance slows a feather more than a hammer
- C) The Moon pulls about one sixth as hard as the Earth
- D) Braking distance rises in proportion to the speed itself

22.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The reason is not weight. The reason is air. ____ remove the air and the difference goes with it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In other words,
- D) Accordingly,

22.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He let go of both at the same moment ____ they fell together and landed together.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) moment, they
- B) moment. They
- C) moment they
- D) moment, and, they

22.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A feather has a large surface for its small mass, so air slows it a great deal.
- The Moon has no air to speak of.
- Galileo could not remove the air from a room.
- The hammer and the feather fell together and landed together.

The student wants to explain why the demonstration had to be done on the Moon. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A feather has a large surface for its small mass
- B) The hammer and the feather fell together and landed together
- C) The Moon has no air to speak of anywhere on it
- D) Air is what separates the two falls, and nobody on Earth could remove it from a room

ملخص المقطع 22 بالعربية

خلاصة: في الثاني من آب سنة ألف وتسعمئة وإحدى وسبعين، في ختام آخر مسير لرحلة أبولو الخامسة عشرة، وقف ديفيد سكوت أمام كاميرا على سطح القمر، وفي يمينه مطرقة جيولوجي تزن نحو رطل ونصف على الأرض، وفي شماله ريشة صقر، فأفلتتهما في اللحظة نفسها فسقطتا معًا وبلغتا الأرض معًا.

المعنى: المعنى أن هذا البيان يفشل على الأرض في كل مرة: الريشة تهيم وتدور وتصل متأخرة كثيرًا. والسبب ليس الوزن بل الهواء، فللريشة سطح واسع بالنسبة إلى كتلتها الصغيرة، فالهواء الذي لا بد أن ترحزه يبطلها كثيرًا، والهواء نفسه لا يكاد يؤثر في المطرقة.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: والسقوط يُظهر أمرًا ثانيًا أيضًا، فالجسمان بلغا الأرض في نحو ثانية وثلاث من علو خمسة أقدام، وهذا أبطل من السقوط نفسه على الأرض، لأن جذب القمر نحو سدس جذب الأرض.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة الممهدة وعن إكمال النص. والفخ المتوقع هنا أن يُنسب الفرق إلى الوزن، مع أن النص ينفي ذلك ويسمّي الهواء. ويقترن المقطع بالمقطع الثاني والسبعين في أسئلة النصين المتقابلين.

Water, a Pipe and a Lit House

Above the town of Foyers in the Scottish Highlands there is a lake, and below it there is a power station. The lake stands about one hundred and seventy meters higher than the turbine hall. Water runs down a steel pipe under its own weight, strikes a wheel at the bottom, and turns it. The turning wheel drives a generator, and the generator sends electricity along wires to houses, some of them forty miles away. The whole arrangement has been working since 1896, which makes it one of the oldest such stations in Britain.

Nothing in that chain creates energy. Each step takes energy in one form and gives most of it back in another. Water high up has energy because of its position. Falling water has energy because of its motion. The spinning generator has electrical energy, and the bulb in a kitchen converts most of that into light and heat. At every step some of what went in does not come out in the useful form. Water sliding down a pipe warms the pipe slightly. Bearings warm. Wires warm. The air around the transformer warms.

Those losses are not large in a modern station. A good turbine and generator together deliver about nine tenths of the energy that the falling water carries. The old bulb was the weak link in the chain for a century, because a filament lamp turned only about five percent of its electricity into light and the rest into heat. That is why replacing the bulbs in a town saves more energy than improving the turbines. The chain is only as efficient as its worst step, and the worst step is usually the one closest to the user. A modern light-emitting diode turns about forty percent of its electricity into light.

WHAT THIS PASSAGE IS FOR

- Each step in the chain changes energy from one form to another.
 - Some energy leaves as heat at every step.
 - The chain is only as efficient as its worst step.
-

Questions 23.1 to 23.10

on passage 23, Water, a Pipe and a Lit House

23.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The station at Foyers has worked since 1896
- B) The generator creates the energy the houses use
- C) A light-emitting diode turns forty percent into light
- D) A chain of conversions is held back by its worst step

23.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how much of the falling energy does a good turbine and generator deliver?

- A) About five percent of it
- B) About nine tenths of it
- C) About forty percent of it
- D) All of it without loss

23.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the biggest saving is not made at the power station?

- A) “Water high up has energy because of its position”
- B) “Those losses are not large in a modern station”
- C) “That is why replacing the bulbs in a town saves more energy than improving the turbines”
- D) “The whole arrangement has been working since 1896”

23.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The chain is only as efficient as its worst step, and the worst step is usually the one closest to the user. A town that improved its turbines alone would therefore ____

Which choice most logically completes the text?

- A) gain very little for the money spent
- B) remove the losses from the chain entirely
- C) make the bulbs the strongest step
- D) raise the energy the falling water carries

23.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “converts” most nearly mean?

- A) persuade to a belief
- B) carry from place to place
- C) store for later use
- D) turn into another form

23.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the old bulb?

- A) It introduces the station at Foyers for the first time
- B) It concedes that the turbines lose most of the energy
- C) It identifies the step that limited the whole chain
- D) It reports the height of the lake above the hall

23.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 73 of this book. It reports that a modern coal-fired plant turns about forty percent of the energy in its fuel into electricity, and that the ceiling for any heat engine is set by its hot and cold temperatures.

Text 1 follows energy from a lake to a bulb. Based on Text 2, what would be added to that account?

- A) A turbine and generator deliver about nine tenths of what reaches them
- B) A limit that no improvement in engineering can pass
- C) The chain is only as efficient as its worst step
- D) Water power is held to forty percent by the same ceiling

23.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Nothing in that chain creates energy. ___ each step takes energy in one form and gives most of it back in another.

Which choice completes the text with the most logical transition?

- A) Instead,
- B) By contrast,
- C) Even so,
- D) For instance,

23.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nothing in that chain creates energy ___ each step takes energy in one form and gives most of it back in another.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) energy, each
- B) energy each
- C) energy. Each
- D) energy, and, each

23.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A good turbine and generator deliver about nine tenths of the energy.
- A filament lamp turned about five percent of its electricity into light.
- The chain is only as efficient as its worst step.
- The worst step is usually the one closest to the user.

The student wants to explain why changing the bulbs beats improving the turbines. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The turbines already pass nine tenths of the energy while the old lamp passed five percent, so the chain is limited at the lamp
- B) A good turbine and generator deliver about nine tenths of the energy
- C) A filament lamp turned about five percent of its electricity into light
- D) The worst step in the chain is usually the one closest to the user

ملخص المقطع 23 بالعربية

خلاصة: فوق بلدة فويرز في مرتفعات إسكتلندا بحيرة، وتحتها محطة كهرباء. والبحيرة أعلى من قاعة العنقات بنحو مئة وسبعين مترًا، والماء ينزل في أنبوب فولاذي بثقله فيصدم عجلة في الأسفل فيديرها، والعجلة تدير مولدًا، والمولد يرسل الكهرباء في أسلاك إلى بيوت بعضها على أربعين ميلًا. المعنى: المعنى أن شيئًا في تلك السلسلة لا يخلق طاقة، بل كل خطوة تأخذ طاقة في صورة وترد معظمها في صورة أخرى: فللماء العالي طاقة بموضعه، وللماء الساقط طاقة بحركته، وللمولد الدائر طاقة كهربية، والمصباح يحول معظمها ضوءًا وحرارة. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: في كل خطوة يخرج بعض ما دخل في غير الصورة النافعة، وهذه الخسائر ليست كبيرة في محطة حديثة، فالعنفه والمولد الجيدان يسلمان نحو تسعة أعشار ما يحمله الماء الساقط. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة وعن معنى كلمة في سياقها. والفتح المتوقع هنا أن يحسب المولد خالقًا للطاقة، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الثالث والسبعين في أسئلة النصين المتقابلين.

A Pump That Grows Hot

Robert Boyle described the behavior of squeezed air in 1662, and anyone with a bicycle can repeat the core of it. Pump up a tire from flat and the barrel of the pump becomes hot to hold within about thirty strokes. The base of the pump, nearest the valve, is the hottest part. Nothing is burning and nothing is rubbing hard enough to explain it. A thermometer taped to the barrel will show a rise of twenty degrees or more on a cool day. The heat comes from the air inside.

Air is mostly empty space. The molecules in it are far apart and moving fast, and the push that a tire feels from the inside is the sum of countless small collisions against the rubber. A pump stroke squeezes a fixed quantity of air into a smaller volume. The piston moving down does work on the air, and that work goes into the motion of the molecules, so they move faster. Faster molecules are what a thermometer reports as a higher temperature. The air has been heated without a flame anywhere near it.

The same relation runs the other way, which is easier to feel than to explain. Let the air out of a full tire quickly and the escaping stream is noticeably cold, because the air expands as it leaves and does work pushing the outside air aside. A refrigerator uses exactly this. It squeezes a gas until the gas is hot and lets that heat transfer to the kitchen through a radiator at the back. The gas is then allowed to expand inside the cabinet, where it is now colder than the food. Pressure, volume and temperature cannot be changed one at a time. Fix any two and the third is decided.

WHAT THIS PASSAGE IS FOR

- A bicycle pump grows hot because work is done on the air inside it.
 - Temperature is a report on how fast the molecules are moving.
 - A refrigerator runs the same relation in reverse.
-

Questions 24.1 to 24.10

on passage 24, A Pump That Grows Hot

24.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Work done on a gas raises its temperature
- B) Friction in the pump explains the heat in the barrel
- C) Boyle described the behavior of squeezed air in 1662
- D) A thermometer on the barrel shows a rise of twenty degrees

24.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which part of the pump is hottest?

- A) The handle at the top of the barrel
- B) The tire into which the air is pushed
- C) The base of the pump, nearest the valve
- D) The thermometer taped to the barrel

24.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the same relation works in the opposite direction?

- A) “Air is mostly empty space. The molecules in it are far apart and moving fast”
- B) “The piston moving down does work on the air, and that work goes into the motion of the molecules”
- C) “A thermometer taped to the barrel will show a rise of twenty degrees or more on a cool day”
- D) “Let the air out of a full tire quickly and the escaping stream is noticeably cold, because the air expands as it leaves”

24.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Pressure, volume and temperature cannot be changed one at a time. Fix any two and the third is decided. A gas held at constant volume and then warmed must therefore ____

Which choice most logically completes the text?

- A) keep the same pressure as before
- B) rise in pressure as it is heated
- C) expand to twice its former volume
- D) cool as the molecules move faster

24.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “transfer” most nearly mean?

- A) pass from one place to another
- B) change into another form
- C) build up in one spot
- D) measure with a thermometer

24.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentences about the refrigerator?

- A) They introduce the squeezing of air for the first time
- B) They concede that the relation fails in a machine
- C) They report the rise a thermometer shows on the barrel
- D) They put both directions of the relation to work at once

24.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 74 of this book. It states the relation between pressure, volume and absolute temperature, reports that dry rising air cools at about ten degrees per thousand meters, and names the laws it was assembled from.

Text 1 shows a pump growing hot. Based on Text 2, what would be added to that showing?

- A) Squeezing a gas raises the temperature of the gas
- B) A refrigerator lets a compressed gas expand inside
- C) The same relation at work in the open air
- D) Rising air warms at ten degrees per thousand meters

24.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Nothing is burning and nothing is rubbing hard enough to explain it. ____ the heat comes from the air inside.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) Rather,
- C) For instance,
- D) In conclusion,

24.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nothing is burning ____ and nothing is rubbing hard enough to explain it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) burning; and
- B) burning and
- C) burning: and
- D) burning, and

24.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A pump stroke squeezes a fixed quantity of air into a smaller volume.
- The piston does work on the air.
- That work goes into the motion of the molecules.
- Faster molecules are what a thermometer reports as a higher temperature.

The student wants to explain why a pump barrel warms without a flame. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A pump stroke squeezes the air into a smaller volume
- B) The piston does work on the air, so the molecules move faster and a thermometer reads the rise
- C) Faster molecules are what a thermometer reports as a temperature
- D) The work of the piston goes into the motion of the molecules

ملخص المقطع 24 بالعربية

خلاصة: وصف روبرت بويل سلوك الهواء المضغوط سنة ألف وستمئة واثنين وستين، وكل من عنده دراجة يقدر على إعادة لب ذلك: انفخ إطاراً من الفراغ فتصير أسطوانة المنفاخ حارة في اليد بعد نحو ثلاثين كبسة، وأحرّ أجرائها قاعدتها القريبة من الصّمام. المعنى: المعنى أن لا شيء يحرق ولا شيء يحتك احتكاكاً يكفي لتفسير ذلك، وأن الحرارة من الهواء في الداخل. فالهواء فراغ في معظمه، وجزيئاته متباعدة سريعة، والكبسة تضغط كمّاً ثابتاً منه في حجم أصغر، والمكبس النازل يعمل عملاً على الهواء فيزيد حركة جزيئاته. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: والعلاقة تعمل في الجهة المعاكسة أيضاً، فإخراج الهواء من إطار ممتلئ بسرعة يعطي تياراً بارداً محسوساً، لأنّ الهواء يتوسّع وهو يخرج، والتلاجة تستعمل هذا بعينه. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجمل الختامية وعن إكمال النص. والفخ المتوقّع هنا أن تُنسب الحرارة إلى الاحتكاك، مع أنّ النص ينفي ذلك. ويقترن المقطع بالمقطع الرابع والسبعين في أسئلة النصّين المتقابلين.

The Fuse and the Kettle

A kettle, a toaster and an iron are switched on in the same kitchen, and the lights go out. In the cupboard under the stairs a small switch has moved to the off position. Nothing is broken. The switch is a circuit breaker, which is a device that opens the circuit when too much current flows through it, and it has done what it was installed to do.

Electricity in a house behaves in a way that a water pipe makes easy to picture. The voltage at the socket is like the pressure in a main. The current is like the flow in gallons a minute. The resistance of whatever is plugged in decides how much flows for a given pressure. A kettle has low resistance because it is supposed to turn electricity into heat quickly, so it draws about thirteen amps in a British house and about twelve in an American one. A table lamp draws less than half an amp. Adding the kettle, the toaster and the iron on one circuit asks for more current than the wire in the wall was designed to carry.

The danger is not the appliance. The danger is the wire buried in the plaster, which cannot be inspected and cannot shed its heat. Push too much current through it and it warms, the insulation around it ages, and in the worst case it sets fire to the joists beside it. The breaker is sized to protect that wire and not the kettle. It is set below the current at which the cable would overheat, so the circuit is broken long before the plaster is. A householder who fits a larger breaker to stop the nuisance has removed the only thing standing between the kitchen and the timber.

WHAT THIS PASSAGE IS FOR

- The breaker opens the circuit when the current is too high.
 - Resistance decides how much current flows for a given voltage.
 - The breaker protects the buried cable, not the appliance.
-

Questions 25.1 to 25.10

on passage 25, The Fuse and the Kettle

25.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A table lamp draws less than half an amp
- B) The breaker is there to protect the wire in the wall
- C) The breaker is sized to protect the kettle
- D) A kettle draws about thirteen amps in a British house

25.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why is the buried cable the dangerous part?

- A) Because it draws more current than a kettle does
- B) Because its resistance is lower than that of a kettle
- C) Because the breaker is set above its safe current
- D) Because it cannot be inspected or shed its heat

25.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the comparison with water is meant to make the quantities clear?

- A) “The voltage at the socket is like the pressure in a main. The current is like the flow in gallons a minute”
- B) “A kettle has low resistance because it is supposed to turn electricity into heat quickly”
- C) “In the cupboard under the stairs a small switch has moved to the off position”
- D) “A householder who fits a larger breaker to stop the nuisance has removed the only thing standing between the kitchen and the timber”

25.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It is set below the current at which the cable would overheat, so the circuit is broken long before the plaster is. A breaker that tripped only at the cable limit would therefore

Which choice most logically completes the text?

- A) protect the kitchen just as well
- B) prevent the kettle from working at all
- C) leave no margin before the wire was damaged
- D) be smaller than the one now fitted

25.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “flows” most nearly mean?

- A) spills over an edge
- B) passes along steadily
- C) gathers in one place
- D) rises in pressure

25.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the comparison with a water main?

- A) It gives a reader a picture of three quantities at once
- B) It introduces the circuit breaker for the first time
- C) It argues that electricity is a kind of liquid
- D) It reports the current a table lamp draws

25.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 75 of this book. It reports that the power lost as heat in a conductor is the current squared times the resistance, that halving the cross-section of a wire roughly doubles its resistance, and that transmission at very high voltage keeps losses low.

Text 1 explains what a breaker protects. Based on Text 2, what would be added to that explanation?

- A) A kettle has low resistance and draws a large current
- B) The wire in the wall cannot shed its heat easily
- C) A thicker wire has a higher resistance than a thin one
- D) The arithmetic that says how fast the cable heats

25.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The danger is not the appliance. The danger is the wire buried in the plaster, which cannot be inspected and cannot shed its heat. ___ push too much current through it and it warms.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) As a result,
- D) In other words,

25.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nothing is broken ___ the switch is a circuit breaker and it has done what it was installed to do.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) broken. The
- B) broken, the
- C) broken the
- D) broken, and, the

25.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The breaker is sized to protect the wire and not the kettle.
- It is set below the current at which the cable would overheat.
- The wire in the wall cannot be inspected and cannot shed its heat.
- In the worst case it sets fire to the joists beside it.

The student wants to explain why fitting a larger breaker is dangerous. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The breaker is sized to protect the wire and not the kettle
- B) The wire in the wall cannot be inspected or shed its heat
- C) A larger breaker lets the buried cable reach the current that overheats it, and that cable can set fire to the joists
- D) A kettle, a toaster and an iron on one circuit will trip it

ملخص المقطع 25 بالعربية

خلاصة: تُشغّل غلاية ومحَمَّصة ومكواة في مطبخ واحد فتتطفئ الأنوار، وفي الخزانة تحت السلم مفتاح صغير قد انتقل إلى وضع الإيقاف. لم يُكسر شيء؛ فالمفتاح قاطع دائرة، أي جهاز يفتح الدارة إذا سرى فيها تيار أكبر من اللازم، وقد فعل ما تُصَبّ له. المعنى: المعنى أن الكهرباء في البيت تشبه الماء في الأنابيب: فالجهد عند المقبس كالضغط في الأنبوب الرئيس، والتيار كالجريان بالغالونات في الدقيقة، ومقاومة ما يُوصل تحدّد كم يجري عند ضغط معلوم. فللغلاية مقاومة صغيرة لأنها تُحوّل الكهرباء حرارةً سريعاً. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: الخطر ليس في الجهاز بل في السلك المدفون في الجبس، فهو لا يُفحص ولا يقدر على طرح حرارته، والقاطع مقيس ليحمي ذلك السلك لا الغلاية، ومضبوط تحت التيار الذي يُحمّيه. الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة التشبيه وعن الدليل الذي يسند دعوى وعن إكمال النص. والفجّ المتوقع هنا أن يُقال إن القاطع يحمي الجهاز، مع أن النص يقول إنه يحمي السلك. ويقترن المقطع بالمقطع الخامس والسبعين في أسئلة النصّين المتقابلين.

The Bent Straw in a Glass

Ptolemy wrote about this effect in Alexandria in the second century. Stand a straw in a glass of water and look at it from the side. The straw appears to break at the surface. The part under water seems to be at a different angle from the part above, and if the glass is moved the break moves with it. The straw is perfectly straight. A ruler laid against it in the air, and then in the water, demonstrates that no physical bending has occurred.

Light travels more slowly through water than through air, by about a quarter. When a beam crosses the surface at an angle, the side of the beam that enters first is slowed first, and the whole beam swings. The technical word is refraction, meaning the bending of light as it passes from one material into another. Everything seen through the water is therefore seen in a shifted position. The eye has no mechanism for detecting that the light changed direction along the way. It reports the straw where the light appears to have come from.

The same rule explains a long list of ordinary things. A swimming pool looks shallower than it is, which is why bathers misjudge the deep end. A spoon in water looks broken. A spoon in oil looks more broken, because oil slows light more than water does. A lens in a pair of spectacles is a piece of glass ground to a curve, so that the bending happens in a chosen direction and brings light to a focus on the retina. Some light is also reflected at the surface, which is why a window shows a faint image of the room. Some is absorbed by the water itself, which is why the deep sea is dark. One surface does three things to a beam at once.

WHAT THIS PASSAGE IS FOR

- The straw looks broken at the surface although it is straight.
 - Light bends because it travels more slowly in water than in air.
 - A surface reflects, bends and absorbs light at the same time.
-

Questions 26.1 to 26.10

on passage 26, The Bent Straw in a Glass

26.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Ptolemy wrote about the effect in the second century
- B) The straw bends physically where it meets the water
- C) Light slowed at a surface is bent, and the eye cannot tell
- D) A spoon in oil looks more broken than one in water

26.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why does a spoon look more broken in oil than in water?

- A) Oil slows light more than water does
- B) Oil reflects more light at its surface
- C) Oil absorbs more light than water does
- D) Oil bends the spoon itself a little

26.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the eye cannot correct for what happened to the light?

- A) “A ruler laid against it in the air, and then in the water, demonstrates that no physical bending has occurred”
- B) “The eye has no mechanism for detecting that the light changed direction along the way. It reports the straw where the light appears to have come from”
- C) “A swimming pool looks shallower than it is, which is why bathers misjudge the deep end”
- D) “Some light is also reflected at the surface, which is why a window shows a faint image of the room”

26.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A lens in a pair of spectacles is a piece of glass ground to a curve, so that the bending happens in a chosen direction and brings light to a focus on the retina. A lens is therefore ____

Which choice most logically completes the text?

- A) a surface that does not bend light at all
- B) the only object that slows light down
- C) a device that removes the shift entirely
- D) the same effect put to a chosen use

26.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “absorbed” most nearly mean?

- A) holds the attention of
- B) spreads out widely
- C) takes in and keeps
- D) sends back again

26.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of ordinary things?

- A) It introduces the word refraction for the first time
- B) It shows how far one rule about light reaches
- C) It concedes that the rule fails in a swimming pool
- D) It reports the speed of light through water

26.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 76 of this book. It reports the principle that each point on a wavefront acts as a source, and explains why sound, with wavelengths around a meter, bends around a doorway while visible light casts sharp shadows.

Text 1 explains one thing a surface does to light. Based on Text 2, what would be added to that explanation?

- A) Why the same rule gives sound and light different behavior
- B) Light travels more slowly through water than through air
- C) A surface reflects some of the light that reaches it
- D) Visible light bends around a doorway as sound does

26.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The straw is perfectly straight. ___ a ruler laid against it in the air, and then in the water, demonstrates that no physical bending has occurred.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In conclusion,
- D) After all,

26.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The straw appears to break at the surface ___ and if the glass is moved the break moves with it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) surface and
- B) surface, and
- C) surface; and
- D) surface and,

26.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Light travels through water about a quarter more slowly than through air.
- The side of a beam that enters first is slowed first, so the whole beam swings.
- The eye has no mechanism for detecting that the light changed direction.
- It reports the straw where the light appears to have come from.

The student wants to explain why the straw looks broken although it is straight. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Light travels through water about a quarter more slowly than through air
- B) The eye has no mechanism for detecting a change of direction
- C) The beam swings because one side of it is slowed first
- D) The beam swings at the surface, and the eye reports the straw where the light seems to have come from

ملخص المقطع 26 بالعربية

خلاصة: كتب بطليموس في هذا الأثر بالإسكندرية في القرن الثاني. أقيم قشة في كأس ماء وانظر إليها من الجانب، فتبدو منكسرة عند السطح: الجزء الغارق على زاوية غير زاوية الجزء الظاهر، وإذا حرك الكأس تحرك الانكسار معه. والقشة مستقيمة تمامًا، ومسطرة تُسند إليها تُبين أن انحناءً ماديًا لم يقع.

المعنى: المعنى أن الضوء يسير في الماء أبطأ منه في الهواء بنحو الربع، فإذا عبر شعاع السطح بزاوية تباطأ الجانب الداخل أولاً فانحرف الشعاع كله، وذلك هو الانكسار. فكل ما يرى عبر الماء يرى في موضع منزاح.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: العين لا تملك آلة تكشف أن الضوء غير اتجاهه في الطريق، فتُخبر عن القشة حيث يبدو أن الضوء جاء منه، والقاعدة نفسها تفسر قائمة طويلة من الأمور المعتادة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة القائمة وعن معنى كلمة في سياقها. والفح المتوقع هنا أن يُقال إن القشة انحنى فعليًا، مع أن النص ينفي ذلك بالمسطرة. ويقترب المقطع بالمقطع السادس والسبعين في أسئلة النصين المتقابلين.

Steel Wool and a Steel Bar

Antoine Lavoisier established in the 1770s that burning is a reaction with oxygen. Hold a match to a steel bar and nothing happens. The bar warms near the flame and stays a bar. Hold the same match to a pad of fine steel wool and the wool catches, glows orange, and travels across the pad in a slow front that leaves a gray ash behind it. A nine-volt battery held across the same pad will start it just as well. The two objects are the same metal, from the same kind of ingot, and one of them burns.

What differs is surface. Steel reacts with oxygen in the air to make iron oxide, which is rust. That reaction can happen only where metal and air meet. A solid bar presents a few square centimeters of surface for every hundred grams. The same hundred grams, drawn into threads a hundredth of a millimeter thick, presents several square meters. Every thread is also thin enough to be heated right through. The reaction then releases enough heat in one spot to light the thread beside it.

Rust on a gate is the same reaction running at a crawl. It takes years because the surface is small, the heat escapes, and a layer of oxide shields what is underneath. The chemistry does not change with the shape of the metal; only the rate does. That is why a flour mill can explode while a bag of flour on a shelf is perfectly stable. Fire crews treat a grain silo and a sack of grain as different problems. A substance has no single level of danger. It has a level for each state it is divided into. Powdered sugar and powdered coal have both destroyed buildings where the solid form had been handled safely for years.

WHAT THIS PASSAGE IS FOR

- The same metal burns as wool and not as a bar.
 - Reaction can happen only where metal and air meet.
 - Shape changes the rate of a reaction, not the chemistry.
-

Questions 27.1 to 27.10

on passage 27, Steel Wool and a Steel Bar

27.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Lavoisier established that burning is a reaction with oxygen
- B) The chemistry changes with the shape of the metal
- C) A nine-volt battery will light a pad of steel wool
- D) The same metal burns or does not, according to how finely divided it is

27.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a hundred grams of steel present when drawn into fine threads?

- A) A few square centimeters of surface
- B) Several square meters of surface
- C) A hundredth of a millimeter of surface
- D) Less surface than the solid bar

27.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the difference is one of rate rather than of chemistry?

- A) “Steel reacts with oxygen in the air to make iron oxide, which is rust”
- B) “Every thread is also thin enough to be heated right through”
- C) “The chemistry does not change with the shape of the metal; only the rate does”
- D) “Fire crews treat a grain silo and a sack of grain as different problems”

27.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Rust on a gate is the same reaction running at a crawl. It takes years because the surface is small, the heat escapes, and a layer of oxide shields what is underneath. A gate stripped to bare metal powder would therefore ____

Which choice most logically completes the text?

- A) rust in a very much shorter time
- B) be protected by the oxide layer still
- C) undergo an entirely different reaction
- D) escape the reaction for want of surface

27.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “stable” most nearly mean?

- A) standing level and firm
- B) kept in a building
- C) measured and recorded
- D) unlikely to react

27.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentences about the flour mill?

- A) They introduce the reaction with oxygen for the first time
- B) They concede that fine division has no effect
- C) They carry the point from steel to any divided solid
- D) They report the thickness of a steel thread

27.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 77 of this book. It explains that even a reaction which releases energy needs an activation barrier crossed first, that rates roughly double for every ten degree rise, and that a catalyst lowers the barrier without being consumed.

Text 1 contrasts a bar with a pad of wool. Based on Text 2, what would be added to that contrast?

- A) Surface is what decides whether the metal burns
- B) The barrier that a match has to get the reaction over
- C) Rust is the same reaction running at a crawl
- D) A catalyst is consumed as the reaction proceeds

27.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The two objects are the same metal, from the same kind of ingot, and one of them burns. ___ what differs is surface.

Which choice completes the text with the most logical transition?

- A) In fact,
- B) By contrast,
- C) Even so,
- D) For example,

27.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The chemistry does not change with the shape of the metal ___ only the rate does.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) metal, only
- B) metal only
- C) metal; only
- D) metal, and, only

27.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Steel reacts with oxygen only where metal and air meet.
- A hundred grams drawn into fine threads presents several square meters.
- The chemistry does not change with the shape; only the rate does.
- A substance has a level of danger for each state it is divided into.

The student wants to explain why a silo and a sack are different problems. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The reaction runs only where the material meets air, so dividing it finely raises the rate without changing the chemistry
- B) Steel reacts with oxygen only where metal and air meet
- C) The chemistry does not change with the shape of the material
- D) A substance has a level of danger for each state it is in

ملخص المقطع 27 بالعربية

خلاصة: أثبت أنطوان لافوازييه في السبعينيات من القرن الثامن عشر أن الاحتراق تفاعل مع الأكسجين. قَرَّبَ عود ثقاب من قضيب فولاذي فلا يحدث شيء؛ وقَرَّبَه من وسادة صوف فولاذي رقيق فيشتعل الصوف ويتوهج ويسري في الوسادة في جبهة بطيئة تترك وراءها رماذاً رمادياً. المعنى: المعنى أن الجسمين معدن واحد من صنف سبيكة واحد، وأحدهما يحترق، والفارق هو السطح. فالفولاذ يتفاعل مع أكسجين الهواء فيصير أكسيد حديد، وهذا التفاعل لا يقع إلا حيث يلتقي المعدن والهواء. فالقضيب الصلب يقدم سنتيمترات مربعة قليلة لكل مئة غرام، والمئة نفسها مسحوبةً خيوطاً تقدم أمتاراً مربعة.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: الكيمياء لا تتغير بشكل المعدن وإنما يتغير المعدل، ولهذا قد تنفجر مطحنة دقيق وكيس الدقيق على الرف هادئ تماماً، ولكل مادة مستوى خطر بحسب كل حال تُقسَم إليها.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الأمثلة الختامية وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُقال إن الكيمياء تتغير بالشكل، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع السابع والسبعين في أسئلة النصين المتقابلين.

The Bridge at Dundee

The first Tay Bridge carried a single railway track two miles across the water at Dundee in Scotland. It opened in 1878 and was the longest bridge in the world at the time. Queen Victoria crossed it in June 1879 and knighted the engineer who had designed it. On the night of December 28 of that same year, in a winter gale, the thirteen central spans went into the river while a train was crossing. Everyone aboard died. The usual figure given is seventy-five.

The inquiry found a chain of causes rather than one. The high girders were carried on columns of cast iron, a material that is strong when squeezed and weak when pulled or struck. Some of the castings had holes in them from the foundry and had been filled with a paste of iron filings and wax, which looked sound and carried nothing. The bolt holes had been cast rather than drilled, which left them rough. No allowance had been made in the design for the sideways push of a gale on the side of a train, and the measured winds that night were near eighty miles an hour.

The engineer had never calculated what the structure must resist from the wind. That was not unusual in 1879. It became unusual immediately afterward. The second Tay Bridge, built beside the first and still in use, used wrought iron and steel, had doubled columns, and was designed against a wind load of fifty-six pounds per square foot. The stumps of the old piers still stand in the water beside it, and every train from Edinburgh to Aberdeen passes them. The inquiry also asked who should have noticed. Workmen had reported loose bolts and rattling joints for months, and the reports had gone no further than the foreman.

WHAT THIS PASSAGE IS FOR

- The bridge fell in a gale fourteen months after it opened.
 - Cast iron is strong in compression and weak in tension.
 - No wind load had been calculated in the design.
-

Questions 28.1 to 28.10

on passage 28, The Bridge at Dundee

28.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A chain of causes, not one, put the spans in the river
- B) The inquiry found a single cause for the collapse
- C) Queen Victoria crossed the bridge in June 1879
- D) The second bridge used wrought iron and steel

28.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how had the holes in some castings been treated?

- A) They had been drilled rather than cast
- B) They had been doubled with a second column
- C) They had been filled with iron filings and wax
- D) They had been reported to the foreman

28.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the practice changed because of the collapse?

- A) “The first Tay Bridge carried a single railway track two miles across the water at Dundee in Scotland”
- B) “Workmen had reported loose bolts and rattling joints for months”
- C) “the measured winds that night were near eighty miles an hour”
- D) “That was not unusual in 1879. It became unusual immediately afterward”

28.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The high girders were carried on columns of cast iron, a material that is strong when squeezed and weak when pulled or struck. A sideways gale on the side of a train would therefore ____

Which choice most logically completes the text?

- A) press the columns in their strongest direction
- B) load the columns in the way they bear worst
- C) be carried entirely by the wrought iron
- D) make no difference to a bridge of that length

28.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “resist” most nearly mean?

- A) stand up to
- B) refuse to obey
- C) measure in advance
- D) give way under

28.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph about the second bridge?

- A) It introduces the collapse of the first bridge
- B) It concedes that the first design was sound
- C) It reports the number of people who died
- D) It shows which lessons were built into the replacement

28.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 78 of this book. It sets out stress as force per unit area and the yield point as where deformation becomes permanent, notes that cast iron has almost no gap between yielding and fracture, and reports wartime ships fracturing in cold water.

Text 1 reports a chain of causes in one collapse. Based on Text 2, what would be added to that report?

- A) Cast iron is weak when pulled or struck
- B) No allowance had been made for the wind on a train
- C) The reason cast iron gives no warning before it breaks
- D) Cast iron yields for a long while before fracturing

28.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The engineer had never calculated what the structure must resist from the wind. ____ that was not unusual in 1879.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) In fairness,
- C) Likewise,
- D) For instance,

28.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The inquiry found a chain of causes rather than one ____ and the castings, the bolt holes and the wind each played a part.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) one; and
- B) one and
- C) one: and
- D) one, and

28.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The inquiry found a chain of causes rather than one.
- Castings with holes had been filled with iron filings and wax.
- No allowance had been made for the sideways push of a gale on a train.
- Workmen had reported loose bolts for months and the reports went no further than the foreman.

The student wants to explain why no single person can be blamed for the collapse. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The inquiry found a chain of causes rather than one
- B) A foundry hid holes, a design left out the wind, and a foreman kept the reports, so the failure was shared
- C) No allowance had been made for the wind on the side of a train
- D) Workmen had reported loose bolts and rattling joints for months

ملخص المقطع 28 بالعربية

خلاصة: حمل جسر تاي الأول سكة حديد واحدة مسافة ميلين فوق الماء عند دندي في إسكتلندا، وفتحت سنة ألف وثمانمئة وثمان وسبعين وكان أطول جسر في العالم حينها. وفي ليلة الثامن والعشرين من كانون الأول من السنة التالية، في عاصفة شتوية، هوت الجيزان الوسطى الثلاث عشرة في النهر والقطار عليها.

المعنى: المعنى أن التحقيق وجد سلسلة أسباب لا سبباً واحداً: فالجيزان العالية كانت على أعمدة من حديد الزهر، وهو قوي إذا ضغط ضعيف إذا شد أو صدم؛ وبعض المصبوبات فيها ثقوب من المسبك ملئت بمعجون نشارة حديد وشمع فظهرت سليمة وهي لا تحمل شيئاً.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: ولم يحسب في التصميم دفع العاصفة الجانبي على جنب قطار، والرياح المقيسة تلك الليلة قاربت ثمانين ميلاً في الساعة، ولم يحسب المهندس قط ما يجب أن يقاومه البناء من الريح.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة الختامية وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن ينسب الانهيار إلى سبب واحد، مع أن النص يسميه سلسلة. ويقترن المقطع بالمقطع الثامن والسبعين في أسئلة النصين المتقابلين.

The Women Who Painted Dials

In 1917 a factory in Orange, New Jersey, began painting watch and clock dials with a paint that glowed in the dark. The glow came from radium, an element discovered by Marie and Pierre Curie in 1898. About seventy young women did the painting. The brushes were fine camel hair, and to keep a point on them the women were taught to shape each brush with their lips between strokes. Some of them painted their nails and teeth with the paint for a party trick.

The first deaths were put down to other causes. A dial painter named Mollie Maggia lost teeth through 1922 and then pieces of her jaw. She died in September of that year, with the cause recorded as a disease of the mouth. By 1924 a dentist in the town had seen enough cases to write to the state. Radium behaves chemically much like calcium, so a body builds it into bone, where it sits for the rest of a life giving out radiation at close range. The jaw and the hip were the usual sites of damage.

Five of the women sued in 1927, in a case the newspapers followed closely. All five were too ill to raise their arms to take the oath. The settlement was small and they were already dying, but the case established that a company could be held liable for a disease contracted at work years earlier. The factories were made to stop the lip-pointing, to issue washable aprons and screens, and to reduce the time any one worker spent at the bench. Later work on those same patients produced the first serious figures on what a given amount of radium in the body does to bone. Those figures were still being used to set safety limits fifty years afterward.

WHAT THIS PASSAGE IS FOR

- Dial painters shaped their brushes with their lips and swallowed radium.
 - Radium behaves like calcium, so the body stores it in bone.
 - The 1927 case established liability for a disease contracted years earlier.
-

Questions 29.1 to 29.10

on passage 29, The Women Who Painted Dials

29.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Radium was discovered by Marie and Pierre Curie in 1898
- B) A work practice killed, and the case it produced changed the law
- C) The first deaths were correctly attributed at the time
- D) The brushes used in the works were of fine camel hair

29.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why does the body build radium into bone?

- A) Because radium glows in the dark
- B) Because the jaw and the hip are weakest
- C) Because the paint was swallowed in quantity
- D) Because radium behaves chemically much like calcium

29.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the case mattered beyond the women who brought it?

- A) “the case established that a company could be held liable for a disease contracted at work years earlier”
- B) “All five were too ill to raise their arms to take the oath”
- C) “The settlement was small and they were already dying”
- D) “The brushes were fine camel hair, and to keep a point on them the women were taught to shape each brush with their lips”

29.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Radium behaves chemically much like calcium, so a body builds it into bone, where it sits for the rest of a life giving out radiation at close range. A dose taken in once would therefore ____

Which choice most logically completes the text?

- A) leave the body within a few weeks
- B) damage the mouth and nothing further
- C) go on acting for many years afterward
- D) be harmless once the painting stopped

29.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “reduce” most nearly mean?

- A) boil down to a paste
- B) cut down in amount
- C) simplify an argument
- D) add to a little more

29.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the dentist in the town?

- A) It marks the point at which the cases became a case
- B) It introduces the lawsuit of 1927 for the first time
- C) It argues that the deaths had natural causes
- D) It reports the number of women employed

29.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 79 of this book. It reports that radium has a half-life of about sixteen hundred years, that alpha particles are stopped by paper or the outer layer of skin, and that intensity falls with the square of the distance from the source.

Text 1 reports what the paint did to the painters. Based on Text 2, what would be added to that report?

- A) Radium sits in the bone for the rest of a life
- B) The jaw and the hip were the usual sites of damage
- C) Radium outside the body is as dangerous as radium inside
- D) Why swallowing the paint mattered so much more than handling it

29.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The first deaths were put down to other causes. ____ by 1924 a dentist in the town had seen enough cases to write to the state.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) For instance,
- C) Before long,
- D) In other words,

29.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The brushes were fine camel hair ____ and the women were taught to shape each brush with their lips between strokes.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) hair, and
- B) hair and
- C) hair; and
- D) hair and,

29.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Radium behaves chemically like calcium and is built into bone.
- Later work on those same patients produced the first serious figures.
- The figures showed what a given amount of radium in the body does to bone.
- They were still being used to set safety limits fifty years afterward.

The student wants to explain why the figures from these patients were used for decades. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Radium behaves chemically like calcium and is built into bone
- B) Later work on those same patients produced the first serious figures
- C) These were the first figures linking an amount of radium in the body to damage in bone, so safety limits rested on them
- D) The figures were still being used fifty years afterward

ملخص المقطع 29 بالعربية

خلاصة: في سنة ألف وتسعمئة وسبع عشرة بدأ مصنع في أورانج بولاية نيوجيرسي يدهن أقراص الساعات بدهان يتوهج في الظلام، وكان توفجه من الراديوم، وهو عنصر كشفه ماري وبير كوري سنة ألف وثمانمئة وثمان وتسعين. وقامت بالدهان نحو سبعين امرأة شابة. المعنى: المعنى أن الفرش كانت من وبر الجمل الرقيق، وأن النساء علمن أن يستن كل فرشة بشفاهن بين ضربة وضربة ليبقى لها سن. ونُسبت الوفيات الأولى إلى أسباب أخرى، فقد فقدت مولي ماجيا أسنانها ثم قطعاً من فكها وماتت في أيلول، وسجل السبب داء في الفم. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: الراديوم يسلك كيميائياً سلوك الكالسيوم، فيبنيه الجسم في العظم فيبقى ببقية العمر يبعث إشعاعه من مدى قريب، والفك والورك موضعاً للضرر المعتادان. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تحوّل السرد وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب الوفيات الأولى منسوبة إلى سببها الصحيح، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع التاسع والسبعين في أسئلة النصين المتقابلين.

Eight Minutes of Sunlight

Light moves at a fixed speed, about three hundred thousand kilometers in a second. Nothing in the universe carries information faster than that. Albert Michelson measured it to within a fraction of one percent in 1879. That single fact turns every distance in the sky into a length of time. The times are easier to hold in the head than the distances. A distance tells a reader how far away a thing is. A time tells the reader how old the view of it is.

The Moon is about four hundred thousand kilometers away, so its light reaches an observer in a little over one second. Radio instructions to the Apollo crews took the same time, which is why those recordings have an odd pause in every exchange of speech. The Sun is four hundred times further off. Sunlight takes eight minutes and twenty seconds to arrive, so the Sun that anyone sees above the horizon left the surface before the viewer sat down. Jupiter is between thirty-three and fifty-three minutes away, depending on where the two planets stand. Light from the edge of the solar system takes several hours.

Beyond that the numbers change scale. The nearest star beyond the Sun, Proxima Centauri, is about four and a quarter light years off. The light arriving tonight set out when a child now at school was born. The nearest large galaxy, Andromeda, lies two and a half million light years away. It is still close enough to see with the naked eye on a dark night, as a faint smudge about the width of a thumb. Every view of the night sky must therefore contain many different dates at once. A telescope is a kind of record, and the further it is pointed the older the record is. Nobody has ever seen any part of the universe as it is now.

WHAT THIS PASSAGE IS FOR

- Light speed turns every distance in the sky into a time.
 - Sunlight takes eight minutes and twenty seconds to arrive.
 - A single view of the sky contains many different dates.
-

Questions 30.1 to 30.10

on passage 30, Eight Minutes of Sunlight

30.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Michelson measured the speed of light in 1879
- B) Andromeda cannot be seen with the naked eye
- C) A fixed speed turns every distance in the sky into a date
- D) Light from the Moon arrives in a little over a second

30.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why do the Apollo recordings have a pause in every exchange?

- A) Radio took a little over a second each way
- B) The Moon is four hundred times further than the Sun
- C) Light from Jupiter takes up to fifty-three minutes
- D) The crews spoke slowly on purpose

30.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a time is easier to grasp than a distance?

- A) "Light moves at a fixed speed, about three hundred thousand kilometers in a second"
- B) "The times are easier to hold in the head than the distances. A distance tells a reader how far away a thing is. A time tells the reader how old the view of it is"
- C) "Jupiter is between thirty-three and fifty-three minutes away, depending on where the two planets stand"
- D) "A telescope is a kind of record, and the further it is pointed the older the record is"

30.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The nearest large galaxy, Andromeda, lies two and a half million light years away. A viewer looking at that smudge tonight is therefore ____

Which choice most logically completes the text?

- A) seeing the galaxy as it is at this moment
- B) using an instrument rather than the naked eye
- C) closer to it than to Proxima Centauri
- D) seeing light that left two and a half million years ago

30.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word "contain" most nearly mean?

- A) hold back from spreading
- B) measure the limits of
- C) have within it
- D) be made up of one

30.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about distances and times?

- A) It introduces the galaxy Andromeda for the first time
- B) It says why the text will use times throughout
- C) It argues that distances cannot be measured at all
- D) It reports the speed Michelson obtained in 1879

30.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 80 of this book. It describes parallax, which uses the width of the orbit of the Earth as a baseline, notes that the nearest star shifts by less than one second of arc, and explains standard candles.

Text 1 converts distances in the sky into times. Based on Text 2, what would be added to that conversion?

- A) How the distances being converted were found at all
- B) Light travels about three hundred thousand kilometers a second
- C) Andromeda lies two and a half million light years away
- D) Parallax works best on the most distant galaxies

30.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Beyond that the numbers change scale. ____ the nearest star beyond the Sun, Proxima Centauri, is about four and a quarter light years off.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In short,
- D) For instance,

30.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A distance tells a reader how far away a thing is ____ a time tells the reader how old the view of it is.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) thing is, a
- B) thing is. A
- C) thing is a
- D) thing is, and, a

30.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Light moves at a fixed speed of about three hundred thousand kilometers a second.
- Sunlight takes eight minutes and twenty seconds to arrive.
- Andromeda lies two and a half million light years away.
- A telescope is a kind of record, and the further it is pointed the older the record is.

The student wants to explain why nobody has seen the universe as it is now. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Light moves at a fixed speed of about three hundred thousand kilometers a second
- Sunlight takes eight minutes and twenty seconds to arrive on Earth
- Andromeda lies two and a half million light years away from here
- Because light takes time to arrive, every view is of an earlier date, eight minutes for the Sun and millions of years for Andromeda

ملخص المقطع 30 بالعربية

خلاصة: الضوء يسير بسرعة ثابتة نحو ثلاثمائة ألف كيلومتر في الثانية، ولا شيء في الكون يحمل خبراً أسرع من ذلك، وقد قاسها ألبرت مايكلسون قياساً دقيقاً سنة ألف وثمانمئة وتسع وسبعين. وتلك الواقعة وحدها تحول كل مسافة في السماء إلى مدة زمنية. المعنى: المعنى أن المدد أيسر حفظاً في الرأس من المسافات: فالمسافة تخبر القارئ كم يبعد الشيء، والمدة تخبره كم عمر المنظر الذي يراه. فالقمر على نحو أربعمئة ألف كيلومتر فيبلغ ضوءه الناظر في أكثر من ثانية قليلاً، وضوء الشمس يستغرق ثمانين دقائق وعشرين ثانية. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الظاهرة: ثم تتغير المقادير مقياساً، فأقرب نجم بعد الشمس على نحو أربع سنوات ضوئية وربع، وأقرب مجرة كبيرة على مليونين ونصف من السنين الضوئية، وهي مع ذلك تُرى بالعين المجردة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة الممهدة وعن إكمال النص. والفخ المتوقع هنا أن يُحسب المنظر منظر اللحظة الحاضرة، مع أن النص يقول إنَّ أحدًا لم ير شيئاً من الكون كما هو الآن. ويقتزن المقطع بالمقطع الثمانين في أسئلة النصين المتقابلين.

Two Proposals, Two Narrators

Charlotte Bronte published *Jane Eyre* in 1847. Jane tells her own story, and when Rochester proposes to her the reader is inside her head. The reader learns that her heart is beating and that she suspects a trick. Nothing is reported that Jane does not know. Rochester's thoughts are a closed door. When he lies to her, the reader is deceived at the same moment she is, and finds out when she finds out.

Jane Austen published *Pride and Prejudice* in 1813. Darcy proposes to Elizabeth in a room at Hunsford, and the teller stands outside both of them. The reader is told what Elizabeth says and how Darcy colors as he listens. The voice also comments. It can say that Darcy spoke with little attempt at civility, which is a judgment Elizabeth would not have phrased that way. Austen uses that freedom constantly, and a reader who misses it takes the narrator's dry remarks for plain fact.

Neither choice is better. Each buys something and gives something up. The first person keeps the reader locked in one mind, which creates suspense and sympathy and makes deception easy to arrange. The outside voice can move between rooms and years, can tell a reader what two people are each thinking, and can judge them both. What it cannot do is surprise the reader by not knowing something. Every novel reveals its world through a particular position, and the first useful question about any passage is who is standing where. The answer is usually settled in the opening sentences and holds for the rest of the book. Bronte made her choice part of the title page, which announced the novel as an autobiography edited by Currer Bell. Austen left her name off her books entirely in her lifetime. Both facts tell a reader something about the voice before a word of the story is read.

WHAT THIS PASSAGE IS FOR

- In *Jane Eyre* nothing is reported that Jane does not know.
 - Austen can report two minds and comment on both.
 - The first question about a passage is who is telling it.
-

Questions 31.1 to 31.10

on passage 31, Two Proposals, Two Narrators

31.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Austen left her name off her books in her lifetime
- B) Each narrative position buys something and gives something up
- C) The first person is the better of the two choices
- D) Darcy proposes to Elizabeth in a room at Hunsford

31.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what can the outside voice not do?

- A) Move between rooms and years
- B) Judge two characters at once
- C) Report what two people are thinking
- D) Surprise a reader by not knowing

31.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the narrator of *Pride and Prejudice* does more than report?

- A) “It can say that Darcy spoke with little attempt at civility, which is a judgment Elizabeth would not have phrased that way”
- B) “The reader is told what Elizabeth says and how Darcy colors as he listens”
- C) “Darcy proposes to Elizabeth in a room at Hunsford, and the teller stands outside both of them”
- D) “Austen left her name off her books entirely in her lifetime”

31.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Nothing is reported that Jane does not know. When he lies to her, the reader is deceived at the same moment she is, and finds out when she finds out. A reader of that novel is therefore ____

Which choice most logically completes the text?

- A) told more than Jane is told
- B) able to see inside Rochester as well
- C) held to the limits of one mind
- D) given the narrator comments on both

31.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “reveals” most nearly mean?

- A) uncovers a secret
- B) presents to a reader
- C) admits a fault
- D) hides from view

31.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that declines to rank the two positions?

- A) It stops the comparison from becoming a ranking
- B) It introduces the sonnet form for the first time
- C) It reports the year Jane Eyre was published
- D) It argues that the outside voice always wins

31.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 81 of this book. It names first person, third limited and omniscient as the three standard positions, explains what each can report, and describes a third-person voice that carries the vocabulary of the character it follows.

Text 1 compares two narrative positions. Based on Text 2, what would be added to that comparison?

- A) A first-person narrator cannot report what it does not know
- B) The outside voice can move between rooms and years
- C) Jane Eyre uses an outside voice throughout
- D) A third position that lies between the two

31.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Neither choice is better. ___ each buys something and gives something up.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) Instead,
- D) For example,

31.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Jane tells her own story ___ and when Rochester proposes to her the reader is inside her head.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) story, and
- B) story and
- C) story; and
- D) story and,

31.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Nothing is reported in Jane Eyre that Jane does not know.
- The narrator of Pride and Prejudice stands outside both characters and comments.
- Each position buys something and gives something up.
- The answer is usually settled in the opening sentences and holds for the book.

The student wants to explain why a reader should first ask who is standing where. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Nothing is reported in one novel that its narrator does not know
- B) Each position buys something and gives something up in turn
- C) The position is fixed in the opening sentences and decides what the whole book can report
- D) The narrator of the other novel comments on both characters

ملخص المقطع 31 بالعربية

خلاصة: نشرت شارلوت برونتي جين إير سنة ألف وثمانمئة وسبع وأربعين، وجين تروى قصتها بنفسها، فالقارئ داخل رأسها حين يعرض عليها روتشستر الزواج: يعلم أن قلبها يخفق وأنها تشك في خدعة، ولا يروى شيء لا تعلمه جين، وأفكار روتشستر باب مغلق. المعنى: المعنى أن جين أوستن نشرت كبرياء وهوى سنة ألف وثمانمئة وثلاث عشرة، وأن دارشي يعرض على إليزابيث في غرفة في هنسفورد والراوي واقف خارجهما كليهما: يُخبر القارئ بما تقول إليزابيث وكيف يحتمل دارشي وهو يسمع، ويعلق الصوت أيضًا. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: لا أحد الاختيارين أفضل، بل كل منهما يكسب شيئًا ويتنازل عن شيء: فالمتكلم يحبس القارئ في عقل واحد فيصنع التشويق والتعاطف ويُسهّل الخديعة، والصوت الخارجي ينتقل بين الغرف والسنين ويحكم على الاثنين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع الراوي وعن وظيفة الجملة وعن معنى كلمة في سياقها. والفج المتوقع هنا أن يُفضّل أحد الموضعين على الآخر، مع أن النص يأبى ذلك. ويقترن المقطع بالمقطع الحادي والثمانين في أسئلة النصين المتقابلين.

The Clerk Who Would Prefer Not To

Herman Melville published *Bartleby, the Scrivener* in 1853. A lawyer on Wall Street hires a copyist named Bartleby, who works steadily for a few days. Then the lawyer asks him to check a document against the original. Bartleby answers that he would prefer not to. He is not angry and he does not explain. Asked again, he gives the same answer in the same mild voice, and over the following weeks he stops doing anything at all.

The story never says why. The lawyer tries every explanation available to him. He wonders whether Bartleby is ill, or mad, or ruined by earlier work in a dead letter office. That last guess is offered in the final paragraph as a rumor rather than a fact. He offers money. He moves his own offices rather than remove the man. The reader is given exactly what the lawyer is given, which is a sentence of five words repeated, and no access to the mind behind it.

That withholding is the design of the story and not a gap in it. Melville portrays a man entirely through what he refuses to do, and the pressure of the tale falls on the narrator instead. What the reader learns a great deal about is the lawyer: his comfort, his fear of scenes, his wish to be thought kind, and the exact point at which his patience runs out. A character can be built out of an absence. When a writer keeps a motive back, the question worth asking is what the silence does to everyone else on the page. Melville had published *Moby-Dick* two years earlier to poor sales. He was working as a customs inspector in New York within a few years of writing this story, and he published almost no prose for the next thirty.

WHAT THIS PASSAGE IS FOR

- Bartleby answers requests with one mild refusal and gives no reason.
 - The story offers the dead letter office only as a rumor.
 - Withholding the motive turns the attention onto the narrator.
-

Questions 32.1 to 32.10on passage 32, *The Clerk Who Would Prefer Not To***32.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Melville had published *Moby-Dick* two years earlier
- B) The dead letter office explains the refusal
- C) A withheld motive turns the pressure onto the narrator
- D) Bartleby works steadily for a few days

32.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how is the dead letter office offered?

- A) As a rumor rather than a fact
- B) As the explanation the lawyer accepts
- C) As the opening sentence of the story
- D) As the reason Bartleby was hired

32.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the story is more about the lawyer than about the clerk?

- A) “Asked again, he gives the same answer in the same mild voice, and over the following weeks he stops doing anything at all”
- B) “What the reader learns a great deal about is the lawyer: his comfort, his fear of scenes, his wish to be thought kind, and the exact point at which his patience runs out”
- C) “He wonders whether Bartleby is ill, or mad, or ruined by earlier work in a dead letter office”
- D) “He was working as a customs inspector in New York within a few years of writing this story”

32.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The reader is given exactly what the lawyer is given, which is a sentence of five words repeated, and no access to the mind behind it. A reader who looks for a motive is therefore ____

Which choice most logically completes the text?

- A) told the motive in the final paragraph
- B) given more than the lawyer has
- C) reading the opening pages too quickly
- D) looking for what the story withholds

32.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “portrays” most nearly mean?

- A) paints a likeness of
- B) speaks on behalf of
- C) presents as a character
- D) betrays a confidence

32.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the withholding a design?

- A) It introduces the lawyer on Wall Street
- B) It tells a reader the gap is deliberate
- C) It concedes that the story is incomplete
- D) It reports the five words Bartleby repeats

32.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 82 of this book. It sets out four ways a writer can build a motive, notes that stated motive leaves nothing to infer, warns that characters lie, and observes that Melville gives Bartleby action and speech but no interiority.

Text 1 reports a story that withholds a motive. Based on Text 2, what would be added to that report?

- A) The other ways a motive could have been built
- B) Bartleby is given no access to his own mind
- C) The reader is given exactly what the lawyer is given
- D) The lawyer tries every explanation available to him

32.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

He is not angry and he does not explain. ____ asked again, he gives the same answer in the same mild voice.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) As a result,
- D) What is more,

32.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He is not angry ____ and he does not explain.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) angry and
- B) angry, and
- C) angry; and
- D) angry and,

32.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Bartleby answers requests with a sentence of five words.
- He is not angry and he does not explain.
- The reader has no access to the mind behind the sentence.
- Melville portrays a man entirely through what he refuses to do.

The student wants to explain how a character can be built out of a refusal. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Bartleby answers every request with a sentence of five words
- B) He is not angry about the requests and he does not explain
- C) The reader has no access to the mind behind the sentence
- D) A repeated refusal with no anger and no reason behind it leaves the man entirely in what he will not do

ملخص المقطع 32 بالعربية

خلاصة: نشر هرمان ملفل بارتلي الكاتب سنة ألف وثمانمئة وثلاث وخمسين. يستأجر محام في وول ستريت ناسخًا يُسمّى بارتلي، فيعمل بانتظام أيامًا، ثم يطلب منه المحامي أن يقايس وثيقة بأصلها، فيجيب بارتلي أنه يفضل ألا يفعل، لا غاضبًا ولا مفسرًا. المعنى: المعنى أن القصة لا تقول قط لماذا. يجزّب المحامي كل تفسير متاح له: أهو مريض؟ أمجنون؟ أفسده عمل سابق في مكتب الرسائل المينة؟ وذلك الحذر الأخير يُعرض في الفقرة الختامية إشاعة لا واقعة. ويُعطى القارئ ما أعطى المحامي بالضبط: جملة من خمس كلمات مُعادة. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: هذا الحجب هو تصميم القصة لا ثغرة فيها، فملفل يرسم رجلًا كلّه بما يأبى فعله، ويقع ثقل الحكاية على الراوي عوضًا عنه، فيتعلّم القارئ كثيرًا عن المحامي: راحته، وخوفه من المشاهد، ورغبته أن يُحسب كريمًا. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الحجب وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُتخذ الإشاعة الختامية تفسيرًا، مع أن النص يسميها إشاعة. ويقترن المقطع بالمقطع الثاني والثمانين في أسئلة النصين المتقابلين.

A Poem Made of Four Objects

William Carlos Williams published a poem of sixteen words in 1923. It names a red wheelbarrow, rain water, white chickens, and the fact that a great deal depends on them. There is no story. Nobody speaks. No feeling is named at any point. The poem does not say that the scene is beautiful or sad or important, and the only abstract word in it is the claim that so much depends.

Williams was a doctor in Rutherford, New Jersey, and wrote between patients. He argued for years that poetry should work through things rather than through statements about things. He put the principle in a line now quoted more often than any of his poems: no ideas but in things. The wheelbarrow is the argument in practice. A reader is handed three objects, told that something rests on them, and left to supply the rest.

The effect is easy to test. Replace the objects with abstractions and the poem dies at once. A line about a feeling of rural simplicity is not a poem at all, and it says less rather than more. The concrete version works because rain water on red paint can be seen, and because the reader's own eye does the work of connecting the glaze to the chickens. Williams did not invent the method. He stated it plainly enough to teach it, and a generation of poets took the lesson. A thing on the page can express what a statement about it cannot. Williams published the poem in a collection called *Spring and All*, among prose passages that argued the same case at length. The poem has outlived the argument around it. It is now one of the most anthologized short poems in English, and it is still sixteen words.

WHAT THIS PASSAGE IS FOR

- The poem names objects and no feelings.
 - Williams argued for poetry that works through things.
 - Replacing the objects with abstractions destroys the poem.
-

Questions 33.1 to 33.10

on passage 33, A Poem Made of Four Objects

33.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Williams worked as a doctor in Rutherford, New Jersey
- B) The poem names a wheelbarrow, rain water and white chickens
- C) Williams invented the method of writing through objects
- D) A poem of objects does what a statement about them cannot

33.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did Williams not do?

- A) State the method plainly enough to teach it
- B) Invent the method of writing through objects
- C) Publish the poem in Spring and All
- D) Work as a doctor in Rutherford, New Jersey

33.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the objects in the poem leave work for the reader?

- A) “There is no story. Nobody speaks. No feeling is named at any point”
- B) “Williams published the poem in a collection called Spring and All”
- C) “A reader is handed three objects, told that something rests on them, and left to supply the rest”
- D) “He argued for years that poetry should work through things rather than through statements about things”

33.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Replace the objects with abstractions and the poem dies at once. A line about a feeling of rural simplicity is not a poem at all. The text therefore shows that the force of the poem comes from ____

Which choice most logically completes the text?

- A) what the reader can see on the page
- B) the abstract claim that so much depends
- C) the number of words Williams used
- D) the prose passages printed around it

33.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “express” most nearly mean?

- A) send on quickly
- B) state outright
- C) squeeze out of
- D) convey to a reader

33.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the effect is easy to test?

- A) It names the collection the poem appeared in
- B) It reports how many words the poem contains
- C) It opens a demonstration of the principle just stated
- D) It concedes that the principle cannot be checked

33.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 83 of this book. It separates simile, metaphor and metonymy by the work each does, says that what all three share is economy because a vivid image makes the reader supply the detail, and calls a worn-out figure a dead metaphor.

Text 1 praises a poem built from objects. Based on Text 2, which choice best explains why such a poem can work in sixteen words?

- A) Metonymy names a thing by something associated with it
- B) A vivid image makes the reader supply the detail
- C) The poem has outlived the argument around it
- D) A dead metaphor has stopped doing any work at all

33.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Williams did not invent the method. ____ he stated it plainly enough to teach it, and a generation of poets took the lesson.

Which choice completes the text with the most logical transition?

- A) Instead,
- B) For example,
- C) As a result,
- D) In addition,

33.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The poem has outlived the argument around it ____ and it is now one of the most anthologized short poems in English.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) it and
- B) it; and
- C) it, and
- D) it and,

33.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The poem names a red wheelbarrow, rain water and white chickens.
- No feeling is named at any point.
- The reader's own eye connects the glaze to the chickens.
- A reader is handed three objects and left to supply the rest.

The student wants to emphasize what a reader has to do with the poem. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- With no feeling named, the reader must connect the glaze to the chickens alone
- The poem names a red wheelbarrow, rain water and white chickens
- No feeling is named at any point in the poem itself
- The reader's own eye connects the glaze to the chickens

ملخص المقطع 33 بالعربية

خلاصة: نشر وليام كارلوس ويليامز سنة ألف وتسعمئة وثلاث وعشرين قصيدة من ست عشرة كلمة تسمي عربية يد حمراء وماء مطر ودجاجاً أبيض وتقول إن شيئاً كثيراً يتوقف عليها. لا حكاية فيها، ولا متكلم، ولا يُسمى فيها شعور قط. المعنى: المعنى أن ويليامز كان طبيباً في رذرفورد بنيجورشي، وأنه دعا سنين إلى شعر يعمل بالأشياء لا بالأقوال عنها، فصاغ المبدأ سطرًا: لا أفكار إلا في الأشياء. والعربة هي الحجة مطبقة: يُسلم القارئ ثلاثة أشياء، ويُقال له إن شيئاً يتوقف عليها، ويُترك ليكمل الباقي. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: الاختبار سهل، فإن أبدلت الأشياء بمجردات ماتت القصيدة في الحال، وسطر عن إحساس ببساطة ريفية ليس قصيدة ويقول أقل لا أكثر. وويليامز لم يبتكر الطريقة، لكنه بيّننا بياناً كافياً لتعليمها فأخذ جيل من الشعراء الدرس. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب ويليامز مبتكرًا للطريقة، مع أن النص ينفي ذلك صريحًا. ويقترن المقطع بالمقطع الثالث والثمانين في أسئلة النصين المتقابلين.

Fourteen Lines and a Hinge

A sonnet has fourteen lines. The form reached England from Italy in the sixteenth century, and Shakespeare composed a hundred and fifty-four of them. The English version rhymes in a fixed pattern: four lines, then four more on new rhymes, then four more, then a pair at the end that rhyme with each other. Each line runs to ten syllables with the stress falling on every second one, a pattern called iambic pentameter.

The interesting part is not the counting but the hinge. An Italian sonnet divides eight lines against six, and the turn comes after line eight. The reader is given a situation, a problem or a picture, and then the poem changes direction. The English form keeps a turn near line nine as well. It then adds a second one, because the closing pair can confirm or undercut what came before. Sonnet 130 spends twelve lines listing everything the speaker's mistress is not. The closing pair then says that he loves her all the same. The joke only lands because the reader has been counting.

A reader who can count to fourteen therefore has a map. Finding the turn is usually enough to find the argument, and the argument is what examiners ask about. The form is also old enough to carry its own weight, so a modern poet who writes a sonnet about a bus station is borrowing four centuries of love poems and knows it. Wordsworth, Keats, Hopkins, Frost, Heaney and Terrance Hayes have all used the shape. The rules are simple, written down, and still being argued with. Hayes published a book of seventy sonnets in 2018, every one of them titled the same way. The form has survived four hundred years of poets trying to break it.

WHAT THIS PASSAGE IS FOR

- A sonnet is fourteen lines with a fixed rhyme pattern.
 - The turn, not the counting, carries the argument.
 - The English form adds a closing couplet that can undercut what came before.
-

Questions 34.1 to 34.10

on passage 34, Fourteen Lines and a Hinge

34.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The turn, not the count, is what makes the form useful
- B) Shakespeare composed a hundred and fifty-four sonnets
- C) The rules of the form are simple and written down
- D) The counting is the interesting part of the form

34.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, where does the turn come in an Italian sonnet?

- A) Near line nine
- B) In the closing pair
- C) After line eight
- D) At line fourteen

34.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the closing pair can work against the lines before it?

- A) “The reader is given a situation, a problem or a picture, and then the poem changes direction”
- B) “Each line runs to ten syllables with the stress falling on every second one, a pattern called iambic pentameter”
- C) “An Italian sonnet divides eight lines against six, and the turn comes after line eight”
- D) “Sonnet 130 spends twelve lines listing everything the speaker's mistress is not. The closing pair then says that he loves her all the same”

34.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Finding the turn is usually enough to find the argument, and the argument is what examiners ask about. A reader who locates the hinge is therefore ____

Which choice most logically completes the text?

- A) counting syllables rather than reading
- B) most of the way to the question asked
- C) certain to identify every rhyme in the poem
- D) reading an Italian sonnet rather than an English one

34.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “composed” most nearly mean?

- A) wrote in full
- B) kept himself calm
- C) was made up of
- D) put into order

34.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the reference to Sonnet 130?

- A) It dates the arrival of the form in England
- B) It defines the pattern called iambic pentameter
- C) It argues that the closing pair always confirms
- D) It shows the second turn doing its work

34.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 84 of this book. It explains that enjambment, caesura and metrical substitution all work by setting something against an expectation, and says they do so only because the underlying pattern is regular enough to be felt.

Text 1 describes the fourteen-line form and its turn. Based on Text 2, which choice best explains why the regularity of the lines matters?

- A) A sonnet has fourteen lines and a closing pair
- B) Free verse makes the poet establish the pattern inside the poem
- C) A pattern regular enough to be felt lets a break carry weight
- D) A caesura stops the voice where the meter says to continue

34.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The English form keeps a turn near line nine as well. ____ it adds a second one, because the closing pair can confirm or undercut what came before.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In addition,
- C) As a result,
- D) In other words,

34.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A reader who can count to fourteen therefore has a map ____ and finding the turn is usually enough to find the argument.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) map and
- B) map; and
- C) map and,
- D) map, and

34.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The interesting part is not the counting but the hinge.
- An Italian sonnet turns after line eight and the English form near line nine.
- Finding the turn is usually enough to find the argument.
- The argument is what examiners ask about.

The student wants to explain why counting the lines helps a reader answer a question. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The interesting part of the form is not the counting but the hinge
- B) Counting to the turn finds the argument, and the argument is what examiners ask about
- C) An Italian sonnet turns after line eight and the English form near line nine
- D) The argument of a sonnet is what examiners ask about

ملخص المقطع 34 بالعربية

خلاصة: السوناتة أربعة عشر سطرًا. وصل الشكل إنجلترا من إيطاليا في القرن السادس عشر، ونظم شكسبير مئة وأربعًا وخمسين منها. وكل سطر عشرة مقاطع يقع النبر على كل ثانٍ منها، وهو وزن يُسمّى البنتامتر اليامي.

المعنى: المعنى أن المهم ليس العد بل المفصل. فالسوناتة الإيطالية تقسم ثمانية أسطر في مقابل ستة، والالتفاتة تأتي بعد السطر الثامن. والشكل الإنجليزي يحفظ الالتفاتة قرب السطر التاسع ثم يضيف ثانية، لأن البيتتين الختاميتين قد يؤكّدان ما سبق أو ينقضانه.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: السوناتة الثلاثون بعد المئة تنفق اثني عشر سطرًا في تعداد ما ليست عليه محبوبة المتكلم، ثم يقول البيتان الختاميان إنه يحبها على كل حال، ولا تنجح الطرفة إلا لأن القارئ كان يعدّ. فمن عدّ إلى أربعة عشر صار بيده خريطة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن وظيفة جزء من النص وعن إكمال النص إكمالاً منطقيًا. والفخ المتوقّع هنا أن يُحسب العدّ هو المقصود، مع أن النص يضعه جانبًا لصالح المفصل. ويقترن المقطع بالمقطع الرابع والثمانين في أسئلة النصّين المتقابلين.

A Platform, a Balcony, a Trap

The Globe was built on the south bank of the Thames in 1599 from the timbers of an older playhouse. It was a ring of galleries about a hundred feet across, open to the sky in the middle, with a platform stage pushed out into the yard. Two thousand people could get in. The cheapest paid a penny and stood in the open around three sides of the stage. Plays began in the early afternoon because there was no artificial light.

The building offered a company three useful things. The platform had a trap door, so a grave could be dug or a devil could rise. Above the stage was a gallery, which could serve as a balcony, a city wall or the deck of a ship. At the back were two doors and a curtained space, which let an actor be hidden and then discovered. There was no front curtain and almost no scenery, so a scene ended when the actors walked off and the next began when others walked on.

Those arrangements shaped the writing. A speech can be addressed to two thousand people standing in daylight, which is why asides and soliloquies work there and would be strange in a dark room. Place is established by being named, because nothing on stage can show it. Scenes run straight into one another without pause, which is why the plays move so quickly between Rome and Egypt or between a court and a field. The theater burned down in 1613 when a cannon used in a performance set the roof alight. A modern copy was built two hundred yards from the original site in 1997, and it plays in daylight without microphones. Audiences there stand in the yard in the rain, which is the one part of the experience that no indoor theater can reproduce.

WHAT THIS PASSAGE IS FOR

- The Globe held about two thousand people and played in daylight.
 - A trap, a gallery and a curtained space were the whole machinery.
 - Place had to be named because nothing on stage could show it.
-

Questions 35.1 to 35.10

on passage 35, A Platform, a Balcony, a Trap

35.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Globe burned down in 1613 after a cannon set the roof alight
- B) The features of the building shaped the plays written for it
- C) Two thousand people could get into the playhouse at once
- D) The plays written decided how the playhouse was built

35.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did plays begin in the early afternoon?

- A) Because the cheapest seats cost a penny
- B) Because the stage had no front curtain
- C) Because two thousand people had to get in
- D) Because there was no artificial light

35.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a scene could change without any pause?

- A) “There was no front curtain and almost no scenery, so a scene ended when the actors walked off and the next began when others walked on”
- B) “Above the stage was a gallery, which could serve as a balcony, a city wall or the deck of a ship”
- C) “At the back were two doors and a curtained space, which let an actor be hidden and then discovered”
- D) “The cheapest paid a penny and stood in the open around three sides of the stage”

35.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Place is established by being named, because nothing on stage can show it. A playwright working in that building therefore had to ____

Which choice most logically completes the text?

- A) build scenery for every new location
- B) avoid moving the action between countries
- C) put the setting into the dialogue itself
- D) write for a dark room and a lit stage

35.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “shaped” most nearly mean?

- A) carved into a form
- B) influenced the form of
- C) limited the amount of
- D) was modeled on

35.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence announcing three useful things?

- A) It sets up the list of features that follows
- B) It reports the year the playhouse was built
- C) It explains why the modern copy uses no microphones
- D) It concedes that the building limited the plays

35.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 85 of this book. It treats several habits of Elizabethan playwriting as consequences of the building, and notes that because there was no front curtain a scene had to end with an exit, which is why so many finish on a rhyming couplet.

Text 1 says the arrangements of the building shaped the writing. Based on Text 2, which choice best describes a further consequence of those arrangements?

- A) Place had to be established in the dialogue
- B) The stage had a trap door for a grave
- C) The aside became awkward in a dark auditorium
- D) Many scenes finish on a couplet that clears the stage

35.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

There was no front curtain and almost no scenery. ____ a scene ended when the actors walked off and the next began when others walked on.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) As a result,
- D) In other words,

35.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Two thousand people could get in ____ and the cheapest paid a penny and stood in the open around three sides of the stage.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) in, and
- B) in and
- C) in; and
- D) in and,

35.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- There was no front curtain and almost no scenery.
- A scene ended when the actors walked off and the next began when others walked on.
- Place is established by being named.
- The plays move quickly between Rome and Egypt or between a court and a field.

The student wants to explain why the plays move so quickly between places. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The playhouse had no front curtain and almost no scenery
- B) The plays move quickly between Rome and Egypt
- C) With no curtain to close and place named in the words, one exit was the whole scene change
- D) Place in these plays is established by being named

ملخص المقطع 35 بالعربية

خلاصة: بُني مسرح الغلوب على الضفة الجنوبية لنهر التايمز سنة ألف وخمسمئة وتسع وتسعين من أخشاب مسرح أقدم. حلقة من الشرف نحو مئة قدم عرضاً، مكشوفة للسماء في وسطها، ومنصة مدفوعة إلى الساحة. يدخله ألفا شخص، وتبدأ المسرحيات بعد الظهر لانعدام الضوء الصناعي. المعنى: المعنى أن البناء قديم للفرقة ثلاثة أشياء نافعة: باب سفلي في المنصة يُحفر منه قبر أو يصعد منه شيطان، وشرفة فوق المنصة تصلح لشرفة أو سور مدينة أو سطح سفينة، وفضاء مستور في الخلف يُخفى فيه ممثل ثم يُكشف. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: تلك الترتيبات صاغت الكتابة. فالخطبة تُوجّه إلى ألفي واقف في ضوء النهار، ولهذا يعمل الهمس الجاني والمنولوج هناك، ويُسمى المكان ليثبت لأن لا شيء على المنصة يُظهره، وتتوالى المشاهد بلا وقفة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن السبب المذكور في النص وعن الانتقال الأكثر منطقية. والفخ المتوقع هنا أن يُقلب الاتجاه فتُحسب المسرحيات هي التي صاغت البناء. ويقترن المقطع بالمقطع الخامس والثمانين في أسئلة النصين المتقابلين.

The First Locked Room

Edgar Allan Poe published *The Murders in the Rue Morgue* in 1841. Two women are killed in a room on the fourth floor of a Paris house. The door is locked from the inside and the key is in the lock. The windows appear to be nailed shut. A crowd of neighbors hears voices on the stairs but cannot agree on what language the second voice was speaking. The police arrest the wrong man almost at once.

The story introduced a set of parts that are still in use. There is a brilliant private investigator, Dupin, who is not a policeman and who solves the case by reasoning from physical detail. There is a slower companion who tells the story and asks the questions a reader would ask. There is an official force that is competent and wrong. There is a solution that is strange but mechanical. Here it turns on a nail broken so that a window appears fastened when it is not. The explanation is given in the last pages, and every clue needed for it has already appeared.

Arthur Conan Doyle read Poe closely and did not pretend otherwise. Sherlock Holmes arrived forty-six years later with the same arrangement of parts. Doyle even has Holmes dismiss Dupin by name in the first novel, which is what a writer does when the debt is obvious. Later writers did not simply imitate the pattern. They counted on a reader knowing it, which is a different and more useful thing, and it is where the pleasure of the modern form begins. Agatha Christie built a career on breaking the rules the pattern had established, and her readers could only be shocked because they knew them. Poe himself wrote only three Dupin stories and thought little of them.

WHAT THIS PASSAGE IS FOR

- The room was locked from the inside with the key still in the lock.
 - Poe assembled the parts the genre still uses.
 - Later writers counted on the reader knowing the pattern.
-

Questions 36.1 to 36.10

on passage 36, The First Locked Room

36.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Poe wrote only three Dupin stories and thought little of them
- B) The windows in the room appear to be nailed shut
- C) One story supplied parts that later writers rely on a reader knowing
- D) Later writers simply copied the pattern Poe set down

36.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what could the crowd of neighbors not agree on?

- A) What language the second voice was speaking
- B) Whether the door was locked from the inside
- C) Which of the two women had been killed first
- D) Whether the police had arrested the wrong man

36.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the solution is prepared rather than sprung on the reader?

- A) “There is a solution that is strange but mechanical”
- B) “The explanation is given in the last pages, and every clue needed for it has already appeared”
- C) “The police arrest the wrong man almost at once”
- D) “Two women are killed in a room on the fourth floor of a Paris house”

36.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Agatha Christie built a career on breaking the rules the pattern had established, and her readers could only be shocked because they knew them. A reader who had never met the pattern would therefore ____

Which choice most logically completes the text?

- A) find the broken rules more shocking still
- B) be unable to follow a Dupin story at all
- C) prefer the official force to the private reasoner
- D) miss the point of the rule being broken

36.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “imitate” most nearly mean?

- A) make fun of
- B) stand in for
- C) reproduce closely
- D) improve upon

36.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of four parts in the text?

- A) It dates the arrival of Sherlock Holmes
- B) It sets out what the story left for later writers
- C) It explains why the police arrest the wrong man
- D) It argues that Christie broke every one of the rules

36.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 86 of this book. It says a convention both tells a reader how to read and creates the possibility of significant deviation, because a rule everybody knows can be broken on purpose and the breaking will be noticed.

Text 1 reports that later writers counted on a reader knowing the pattern. Based on Text 2, which choice best explains what that knowledge makes possible?

- A) A rule everybody knows can be broken on purpose and noticed
- B) Every clue must be shown to the reader before the solution
- C) The story introduced a set of parts that are still in use
- D) A western hero walking down a street borrows earlier walks

36.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Later writers did not simply imitate the pattern. ____ they counted on a reader knowing it, which is a different and more useful thing.

Which choice completes the text with the most logical transition?

- A) For example,
- B) As a result,
- C) Even so,
- D) Instead,

36.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The door is locked from the inside ____ and the key is in the lock.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) inside and
- B) inside, and
- C) inside; and
- D) inside and,

36.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The story introduced a set of parts that are still in use.
- Later writers did not simply imitate the pattern.
- They counted on a reader knowing it.
- Christie built a career on breaking rules her readers knew.

The student wants to explain why a modern reader enjoys a detective story. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The story introduced a set of parts that are still in use
- B) Later writers did not simply imitate the pattern Poe set
- C) Christie built a career on breaking rules her readers knew
- D) Because the reader knows the pattern, a writer can break it and be felt to have done so

ملخص المقطع 36 بالعربية

خلاصة: نشر إدغار آلن بو جرائم شارع المشرحة سنة ألف وثمانمئة وإحدى وأربعين. تُقتل امرأتان في غرفة بالطابق الرابع من دار باريسية، والباب مُقفّل من داخله والمفتاح في القفل، والنوافذ تبدو مسمّرة، وتقبض الشرطة على الرجل الخطأ في الحال.

المعنى: المعنى أن القصة قدّمت أجزاءً ما زالت تُستعمل: محقّق خاصّ لامع ليس شرطياً يحلّ القضية بالاستدلال من التفصيل المادّي، ورفيق أبطأ يروي ويسأل ما يسأله القارئ، وجهاز رسمي كفو ومخطئ، وحلّ غريب لكنّه ميكانيكيّ، وتفسير يأتي في الصفحات الأخيرة وقد ظهر كلّ دليل له قبلها.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: الكتاب اللاحقون لم يحاكو النمط محاكاةً مجرّدة، بل عوّلوا على معرفة القارئ به، وهذا أمر آخر وأنفع، ومنه تبدأ لذة الشكل الحديث. فأغاثا كريستي بنت مسيرتها على نقض القواعد التي أقامها النمط.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفتح المتوقّع هنا أن يُحسب اللاحقون ناسخين للنمط، مع أن النض ينفي ذلك. ويقترن المقطع بالمقطع السادس والثمانين في أسئلة النضين المتقابلين.

A Dutch Kitchen in 1658

Johannes Vermeer painted *The Milkmaid* in Delft at about the end of the 1650s. The picture is small, roughly eighteen inches high. A servant stands at a table pouring milk from an earthenware jug into a bowl. That is the whole event. Light comes through a window on the left, and the wall behind her is plain plaster with a nail and a nail hole in it.

The things in the room are painted with great care. There is bread on the table, broken and rough. There is a blue cloth, a brass pot, a basket and a polished jug hanging on the wall. Low down on the right there is a foot warmer, a small wooden box for hot coals, and a line of blue tiles along the base of the wall. The milk is the only moving thing in the painting, and Vermeer painted it as a thin white thread with a thickened edge where it meets the bowl.

Every surface reflects light differently and the painter has recorded each one. The glaze on the jug carries a hard highlight. The bread crust holds small dots of thick paint that catch light like real crumbs. The whitewashed wall is warm where the sun falls on it and cool in the shadow. Nothing is happening, and yet the picture has held visitors in front of it for three hundred years. A later passage in this strand asks how a painter arranges such a scene so that the eye goes where it is sent. The first step is noticing how much is actually there. Vermeer left about thirty-five paintings in all. He worked slowly, borrowed money, and was largely forgotten for nearly two centuries after his death in 1675. *The Milkmaid* is now the property of the Dutch state.

WHAT THIS PASSAGE IS FOR

- The painting records one ordinary action in a plain room.
 - Each surface is given its own kind of highlight.
 - The milk is the only thing in motion.
-

Questions 37.1 to 37.10

on passage 37, A Dutch Kitchen in 1658

37.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Vermeer left about thirty-five paintings in all
- B) The painting is small, roughly eighteen inches high
- C) The painting records a dramatic event in a kitchen
- D) A picture in which nothing happens is dense with recorded surfaces

37.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the only moving thing in the painting?

- A) The light through the window on the left
- B) The milk being poured into the bowl
- C) The servant standing at the table
- D) The jug hanging on the wall

37.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the painter recorded how each surface takes light differently?

- A) “A servant stands at a table pouring milk from an earthenware jug into a bowl”
- B) “Low down on the right there is a foot warmer, a small wooden box for hot coals”
- C) “The bread crust holds small dots of thick paint that catch light like real crumbs”
- D) “The things in the room are painted with great care”

37.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Nothing is happening, and yet the picture has held visitors in front of it for three hundred years. A viewer who finds the painting empty has therefore ____

Which choice most logically completes the text?

- A) not yet noticed how much is there
- B) understood the painter's intention exactly
- C) confused this picture with a later one
- D) measured the panel at eighteen inches

37.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “reflects” most nearly mean?

- A) thinks carefully about
- B) stands as a sign of
- C) mirrors an exact image
- D) throws back

37.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about a later passage in this strand?

- A) It names the owner of the painting today
- B) It reports the year Vermeer died in Delft
- C) It points forward to a question this text does not take up
- D) It concludes that the arrangement cannot be described

37.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 87 of this book. It names tonal contrast, line, and scale and position as the three devices that carry a composition, and says the eye goes to the strongest contrast first, which is why Vermeer puts his brightest white on the milk and the cap.

Text 1 lists the surfaces Vermeer recorded. Based on Text 2, which choice best explains why the milk draws the eye first?

- A) Edges that run diagonally lead the eye along them
- B) The brightest white sits against a wall kept in a narrow range
- C) The milk is the only moving thing in the painting
- D) An object cut by the frame reads as continuing beyond it

37.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Nothing is happening in the picture. ____ it has held visitors in front of it for three hundred years.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) As a result,
- C) In other words,
- D) For instance,

37.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The things in the room are painted with great care ____ and there is bread on the table, broken and rough.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) care and
- B) care; and
- C) care, and
- D) care and,

37.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The whole event is a servant pouring milk into a bowl.
- Bread, a blue cloth, a brass pot, a basket and a jug are all recorded.
- Every surface reflects light differently.
- The picture has held visitors for three hundred years.

The student wants to emphasize how much detail a quiet picture holds. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) One pouring of milk is surrounded by a dozen surfaces, each recorded for the light it takes
- B) The whole event in the painting is a servant pouring milk
- C) Bread, a cloth, a pot, a basket and a jug are recorded
- D) The picture has held visitors for three hundred years

ملخص المقطع 37 بالعربية

خلاصة: رسم يوهانس فرمير حالبة اللبن في دلفت قرب نهاية خمسينيات القرن السابع عشر. واللوحة صغيرة، نحو ثمانين عشرة بوصة ارتفاعاً، وفيها خادمة واقفة عند مائدة تصب لبناً من جرة خزفية في قصعة، وذلك هو الحدث كله.

المعنى: المعنى أن أشياء الغرفة مرسومة بعناية بالغة: خبز مكسور حشيش، وقماش أزرق، وقدر نحاسية، وسلّة، وجرة مصقولة معلّقة، ودفء قدمين في اليمين الأسفل، وصف من القرميد الأزرق. واللبن هو الشيء المتحرك الوحيد، رسمه فرمير خيطاً أبيض رقيقاً له حرف غليظ عند القصعة.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: كل سطح يرد الضوء رداً مختلفاً، والرسام سجل كل واحد منها: الطلاء على الجرة يحمل وميضاً قاسياً، وقشرة الخبز فيها نقط من طلاء غليظ تلتقط الضوء كالكيسر الحقيقية، والجدار دافئ حيث تقع الشمس وبارد في الطل.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن معنى كلمة في سياقها. والفتح المتوقع هنا أن يطلب حدث درامي في اللوحة، مع أن النص يقول إن لا شيء يحدث. ويقترب المقطع بالمقطع السابع والثمانين في أسئلة النصين المتقابلين.

One Tune, Twelve Ways

Mozart wrote a set of twelve variations for keyboard on a French song that English speakers know as the tune of Twinkle, Twinkle, Little Star. The tune itself is eight bars long and uses only a handful of notes. He states it plainly first, so that every listener knows exactly what will be worked on. Then he changes it twelve times without ever quite losing it.

The methods are easy to hear. In one variation the right hand runs in fast even notes while the tune hides inside the run. In another the tune moves to the left hand underneath. One variation turns the key from major to minor, which darkens the whole character while the shape of the melody stays where it was. One slows almost to a halt. The last speeds up and changes the count of beats in a bar. In every case a listener can still follow the original, and the pleasure comes from hearing it survive.

The form is old and was never Mozart's invention. A composer takes something already known, often a popular song or a dance, and demonstrates what can be done to it. Bach, Beethoven, Brahms and Rachmaninoff all wrote large sets of this kind, and Beethoven was inspired to write thirty-three variations on a waltz by a publisher he thought little of. Jazz musicians work the same way nightly. The theme is stated, and then it is taken apart in front of the audience. That only works if everyone in the room remembers the theme. Mozart wrote his set in his twenties, probably in Paris, and it was published in 1785. The song itself was already old and nobody knows who wrote it. Several hundred sets of variations on borrowed tunes were published in Europe in that decade alone.

WHAT THIS PASSAGE IS FOR

- The tune is stated plainly before it is altered.
 - Each variation changes one thing while leaving the tune recognizable.
 - The form depends on the audience remembering the theme.
-

Questions 38.1 to 38.10

on passage 38, One Tune, Twelve Ways

38.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A known tune is changed repeatedly and still followed
- B) Mozart published the set in Paris in 1785
- C) The variation form was invented by Mozart himself
- D) One variation turns the key from major to minor

38.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how long is the tune Mozart works on?

- A) Twelve bars
- B) Thirty-three bars
- C) Eight bars
- D) Two bars

38.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a listener can follow the tune through every change?

- A) “The tune itself is eight bars long and uses only a handful of notes”
- B) “One variation turns the key from major to minor, which darkens the whole character”
- C) “Mozart wrote his set in his twenties, probably in Paris, and it was published in 1785”
- D) “In every case a listener can still follow the original, and the pleasure comes from hearing it survive”

38.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The theme is stated, and then it is taken apart in front of the audience. That only works if everyone in the room remembers the theme. A performance that opened with the variations instead would therefore ____

Which choice most logically completes the text?

- A) be easier for the audience to follow
- B) leave the audience with nothing to measure against
- C) turn the key from major to minor at once
- D) last longer than a performance in the usual order

38.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “inspired” most nearly mean?

- A) moved to act
- B) breathed in
- C) made holy
- D) given the idea by

38.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the reference to jazz musicians?

- A) It dates the publication of Mozart's set
- B) It names the French song behind the tune
- C) It argues that jazz invented the procedure
- D) It shows the same procedure still in use

38.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 88 of this book. It describes music as the management of tension and release around a home note, says a cadence is the machinery of arrival, and tells a listener to ask what a passage has set up and whether it has paid.

Text 1 says the pleasure comes from hearing the tune survive. Based on Text 2, which choice best explains why a stated theme matters?

- A) A cadence is the standard machinery of arrival
- B) A strong beat left silent is louder than any note
- C) An effect depends on something being set up first
- D) Film composers work with very simple material

38.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

He states it plainly first, so that every listener knows exactly what will be worked on. ____ he changes it twelve times without ever quite losing it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) After that,
- C) In other words,
- D) For example,

38.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The theme is stated ____ and then it is taken apart in front of the audience.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) stated and
- B) stated; and
- C) stated and,
- D) stated, and

38.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Mozart states the tune plainly before the variations.
- The tune is eight bars long and uses few notes.
- A listener can still follow the original in every case.
- Taking a theme apart only works if the room remembers it.

The student wants to explain what a listener needs in order to enjoy a set of variations. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The tune is eight bars long and uses only a few notes
- A plainly stated tune gives the listener the original to follow through every change
- Mozart states the tune plainly before the variations begin
- Taking a theme apart only works if the room remembers it

ملخص المقطع 38 بالعربية

خلاصة: كتب موتسارت اثنتي عشرة تنويعاً للآلة ذات المفاتيح على أغنية فرنسية يعرفها متكلمو الإنجليزية لاحقاً لأغنية النجمة الصغيرة. واللحن نفسه ثمانية موازير ولا يستعمل إلا حفنة من النغمات، ويعرضه موتسارت صريحاً أولاً ليعلم كل مستمع ما سيعمل عليه.

المعنى: المعنى أن الطرائق مسموعة بيسر: في تنويع تجري اليمينى بنغمات سريعة متساوية واللحن مستخف داخل الجريان، وفي أخرى ينتقل اللحن إلى اليسرى تحته، وواحدة تحول المقام من كبير إلى صغير فيعتم الطابع كله وشكل اللحن باقٍ، وواحدة تبطل حتى الوقوف.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: الشكل قديم ولم يكن ابتكاراً لموتسارت، فالمؤلف يأخذ شيئاً معروفاً، أغنية شائعة أو رقصة، ويظهر ما يمكن عمله به. وقد كتب باخ وبيتهوفن وبرامز ورخمانينوف مجموعات كبيرة من هذا النوع، ويعمل عازفو الجاز كذلك كل ليلة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن وظيفة جزء من النص وعن إكمال النص إكمالاً منطقيًا، والفخ المتوقع هنا أن يُنسب ابتكار الشكل إلى موتسارت، مع أن النص يسميه قديمًا. ويقترن المقطع بالمقطع الثامن والثمانين في أسئلة النصين المتقابلين.

Shopping Under Glass

Burlington Arcade opened off Piccadilly in London in 1819. It is a straight covered lane, about six hundred feet long, lined on both sides with small shops and roofed in glass. It was built on the edge of a private garden, partly to stop passers-by from throwing oyster shells over the wall. Beadles, meaning uniformed officers employed to keep order, patrolled it in top hats. Running, singing and whistling were forbidden, and still are.

The idea spread quickly because it solved several problems at once. London rain made street shopping miserable, and pavements were narrow, filthy and shared with carriages. Under glass a shopper could walk the whole length dry, look in forty windows, and meet people. The shops were small and the rents were high, which suited trades selling expensive light goods: gloves, jewelry, prints, watches. Gas lighting, and then electric lighting, let the arcade stay open into the evening.

Bigger versions followed across Europe. Milan built the Galleria Vittorio Emanuele II between 1865 and 1877, with a glass dome a hundred and fifty feet high over a crossing of two covered streets. Cleveland, Brussels, Naples and Moscow each built their own version within fifty years of the Milan galleria. These were admired as engineering as much as architecture. A long glass roof carried on iron was a new thing to be able to make. The arcade is also the direct ancestor of the shopping mall. One difference matters. An arcade is a public street with a roof on it, and it has doors at both ends that open onto the city. A mall has one owner, one set of opening hours and a car park. Burlington Arcade still has its beadles, and the rules against whistling were enforced into the present century.

WHAT THIS PASSAGE IS FOR

- An arcade is a covered lane lined with small shops.
 - It solved rain, dirt and narrow pavements at once.
 - An arcade is a public street with a roof, open at both ends.
-

Questions 39.1 to 39.10

on passage 39, Shopping Under Glass

39.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Burlington Arcade still employs beadle in top hats
- B) A roofed public lane solved several problems of street shopping
- C) The Milan galleria has a dome a hundred and fifty feet high
- D) An arcade and a shopping mall are the same thing

39.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which trades suited the shops in the arcade?

- A) Those selling heavy goods cheaply
- B) Those needing a car park nearby
- C) Those open only in daylight hours
- D) Those selling expensive light goods

39.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the arcade belongs to the city in a way a mall does not?

- A) “An arcade is a public street with a roof on it, and it has doors at both ends that open onto the city”
- B) “A mall has one owner, one set of opening hours and a car park”
- C) “Gas lighting, and then electric lighting, let the arcade stay open into the evening”
- D) “It is a straight covered lane, about six hundred feet long, lined on both sides with small shops”

39.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

London rain made street shopping miserable, and pavements were narrow, filthy and shared with carriages. A shopper who went under glass instead was therefore ____

Which choice most logically completes the text?

- A) paying higher rents than before
- B) confined to a single row of shops
- C) out of the rain and off the carriage way
- D) forbidden to meet anyone on the way

39.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “admired” most nearly mean?

- A) looked at longingly
- B) held in high regard
- C) copied in other cities
- D) inspected for faults

39.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying one difference matters?

- A) It marks the arcade off from its descendant
- B) It reports the length of Burlington Arcade
- C) It explains why running and singing were forbidden
- D) It claims the mall improved on the arcade

39.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 89 of this book. It measures a street by active frontage, by the proportion of width to height and by permeability, and reports that doorways per hundred meters predicts street life better than architectural quality does.

Text 1 describes a lane lined on both sides with small shops. Based on Text 2, which choice best explains why such a lane feels busy?

- A) A long glass roof carried on iron was a new thing
- B) A tower set back in open ground leaves the pavement dead
- C) Older European streets run between one to one and one to two
- D) Many doorways along a short length predict street life

39.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The shops were small and the rents were high. ____ the arcade suited trades selling expensive light goods.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) For instance,
- C) Accordingly,
- D) That is to say,

39.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Running, singing and whistling were forbidden ____ and they still are.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) forbidden, and
- B) forbidden and
- C) forbidden; and
- D) forbidden and,

39.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- An arcade is a public street with a roof on it.
- It has doors at both ends that open onto the city.
- A mall has one owner and one set of opening hours.
- The arcade is the direct ancestor of the shopping mall.

The student wants to explain why the arcade is not simply an early mall. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The arcade is the direct ancestor of the shopping mall
- B) A mall has one owner and one set of opening hours
- C) The arcade stays a public street, open at both ends, while the mall has one owner
- D) An arcade is a public street with a roof on it

ملخص المقطع 39 بالعربية

خلاصة: افتتح رواق برلنغتون قبالة بيكاديلي في لندن سنة ألف وثمانمئة وتسع عشرة. وهو زقاق مغطى مستقيم نحو ستمئة قدم طولاً، مصطفة على جانبيه دكاكين صغيرة ومسقوف بالزجاج، وكان يطوف فيه حجة بقبعات عالية، ومُنِع الرُكُض والغناء والصغير وما زال ممنوعاً. المعنى: المعنى أن الفكرة انتشرت سريعاً لأنها حلّت مشكلات عدّة في وقت واحد: فمطر لندن كان يُنكّد التسوّق في الشارع، والأرصفة ضيقة قدرة تُشَارِك مع العربات. أمّا تحت الزجاج فيمشي المتسوّق الطول كلّ جافاً، وينظر في أربعين واجهة، ويلقى الناس. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: الدكاكين صغيرة والأجرة عالية، وهذا يوافق تجارات تباع سلعاً خفيفة غالية من قفازات وخليّ ومطبوعات وساعات. وتبعت نسخ أكبر في أوروبا، ورواق فيتوريو إيمانويلي الثاني في ميلانو بُني بين سنة خمس وستين وسنة سبع وسبعين من القرن التاسع عشر. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقع هنا أن يُسوَّى الرواق بالمركز التجاري، مع أن النص يفرّق بينهما: الرواق شارع عامّ مسقوف له بابان يفتحان على المدينة. ويقترن المقطع بالمقطع التاسع والثمانين.

Two Reviews of One Riot

The Rite of Spring had its first performance in Paris on May 29, 1913. Igor Stravinsky wrote the music and Vaslav Nijinsky arranged the dancing. The audience began to object within the first minutes. There was laughing, then shouting, then fighting in the aisles, and the noise grew loud enough that the dancers could not hear the orchestra. Nijinsky stood in the wings calling out the counts.

The reviews the next morning did not agree about what had happened. One Paris critic called the work a laborious and puerile barbarity and said the theater should be ashamed. Another praised it as a work of rare strength and wrote that the hissing came from people defending their own habits. A third spent most of his column on the clothes in the audience. All three had sat in the same room for the same thirty-three minutes.

That disagreement is the ordinary condition of criticism rather than a scandal. Each of the three had a standard in mind and the standards were different. The first wanted melody and grace and found neither. The second wanted a work that did something new and found one. The third wanted a social occasion. A reader who wants to use any review must therefore find the standard behind it, which is often unstated. Within a decade the piece was being played in concert halls to respectful audiences, and Stravinsky lived another fifty-eight years as the most famous composer alive. The riot is now part of the music's reputation, which none of the three critics could have predicted. Stravinsky himself gave several accounts of the evening in later life, and they do not agree with one another either. The theater that staged it had opened only six weeks before, on a new avenue in a fashionable district. Its manager said afterward that he had expected trouble and had sold the seats anyway.

WHAT THIS PASSAGE IS FOR

- The first performance ended in shouting and fighting.
 - The reviews disagreed because the standards behind them differed.
 - A reader of a review must find the standard behind it.
-

Questions 40.1 to 40.10

on passage 40, Two Reviews of One Riot

40.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Rite of Spring was first performed in Paris in 1913
- B) The audience fought in the aisles during the performance
- C) Reviews differ because the standards behind them differ
- D) One of the three critics judged the work correctly

40.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did the third critic write about?

- A) The clothes worn by the audience
- B) The strength of the new work
- C) The shame of the theater
- D) The counts called from the wings

40.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the disagreement cannot be put down to what the critics saw?

- A) “The audience began to object within the first minutes”
- B) “All three had sat in the same room for the same thirty-three minutes”
- C) “Nijinsky stood in the wings calling out the counts”
- D) “The reviews the next morning did not agree about what had happened”

40.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Each of the three had a standard in mind and the standards were different. A reader who wants to use any review must therefore ____

Which choice most logically completes the text?

- A) count the minutes the performance lasted
- B) accept the verdict of the strongest writer
- C) read only the reviews that agree with one another
- D) work out the standard the review is using

40.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “praised” most nearly mean?

- A) raised up high
- B) prayed over
- C) commended warmly
- D) appraised coolly

40.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three sentences naming what each critic wanted?

- A) They date the first performance of the work
- B) They supply the standards behind the three reviews
- C) They rank the three reviews against one another
- D) They report how long the performance lasted

40.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 90 of this book. It divides a critical judgment into a claim, evidence and a criterion, and says the criterion fails by staying hidden, which produces a disagreement in which two people measure a work against different things.

Text 1 reports three reviews that do not agree. Based on Text 2, which choice best accounts for that disagreement?

- A) Two people measuring against different hidden standards cannot settle it
- B) A claim fails when nothing could count against it
- C) All three critics sat in the same room for the same minutes
- D) Evidence fails when it is about the author rather than the work

40.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

All three had sat in the same room for the same thirty-three minutes. ____ that disagreement is the ordinary condition of criticism rather than a scandal.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) In other words,
- D) Even so,

40.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Igor Stravinsky wrote the music ____ and Vaslav Nijinsky arranged the dancing.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) music and
- B) music, and
- C) music; and
- D) music and,

40.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Three critics sat in the same room for the same thirty-three minutes.
- One wanted melody and grace and another wanted something new.
- The standard behind a review is often unstated.
- Disagreement is the ordinary condition of criticism.

The student wants to explain how a reader should handle two opposed reviews.

Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Three critics sat in the same room for the same thirty-three minutes
- B) Disagreement is the ordinary condition of criticism rather than a scandal
- C) One critic wanted melody and grace and another wanted something new
- D) Since each review hides a standard, the reader recovers the standard before weighing the verdict

ملخص المقطع 40 بالعربية

خلاصة: عُرض ربيع التقديس أول مرة في باريس في التاسع والعشرين من مايو سنة ألف وتسعمئة وثلاث عشرة. وضع إيغور سترافنسكي الموسيقى ورثب فاسلاف نيجينسكي الرقص، وبدأ الجمهور يعترض في الدقائق الأولى، فكان ضحك ثم صياح ثم عراك في الممزات. المعنى: المعنى أن مراجعات الصباح التالي لم تتفق على ما حدث: فناقذ باريسى سمى العمل بربرية متكلفة صبيانية وقال إن على المسرح أن يخجل، وآخر أثنى عليه عملاً نادر القوة وكتب إن الهسهسة جاءت من مدافعين عن عاداتهم، وثالث أنفق عموده على ثياب الجمهور. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الظاهرة: ثلاثتهم جلسوا في الغرفة نفسها ثلاثاً وثلاثين دقيقة، وذلك الخلاف حال النقد المعتادة لا مفضحة. فلكل واحد معيار في ذهنه والمعايير مختلفة: الأول أراد لحنًا ورشاقة، والثاني أراد عملاً يفعل شيئاً جديداً، والثالث أراد مناسبة اجتماعية. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن الانتقال الأكثر منطقية. والفخ المتوقع هنا أن يُختار ناقد واحد مائلاً، مع أن النص يطلب من القارئ أن يستخرج المعيار الكامن خلف كل مراجعة. ويقترن المقطع بالمقطع التسعين.

Social Science

Passages 41 to 50

SOC · S01 · phenomenon

Forbid, Allow and Twenty Points

In 1940 an American researcher named Donald Rugg ran a simple test on question wording. He had two versions of one question about free speech. One asked whether the United States should forbid public speeches against democracy. The other asked whether the United States should allow such speeches. Logically these are the same question. A person who wants to forbid something does not want to allow it. The two versions went to two matched groups of people in the same survey.

The answers did not match. About fifty-four percent said yes to forbidding. About seventy-five percent said no to allowing. Those two figures describe different publics, and the gap is roughly twenty points. The study has been repeated many times since, in several countries, with the same result. People are more willing to refuse permission than to impose a ban, even when the practical effect is identical. The word forbid is heavier than the phrase not allow, and respondents, meaning the people who answer a survey, hear the weight.

That is one of a family of effects that pollsters have to manage. The order of the items changes answers. A question about national problems placed after a question about crime produces more mentions of crime. Offering a middle option pulls perhaps a fifth of respondents out of the two sides. Asking about aid to the poor gets warmer answers than asking about welfare, though the programs named are the same ones. None of this means that surveys are useless. It means that a number from a survey is a number about a particular form of words, and that the wording influences the result as much as the subject does. A reader who is given a percentage without the question is not being given much. Good polling organizations publish the exact wording alongside the figure for this reason.

WHAT THIS PASSAGE IS FOR

- Two logically identical wordings gave answers twenty points apart.
- People refuse permission more readily than they impose a ban.
- A survey figure is a figure about one particular form of words.

Questions 41.1 to 41.10

on passage 41, Forbid, Allow and Twenty Points

41.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Rugg ran his test on free speech in 1940
- B) A survey figure is a figure about one form of words
- C) Surveys are useless because wording changes answers
- D) The two versions of the question produced the same answers

41.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did about fifty-four percent say?

- A) That they would not allow the speeches
- B) That they had no opinion either way
- C) That the two questions were the same
- D) That the speeches should be forbidden

41.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the effect is not a one-off result?

- A) “The study has been repeated many times since, in several countries, with the same result”
- B) “The two versions went to two matched groups of people in the same survey”
- C) “Logically these are the same question. A person who wants to forbid something does not want to allow it”
- D) “Good polling organizations publish the exact wording alongside the figure for this reason”

41.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A reader who is given a percentage without the question is not being given much. A report that prints a figure and omits the wording therefore ____

Which choice most logically completes the text?

- A) rules out any order effect
- B) describes two publics at once
- C) withholds what the figure is about
- D) proves the survey was badly run

41.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “influences” most nearly mean?

- A) has authority over
- B) helps to determine
- C) leaves unchanged
- D) persuades by charm

41.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the answers failed to match?

- A) It marks the result against the expectation just stated
- B) It defines what a respondent is for a reader
- C) It reports the year the test was run
- D) It concludes that surveys cannot be used

41.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 91 of this book. It separates three ways a survey can fail, the sampling frame, nonresponse and the instrument, and says the instrument includes the wording effects from the earlier passage along with order effects.

Text 1 reports an effect of question wording. Based on Text 2, which choice best describes where such an effect belongs?

- A) In the sampling frame the names are drawn from
- B) In the failure of selected people to answer
- C) In the weighting applied to the answers
- D) In the instrument that puts the questions

41.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Logically these are the same question. ____ a person who wants to forbid something does not want to allow it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) After all,
- D) In any case,

41.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The order of the items changes answers ____ and offering a middle option pulls about a fifth of respondents out of the two sides.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) answers, and
- B) answers and
- C) answers; and
- D) answers and,

41.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- About fifty-four percent would forbid and about seventy-five percent would refuse to allow.
- The two figures describe different publics.
- A number from a survey is a number about a particular form of words.
- Good polling organizations publish the exact wording.

The student wants to explain what a reader needs besides the percentage. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) About fifty-four percent would forbid the speeches
- B) The two figures describe different publics entirely
- C) The exact wording, since the figure is a figure about those words
- D) Good polling organizations publish the exact wording

ملخص المقطع 41 بالعربية

خلاصة: سنة ألف وتسعمئة وأربعين أجرى باحث أمريكي يُسمى دونالد رَغ اختبارًا بسيطًا على صياغة الأسئلة. كان بيده صيغتان لسؤال واحد عن حُرِّية الكلام: إحداهما تسأل هل تمنع الولايات المتحدة الخطب العامة ضد الديمقراطية، والأخرى هل تسمح بها. المعنى: المعنى أن الصيغتين سؤال واحد منطقيًا، فمن أراد منع شيء لم يُرد السماح به. وذهبت الصيغتان إلى مجموعتين متماثلتين في المسح نفسه، فلم تتوافق الأجوبة: نحو أربع وخمسين في المئة قالوا نعم للمنع، ونحو خمس وسبعين قالوا لا للسماح. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: الرقمان يصفان جمهورين مختلفين، والفجوة نحو عشرين نقطة، وقد أعيدت الدراسة مرّات كثيرة في بلدان عدّة بالنتيجة نفسها. فالناس أقدر على رفض الإذن من فرض الحظر ولو تساوى الأثر العملي. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُستنتج أن المسوح عديمة النفع، مع أن النص ينفي ذلك صريحًا. ويقترن المقطع بالمقطع الحادي والتسعين في أسئلة النصّين المتقابلين.

Thirteen Children or Twenty-Five

Tennessee ran an unusual experiment in its schools between 1985 and 1989. It is still known by the name Project STAR. The state wanted to know whether small classes help young children. Earlier studies had compared schools that happened to have small classes with schools that did not, and those comparisons were hard to trust. Small classes are common in rich districts and in schools with spare rooms. Any difference in results might come from the wealth or the building rather than the class size.

So the state assigned children by lot. About eleven thousand six hundred pupils in seventy-nine schools entered the study in kindergarten. Within each school, children were put at random into a small class of thirteen to seventeen, or into a regular class of twenty-two to twenty-five, or into a regular class with a teacher's aide. Teachers were assigned by lot as well. The children stayed in their assigned kind of class for up to four years and were tested each year. The design is called a randomized trial.

The small classes did better. The gap was clearest in the first two years and in reading, and it was larger for children from poorer families. The effect did not vanish when the children returned to ordinary classes, and some of it could still be found years later in high school test taking. The experiment also cost a great deal, because small classes need more teachers and more rooms, and that cost is the reason the policy argument continued after the result was in. Tennessee published the data, and economists including Alan Krueger reanalyzed it for years afterward. What the lot made possible was a fair comparison. Nothing except the class size distinguished the two groups at the start.

WHAT THIS PASSAGE IS FOR

- Children and teachers were assigned to class sizes by lot.
 - About 11,600 pupils in 79 schools took part from kindergarten.
 - The lot is what made the comparison fair.
-

Questions 42.1 to 42.10on passage 42, *Thirteen Children or Twenty-Five***42.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Tennessee published the data for later reanalysis
- B) Small classes cost a great deal to provide
- C) Assigning by lot made a fair comparison possible
- D) Earlier comparisons of schools were trustworthy

42.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how large was a small class in the study?

- A) Thirteen to seventeen children
- B) Twenty-two to twenty-five children
- C) About seventy-nine children
- D) Four to eleven children

42.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the gain did not depend on staying in a small class?

- A) “About eleven thousand six hundred pupils in seventy-nine schools entered the study in kindergarten”
- B) “The effect did not vanish when the children returned to ordinary classes, and some of it could still be found years later in high school test taking”
- C) “The gap was clearest in the first two years and in reading, and it was larger for children from poorer families”
- D) “Within each school, children were put at random into a small class of thirteen to seventeen”

42.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Small classes are common in rich districts and in schools with spare rooms. Any difference in results might come from the wealth or the building rather than the class size. A comparison of schools that happened to differ would therefore ____

Which choice most logically completes the text?

- A) balance the two groups at the start
- B) require teachers assigned by lot
- C) show a larger gain for poorer children
- D) leave the cause of the gap unsettled

42.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “compared” most nearly mean?

- A) likened for rhetorical effect
- B) ranked above one another
- C) set side by side to find a difference
- D) brought into agreement

42.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about rich districts and spare rooms?

- A) It defines a randomized trial for a reader
- B) It explains why the earlier studies were doubted
- C) It reports the years the experiment ran
- D) It argues that wealth improves reading

42.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 92 of this book. It contrasts matching with a lottery, names the confounder as a difference between groups that affects the outcome, and says the fatal property of confounders is that the dangerous ones are the ones nobody thought of.

Text 1 says the lot made a fair comparison possible. Based on Text 2, which choice best explains why matching would have failed?

- A) The dangerous differences are the ones nobody listed
- B) Groups will differ a little by luck in any trial
- C) A result may fail to transfer to another decade
- D) People dropping out unevenly spoils a design

42.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Any difference in results might come from the wealth or the building rather than the class size. ___ the state assigned children by lot.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) In other words,
- D) For that reason,

42.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The small classes did better ___ and the gap was clearest in the first two years.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) better and
- B) better, and
- C) better; and
- D) better and,

42.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The small classes did better, especially for poorer children.
- Small classes need more teachers and more rooms.
- The experiment cost a great deal.
- The cost is the reason the argument continued.

The student wants to explain why the policy argument continued after the result. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The small classes did better, especially for poorer children
- B) Small classes need more teachers and more rooms
- C) The cost is the reason the argument continued after the result
- D) A finding that works can still be argued over once its price is counted

ملخص المقطع 42 بالعربية

خلاصة: أجرت ولاية تينيسي تجربة غير معتادة في مدارسها بين سنة ألف وتسعمئة وخمس وثمانين وسنة تسع وثمانين، تُعرف باسم مشروع ستار. أرادت الولاية أن تعلم هل تنفع الصفوف الصغيرة الأطفال الصغار.

المعنى: المعنى أن دراسات سابقة قارنت مدارس صادف أن فيها صفوفًا صغيرة بمدارس ليس فيها، وتلك المقارنات صعبة التصديق: فالصفوف الصغيرة شائعة في المناطق الغنية وفي المدارس ذات الغرف الفاضلة، وأي فرق قد يأتي من الثراء أو البناء لا من حجم الصف.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: فوزعت الولاية الأطفال بالقرعة، ودخل الدراسة نحو أحد عشر ألفًا وستمئة تلميذ في تسع وسبعين مدرسة، فوضعوا عشوائيًا في صف صغير من ثلاثة عشر إلى سبعة عشر أو في صف عادي من اثنين وعشرين إلى خمسة وعشرين.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقع هنا أن تُحسب المقارنات السابقة موثوقة، مع أن النص يقول إنها صعبة التصديق. ويقترن المقطع بالمقطع الثاني والتسعين.

Chocolate and the Nobel Prize

In 2012 a Swiss physician named Franz Messerli published a short paper in a well-known medical journal. He had plotted two figures for twenty-three countries. On one axis was the amount of chocolate eaten per person each year. On the other was the number of Nobel prizes won per million people. The points lined up remarkably well. Switzerland sat at the top on both measures. China sat near the bottom on both. The relationship was strong enough that a statistician would call it a tight fit.

Messerli was making a joke with a serious point, and he said so in the paper. Nobody thinks that eating chocolate produces scientists. Several other explanations are available at once. Rich countries eat more chocolate and also fund more laboratories, so national wealth could produce both figures without either touching the other. The measures are also crude. Prizes are awarded to people who did their work decades earlier, often in a different country from the one that claims them. A country of two million people needs only one laureate, meaning one person awarded the prize, to lead the table.

The paper is now used in teaching, which was not quite its purpose. It is a clean case of a pattern that is real, strong, measurable and useless as a guide to action. Two figures can rise together because one causes the other, because the second causes the first, because a third thing causes both, or because a small sample has fallen out that way. A reader who sees two lines moving together and does not ask which of those four is in play will assume the first. That reader will be wrong most of the time. The habit of asking is most of what a course in statistics is for.

WHAT THIS PASSAGE IS FOR

- A real published paper found a tight fit between chocolate and Nobel prizes.
 - National wealth could produce both figures without either touching the other.
 - Two figures can move together for four quite different reasons.
-

Questions 43.1 to 43.10

on passage 43, Chocolate and the Nobel Prize

43.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Switzerland sat at the top on both measures
- B) The paper is now used in teaching
- C) Eating chocolate helps produce scientists
- D) A real and strong pattern can still guide nothing

43.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how many countries did the paper cover?

- A) Two of them
- B) Twenty-three
- C) Two million
- D) A dozen

43.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that national wealth could produce both figures?

- A) “The points lined up remarkably well. Switzerland sat at the top on both measures”
- B) “Prizes are awarded to people who did their work decades earlier, often in a different country”
- C) “Rich countries eat more chocolate and also fund more laboratories, so national wealth could produce both figures without either touching the other”
- D) “A country of two million people needs only one laureate, meaning one person awarded the prize, to lead the table”

43.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Two figures can rise together because one causes the other, because the second causes the first, because a third thing causes both, or because a small sample has fallen out that way. A reader who settles on the first without asking is therefore ____

Which choice most logically completes the text?

- A) wrong most of the time
- B) reading a tight fit correctly
- C) studying twenty-three countries
- D) making the joke the author made

43.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “assume” most nearly mean?

- A) take on a duty
- B) pretend to have
- C) prove by testing
- D) take for granted

43.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about a country of two million?

- A) It defines a laureate for the first time
- B) It reports the year the paper appeared
- C) It shows how crude the second measure is
- D) It argues that small countries win more prizes

43.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 93 of this book. It sets out four relations two correlated measurements may stand in, and names the common cause as its third possibility, saying it is what the chocolate and Nobel case shows.

Text 1 calls national wealth a possible source of both figures. Based on Text 2, which choice best names that relation?

- A) Reverse causation
- B) A common cause
- C) A selection effect
- D) A dose response

43.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Nobody thinks that eating chocolate produces scientists. ___ several other explanations are available at once.

Which choice completes the text with the most logical transition?

- A) Besides,
- B) By contrast,
- C) As a result,
- D) In other words,

43.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Switzerland sat at the top on both measures ___ and China sat near the bottom on both.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) measures and
- B) measures; and
- C) measures, and
- D) measures and,

43.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Two figures can rise together for four different reasons.
- A reader who fails to ask will assume the first.
- That reader will be wrong most of the time.
- The habit of asking is most of what a statistics course is for.

The student wants to explain what the habit of asking is for. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Asking which of four reasons is in play is what keeps a reader from guessing the first
- Two figures can rise together for four different reasons
- A reader who fails to ask will assume the first reason
- The habit of asking is most of what a statistics course is for

ملخص المقطع 43 بالعربية

خلاصة: سنة ألفين واثنى عشرة نشر طبيب سويسري يُسمى فرانتس ميسرلي ورقة قصيرة في مجلة طبية معروفة. كان قد رسم رقمين لثلاث وعشرين دولة: على محور كمية الشوكولاتة المأكولة للفرد في السنة، وعلى الآخر عدد جوائز نوبل لكل مليون نسمة. المعنى: المعنى أن النقاط اصطفت اصطفاً لافتاً: سويسرا في القمة على المقياسين، والصين قريبة من الأسفل عليهما. والعلاقة قوية بما يسميه الإحصائي مطابقة محكمة، وميسرلي كان يمزح مزحة ذات مغزى جذبي وقال ذلك في الورقة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: لا أحد يظن أن أكل الشوكولاتة يُنتج علماء، وثم تفاسير أخرى حاضرة: فالبلدان الغنية تأكل شوكولاتة أكثر وتمول مختبرات أكثر، فقد يُنتج الثراء الوطني الرقمين دون أن يمس أحدهما الآخر. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُقرأ العلاقة سبباً، مع أن النص يعد أربع علاقات ممكنة. ويقترن المقطع بالمقطع الثالث والتسعين.

The Street With One Rich Man

Nine households on a street each have an income of forty thousand dollars a year. The tenth household has an income of four million. The mean income on the street is four hundred and four thousand dollars. That figure is correct and it describes nobody. Nine of the ten families are nowhere near it, and the tenth is ten times above it. The middle household, which is the median, meaning the middle value when the cases are put in order, earns forty thousand dollars like its eight neighbors.

Real national figures behave in the same way for the same reason. In the United States the mean household income runs well above the median, by something like a third, because incomes have no upper limit and do have a lower one. A small number of very large incomes pull the mean up and cannot pull the median anywhere, since the median only asks which household stands in the middle of the line. Any measure that sums and divides is sensitive to the largest values in the set. Any measure that counts positions is not.

Which figure a writer chooses therefore decides what the sentence says. A report that uses the mean can describe a decade in which almost every household lost ground as a decade of rising incomes, provided the top of the distribution rose enough. A report that uses the median will show the opposite trend from the same raw data, and neither report is lying. The responsible practice is to give both, along with some measure of the spread. When only one is offered, the useful question is which one, and the second useful question is why that one was chosen. Government statistical offices publish both as a matter of routine. Newspapers usually print whichever supports the sentence already written.

WHAT THIS PASSAGE IS FOR

- A mean can be correct and describe nobody in the group.
 - The median asks which household stands in the middle.
 - Mean and median can show opposite trends from the same data.
-

Questions 44.1 to 44.10

on passage 44, The Street With One Rich Man

44.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The choice between mean and median decides the sentence
- B) The mean on the street is four hundred and four thousand
- C) Government offices publish both figures routinely
- D) A report using the mean is lying about incomes

44.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how far above the median is the mean in the United States?

- A) About ten times
- B) By about four hundred thousand
- C) By something like a third
- D) By about one percent

44.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that one figure can report a decade the other denies?

- A) “That figure is correct and it describes nobody. Nine of the ten families are nowhere near it”
- B) “Any measure that sums and divides is sensitive to the largest values in the set”
- C) “Government statistical offices publish both as a matter of routine”
- D) “A report that uses the mean can describe a decade in which almost every household lost ground as a decade of rising incomes”

44.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Any measure that sums and divides is sensitive to the largest values in the set. Any measure that counts positions is not. A single enormous income added to a street would therefore ____

Which choice most logically completes the text?

- A) move the median and leave the mean alone
- B) move the mean and leave the median alone
- C) change both figures by the same amount
- D) reduce the spread of the distribution

44.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “trend” most nearly mean?

- A) direction of change over time
- B) a brief fashion
- C) a single measurement
- D) a line on a chart

44.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the middle household?

- A) It reports the income of the tenth household
- B) It argues that the mean is always wrong
- C) It defines the spread of the distribution
- D) It introduces the measure the mean missed

44.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 94 of this book. It adds the standard deviation and the skew to the mean and the median, and says the practical rule is to ask for the shape rather than the summary, with a mean and a standard deviation as the usual pairing.

Text 1 recommends giving both the mean and the median. Based on Text 2, which choice best describes what should accompany them?

- A) A second country for comparison
- B) The number of households on the street
- C) A measure of the spread, or better a shape
- D) The year the figures were collected

44.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

That figure is correct and it describes nobody. ____ nine of the ten families are nowhere near it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Indeed,
- C) As a result,
- D) For example,

44.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nine households on a street each have an income of forty thousand dollars a year ____ and the tenth household has an income of four million.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) year and
- B) year; and
- C) year and,
- D) year, and

44.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A measure that sums and divides is sensitive to the largest values.
- A measure that counts positions ignores them.
- The responsible practice is to give both.
- The useful questions are which one and why that one was chosen.

The student wants to explain what a reader should ask when only one figure is given. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The responsible practice is to give both of the figures
- B) Ask which measure it is and why that one was chosen, since the two respond to large values differently
- C) A measure that counts positions ignores the largest values
- D) The useful question is which one of the two it is

ملخص المقطع 44 بالعربية

خلاصة: تسع أسر في شارع دخل كل واحدة أربعون ألف دولار في السنة، والأسرة العاشرة دخلها أربعة ملايين. فمتوسط الدخل في الشارع أربع مئة وأربعة آلاف دولار، وهو رقم صحيح لا يصف أحدًا: تسع من عشرة بعيدة عنه، والعاشرة عشرة أمثاله. المعنى: المعنى أن الأسرة الوسطى، وهي الوسيط أي القيمة الوسطى حين ترتب الحالات، تكسب أربعين ألفًا كجيرانها الثمانية. والأرقام الوطنية الحقيقية تسلك السلوك نفسه للسبب نفسه: فمتوسط دخل الأسرة في الولايات المتحدة يزيد على الوسيط بنحو الثلث. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: كل مقياس يجمع ويقسم حساس لأكبر القيم في المجموعة، وكل مقياس يعدّ المواضع ليس كذلك. فاختيار الكاتب للرقم هو الذي يقرّر ما تقوله الجملة، وقد يصف تقرير عقدًا خسرت فيه كل أسرة تقريبًا عقد دخول صاعدة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقّع هنا أن يُحسب أحد التقريرين كاذبًا، مع أن النص يقول إنَّ أيًا منهما لا يكذب. ويقترن المقطع بالمقطع الرابع والتسعين.

Parking by the Hour in San Francisco

San Francisco began an experiment with parking meters in 2011. The problem was not a shortage of spaces. It was that drivers circled looking for one, which filled the streets with slow traffic. Studies in several cities had found that a substantial share of downtown traffic at some hours was made up of cars hunting for a space rather than going anywhere. The city decided to attack the hunting rather than build more parking.

The method was price. Meters in the test districts were fitted with sensors, which are devices that reported whether the space was occupied. Rates were then adjusted block by block and hour by hour, with a target of leaving about one space free on every block. Where a block was always full, the price went up by twenty-five cents an hour at the next review. Where a block was often empty, the price came down. Rates ended up ranging from twenty-five cents to six dollars an hour, and on many blocks at many hours they fell rather than rose.

The city reported that the time spent searching for a space dropped by about forty percent in the test areas. Average rates in those areas went down, which surprised people who had expected a revenue grab. The policy works by paying attention to the one thing a driver cannot ignore, and by letting the price reward whoever is willing to walk two blocks. A campaign asking drivers to circle less would have cost less and done nothing. Several cities have since copied the design. The main obstacle everywhere has been political rather than technical. A price that moves is easy to attack and hard to defend in one sentence. Los Angeles, Seattle and Calgary now run versions of the same scheme.

WHAT THIS PASSAGE IS FOR

- Much downtown traffic was cars hunting for a space.
 - Rates were adjusted block by block toward one free space per block.
 - Search time fell by about forty percent and average rates fell too.
-

Questions 45.1 to 45.10

on passage 45, Parking by the Hour in San Francisco

45.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Rates ranged from twenty-five cents to six dollars
- B) A moving price cut the hunting that filled the streets
- C) The city built more parking to end the circling
- D) Los Angeles and Seattle now run similar schemes

45.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, by how much did search time fall?

- A) By twenty-five cents an hour
- B) By about one space a block
- C) By about six dollars an hour
- D) By about forty percent

45.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the scheme was not a way of raising money?

- A) “Average rates in those areas went down, which surprised people who had expected a revenue grab”
- B) “Meters in the test districts were fitted with sensors”
- C) “Rates were then adjusted block by block and hour by hour, with a target of leaving about one space free on every block”
- D) “The main obstacle everywhere has been political rather than technical”

45.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A campaign asking drivers to circle less would have cost less and done nothing. The city therefore chose a measure that ____

Which choice most logically completes the text?

- A) reduced the number of spaces
- B) relied on the goodwill of drivers
- C) acted on something a driver notices
- D) raised revenue on every block

45.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “reward” most nearly mean?

- A) pay a bounty to
- B) give an advantage to
- C) punish for delay
- D) praise in public

45.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that locates the problem in the circling?

- A) It redirects the account from supply to behavior
- B) It defines what the sensors reported
- C) It reports the year the experiment began
- D) It concludes that the scheme failed

45.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 95 of this book. It says an incentive works through salience, the availability of a substitute and timing, and calls a parking charge paid at a meter before walking away the salient case.

Text 1 describes a parking charge that changed behavior. Based on Text 2, which choice best explains why it worked?

- A) The sum charged was large enough to deter
- B) Nobody can substitute for the journey to work
- C) A cost arriving in three months changes little
- D) The cost is noticed at the moment of choosing

45.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Where a block was always full, the price went up by twenty-five cents an hour at the next review. ___ where a block was often empty, the price came down.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) In other words,
- C) By contrast,
- D) For example,

45.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The method was price ___ and meters in the test districts were fitted with sensors.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) price, and
- B) price and
- C) price; and
- D) price and,

45.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Drivers circled looking for a space, which filled the streets.
- Rates were adjusted block by block toward one free space.
- Search time fell by about forty percent.
- A campaign asking drivers to circle less would have done nothing.

The student wants to explain why a price did what a request could not. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Drivers circled looking for a space, which filled the streets
- B) A campaign asking drivers to circle less would have done nothing
- C) A price tuned block by block cut the searching by about forty percent
- D) Rates were adjusted toward one free space on every block

ملخص المقطع 45 بالعربية

خلاصة: بدأت سان فرانسيسكو تجربة في عدادات الركن سنة ألفين وإحدى عشرة. لم تكن المشكلة قلة الأماكن بل أن السائقين كانوا يدورون باحثين عن مكان، فتملأ الشوارع بمرور بطيء، وقد وجدت دراسات أن حصة معتبرة من المرور في وسط المدينة سيارات تطارد مكائاً. المعنى: المعنى أن المدينة قرّرت أن تهاجم المطاردة لا أن تبني مزيداً من المواقف، والوسيلة السعر. فزوّدت العدادات في الأحياء المختبرة بمجسات تُبلغ أمشغول المكان أم لا، ثم غُذلت الأسعار مربّعاً مربّعاً وساعة ساعة بهدف ترك مكان واحد خالياً في كل مربع. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: حيث كان المربع مملوءاً دائماً رُفع السعر خمساً وعشرين سنتاً في المراجعة التالية، وحيث كان خالياً كثيراً نزل. وأبلغت المدينة أن زمن البحث عن مكان مبط نحو أربعين في المئة، وأن متوسط الأسعار نزل. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقع هنا أن تُحسب الخطة جمعاً للإيراد، مع أن متوسط الأسعار نزل. ويقترن المقطع بالمقطع الخامس والتسعين.

The Card in the Hotel Bathroom

Hotels put cards in bathrooms asking guests to use their towels more than once. In 2008 three researchers, led by Noah Goldstein, tested what those cards should say. They ran the test in a real hotel, across several hundred rooms, over several months. Housekeeping staff recorded whether the towels in each room had been hung up for reuse. The guests did not know that anything was being measured. That is what makes the study a field experiment, meaning a trial run in a real setting rather than a laboratory.

One version of the card made the usual environmental appeal and asked guests to help save the environment. Another version reported a plain fact about other guests, saying that most people who stay in the hotel reuse their towels. A third named the room: most guests who have stayed in this room have reused their towels. The cards were otherwise identical and were assigned to rooms at random. Reuse rose by roughly a quarter with the second card compared with the first. The version naming the room did better still.

The finding has been reproduced in other settings, including electricity use and tax letters, and it has limits that later passages in this strand will take up. What it shows is modest and useful. A statement about what other people actually do is a stronger lever than an appeal to a value, and it costs the same to print. People behave partly by reading the room, and a sentence that tells them what the room is doing will be acted on by some of them. Nobody in the hotel was arguing about the environment. They were deciding, in about four seconds, what a normal guest does with a towel. The hotel saved laundry costs, which is why it agreed to the study.

WHAT THIS PASSAGE IS FOR

- Housekeeping recorded towel reuse without the guests knowing.
 - A card reporting what other guests do beat an environmental appeal.
 - A statement about what others do is a stronger lever than an appeal to a value.
-

Questions 46.1 to 46.10

on passage 46, The Card in the Hotel Bathroom

46.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The hotel saved laundry costs by joining the study
- B) Three versions of a card were printed for the rooms
- C) A report of what others do beats an appeal to a value
- D) The environmental appeal worked best of the three

46.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which card did best of the three?

- A) The one naming the room itself
- B) The usual environmental appeal
- C) The one reporting hotel guests generally
- D) The one printed on thicker card

46.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the guests were not reacting to being studied?

- A) “Housekeeping staff recorded whether the towels in each room had been hung up for reuse”
- B) “The guests did not know that anything was being measured”
- C) “The cards were otherwise identical and were assigned to rooms at random”
- D) “The hotel saved laundry costs, which is why it agreed to the study”

46.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Nobody in the hotel was arguing about the environment. They were deciding, in about four seconds, what a normal guest does with a towel. A card that argued at length would therefore ____

Which choice most logically completes the text?

- A) be read more carefully than a short one
- B) report what other guests had done
- C) have cost the hotel less to print
- D) miss the moment the decision is made

46.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “behave” most nearly mean?

- A) show good manners
- B) obey an instruction
- C) act in a situation
- D) manage a household

46.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the finding is modest and useful?

- A) It defines a field experiment for a reader
- B) It sets the size of the claim before stating it
- C) It reports the year the study was published
- D) It denies that the cards changed behavior

46.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 96 of this book. It sets out the four parts of the machinery that enforces an unwritten rule and says a card reporting the descriptive norm supplies information that machinery needs and cannot otherwise get.

Text 1 reports that a card naming other guests raised reuse. Based on Text 2, which choice best explains what the card supplied?

- A) Information the enforcement machinery could not otherwise get
- B) A sanction applied by other people rather than by law
- C) A rule that governs private behavior only
- D) A campaign advertising how widespread a problem is

46.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The guests did not know that anything was being measured. ____ that is what makes the study a field experiment.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) Even so,
- D) For that reason,

46.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The cards were otherwise identical ____ and they were assigned to rooms at random.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) identical and
- B) identical, and
- C) identical; and
- D) identical and,

46.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The cards were otherwise identical.
- A statement about what others do is a stronger lever than an appeal.
- It costs the same to print.
- Reuse rose by roughly a quarter.

The student wants to explain why the better card cost the hotel nothing extra. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The three cards were otherwise identical in the rooms
- B) A statement about what others do is the stronger lever
- C) Reuse rose by roughly a quarter with the second card
- D) The same sheet of card raised reuse a quarter once the sentence changed

ملخص المقطع 46 بالعربية

خلاصة: تضع الفنادق بطاقات في الحمامات تطلب من الضيوف استعمال مناشفهم أكثر من مرة. وسنة ألفين وثمانٍ اختبر ثلاثة باحثين، على رأسهم نوا غولدستين، ما ينبغي أن تقوله تلك البطاقات، فأجروا الاختبار في فندق حقيقي عبر مئات الغرف وعلى شهور. المعنى: المعنى أن عاملتي الخدمة سجلوا هل غلقت المناشف لإعادة الاستعمال، ولم يعلم الضيوف أن شيئاً يُقاس، وبذلك كانت الدراسة تجربة ميدانية، أي تجربة تُجرى في موضع حقيقي لا في مختبر. وكانت صيغة تطلب المساعدة في إنقاذ البيئة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: صيغة أخرى أوردت واقعة بسيطة عن الضيوف الآخرين: أن أكثر النازلين يعيدون استعمال مناشفهم، وثالثة سمّت الغرفة نفسها. فارتفعت إعادة نحو الربع بالثانية مقارنةً بالأولى، والتي سمّت الغرفة كانت أفضل. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُنسب النجاح إلى النداء البيئي، مع أنه كان الأضعف. ويقترن المقطع بالمقطع السادس والتسعين.

Houses That Followed the Streetcar

Before 1850 most people in Boston lived within walking distance of their work. The built-up city was about two miles across. A clerk who had to be at a counting house by eight walked there, and a city therefore could not be much wider than an hour on foot. Rich and poor lived close together, often in the same street, because nobody could afford the time to live far out.

Then came the omnibus, which is a large horse-drawn carriage running a fixed route, and the steam railway, and from 1889 the electric streetcar. A streetcar held forty people and ran at about eight miles an hour, which put land four or five miles out within reach of a downtown office. Builders bought fields along the new lines. They put up houses in rows. Between 1870 and 1900 Boston spread from a two-mile city to a ten-mile one. The historian Sam Bass Warner counted twenty-three thousand houses built in three suburbs in those thirty years, almost all of them by small builders putting up a handful at a time.

Who moved out was decided by the fare. A ride cost five cents each way. That was real money for a laborer earning a dollar and a half a day. It was nothing to a clerk earning three. Those who could pay it moved to new wooden houses with gardens, and those who could not stayed in the center. The new districts sorted themselves by income along each line. A pattern of this kind is not a matter of taste alone. People prefer space when they can buy the travel time, and the price of the travel decides who is allowed to prefer it. The same sorting happened later with the automobile, at a larger scale and a higher price.

WHAT THIS PASSAGE IS FOR

- A walking city could not be much wider than an hour on foot.
 - The electric streetcar from 1889 put land four or five miles out in reach.
 - The five-cent fare decided who could move out.
-

Questions 47.1 to 47.10

on passage 47, Houses That Followed the Streetcar

47.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Boston spread from two miles to ten between 1870 and 1900
- B) Twenty-three thousand houses went up in three suburbs
- C) Taste alone decided who moved to the new districts
- D) Cheaper travel widened the city and the fare sorted it

47.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how fast did the electric streetcar run?

- A) About two miles an hour
- B) About eight miles an hour
- C) About forty miles an hour
- D) About five miles an hour

47.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the fare settled who left the center?

- A) “Builders bought fields along the new lines. They put up houses in rows”
- B) “Between 1870 and 1900 Boston spread from a two-mile city to a ten-mile one”
- C) “That was real money for a laborer earning a dollar and a half a day. It was nothing to a clerk earning three”
- D) “The same sorting happened later with the automobile, at a larger scale and a higher price”

47.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A clerk who had to be at a counting house by eight walked there, and a city therefore could not be much wider than an hour on foot. A city whose workers could travel at eight miles an hour would therefore ____

Which choice most logically completes the text?

- A) reach several miles further out
- B) keep rich and poor in the same street
- C) need more counting houses downtown
- D) hold its edge at two miles across

47.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “prefer” most nearly mean?

- A) put forward formally
- B) promote to a higher rank
- C) tolerate without complaint
- D) choose over something else

47.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the clerk and the counting house?

- A) It defines an omnibus for a reader
- B) It reports the number of houses built
- C) It fixes the limit the new transport removed
- D) It argues that walking was preferred

47.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 97 of this book. It describes bid rent as the amount paid for land at a given distance from the center, says the slope of its fall is set by the cost of travel, and that faster travel flattens the slope and spreads the city.

Text 1 reports a city that widened as travel improved. Based on Text 2, which choice best describes the mechanism behind that widening?

- A) Firms needing many workers cluster together
- B) Faster travel flattens the fall of land prices
- C) A new road fills once congestion eases
- D) Generalized cost adds time and money together

47.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

Rich and poor lived close together, often in the same street. ___ nobody could afford the time to live far out.

Which choice completes the text with the most logical transition?

- A) After all,
- B) By contrast,
- C) In other words,
- D) For example,

47.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Builders bought fields along the new lines ___ and they put up houses in rows.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) lines and
- B) lines; and
- C) lines, and
- D) lines and,

47.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A streetcar ride cost five cents each way.
- That was real money for a laborer earning a dollar and a half a day.
- It was nothing to a clerk earning three.
- Those who could pay moved out and those who could not stayed in the center.

The student wants to explain why the new districts sorted by income. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A fare that was heavy for one wage and trivial for another decided who could move
- B) A streetcar ride cost five cents each way on the new lines
- C) The fare was nothing to a clerk earning three dollars a day
- D) Those who could pay the fare moved out of the center

ملخص المقطع 47 بالعربية

خلاصة: قبل سنة ألف وثمانمئة وخمسين كان أكثر أهل بوسطن يسكنون على مسافة مشي من عملهم، والمدينة المبنية نحو ميلين عرضاً. فالكاتب الذي يجب أن يكون في بيت حساب عند الثامنة كان يمشي، ولا تكون المدينة أوسع من ساعة على القدمين. المعنى: المعنى أن الأغنياء والفقراء سكنوا متقاربين، في الشارع نفسه غالباً، لأن أحداً لم يكن يستطيع أن يبذل الوقت ليسكن بعيداً. ثم جاءت العربى العامة والسكة البخارية، ومن سنة تسع وثمانين الترام الكهربائي الذي يسع أربعين راكباً ويسير نحو ثمانية أميال في الساعة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: اشترى البناؤون حقولاً على الخطوط الجديدة وأقاموا بيوتاً مرفوعة، فامتدّت بوسطن بين سنة سبعين وسنة ألف وتسعمئة من مدينة ميلين إلى مدينة عشرة أميال. ومن انتقل حدّته الأجرة: خمسة سنوات في كل اتجاه. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النضين المتقابلين. والفخ المتوقّع هنا أن يُحال الفرز إلى الذوق وحده، مع أن النض يجعل ثمن السفر هو الحاكم. ويقترن المقطع بالمقطع السابع والتسعين.

Hired by the Half Day

At the London docks in the 1880s men were hired twice a day. A foreman came to a gate at about half past seven, and again after noon, and chose from the crowd that had gathered. The crowd was always larger than the number of jobs. Work lasted four hours and paid by the hour. A man who was not picked went home with nothing and came back for the afternoon call. Those who were picked might work two days that week or six, depending on how many ships were in.

The system suited the dock companies exactly. Ship arrivals were irregular, and a company that employed a steady workforce would be paying men to stand about on quiet days. Casual hiring, meaning taking men on by the half day with no contract, moved that risk onto the workers. It also gave the foreman very great power, since he chose faces each morning and could be bought a drink the night before. The men who did best were not the strongest but the best known to the man at the gate.

Hiring of that kind was normal across the whole port. In August 1889 the dockers struck for a guaranteed minimum call of four hours and a rate of sixpence an hour. The strike lasted five weeks, drew financial support from as far away as Australia, and largely won. The deeper arrangement took much longer to change. Casual hiring at the docks was not ended in Britain until 1967. The same practice ran in New York under the name of the shape-up into the 1950s. A market can be organized so that one side carries nearly all the uncertainty, and the side that benefits will usually describe the arrangement as flexibility. The word has not changed much since. Delivery work booked by the hour raises the same question in a new form.

WHAT THIS PASSAGE IS FOR

- Men were chosen from a crowd at the gate twice a day.
 - Casual hiring moved the risk of irregular shipping onto the workers.
 - The 1889 strike won the four-hour call but casual hiring lasted much longer.
-

Questions 48.1 to 48.10on passage 48, *Hired by the Half Day***48.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The hiring put the risk of irregular work on the men
- B) The 1889 strike lasted five weeks and largely won
- C) Casual hiring ended in Britain in 1967
- D) The arrangement suited the workers as much as the companies

48.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did the dockers strike for in 1889?

- A) An end to casual hiring altogether
- B) A shorter working week of four days
- C) Sixpence an hour and a four-hour call
- D) The removal of the foreman at the gate

48.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the gate call left the foreman with great power?

- A) “Ship arrivals were irregular, and a company that employed a steady workforce would be paying men to stand about on quiet days”
- B) “The strike lasted five weeks, drew financial support from as far away as Australia, and largely won”
- C) “Casual hiring, meaning taking men on by the half day with no contract, moved that risk onto the workers”
- D) “he chose faces each morning and could be bought a drink the night before. The men who did best were not the strongest but the best known to the man at the gate”

48.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Ship arrivals were irregular, and a company that employed a steady workforce would be paying men to stand about on quiet days. A company that hired by the half day therefore

Which choice most logically completes the text?

- A) paid more over the course of a year
- B) carried none of the quiet days itself
- C) guaranteed a four-hour call to each man
- D) drew support from as far away as Australia

48.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “benefits” most nearly mean?

- A) gains an advantage
- B) pays a charity
- C) receives a pension
- D) bears a cost

48.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the men who did best?

- A) It defines casual hiring for a reader
- B) It reports the length of the 1889 strike
- C) It argues that strength decided the choosing
- D) It shows where the power of the foreman led

48.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 98 of this book. It sets a wage between a ceiling and a reservation wage with bargaining power deciding the rest, and says hiring at a gate twice a day ensured each man competed against a crowd for that day only.

Text 1 describes hiring at a gate twice a day. Based on Text 2, which choice best names what that arrangement weakened?

- A) The ceiling set by what the work produces
- B) The floor set by the reservation wage
- C) The bargaining power of each individual man
- D) The productivity of the dock trade itself

48.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The system suited the dock companies exactly. ___ ship arrivals were irregular, and a company that employed a steady workforce would be paying men to stand about on quiet days.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) After all,
- C) In other words,
- D) For example,

48.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The crowd was always larger than the number of jobs ___ and a man who was not picked went home with nothing.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) jobs and
- B) jobs; and
- C) jobs and,
- D) jobs, and

48.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Ship arrivals were irregular.
- Casual hiring moved that risk onto the workers.
- A market can be organized so one side carries nearly all the uncertainty.
- The side that benefits describes the arrangement as flexibility.

The student wants to explain what the word flexibility is doing in such an arrangement. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Ship arrivals were irregular at the London docks
- B) The word names, from the gaining side, a risk shifted entirely onto the other
- C) Casual hiring moved the risk onto the workers
- D) The side that benefits calls the arrangement flexibility

ملخص المقطع 48 بالعربية

خلاصة: في أحواض لندن في ثمانينيات القرن التاسع عشر كان الرجال يُستأجرون مرتين في اليوم: يأتي رئيس عمل إلى بوابة نحو الساعة والنصف، ثم بعد الظهر، فيختار من الحشد المجتمع، والحشد أكبر دائماً من عدد الأعمال.

المعنى: المعنى أن العمل يدوم أربع ساعات ويُدفع بالساعة، ومن لم يُختَر رجوع بلا شيء وعاد لنداء العصر، ومن اختير قد يعمل يومين في الأسبوع أو ستة بحسب عدد السفن الحاضرة.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: النظام وافق شركات الأحواض موافقة تامة، فوصول السفن غير منتظم، وشركة تستخدم قوة عمل ثابتة ستدفع للرجال ليقفوا في الأيام الهادئة. والاستئجار العارض، أي أخذ الرجال بنصف اليوم بلا عقد، نقل تلك المخاطرة إلى العمال.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الترتيب نافعا للطرفين، مع أن النص ينسب النفع إلى جانب واحد. ويقترن المقطع بالمقطع الثامن والتسعين.

Thirty Years Across One City

Streeterville and Englewood are both neighborhoods of Chicago. They lie about nine miles apart and are served by the same city government, the same state laws and the same hospitals in principle. Life expectancy at birth means the average number of years a person born now is expected to live. In figures published in 2019 it was about ninety years in Streeterville. In Englewood it was about sixty. The gap is roughly thirty years, inside one city, between two places a short train ride apart.

Nothing in those figures is about individual choices in any simple sense. The two areas differ in income and in the share of adults with work. They differ in the quality of housing and the number of grocery stores. They differ in air quality near the expressways and in the presence of violence. They differ in how far a resident must travel for unhurried medical care. They also differ in history. The boundaries follow lines drawn by lending maps and by covenants, which were clauses in deeds restricting who could buy a house. These things arrive together and are hard to separate.

Figures of this kind are now published for most large American cities and for many European ones, usually by small area. Glasgow produced a famous example. The reported gap there was more than twenty years between two districts eight miles apart. The exact numbers move when the boundaries or the years change. Some early figures were later revised downward, which is a reason to read any single pair of numbers carefully. The pattern does not move. A postal code will predict the length of a life better than most facts about the person living there. Later passages in this strand ask what such a measure is actually measuring.

WHAT THIS PASSAGE IS FOR

- Two Chicago neighborhoods nine miles apart differ by about thirty years.
 - The differences arrive together and are hard to separate.
 - A postal code predicts length of life better than most personal facts.
-

Questions 49.1 to 49.10on passage 49, *Thirty Years Across One City***49.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Streeterville and Englewood lie about nine miles apart
- B) A postal code predicts a life better than a personal fact
- C) Glasgow reported a gap of more than twenty years
- D) The gap is explained by individual choices

49.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what were the two life expectancy figures?

- A) About sixty and about seventy years
- B) About twenty and about thirty years
- C) About nine and about thirty years
- D) About ninety and about sixty years

49.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two figures should be read with care?

- A) “The exact numbers move when the boundaries or the years change. Some early figures were later revised downward”
- B) “The boundaries follow lines drawn by lending maps and by covenants”
- C) “They differ in air quality near the expressways and in the presence of violence”
- D) “Figures of this kind are now published for most large American cities”

49.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

These things arrive together and are hard to separate. A study that tried to credit the gap to one of them would therefore ____

Which choice most logically completes the text?

- A) find the pattern had moved
- B) measure a smaller gap than thirty years
- C) have the others working alongside it
- D) need figures from a European city

49.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “predict” most nearly mean?

- A) announce in advance
- B) serve as a guide to
- C) cause to happen
- D) remember accurately

49.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of differences between the areas?

- A) It fills in what arrives alongside the gap
- B) It defines life expectancy for a reader
- C) It reports the Glasgow figures for comparison
- D) It settles which difference causes the gap

49.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 99 of this book. It separates income, wealth and mobility and says none of the three captures the experience of being poor, where stigma, insecurity and the cost of credit do damage no distribution figure records.

Text 1 reports a thirty-year gap between two neighborhoods. Based on Text 2, which choice best describes what such a figure leaves out?

- A) The share of adults in work in each area
- B) The boundaries drawn by lending maps
- C) The number of grocery stores nearby
- D) The stigma and insecurity of being poor

49.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The exact numbers move when the boundaries or the years change. ____ the pattern does not move.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) Even so,
- D) In other words,

49.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

They lie about nine miles apart ____ and they are served by the same city government.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) apart, and
- B) apart and
- C) apart; and
- D) apart and,

49.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The exact numbers move when the boundaries or the years change.
- Some early figures were later revised downward.
- The pattern does not move.
- Figures of this kind are published by small area.

The student wants to explain why a single pair of numbers should be read carefully. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The numbers move when the boundaries or the years change
- B) Some early figures were later revised downward
- C) The exact figures shift with the boundaries, though the pattern behind them holds
- D) Figures of this kind are now published by small area

ملخص المقطع 49 بالعربية

خلاصة: ستريترفيل وإنغلوود حيّان من شيكاغو، يبعد أحدهما عن الآخر نحو تسعة أميال، وتخدمهما الحكومة البلدية نفسها وقوانين الولاية نفسها والمستشفيات نفسها من حيث المبدأ. وتوقع الحياة عند الميلاد متوسط السنين التي يُتوقع أن يعيشها مولود الآن. المعنى: المعنى أن الرقم في أرقام نُشرت سنة ألفين وتسع عشرة كان نحو تسعين سنة في ستريترفيل ونحو ستين في إنغلوود، والفجوة نحو ثلاثين سنة داخل مدينة واحدة بين موضعين تفصلهما رحلة قطار قصيرة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: لا شيء في تلك الأرقام عن اختيارات فردية بأي معنى بسيط. فالمنطقتان تختلفان في الدخل وفي حصة العاملين، وفي جودة الإسكان وعدد البقالات، وفي جودة الهواء قرب الطرق السريعة وفي حضور العنف، وفي التاريخ أيضًا. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحال الفجوة إلى اختيارات الأفراد، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع التاسع والتسعين.

A Test That Is Usually Wrong

In 1978 three researchers put a short problem to sixty doctors and medical students at Harvard. A disease affects one person in a thousand. A test for it never misses a case. It does give a false positive, which is a positive result in a person who does not have the condition, in five percent of healthy people. A patient has tested positive and nothing else is known about him. The doctors were asked for the chance that he has the disease.

Most of the sixty answered ninety-five percent. Only about one in six gave an answer near the right one. The right answer is about two percent. The arithmetic is short enough to do on a napkin. Take a thousand people, of whom exactly one has the disease, and that one tests positive as the test never misses a case. Of the nine hundred and ninety-nine who do not have it, about fifty also test positive. So fifty-one people in the thousand test positive and only one of them is actually ill, and one in fifty-one is about two percent.

What goes wrong is not the arithmetic but the starting point. The five percent figure is vivid and the one in a thousand figure is not, so the second gets dropped. The rate at which a condition occurs before any test is run is called the base rate. Ignoring it is among the most reliable errors in human judgment. It matters wherever a rare thing is screened for in a large population. That covers cancer screening, airport security, drug testing and fraud detection. A positive result on a good test for a rare condition is usually a false alarm. How a doctor or an official should respond to one depends entirely on the number that most people forget. Screening programs are designed around this arithmetic.

WHAT THIS PASSAGE IS FOR

- Most of the sixty doctors answered ninety-five percent.
 - The right answer is about two percent.
 - Ignoring the base rate is one of the most reliable errors in judgment.
-

Questions 50.1 to 50.10

on passage 50, A Test That Is Usually Wrong

50.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Sixty doctors and students were given the problem in 1978
- B) The arithmetic is short enough to do on a napkin
- C) The base rate is dropped, and a positive is usually a false alarm
- D) A positive result on a good test is usually correct

50.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did most of the sixty answer?

- A) Ninety-five percent
- B) About two percent
- C) One in a thousand
- D) Fifty-one percent

50.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the error lies in the starting point rather than the sums?

- A) “Of the nine hundred and ninety-nine who do not have it, about fifty also test positive”
- B) “What goes wrong is not the arithmetic but the starting point. The five percent figure is vivid and the one in a thousand figure is not, so the second gets dropped”
- C) “It matters wherever a rare thing is screened for in a large population. That covers cancer screening, airport security, drug testing and fraud detection”
- D) “Most of the sixty answered ninety-five percent. Only about one in six gave an answer near the right one”

50.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A positive result on a good test for a rare condition is usually a false alarm. How a doctor or an official should respond to one depends entirely on the number that most people forget. A screening program designed without that number would therefore ____

Which choice most logically completes the text?

- A) catch fewer of the real cases
- B) reduce the false positive rate
- C) need sixty doctors to assess it
- D) treat its alarms as more than they are

50.5

WORDS IN CONTEXT · EASY · CRAFT AND STRUCTURE

As used in the text, what does the word “respond” most nearly mean?

- A) answer a letter
- B) react to a drug
- C) act on a result
- D) ignore a warning

50.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the thousand-person calculation?

- A) It defines a false positive for a reader
- B) It works the right answer out in full
- C) It reports what the doctors answered
- D) It argues that the test is a bad one

50.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 100 of this book. It names anchoring, availability and framing as systematic errors, and defines availability as judging how common something is by how easily examples come to mind.

Text 1 reports a figure dropped because it is less vivid. Based on Text 2, which choice best names the pattern behind that dropping?

- A) Judging how common a thing is by what comes to mind
- B) The pull of an irrelevant number on an estimate
- C) The same choice described two ways giving two decisions
- D) A random error that cancels over many judgments

50.8

TRANSITIONS · EASY · EXPRESSION OF IDEAS

The arithmetic is short enough to do on a napkin. ____ take a thousand people, of whom exactly one has the disease.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For example,

50.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A test for it never misses a case ____ and it gives a false positive in five percent of healthy people.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) case and
- B) case, and
- C) case; and
- D) case and,

50.10

SYNTHESIS · MEDIUM · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Ignoring the base rate is among the most reliable errors in judgment.
- It matters wherever a rare thing is screened for in a large population.
- That covers cancer screening, airport security and fraud detection.
- A positive on a good test for a rare condition is usually a false alarm.

The student wants to explain where the error matters most. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Ignoring the base rate is a reliable error in human judgment
- B) That covers cancer screening, airport security and fraud detection
- C) A positive on a good test is usually a false alarm
- D) Wherever a rare thing is screened for in millions, most alarms are false

ملخص المقطع 50 بالعربية

خلاصة: سنة ألف وتسعمئة وثمان وسبعين عرض ثلاثة باحثين مسألة قصيرة على سئتين طبيين وطالب طب في هارفارد: مرض يصيب شخصاً في الألف، واختبار له لا يفوته حالة قط، لكنه يعطي نتيجة موجبة كاذبة في خمسة في المئة من الأصحاء. المعنى: المعنى أن مريضاً جاءت نتيجته موجبة ولا يُعلم عنه شيء آخر، فسئل الأطباء عن احتمال إصابته. فأجاب أكثر السئتين بخمسة وتسعين في المئة، ولم يقترب من الصواب إلا نحو واحد من سئة، والجواب الصحيح نحو اثنين في المئة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الظاهرة: الحساب قصير: خذ ألف شخص فيهم مصاب واحد، فيظهر الاختبار إيجابه، ومن التسعمئة وتسعة وتسعين الأصحاء يظهر نحو خمسين موجبين، فيكون الموجبون أحدًا وخمسين وفيهم مريض واحد، وواحد من أحد وخمسين نحو اثنين في المئة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب النتيجة الموجبة صحيحة غالباً، مع أن النص يقول إنها إنذار كاذب في الأغلب. ويقترب المقطع بالمقطع المئة.

LEVEL 2

Developing

mechanism

How it works and how much: cause, comparison, magnitude.

Passage length — 288 to 312 words

Sentences — averaging 16 to 21 words

Vocabulary assumed — the top 22,000 most frequent word forms

Words above that — at most 6, each explained in place

Clue to the reader — Read for the working. These passages do not stop at what happens; they say why it happens and how much. Watch for the sentence that carries the cause, and for the number that gives the size of it.

The Shape of the Argument

The second paragraph of the Declaration is a piece of reasoning laid out in order, and the order matters more than the famous phrases. It begins with premises, meaning statements offered without proof because the writer expects agreement. They are that all men are created equal, that they hold certain rights which cannot be given away, and that governments exist to secure those rights. From those premises a conclusion follows, and Jefferson draws it immediately. A government that destroys those rights may be altered or abolished by the people who set it up. Nothing in the paragraph is decoration.

Everything after that is evidence for a factual claim rather than argument about principle. The twenty-seven grievances are offered to show that this particular government has in fact destroyed those rights, in named ways, over a stated period. The document also closes off the obvious objection. It states that prudence requires long-established governments not be changed for light and transient causes, and that the colonists had petitioned repeatedly and been answered with repeated injury. The structure is a legal brief: here is the standard, here is the record, here is the remedy.

That shape explains what the document does and does not do. It makes no promise about who shall vote, how the new states shall be governed, or what equality requires in practice, because none of those questions bears on the narrow case being argued. Readers who come to it expecting a constitution find a brief for separation instead. The actual machinery was built eleven years later and ratified in 1788, by men who had the Declaration in front of them and treated it as settled ground rather than as a plan to be carried out. Jefferson owned more than a hundred people at the time of writing, which later readers have had to reckon with.

WHAT THIS PASSAGE IS FOR

- The second paragraph moves from premises to a conclusion in order.
- The grievances are evidence for a factual claim, not argument about principle.
- The document is a brief for separation, not a plan of government.

Questions 51.1 to 51.10

on passage 51, The Shape of the Argument

51.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Jefferson owned more than a hundred people at the time he wrote the document
- B) The second paragraph is a legal brief: a standard, a record, and a remedy
- C) The Declaration sets out how the new states were to be governed
- D) The Constitution was written eleven years after the Declaration

51.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what role do the twenty-seven grievances play?

- A) They state the premises from which the conclusion follows
- B) They set out the machinery of the government to come
- C) They close off the objection about light and transient causes
- D) They are evidence that this government destroyed those rights

51.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the document deliberately leaves some questions unanswered?

- A) “It makes no promise about who shall vote, how the new states shall be governed, or what equality requires in practice”
- B) “From those premises a conclusion follows, and Jefferson draws it immediately”
- C) “Jefferson owned more than a hundred people at the time of writing, which later readers have had to reckon with”
- D) “The twenty-seven grievances are offered to show that this particular government has in fact destroyed those rights”

51.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The actual machinery was built eleven years later and ratified in 1788, by men who had the Declaration in front of them and treated it as settled ground rather than as a plan to be carried out. For them the Declaration therefore served as ____

Which choice most logically completes the text?

- A) a draft constitution still awaiting revision
- B) a record of grievances still to be answered
- C) a premise they did not argue about again
- D) a document none of them had read closely

51.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ratified” most nearly mean?

- A) argued over at length
- B) formally approved
- C) printed and distributed
- D) set aside for later

51.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that calls the structure a legal brief?

- A) It names the shape that the preceding analysis has established
- B) It introduces the twenty-seven grievances for the first time
- C) It concedes that the document is poorly organized
- D) It explains why Jefferson drew the conclusion immediately

51.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 1 of this book. It reports that the vote for independence and the text explaining it were separate acts two days apart, that most of the document is a list of particular complaints, and that Congress was building a legal case.

Text 1 analyzes the reasoning of the second paragraph. Based on Text 2, what would be added to that account?

- A) The conclusion follows immediately from the premises stated
- B) The grievances were added after the conclusion had been drafted
- C) The document makes no promise at all about who shall vote
- D) The proportions matter: the particulars take up most of the page

51.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Everything after that is evidence for a factual claim rather than argument about principle. ____ the document also closes off the obvious objection.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) Beyond that,
- D) For instance,

51.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The structure is a legal brief ____ here is the standard, here is the record, here is the remedy.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) brief: here
- B) brief, here
- C) brief here
- D) brief; here,

51.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The second paragraph moves from premises to a conclusion in order.
- Everything after the premises is evidence for a factual claim.
- The document makes no promise about who shall vote or how the new states shall be governed.
- The actual machinery was built eleven years later and ratified in 1788.

The student wants to explain why the Declaration cannot be read as a plan of government. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The second paragraph of the Declaration moves from premises to a conclusion in order
- B) The machinery of government was built eleven years later and ratified in 1788
- C) The Declaration argues one narrow case and makes no promise about voting or government, which the machinery of 1788 supplied instead
- D) Readers who come to the document expecting a constitution find a brief for separation

ملخص المقطع 51 بالعربية

خلاصة: الفقرة الثانية من إعلان الاستقلال استدلال مرتب، والترتيب أهم من العبارات المشهورة. تبدأ بمقدمات تُعرض بلا إثبات لأن كاتبها يتوقع الموافقة: أن الناس خلُقوا متساوين، وأن لهم حقوقاً لا تُسلب، وأن الحكومات قائمة لحماية تلك الحقوق. ومن هذه المقدمات تُستخرج النتيجة فوراً: أن حكومة تهدم تلك الحقوق يحق لمن أنشأها تغييرها.

المعنى: المعنى أن البنية بنية مرافعة قانونية: هذا هو المعيار، وهذا هو السجل، وهذا هو المطلوب. فالمظالم السبع والعشرون ليست جدلاً في المبادئ بل دليل على واقعة: أن هذه الحكومة بعينها هدمت تلك الحقوق في وجوه مسمّاة وفي مدة معلومة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: كيف تعمل الحجة وبأي ترتيب، لا ما حدث فقط. ولذلك لا تُعد الوثيقة بشيء عن من يحق له الانتخاب ولا عن حكم الولايات، لأن ذلك خارج القضية الضيقة المطروحة.

الصلة بالاختبار: في اختبار سات يُسأل كثيراً عن بنية النص وعن وظيفة جملة بعينها وعن الدليل الذي يسند دعوى محدّدة. والفجّ المتوقع هنا أن تُقرأ الوثيقة كأنها دستور، فيُنسب إليها ما تنصّ هي صراحةً على أنها لا تقرّه. ويقترن المقطع بالمقطع الأول في أسئلة النصّين المتقابلين.

Madison on Faction

The men who wrote the Constitution were not afraid of kings only. They were at least as worried about majorities, and Federalist 10 is James Madison explaining why. His term for the danger is faction, meaning a group united by a common interest or passion that is adverse to the rights of others or to the general good. Factions, he argues, cannot be prevented, because their causes are sown in the nature of man. Any attempt to remove them would require removing liberty or enforcing a single opinion on everyone.

If the cause cannot be removed, the effects must be controlled, and Madison offers two mechanisms. The first is size. In a small republic one interest can easily become a majority, but across a large and various country a faction must assemble so many different groups that its demands get moderated in the assembling. The second is representation. Power is delegated to elected members rather than exercised directly, which puts a deliberating body between a public mood and a statute. Madison expected election to filter upward toward people of some judgment, and he may have been wrong about that.

The design that follows from this reasoning is the one in the Constitution. Two chambers chosen on different principles, by different electorates, for different terms. A president elected separately from either. Judges appointed rather than elected and holding office for life. Each of these slows a majority down and forces it to persist through more than one season of opinion. Whether the result protects minorities or simply protects property has been argued since the ratification debates, and that argument is taken up at the end of this strand. Federalist 10 was published in a New York newspaper in November 1787 under the name Publius, and was one of eighty-five such essays.

WHAT THIS PASSAGE IS FOR

- Madison treats faction as unpreventable and aims at its effects.
 - His two mechanisms are the size of the republic and representation.
 - Each device forces a majority to persist through more than one season.
-

Questions 52.1 to 52.10

on passage 52, Madison on Faction

52.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Federalist 10 was published in a New York newspaper in November 1787 under a pen name
- B) Madison expected election to filter upward toward people of some judgment
- C) Faction cannot be prevented, so the Constitution was built to control its effects
- D) The men who wrote the Constitution were afraid of kings above all else

52.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why can faction not be prevented?

- A) Because its causes are sown in the nature of man
- B) Because a large republic always contains many interests
- C) Because elected members cannot be trusted to deliberate
- D) Because the Constitution gives each branch a veto

52.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the design slows a majority rather than blocking it?

- A) “Factions, he argues, cannot be prevented, because their causes are sown in the nature of man”
- B) “Each of these slows a majority down and forces it to persist through more than one season of opinion”
- C) “Federalist 10 was published in a New York newspaper in November 1787 under the name Publius”
- D) “Power is delegated to elected members rather than exercised directly”

52.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

In a small republic one interest can easily become a majority, but across a large and various country a faction must assemble so many different groups that its demands get moderated in the assembling. Size therefore works by ____

Which choice most logically completes the text?

- A) removing the causes of faction from political life
- B) giving each branch a power to block the others
- C) ensuring that no majority can ever be assembled
- D) raising the price of putting a majority together

52.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “delegated” most nearly mean?

- A) argued over in public
- B) written down in law
- C) handed over to be used by others
- D) divided into equal shares

52.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence admitting that Madison may have been wrong?

- A) It withdraws the argument of the preceding paragraph
- B) It marks one expectation as having failed while the mechanisms stand
- C) It introduces the two chambers described in the next paragraph
- D) It explains why Federalist 10 was published under a pen name

52.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 2 of this book. It reports that the Constitution gives each of three branches at least one power that can stop the others, that Congress holds the money and the courts may refuse to apply a law, and that the result is slow by design.

Text 1 gives Madison two mechanisms, size and representation. Based on Text 2, what third mechanism does the finished Constitution add?

- A) Blocks held by each branch against the work of the others
- B) A requirement that treaties be approved by two thirds of the Senate
- C) The printing of the finished text in four pages
- D) A guarantee that every faction is represented in Congress

52.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Any attempt to remove them would require removing liberty or enforcing a single opinion on everyone. ___ if the cause cannot be removed, the effects must be controlled.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) For example,
- C) In other words,
- D) Therefore,

52.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Madison expected election to filter upward toward people of some judgment ___ he may have been wrong about that.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) judgment he
- B) judgment, and
- C) judgment; and
- D) judgment, he

52.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Factions cannot be prevented, because their causes are sown in the nature of man.
- If the cause cannot be removed, the effects must be controlled.
- Madison offers two mechanisms: the size of the republic and representation.
- Each device slows a majority down and forces it to persist through more than one season of opinion.

The student wants to explain to a reader why the Constitution contains so many separate obstacles. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Madison offers two mechanisms, the size of the republic and representation
- B) The causes of faction cannot be removed without removing liberty itself
- C) Each device slows a majority down and forces it to persist over time
- D) Since faction cannot be prevented, the design multiplies obstacles so that a majority must persist beyond one season of opinion

ملخص المقطع 52 بالعربية

خلاصة: لم يكن واضع الدستور خائفين من الملوك وحدهم، بل كانوا قلقين بالقدر نفسه من الأغلبيات. ومقالة الفيدرالي العاشرة هي جيمس ماديسون يشرح السبب. ومصطلحه للخطر هو الفئة: جماعة تجمعها مصلحة أو عاطفة مشتركة تناقض حقوق الآخرين أو الصالح العام. والفئات، كما يحتج، لا يمكن منعها، لأن أسبابها مزروعة في طبيعة الإنسان.

المعنى: المعنى أن ما لا يُمنع سببه يُضبط أثره، وماديسون يقدم آليتين. الأولى الحجم: في جمهورية صغيرة تصير مصلحة واحدة أغلبية بسهولة، أما في بلد واسع متنوع فتحتاج الفئة إلى تجميع جماعات كثيرة، فتتعدّل مطالبها في التجميع. والثانية التمثيل: تُوكل السلطة إلى منتخبين لا تُمارس مباشرة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: لماذا بُنيت الآلة هكذا، لا وصفها فقط. وكل أداة في التصميم تُبطئ الأغلبية وتُلزمها بالبقاء أكثر من موسم رأي واحد.

الصلة بالاختبار: في اختبار سات تتكرر المقالات الحجاجية، ويُسأل عن الاستنتاج وعن وظيفة جملة تتضمن تحفظًا. والفخ الشائع أن يُقرأ التعديل الجزئي كأنه تراجع عن الحجة كلها، أو أن يُحوّل الإبطاء إلى منع تام. ويقترن المقطع بالمقطع الثاني في أسئلة النصين المتقابلين.

Four Barriers and Four Amendments

Voting in the United States was never restricted by one rule. It was restricted by four, and each came down separately. Property requirements were the first to go, removed state by state between about 1790 and 1850, so that by the Civil War most white men could vote without owning land. Race was next in law and last in practice: the Fifteenth Amendment of 1870 forbade denial of the vote on racial grounds, and was then evaded for ninety years by devices that did not mention race at all.

Sex was removed by the Nineteenth Amendment in 1920, after campaigners had petitioned, marched and picketed for seventy years. Age came last. The Twenty-Sixth Amendment of 1971 set the voting age at eighteen, and passed in under four months during a war in which eighteen-year-olds were being drafted. A fifth barrier was the poll tax, which was a charge that had to be paid before a person could vote. It was abolished for federal elections by the Twenty-Fourth Amendment in 1964. The Supreme Court struck it down for state elections two years after that.

The pattern in all of this is that a constitutional amendment settles the rule and settles nothing else. Each of these changes required a second round of enforcement machinery, usually decades later, because a state that wishes to exclude voters has many instruments and only one of them is an explicit rule. Literacy tests administered by local officials, residence requirements, registration hours, the location of polling places and the drawing of district lines all survive the removal of the barrier they replaced. The history of the franchise is therefore not a straight line but a series of rules followed by workarounds. Each new amendment also had to be ratified by three quarters of the states, which meant persuading legislatures that had no obligation to listen.

WHAT THIS PASSAGE IS FOR

- Four separate barriers to voting came down at different times.
 - The Fifteenth Amendment was evaded for ninety years by devices that avoided race.
 - An amendment settles the rule and nothing else.
-

Questions 53.1 to 53.10

on passage 53, Four Barriers and Four Amendments

53.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Property requirements were removed state by state between about 1790 and 1850
- B) The Twenty-Sixth Amendment passed in under four months during a war
- C) An amendment removes a barrier, and the barrier does not return
- D) Four barriers fell separately, and each amendment settled a rule and nothing else

53.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which barrier was the last to be removed?

- A) The poll tax in state elections
- B) The requirement of a minimum age
- C) Denial of the vote by race
- D) The ownership of property

53.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that removing a barrier in law does not remove it in practice?

- A) “Each new amendment also had to be ratified by three quarters of the states, which meant persuading legislatures that had no obligation to listen”
- B) “Sex was removed by the Nineteenth Amendment in 1920, after campaigners had petitioned, marched and picketed for seventy years”
- C) “the Fifteenth Amendment of 1870 forbade denial of the vote on racial grounds, and was then evaded for ninety years by devices that did not mention race at all”
- D) “Property requirements were the first to go, removed state by state between about 1790 and 1850”

53.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A state that wishes to exclude voters has many instruments and only one of them is an explicit rule. Removing the explicit rule therefore ____

Which choice most logically completes the text?

- A) leaves the other instruments in working order
- B) removes the motive for exclusion as well
- C) requires the consent of three quarters of the states
- D) ends the practice within a single generation

53.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “petitioned” most nearly mean?

- A) voted in large numbers
- B) brought a case to court
- C) withdrew from public life
- D) made formal requests to authority

53.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of instruments in the third paragraph?

- A) It names the amendments that removed each barrier in turn
- B) It explains why the poll tax counted as a fifth barrier
- C) It shows how exclusion continued without any explicit rule
- D) It reports how long each amendment took to be ratified

53.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 3 of this book. It describes the Seneca Falls convention of 1848, the Declaration of Sentiments that borrowed the form of 1776, and the single resolution asking for the vote that was argued over and nearly lost.

Text 1 says sex was removed as a barrier in 1920. Based on Text 2, what does that date conceal?

- A) That the Nineteenth Amendment was ratified by three quarters of the states
- B) That the demand had been made seventy-two years earlier and nearly abandoned
- C) That property requirements had already fallen by the Civil War
- D) That literacy tests were still being administered by local officials

53.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Property requirements were the first to go, removed state by state between about 1790 and 1850. ___ race was next in law and last in practice.

Which choice completes the text with the most logical transition?

- A) After that,
- B) Even so,
- C) In other words,
- D) For example,

53.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The Twenty-Sixth Amendment of 1971 set the voting age at eighteen ___ it passed in under four months during a war.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) eighteen it
- B) eighteen, it
- C) eighteen, and
- D) eighteen; and

53.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The Fifteenth Amendment of 1870 forbade denial of the vote on racial grounds.
- It was then evaded for ninety years by devices that did not mention race.
- A state that wishes to exclude voters has many instruments.
- Each change required a second round of enforcement machinery, usually decades later.

The student wants to warn a reader against treating an amendment as the end of a story. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The Fifteenth Amendment forbade racial denial of the vote in 1870 and was then evaded for ninety years, because a rule is only one instrument among many
- B) The Fifteenth Amendment of 1870 forbade denial of the vote on racial grounds
- C) Each change required a second round of enforcement machinery, usually decades later
- D) A state that wishes to exclude voters has a good many instruments available

ملخص المقطع 53 بالعربية

خلاصة: لم يكن حق الانتخاب في الولايات المتحدة مقيّدًا بقاعدة واحدة بل بأربع، وسقطت كلّ واحدة منها على حدة. فشرط الملكية أزيلت ولاية ولاية بين نحو ألف وسبعمئة وتسعين وألف وثمانمئة وخمسين، والعرق جاء ثانيًا في القانون وأخيرًا في الواقع، والجنس أزيل بالتعديل التاسع عشر عام ألف وتسعمئة وعشرين، والسّ جاء آخرًا بالتعديل السادس والعشرين عام ألف وتسعمئة وواحد وسبعين.

المعنى: المعنى أنّ التعديل الدستوري يحسم القاعدة ولا يحسم شيئًا غيرها. فكّل تغيير احتاج دورة ثانية من أدوات التنفيذ بعد عقود، لأنّ الولاية التي تريد استبعاد ناخبين تملك أدوات كثيرة والقاعدة الصريحة واحدة منها فقط: اختبارات قراءة، وشروط إقامة، وساعات تسجيل، ومواقع اقتراع، ورسم دوائر.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: كيف يتسع الحقّ فعلاً وكيف يُفرغ من مضمونه، لا تواريخ التعديلات وحدها. وتاريخ حق الانتخاب ليس خطًا مستقيمًا بل سلسلة قواعد تتبعها حيلٌ للتغلّت منها.

الصلة بالاختبار: في اختبار سات يُسأل عن الاستنتاج الذي يكمل النصّ وعن الدليل الذي يسند دعوى محدّدة. والفخّ الشائع أن يُفترض أنّ إزالة القاعدة تُزيل الممارسة، وهو ما ينفية النصّ بتسعين سنة من التغلّت. ويقرن المقطع بالمقطع الثالث في أسئلة النصّين المتقابلين.

Two Arguments About Property

The case against slavery that Douglass and others advocated rested on a single premise and a single move. The premise is that a human being is not a kind of property, because the capacity to reason and to choose puts a person in a different category from a horse or a field. The move is to apply the founding documents literally. If rights are unalienable, meaning incapable of being transferred or surrendered, then no bill of sale can transfer them and no statute can make the transfer valid. Slavery is therefore not merely cruel but void.

The defense of slavery did not answer that argument on its own ground. It shifted the ground. John Calhoun and others argued from order rather than from rights. They held that every settled society rests on some arrangement of unequal labor, and that the southern arrangement was more humane than the wage labor of northern factories. They added that abolition would destroy property worth more than the whole industrial capital of the country. A second line argued from history, claiming that the Constitution had recognized slavery in three clauses and therefore protected it.

Each side was arguing toward a different kind of conclusion. One asked what is owed to a person. The other asked what will hold a society together and what the law already permits. Arguments of that shape cannot be settled by better evidence, because the parties disagree about what counts as evidence in the first place. That is why the dispute moved from the pulpit and the pamphlet to the territories and then to the battlefield, and why the amendment of 1865 was framed as a flat prohibition rather than as a compromise. Douglass had read Calhoun and quoted him, which is why his speeches so often answer a specific sentence rather than a general position.

WHAT THIS PASSAGE IS FOR

- The antislavery case turns on the claim that a person is not property.
 - The defense argued from order and from the existing Constitution.
 - The two sides disagreed about what counts as evidence.
-

Questions 54.1 to 54.10

on passage 54, Two Arguments About Property

54.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The two sides argued toward different kinds of conclusion and so could not be reconciled by evidence
- B) Douglass had read Calhoun and quoted him in his own speeches
- C) The Constitution had recognized slavery in three separate clauses
- D) Better evidence would eventually have settled the dispute

54.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, on what ground did Calhoun and others argue?

- A) On the ground of unalienable rights
- B) On the ground of a capacity to reason
- C) On the ground of social order
- D) On the ground of the amendment of 1865

54.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the antislavery case treated slavery as legally void rather than merely wrong?

- A) “They added that abolition would destroy property worth more than the whole industrial capital of the country”
- B) “Douglass had read Calhoun and quoted him, which is why his speeches so often answer a specific sentence”
- C) “One asked what is owed to a person. The other asked what will hold a society together”
- D) “no bill of sale can transfer them and no statute can make the transfer valid”

54.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Arguments of that shape cannot be settled by better evidence, because the parties disagree about what counts as evidence in the first place. A dispute of that kind therefore ____

Which choice most logically completes the text?

- A) ends as soon as one side produces a document
- B) is settled by force or not settled at all
- C) can be resolved by a careful reading of the Constitution
- D) was invented by historians of a later century

54.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “advocated” most nearly mean?

- A) argued publicly for
- B) represented in court
- C) listened to in silence
- D) wrote down for the record

54.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying that the defense shifted the ground?

- A) It concedes that the defense had the stronger argument
- B) It introduces the three clauses of the Constitution
- C) It reports what Douglass had read and then quoted
- D) It marks the two cases as answering different questions

54.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 4 of this book. It describes the Fourth of July address of 1852, which praised the founders for twenty minutes and then argued that the country was failing its own words rather than that the words were wrong.

Text 1 sets out a case built on applying the founding documents literally. Based on Text 2, how did Douglass put that case to an audience?

- A) By rejecting the founding documents as worthless to him
- B) By quoting the three clauses that recognized slavery
- C) By praising the founders first and then charging the country with failing them
- D) By arguing that wage labor was crueler than slavery

54.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The defense of slavery did not answer that argument on its own ground. ____ it shifted the ground.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) Instead,
- C) Likewise,
- D) For example,

54.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A second line argued from history ____ claiming that the Constitution had recognized slavery in three clauses and therefore protected it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) history claiming
- B) history; claiming
- C) history: claiming
- D) history, claiming

54.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The antislavery case held that a human being is not a kind of property.
- The defense argued from order rather than from rights.
- The parties disagreed about what counts as evidence in the first place.
- The amendment of 1865 was framed as a flat prohibition rather than as a compromise.

The student wants to explain why the dispute over slavery could not be settled by argument. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The antislavery case held that a human being is not a kind of property at all
- B) Because one side asked what is owed to a person and the other what holds a society together, the parties disagreed about what counts as evidence
- C) The defense of slavery argued from social order rather than from individual rights
- D) The amendment of 1865 was framed as a flat prohibition rather than as a compromise

ملخص المقطع 54 بالعربية

خلاصة: قامت الحجّة ضدّ العبودية التي دعا إليها دوغلاس وغيره على مقدّمة واحدة وخطوة واحدة. المقدّمة أنّ الإنسان ليس نوعاً من الملك، لأنّ القدرة على التفكير والاختيار تضعه في فئة غير فئة الفرس أو الحقل. والخطوة أنّ تُطبّق الوثائق التأسيسية تطبيقاً حرفياً: فإذا كانت الحقوق غير قابلة للتنازل، فلا عقد بيع ينقلها ولا قانون يمحّح نقلها.

المعنى: المعنى أنّ الدفاع عن العبودية لم يردّ على الحجّة في أرضها بل أزاح الأرض. فقد احتجّ كالهون وغيره بالنظام لا بالحقوق، وقالوا إنّ كلّ مجتمع مستقرّ يقوم على ترتيب ما من العمل غير المتكافئ، وإنّ الترتيب الجنوبي أرحم من عمل الأجر في موانع الشمال.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: شكل الحجّتين وما تهدف كلّ منهما إليه. فإحدهما تسأل ما يُستحقّ للإنسان، والأخرى تسأل ما يُمسك المجتمع وما يسمح به القانون أصلاً.

الصلة بالاختبار: في اختبار سات تتكرّر النصوص المتقابلة في موضوع واحد، ويُسأل عن الاستنتاج وعن الدليل النصّي. والفخّ الشائع أن يُنسب أحد حجج الدفاع إلى الطرف المناهض، أو أن يُفترض أنّ دليلاً أفضل كان سيحسم الأمر. ويقترن المقطع بالمقطع الرابع في أسئلة النصّين المتقابلين.

How the Retreat Was Managed

The reversal of Reconstruction was not one event, and it was not mainly achieved by changing the law. Four instruments did the work, and they reinforced one another. The first and most immediate instrument was organized violence on a large scale. Armed groups attacked officeholders, teachers and voters through the years around 1870, and federal prosecutions under the enforcement acts fell away almost entirely once the troops had left the region. The second instrument was the courts, which in a series of decisions from 1873 onward read the Fourteenth Amendment narrowly, holding in 1883 that Congress could not reach discrimination by private individuals.

The third instrument was national politics. The disputed presidential election of 1876 was settled by an arrangement under which the remaining federal troops were withdrawn, and after that no administration was willing to spend political capital on enforcement. The fourth was state law, and it proved the most durable. Between 1890 and 1908 southern states enacted new constitutions and statutes imposing literacy tests, poll taxes, property requirements, all-white primaries, which were party contests from which Black voters were excluded, and complicated registration rules.

The combination worked because each part covered a weakness in the others. Violence created the conditions in which the new rules could be written, narrow court rulings removed the federal remedy, and national indifference removed the political cost of doing nothing. None of the new state rules mentioned race, which is what allowed them to survive judicial review for decades. The result can be measured. Black registration in Louisiana fell from over ninety percent of eligible men in 1896 to about one percent by 1904. Nothing in the Constitution had changed in those eight years, and what changed instead was everything around it. The architects of the new constitutions said in public what they were doing, and the convention debates were printed.

WHAT THIS PASSAGE IS FOR

- Four instruments reversed Reconstruction and reinforced each other.
 - The new state rules avoided mentioning race and so survived review.
 - Black registration in Louisiana fell from over ninety percent to about one.
-

Questions 55.1 to 55.10

on passage 55, How the Retreat Was Managed

55.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The disputed presidential election of 1876 was settled by an arrangement
- B) Four instruments reversed Reconstruction, each covering a weakness in the others
- C) The courts repealed the Fourteenth Amendment in a series of decisions
- D) Black registration in Louisiana fell to about one percent by 1904

55.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did the new state rules avoid mentioning?

- A) The cost of keeping federal troops in the region
- B) The decisions handed down by the courts after 1873
- C) The arrangement that settled the election of 1876
- D) Race, which is what allowed them to survive review

55.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the reversal was achieved without changing the Constitution?

- A) “Nothing in the Constitution had changed in those eight years, and what changed instead was everything around it”
- B) “The architects of the new constitutions said in public what they were doing, and the convention debates were printed”
- C) “Armed groups attacked officeholders, teachers and voters through the years around 1870”
- D) “Between 1890 and 1908 southern states enacted new constitutions and statutes imposing literacy tests”

55.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Violence created the conditions in which the new rules could be written, narrow court rulings removed the federal remedy, and national indifference removed the political cost of doing nothing. Each instrument alone therefore ____

Which choice most logically completes the text?

- A) would have been enough to end Reconstruction
- B) operated at a different level of government
- C) would have left a weakness the others covered
- D) was declared unconstitutional within a decade

55.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “enacted” most nearly mean?

- A) performed on a stage
- B) passed into law
- C) brought before a court
- D) set aside as void

55.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the final paragraph of the text?

- A) It explains why the four instruments worked together and measures the result
- B) It introduces the disputed presidential election of 1876
- C) It lists the devices that the new state constitutions imposed
- D) It reports which federal prosecutions were brought after 1870

55.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 5 of this book. It reports what Reconstruction built in twelve years, three amendments and more than fifteen hundred Black officeholders, and then that the amendments stayed in the Constitution unrepealed and largely unenforced for sixty years.

Text 1 explains how the retreat was managed. Based on Text 2, what makes that explanation necessary?

- A) The amendments were repealed and had to be reinstated later
- B) Federal troops remained in the South until 1890
- C) The gains were made by state law rather than by amendment
- D) The amendments survived while their enforcement did not

55.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Armed groups attacked officeholders, teachers and voters through the years around 1870. ___ federal prosecutions under the enforcement acts fell away almost entirely once the troops had left.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) In other words,
- C) Meanwhile,
- D) As a result,

55.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The third instrument was national politics ___ the fourth was state law, and it proved the most durable.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) politics; the
- B) politics, the
- C) politics the
- D) politics: the

55.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Armed groups attacked officeholders, teachers and voters around 1870.
- Courts from 1873 read the Fourteenth Amendment narrowly.
- After 1876 no administration would spend political capital on enforcement.
- Nothing in the Constitution had changed in those eight years.

The student wants to show a reader that the reversal was a political achievement rather than a legal one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Courts from 1873 onward read the Fourteenth Amendment narrowly
- B) Armed groups attacked officeholders, teachers and voters around 1870
- C) Nothing in the Constitution changed, and yet violence, narrow rulings and national indifference together emptied it of effect
- D) After 1876 no administration would spend political capital on enforcement

ملخص المقطع 55 بالعربية

خلاصة: لم يكن انقلاب إعادة الإعمار حادثة واحدة، ولم يتحقق أساسًا بتغيير القانون. أربع أدوات أدت العمل وعززت إحداها الأخرى: عنف منظم واسع ضد أصحاب المناصب والمعلمين والناخبين، ثم محاكم قرأت التعديل الرابع عشر قراءة ضيقة من عام ألف وثمانمئة وثلاثة وسبعين، ثم تسوية انتخابات عام ألف وثمانمئة وستة وسبعين، ثم قانون الولايات.

المعنى: المعنى أن التركيبة نجحت لأن كل جزء غطى ضعف الأجزاء الأخرى: العنف هيأ الطرف لكتابة القواعد، والأحكام الضيقة أزلت العلاج الفدرالي، واللامبالاة الوطنية أزلت الكلفة السياسية للتقاعس. ولم تذكر أي من القواعد الجديدة العرق، وهذا ما أتاح لها النجاة من المراجعة القضائية عقودًا.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: ليس ماذا حدث بل بأي أدوات، وكيف يُقاس الأثر. وتسجيل الناخبين السود في لويزيانا هبط من أكثر من تسعين في المئة عام ألف وثمانمئة وستة وتسعين إلى نحو واحد في المئة عام ألف وتسعمئة وأربعة. الصلة بالاختبار: في اختبار سات يُسأل عن الاستنتاج وعن بنية الحجة وعن الدليل. والفخ الشائع أن تختار أداة واحدة من الأربع وتعامل كأنها السبب الكامل، مع أن النص يشدد على التعاضد. ويقترن المقطع بالمقطع الخامس في أسئلة النصين المتقابلين.

Four Ways to Make a Factory Safer

A state that wants fewer factory deaths has four instruments, and they work in quite different ways. The first is a rule with an inspector behind it. A statute imposed a duty, such as keeping exits unlocked, and an inspection service with the right to enter unannounced makes that duty real. The weakness is cost and coverage. New York had about fifty inspectors for tens of thousands of workplaces in 1912, so the chance of a visit in any given year was small.

The second instrument is liability, meaning legal responsibility for the cost of an injury. If an injured worker can sue and win, the employer carries the cost of danger and has a reason to spend on prevention. Nineteenth-century courts blocked this with three doctrines. The first was that a worker who knew of a risk had accepted it. The second was that an employer was not answerable for the carelessness of a fellow servant. The third was that any fault by the worker barred recovery altogether. Workers' compensation laws, which are schedules of automatic payments replacing the lawsuit, were passed by most states between 1910 and 1920.

The third instrument is insurance pricing. Once compensation payments became automatic, insurers had a direct interest in safer plants, and they began to inspect, grade and charge accordingly. The fourth is the hours law, which reduces exposure rather than hazard, since a worker in the building for ten hours instead of fourteen is at risk for less time and is less tired while there. The record suggests that no single instrument did much on its own, and that the sharp falls in industrial death rates came where three or four of them were operating at once. Britain had reached much the same conclusion fifty years earlier, and its factory inspectorate dated from 1833.

WHAT THIS PASSAGE IS FOR

- Rules need an inspection service with the right to enter.
 - Three legal doctrines had blocked injured workers from suing.
 - Automatic compensation gave insurers a direct interest in safer plants.
-

Questions 56.1 to 56.10

on passage 56, Four Ways to Make a Factory Safer

56.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) New York had about fifty inspectors for tens of thousands of workplaces
- B) Britain had a factory inspectorate from 1833, fifty years earlier
- C) Four instruments act on factory safety in different ways, and none did much alone
- D) Liability was the instrument that finally made factories safe

56.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what weakness does a rule with an inspector behind it have?

- A) Cost and coverage
- B) The fellow servant rule
- C) The pricing of insurance
- D) The length of the working day

56.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that liability works by making danger expensive for the employer?

- A) “New York had about fifty inspectors for tens of thousands of workplaces in 1912”
- B) “If an injured worker can sue and win, the employer carries the cost of danger and has a reason to spend on prevention”
- C) “Britain had reached much the same conclusion fifty years earlier”
- D) “a worker in the building for ten hours instead of fourteen is at risk for less time”

56.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The fourth instrument is the hours law, which reduces exposure rather than hazard, since a worker in the building for ten hours instead of fourteen is at risk for less time. An hours law therefore ____

Which choice most logically completes the text?

- A) removes the danger from the workplace itself
- B) makes the machinery of a factory safer to use
- C) raises the price an insurer will charge a plant
- D) leaves the hazard in place and shortens the exposure

56.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “imposed” most nearly mean?

- A) took unfair advantage
- B) placed one thing over another
- C) laid down as a requirement
- D) offered as a suggestion

56.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three doctrines listed in the second paragraph?

- A) They explain why insurers began to inspect and grade plants
- B) They explain why liability did not work for most of a century
- C) They list the duties that a statute could impose on an employer
- D) They give the hours worked by women and children before 1910

56.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 6 of this book. It describes the Triangle fire of 1911, a locked stair door kept locked so that bags could be checked, a refused inspection, and more than thirty state laws passed within three years of the fire.

Text 1 holds that no single instrument did much alone. Based on Text 2, which instruments did New York put in place at once?

- A) Rules with inspectors behind them, together with limits on hours
- B) Insurance pricing and the fellow servant rule
- C) Liability alone, through the courts of the state
- D) An hours law, but no power of inspection at all

56.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A statute imposed a duty, such as keeping exits unlocked. ____ an inspection service with the right to enter unannounced makes that duty real.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In short,
- C) Even so,
- D) For its part,

56.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nineteenth-century courts blocked this with three doctrines ____ assumption of risk, the fellow servant rule, and contributory fault.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) doctrines, assumption
- B) doctrines: assumption
- C) doctrines assumption
- D) doctrines; assumption

56.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A rule needs an inspection service with the right to enter unannounced.
- Liability makes the employer carry the cost of danger.
- Once compensation became automatic, insurers had an interest in safer plants.
- The sharp falls came where three or four instruments were operating at once.

The student wants to explain to a reader why factory deaths fell when they did. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A rule needs an inspection service with the right to enter unannounced
- B) Liability makes an employer carry the cost of the danger it creates
- C) Insurers gained an interest in safer plants once compensation was automatic
- D) Deaths fell sharply where inspection, liability, insurance pricing and hours laws were all working together

ملخص المقطع 56 بالعربية

خلاصة: للدولة التي تريد وفيات أقل في المصانع أربع أدوات تعمل بطرائق مختلفة. الأولى قاعدة وراءها مفتش: نص يفرض واجباً كإبقاء المخارج غير مقفلة، وجهاز تفتيش له حق الدخول بلا إشعار. وضعها الكلفة والتغطية: كان في نيويورك نحو خمسين مفتشاً لعشرات آلاف أماكن العمل عام ألف وتسعمئة واثني عشر.

المعنى: المعنى أن الأداة الثانية هي المسؤولية القانونية: إذا استطاع العامل المصاب المقاضاة والفوز حمل صاحب العمل كلفة الخطر فصار له سبب للإنفاق على الوقاية. والثالثة تسعير التأمين، والرابعة قانون ساعات العمل الذي يقلل التعرض لا الخطر نفسه.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: لا ما حدث بعد الحريق بل بأي وسائل يُحتمل أن يتغير شيء، وأي وسيلة تسد ثغرة الأخرى. ويشير السجل إلى أن أداة واحدة لم تفعل الكثير بمفردها.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يعدّ وسائل ويوازن بينها، ويُسأل عن الاستنتاج وعن وظيفة الفقرة. والفخ الشائع أن تُنسب النتيجة إلى وسيلة واحدة، أو أن يُخلط تقليل التعرض بتقليل الخطر. ويقترن المقطع بالمقطع السادس في أسئلة النصين المتقابلين.

What the 1965 Act Actually Did

Brown v. Board of Education in 1954 declared segregated schooling unconstitutional and provided no machinery at all. Enforcement depended on lawsuits brought district by district, and ten years later fewer than two percent of Black children in the states of the old Confederacy attended schools with white children. A ruling that must be enforced by litigation moves at the speed of litigation, and that speed is set by how many lawyers exist.

The Civil Rights Act of 1964 took a different route. Rather than rest on the Fourteenth Amendment, which reaches only state action, Congress used its power over interstate commerce to reach private businesses, and attached conditions to federal funding for school districts. A district that discriminated could lose its money without anyone filing suit. The Voting Rights Act of 1965 went further and is the clearest case of machinery in the whole period. It suspended literacy tests in covered areas, sent federal examiners, who were officials able to register voters directly where local registrars refused, and required those areas to obtain federal approval before changing any voting rule.

The results separate sharply. Black registration in Mississippi rose from under seven percent in 1964 to about sixty percent in 1967. School desegregation in the same states, driven by funding conditions rather than by courts alone, moved further between 1964 and 1972 than in the whole previous decade. The pattern is consistent. Where a statute created an administrative mechanism that operated without a plaintiff, change prevailed quickly. Where it created a right that had to be claimed in court, change was slow and uneven. The approval requirement in the 1965 Act was narrowed by the Supreme Court in 2013, and several covered states changed their voting rules within weeks. The two statutes are therefore studied together as a lesson about remedies: a right without an administrator is a right that waits.

WHAT THIS PASSAGE IS FOR

- Brown provided no enforcement machinery and depended on lawsuits.
 - The 1964 Act used commerce power and funding conditions instead.
 - Mississippi Black registration rose from under seven percent to about sixty.
-

Questions 57.1 to 57.10

on passage 57, What the 1965 Act Actually Did

57.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The approval requirement in the 1965 Act was narrowed by the Supreme Court in 2013
- B) Black registration in Mississippi rose from under seven percent to about sixty
- C) Congress used its power over interstate commerce to reach private businesses
- D) A right with an administrator behind it moves quickly, and a right without one waits

57.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did the Civil Rights Act of 1964 rely on instead of the Fourteenth Amendment?

- A) Federal examiners sent into the covered areas
- B) The commerce power and conditions on federal funding
- C) The suspension of literacy tests in covered areas
- D) The equal protection clause of the Fourteenth Amendment

57.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that machinery matters more than the strength of the words?

- A) “The Civil Rights Act of 1964 took a different route. Rather than rest on the Fourteenth Amendment”
- B) “several covered states changed their voting rules within weeks. The two statutes are therefore studied together”
- C) “A ruling that must be enforced by litigation moves at the speed of litigation, and that speed is set by how many lawyers exist”
- D) “Black registration in Mississippi rose from under seven percent in 1964 to about sixty percent in 1967”

57.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Where a statute created an administrative mechanism that operated without a plaintiff, change prevailed quickly. Where it created a right that had to be claimed in court, change was slow and uneven. A reformer drafting a statute should therefore ____

Which choice most logically completes the text?

- A) build the administrator into the statute itself
- B) rest the statute on the Fourteenth Amendment
- C) leave enforcement to the courts of each state
- D) use the strongest language the subject allows

57.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “prevailed” most nearly mean?

- A) was widely believed
- B) was argued over in court
- C) persuaded by entreaty
- D) came about and held

57.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the first paragraph of this text?

- A) It lists the instruments created by the Voting Rights Act
- B) It explains why federal examiners could register voters directly
- C) It gives the case of a ruling with no machinery behind it
- D) It reports the registration figures for Mississippi in 1967

57.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 7 of this book. It describes the Montgomery bus boycott of 1955 and 1956, which held for three hundred and eighty-one days, and reports that what finally ended segregation on the buses was a lawsuit upheld by the Supreme Court.

Text 1 argues that a right claimed in court moves slowly. Based on Text 2, what makes the Montgomery case consistent with that argument?

- A) The boycott itself had no effect on the bus company at all
- B) The remedy arrived through a lawsuit after a year of pressure
- C) Federal examiners were sent to register voters in Alabama
- D) The city repealed its own ordinance within three days

57.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Enforcement depended on lawsuits brought district by district. ____ ten years later fewer than two percent of Black children in the states of the old Confederacy attended schools with white children.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) In other words,
- C) For instance,
- D) Nevertheless,

57.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The Voting Rights Act of 1965 went further ____ it is the clearest case of machinery in the whole period.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) further and
- B) further; and
- C) further, and
- D) further, it

57.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Brown provided no enforcement machinery and depended on lawsuits.
- The 1964 Act attached conditions to federal funding.
- The 1965 Act sent federal examiners and required prior federal approval.
- Where a mechanism operated without a plaintiff, change prevailed quickly.

The student wants to explain to a reader why two statutes of the same decade worked at different speeds. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The statutes that worked fastest were the ones whose machinery operated without waiting for a plaintiff
- The 1965 Act sent federal examiners and required prior federal approval of rule changes
- Brown provided no enforcement machinery and depended on lawsuits brought district by district
- The 1964 Act attached conditions to the federal funding of school districts

ملخص المقطع 57 بالعربية

خلاصة: أعلن حكم براون ضد مجلس التعليم عام ألف وتسعمئة وأربعة وخمسين أن التعليم المفصول غير دستوري، ولم يوفر أي جهاز تنفيذ على الإطلاق. فتوقف التطبيق على دعاوى تُرفع منطقةً منطقة، وبعد عشر سنوات كان أقل من اثنين في المئة من الأطفال السود في ولايات الكونغرس القديمة يدرسون مع أطفال بيض.

المعنى: المعنى أن الحق الذي يحتاج دعوى يتحرك بسرعة الدعاوى، أما قانون حقوق التصويت عام ألف وتسعمئة وخمسة وستين فقد أنشأ جهازاً إدارياً يعمل بلا مدع: أوقف اختبارات القراءة، وأرسل مفتشين فدراليين يسجلون الناخبين مباشرة، وألزم المناطق المشمولة بالحصول على موافقة فدرالية قبل تغيير أي قاعدة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: ليس أي قانون صدر بل أي جهاز أنشأه. والنمط ثابت: حيث نشأ جهاز إداري يعمل بلا مدع جاء التغيير سريعاً، وحيث نشأ حق يُطالب به في محكمة جاء بطيئاً ومتفاوتاً.

الصلة بالاختبار: في اختبار سات يُسأل عن الاستنتاج وعن الدليل الذي يسند مقارنة. والفخ الشائع أن يُقاس أثر القانون بقوة لغته لا بوجوده من ينقذه. ويقترن المقطع بالمقطع السابع في أسئلة النصين المتقابلين.

The Arithmetic of Empire

An empire is an administrative problem before it is anything else. British India was governed by a civil service of about a thousand British officials over a population that passed three hundred million. That was possible only because almost all the work was done by Indian employees and by local rulers who kept their thrones. The army was similar. Most soldiers were Indian, paid out of Indian revenue, and the same revenue paid for the railways, the telegraph and the salaries of the officials.

That arrangement had a condition attached. The colony had to produce a surplus. Land revenue, which was the tax on agricultural land that funded most of the administration, together with the salt tax and customs duties, had to cover the cost of government and leave something over. Two things broke the arithmetic in the twentieth century. The first was the cost of consent. Each concession to nationalist demand, from the councils of 1909 to the provincial governments conceded in 1935, moved spending decisions toward people with no interest in remitting money abroad. The second and decisive pressure was the cost of two world wars fought on borrowed money.

Britain finished the Second World War owing India about thirteen hundred million pounds. The debt was recorded as sterling balances, meaning sums owed in British currency and held in London. By 1945 the colony had become a creditor of the country that governed it. At the same time the British army was stretched across four continents, the Indian officer corps had been largely Indianized, and the police could no longer be relied on in a general strike. Independence in 1947 was neither a gift nor simply a victory. It was the point at which the cost of holding on exceeded any plausible return. France, the Netherlands and Portugal each reached a version of the same reckoning within twenty years.

WHAT THIS PASSAGE IS FOR

- About a thousand British officials governed a population over three hundred million.
 - The arrangement required the colony to produce a surplus.
 - By 1945 Britain owed India about thirteen hundred million pounds.
-

Questions 58.1 to 58.10

on passage 58, The Arithmetic of Empire

58.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Independence came when the cost of holding on exceeded any plausible return
- B) Most soldiers in the Indian army were Indian and paid from Indian revenue
- C) France, the Netherlands and Portugal each reached a similar reckoning
- D) Land revenue was the tax that funded most of the administration

58.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what condition was attached to the arrangement?

- A) That most soldiers be recruited locally
- B) That local rulers should keep their thrones
- C) That the colony had to produce a surplus
- D) That the railways be paid for from London

58.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that by the end of the war the financial relation had reversed?

- A) “Most soldiers were Indian, paid out of Indian revenue, and the same revenue paid for the railways”
- B) “Each concession to nationalist demand, from the councils of 1909 to the provincial governments conceded in 1935”
- C) “the Indian officer corps had been largely Indianized, and the police could no longer be relied on in a general strike”
- D) “By 1945 the colony had become a creditor of the country that governed it”

58.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Land revenue, together with the salt tax and customs duties, had to cover the cost of government and leave something over. A colony that stopped producing that margin therefore ____

Which choice most logically completes the text?

- A) could be governed more cheaply than before
- B) became a cost rather than a source of income
- C) was obliged to raise its own customs duties
- D) had already won its independence in practice

58.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “conceded” most nearly mean?

- A) granted under pressure
- B) admitted to be false
- C) surrendered in a contest
- D) offered as a gift

58.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the cost of consent?

- A) It reports the size of the civil service in British India
- B) It explains why most soldiers in the army were Indian
- C) It gives the figure that Britain owed India by 1945
- D) It names the first of two pressures that broke the arithmetic

58.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 8 of this book. It describes the salt march of 1930, reports that the march won nothing at the time, and says that a government arresting a man of sixty for picking up mud has rejected its own claim to rule by consent.

Text 1 names the cost of consent as a pressure. Based on Text 2, how did the salt march raise that cost?

- A) By emptying the British treasury during a world war
- B) By persuading Indian officials to leave the service
- C) By making the claim to rule by consent indefensible in public
- D) By abolishing the salt tax sixteen years ahead of independence

58.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Britain finished the Second World War owing India about thirteen hundred million pounds. ___ by 1945 the colony had become a creditor of the country that governed it.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) In other words,
- C) For instance,
- D) By contrast,

58.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The army was similar ___ most soldiers were Indian, paid out of Indian revenue.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) similar most
- B) similar, most
- C) similar, and most
- D) similar: most

58.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The arrangement required the colony to produce a surplus.
- Each concession to nationalist demand moved spending decisions away from remitting money abroad.
- Britain finished the war owing India about thirteen hundred million pounds.
- Independence was the point at which the cost of holding on exceeded any plausible return.

The student wants to correct the impression that independence was simply granted. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The arrangement in India required the colony to produce a surplus every year
- B) Independence came when a colony that had to pay for itself had become a creditor and a charge instead
- C) Britain finished the war owing India about thirteen hundred million pounds
- D) Each concession moved spending decisions away from remitting money abroad

ملخص المقطع 58 بالعربية

خلاصة: الإمبراطورية مسألة إدارية قبل أي شيء آخر. فقد حُكمت الهند البريطانية بخدمة مدنية من نحو ألف موظف بريطاني على سكان تجاوزوا ثلاثمائة مليون، ولم يكن ذلك ممكناً إلا لأن معظم العمل أداه موظفون هنود وحكام محليون أبقوا على عروشهم. وكذلك الجيش: معظم جنوده هنود، يُدفع لهم من إيرادات هندية.

المعنى: المعنى أن للترتيب شرطاً على المستعمرة أن تنتج فائضاً. فإيراد الأرض مع ضريبة الملح والرسوم الجمركية كان عليه أن يغطي كلفة الحكم ويترك زيادة. وكسر هذا الحساب أمران: كلفة الرضى، أي كل تنازل للمطلب الوطني، ثم كلفة حربين عالميتين خيشت بمال مستدان.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: ليس متى جاء الاستقلال بل بأي حساب صار الاستمرار غير مجدٍ. فبحلول عام ألف وتسعمائة وخمسة وأربعين كانت بريطانيا مدينة للهند بنحو ألف وثلاثمائة مليون جنيه، وصارت المستعمرة دائنة للدولة التي تحكمها.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يفسر حدثاً كبيراً بحساب صغير، ويُسأل عن الاستنتاج وعن الدليل. والفخ الشائع أن يُقرأ الاستقلال منحة أو انتصاراً خالصاً، مع أن النص يقدمه نقطة تجاوزت فيها الكلفة أي عائد محتمل. ويقتزن المقطع بالمقطع الثامن في أسئلة النصين المتقابلين.

The Machinery of Emergency

Emergency powers in a constitutional state follow a recognizable pattern, and the removal of 1942 used three of its standard instruments. The first is delegation, meaning a grant of broad authority from a legislature to an executive to act in a defined emergency, usually without specifying what will be done, because the point of the grant is speed. Executive Order 9066 handed the army power to define areas and exclude persons from them, and Congress then made violation of such an order a crime.

The second instrument is the suspension of ordinary procedure. Detention without charge, military courts, and the removal of a right to challenge detention before a civilian judge all shorten the distance between a decision and its execution. The third is control of information, and it operates in two directions at once. One is censorship of what the public learns. The other is classification, which is the withholding of the government's own evidence from examination, so that the basis for a measure cannot be tested while the measure is in force.

Those three together produce a characteristic difficulty. The executive holds the facts, the courts defer to the executive on military necessity, and dissent is therefore conducted in the dark. In the Japanese American cases the Supreme Court was told that military necessity required removal, and was not shown the reports already in the government's possession that said otherwise. Powers of this kind are rarely repealed outright. They are allowed to lapse, or narrowed quietly, or left on the books unused, which is why each emergency begins with a stock of instruments inherited from the last one. The order itself was not formally revoked until 1976, thirty-four years after it was signed. Lawyers for the detained men discovered the suppressed reports in government archives in the early 1980s.

WHAT THIS PASSAGE IS FOR

- Emergency power begins with a broad delegation to the executive.
 - Control of information works through censorship and classification together.
 - The courts deferred while the executive held the facts.
-

Questions 59.1 to 59.10

on passage 59, The Machinery of Emergency

59.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The order of 1942 was not formally revoked until 1976
- B) Emergency power works through three standard instruments that together leave dissent in the dark
- C) Congress made violation of an exclusion order a criminal offense
- D) Lawyers discovered the suppressed reports in government archives

59.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, in which two directions does the control of information operate?

- A) Through delegation and through detention without charge
- B) Through military courts and through the removal of appeal
- C) Through the courts and through the legislature
- D) Through censorship and through classification

59.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the courts were asked to defer on a question they could not examine?

- A) “the Supreme Court was told that military necessity required removal, and was not shown the reports already in the government's possession”
- B) “Powers of this kind are rarely repealed outright. They are allowed to lapse, or narrowed quietly”
- C) “Executive Order 9066 handed the army power to define areas and exclude persons from them”
- D) “The order itself was not formally revoked until 1976, thirty-four years after it was signed”

59.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The executive holds the facts, the courts defer to the executive on military necessity, and dissent is therefore conducted in the dark. A challenge brought during the emergency therefore ____

Which choice most logically completes the text?

- A) can rely on the reports the government has prepared
- B) is decided by a military court rather than a civilian one
- C) must argue against a case it is not allowed to see
- D) had already been made impossible by Congress

59.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “dissent” most nearly mean?

- A) a difference of taste
- B) objection to the measure
- C) withdrawal from office
- D) a formal declaration of war

59.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying that such powers are rarely repealed outright?

- A) It explains why each emergency begins with instruments inherited from the last
- B) It reports when the order of 1942 was finally revoked
- C) It introduces the three instruments the text has just listed
- D) It accounts for the discovery of the suppressed reports

59.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 9 of this book. It reports that Executive Order 9066 named no group, that the army declared the whole Pacific coast a military area, that about one hundred and twenty thousand people were removed, and that nobody of Japanese descent was ever charged with spying.

Text 1 calls delegation the first instrument. Based on Text 2, what makes the delegation in 1942 a clear example?

- A) The whole Pacific coast was declared a military area within weeks
- B) Two thirds of those removed were American citizens by birth
- C) The last of the ten camps did not close until 1946
- D) The order granted a power to act without naming whom it would be used on

59.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The second instrument is the suspension of ordinary procedure. ____ the third is control of information, and it operates in two directions at once.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In other words,
- C) Beyond that,
- D) For example,

59.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

One is censorship of what the public learns ____ the other is classification, which is the withholding of evidence from examination.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) learns; the
- B) learns, the
- C) learns the
- D) learns: the

59.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Delegation grants broad authority without specifying what will be done.
- Ordinary procedure is suspended, which shortens the distance between decision and execution.
- Classification withholds the government's own evidence from examination.
- The courts defer to the executive on military necessity.

The student wants to explain to a reader why emergency powers are hard to challenge at the time. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Delegation grants broad authority without specifying what will be done with it
- B) Ordinary procedure is suspended, which shortens the distance between decision and execution
- C) The executive holds the evidence and the courts defer to it, so a challenge must be made without access to the case
- D) Classification withholds the evidence of the government from any examination

ملخص المقطع 59 بالعربية

خلاصة: سلطات الطوارئ في دولة دستورية تتبع نمطًا معروفًا، واستخدم ترحيل عام ألف وتسعمئة واثنين وأربعين ثلاثًا من أدواته المعتادة. الأولى التفويض: منح سلطة واسعة من المشرع إلى السلطة التنفيذية في طارئ محدد، دون تحديد ما سيفعل، لأن الغرض من المنح هو السرعة. المعنى: المعنى أن الأداة الثانية تعليق الإجراء المعتاد: الحبس دون تهمة، والمحاكم العسكرية، وإزالة حق الطعن أمام قاض مدني، وكلها تقصر المسافة بين القرار وتنفيذه. والثالثة التحكم في المعلومات في اتجاهين: رقابة على ما يعرفه الجمهور، وحجب أدلة الحكومة نفسها عن الفحص. الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: ليس ما حدث لجماعة بعينها بل كيف تعمل سلطة الطوارئ عمومًا. والنتيجة صعوبة مميزة: الحكومة تملك الوقائع، والمحاكم تتنازل لها في الضرورة العسكرية، فيدار الخلاف في العتمة. الصلة بالاختبار: في اختبار سات يكثر النص الذي يحلل بنية سلطة لا واقعة، ويسأل عن الاستنتاج وعن وظيفة الجملة. والفخ الشائع أن يفترض أن هذه السلطات تلغي صراحة، مع أن النص يقول إنها تُترك لتتقضي أو تُضيق بهدوء. ويقترن المقطع بالمقطع التاسع في أسئلة النصين المتقابلين.

How a Story Gets Into the Paper

News is not a selection from everything that happened. It is a selection from whatever reached a newsroom in a usable form before a deadline, and that difference explains a great deal. A reporter has a beat, meaning an assigned area such as the courts, the city hall or the police, and the beat delivers a steady supply of material from official sources who are easy to reach and willing to talk. Events that occur where no reporter is assigned arrive late or never.

Three pressures then shape what survives. The deadline rewards whatever can be confirmed quickly, which favors documents and official statements over slow inquiry. Competition rewards whatever rivals do not have, which favors novelty over importance, and a new development in a long-running story over the story itself. The need for a narrative rewards events with actors, a beginning and a visible change, which is why a vote is covered and a trend is not. Nothing in this requires any journalist to be dishonest.

The consequences are measurable. Coverage of crime rises and falls with police practice as much as with crime itself. Famines, slow epidemics and gradual improvements are systematically underreported because they have no event structure. When a government department is abolished there is a story on the day and no story at all about the work that quietly stops. A reader who understands the production process can therefore predict the shape of the gaps, and that is a more useful skill than detecting bias in any single article. Research on American local news finds that the closing of a paper is followed by measurable falls in turnout and in local borrowing costs. The same pressures now operate on a faster clock, because a story that takes six hours to confirm has already been overtaken.

WHAT THIS PASSAGE IS FOR

- News is selected from what reached a newsroom usable and in time.
 - Deadline, competition and narrative each favor a particular kind of event.
 - Slow processes are underreported because they have no event structure.
-

Questions 60.1 to 60.10

on passage 60, How a Story Gets Into the Paper

60.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Coverage of crime rises and falls with police practice as much as with crime
- B) Research finds that closing a paper is followed by falls in local turnout
- C) The production process, not dishonesty, decides the shape of what is reported
- D) A reporter has a beat such as the courts, the city hall or the police

60.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the pressure of competition reward?

- A) Whatever rivals do not already have
- B) Whatever can be confirmed most quickly
- C) Whatever has actors and a visible change
- D) Whatever an official source is willing to say

60.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the gaps in coverage can be predicted without accusing anyone?

- A) “Famines, slow epidemics and gradual improvements are systematically underreported because they have no event structure”
- B) “Nothing in this requires any journalist to be dishonest”
- C) “a story that takes six hours to confirm has already been overtaken”
- D) “Coverage of crime rises and falls with police practice as much as with crime itself”

60.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The need for a narrative rewards events with actors, a beginning and a visible change, which is why a vote is covered and a trend is not. A slow improvement therefore ____

Which choice most logically completes the text?

- A) is covered more heavily than a single vote
- B) is reported once its actors have been identified
- C) must be confirmed within six hours to be printed
- D) has no day on which it becomes a story

60.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “abolished” most nearly mean?

- A) reduced in size
- B) moved to another city
- C) done away with
- D) reorganized internally

60.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence denying that journalists must be dishonest?

- A) It introduces the three pressures described just before it
- B) It locates the cause in the process rather than in the people
- C) It explains why official sources are easy to reach
- D) It reports the research on the closing of local papers

60.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 10 of this book. It describes the penny press of 1833, which lived on advertising rather than subscription, needed the largest crowd it could gather, and hired reporters to go out to courts, docks and police stations.

Text 1 explains how a beat supplies a steady flow of material. Based on Text 2, when did the beat come into being?

- A) When the penny papers began sending paid reporters to fixed places
- B) When newspapers first began to carry opinion supplied by friends
- C) When a single copy was read by a dozen people in a coffee house
- D) When the Sun printed its invented reports about the moon

60.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The deadline rewards whatever can be confirmed quickly, which favors documents and official statements over slow inquiry. ___ competition rewards whatever rivals do not have.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) As a result,
- C) In other words,
- D) Meanwhile,

60.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Events that occur where no reporter is assigned arrive late ___ never.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) late; or
- B) late or
- C) late, or
- D) late or,

60.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- News is a selection from what reached a newsroom usable and in time.
- The deadline rewards whatever can be confirmed quickly.
- The need for a narrative rewards events with actors and a visible change.
- Famines, slow epidemics and gradual improvements are systematically underreported.

The student wants to help a reader predict which stories a newspaper will miss.

Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) News is a selection from whatever reached a newsroom usable and in time
- B) The deadline rewards whatever can be confirmed quickly rather than slowly
- C) Famines and slow epidemics are systematically underreported by newspapers
- D) What gets missed is whatever has no actors, no beginning and no day on which it changes

ملخص المقطع 60 بالعربية

خلاصة: الخبر ليس انتقاءً من كل ما حدث، بل انتقاء من كل ما وصل إلى غرفة التحرير بصورة قابلة للاستخدام قبل موعد الإغلاق، وهذا الفرق يفتر الكثير. فللمراسل دائرة تغطية مخصصة كالمحاكم أو بلدية المدينة أو الشرطة، وهذه الدائرة تسلم مادة منتظمة من مصادر رسمية يسهل الوصول إليها وترغب في الكلام.

المعنى: المعنى أن ثلاثة ضغوط تحد ما يبقى: موعد الإغلاق يكافئ ما يتحقق منه سريعاً فيرجح الوثائق والبيانات الرسمية على التحقيق البطيء؛ والمنافسة تكافئ ما لا يملكه الخصوم فترجح الجديد على المهم؛ والحاجة إلى حكاية تكافئ الأحداث ذات الأبطال والبدائية والتغير المرئي.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الآلية: ليس ما نشرته صحيفة بل كيف تُصنع الأخبار أصلاً. ولا شيء في هذا يحتاج صحافياً غير نزيه، والنتائج قابلة للقياس: المجاعات والأوبئة البطيئة والتحسين التدريجي تُغطي تغطية ناقصة لأنها بلا بنية حدث.

الصلة بالاختبار: في اختبار سات يكثر النص الذي يشرح نظاماً ينتج تحيزاً بلا نية، ويسأل عن الاستنتاج وعن الفكرة المركزية. والفخ الشائع أن يُنسب النقص إلى سوء نية الصحفيين، مع أن النص ينفي ذلك صراحةً. ويقترن المقطع بالمقطع العاشر في أسئلة النصين المتقابلين.

Biology and Earth Science

Passages 61 to 70

61

BIO · S01 · mechanism

Four Conditions and a Clock

Natural selection is not a force and not a tendency. It is an outcome that follows whenever four conditions hold at the same time. There must be variation, meaning that the members of a population differ from one another, and some of that variation must be heritable, meaning passed from parent to offspring through the genes. The variants must then differ in how many offspring they leave, and there must be time, counted in generations rather than in years.

Each condition can be checked, and that is what makes the mechanism testable rather than a story. In the peppered moth the variation was a single difference in color, and it was heritable, because dark moths bred dark offspring. Survival differed because birds hunting by sight took whichever form stood out against the bark. The generation time is one year, so fifty years allowed fifty rounds. Change the bark and the same four conditions produce the opposite result, which is exactly what the counts recorded after the clean air laws.

Two common misreadings are worth naming. The first is that individuals adapt. They do not, because a pale moth cannot darken and nothing in its lifetime changes its color. What changes across generations is the proportion of each form in the population. The second is that selection makes things better in general. It makes a population fit the conditions it is actually in, which is why a variant that lets a population thrive under soot becomes a liability once the soot is gone. The mechanism has no memory and no aim. It is simply arithmetic applied to who leaves offspring. Breeders had been using the same arithmetic deliberately for centuries, which is where Darwin got his clearest evidence. He devoted the opening chapter of his book to pigeons and cabbages rather than to wild species.

WHAT THIS PASSAGE IS FOR

- Selection follows whenever four conditions hold together.
 - Individuals do not adapt; proportions in a population change.
 - Selection fits a population to current conditions only.
-

Questions 61.1 to 61.10

on passage 61, Four Conditions and a Clock

61.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Darwin devoted his opening chapter to pigeons and cabbages
- B) Selection is an outcome that follows whenever four checkable conditions hold at once
- C) A pale moth darkens its color when the bark around it turns sooty
- D) The peppered moth has a generation time of one year

61.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what changes across the generations of a moth population?

- A) The color of an individual moth as the bark around it darkens
- B) The number of generations that a single year will allow
- C) The aim that the mechanism of selection is working toward
- D) The proportion of each form present in the population

61.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that selection fits a population to present conditions rather than improving it in general?

- A) “It makes a population fit the conditions it is actually in, which is why a variant that lets a population thrive under soot becomes a liability once the soot is gone”
- B) “In the peppered moth the variation was a single difference in color, and it was heritable”
- C) “Each condition can be checked, and that is what makes the mechanism testable rather than a story”
- D) “Breeders had been using the same arithmetic deliberately for centuries, which is where Darwin got his clearest evidence”

61.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The mechanism has no memory and no aim. It is simply arithmetic applied to who leaves offspring. A population that has been shaped by soot therefore ____

Which choice most logically completes the text?

- A) retains an advantage once the soot is gone
- B) can direct its own change in a new direction
- C) carries no advantage once the bark is clean again
- D) must wait fifty generations before anything changes

61.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “thrive” most nearly mean?

- A) spread more slowly
- B) do well and increase
- C) stay the same
- D) become harder to see

61.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the two misreadings the text names?

- A) They mark off errors the four conditions do not license
- B) They supply the fourth of the four conditions
- C) They show that the mechanism cannot be tested
- D) They introduce the peppered moth for the first time

61.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 11 of this book. It reports that a nearly black peppered moth was recorded near Manchester in 1848, that the black form was more than nine in ten of the local catch fifty years later, and that it fell below five percent again after the clean air law of 1956.

Text 1 sets out the conditions that produce selection. Based on Text 2, what would be added to that account?

- A) Variation in the population must be heritable to count
- B) The counts were made by biologists who expected the reversal
- C) Birds take whichever form of the moth stands out
- D) An actual record of the reversal, counted in both directions

61.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The first misreading is that individuals adapt. They do not. ___ a pale moth cannot darken and nothing in its lifetime changes its color.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) For instance,
- C) After all,
- D) In addition,

61.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Each condition can be checked ___ that is what makes the mechanism testable rather than a story.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) checked, and that
- B) checked and that
- C) checked; and that
- D) checked and, that

61.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Selection follows whenever four conditions hold: variation, heritability, differential reproduction and time.
- It makes a population fit the conditions it is actually in.
- A variant that lets a population thrive under soot becomes a liability once the soot is gone.
- The mechanism has no memory and no aim.

The student wants to explain why selection cannot be described as improvement in general. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Selection follows whenever variation, heritability, differential reproduction and time hold at once
- B) The mechanism of selection has no memory and no aim to work toward
- C) Because the mechanism has no aim, it fits a population to the conditions at hand, so a variant favored under soot becomes a liability
- D) Readers who expect progress from selection are reading a story into arithmetic

ملخص المقطع 61 بالعربية

خلاصة: الانتقاء الطبيعي ليس قوة ولا نزعة، بل نتيجة تتحقق كلما توافرت أربعة شروط في وقت واحد: أن يوجد تنوع بين أفراد الجماعة، وأن يكون بعض ذلك التنوع موروثاً ينتقل من الوالد إلى الولد عبر الجينات، وأن تختلف الصور في عدد ما تتركه من نسل، وأن يتوافر الزمن محسوباً بالأجيال لا بالسنين.

المعنى: المعنى أن كل شرط من هذه الشروط قابل للفحص، وهذا ما يجعل الآلية قابلة للاختبار لا حكاية تُروى. وفي عثة الفلفل كان التنوع فرقاً واحداً في اللون، وكان موروثاً، واختلف البقاء لأن الطيور تأخذ ما تراه، ومدة الجيل سنة واحدة، فأتاحت خمسون سنة خمسين دورة.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الأفراد لا تتكيف، وإنما تتغير نسبة كل صورة في الجماعة، والانتقاء لا يحسن الأشياء عموماً بل يوفق الجماعة لما هي فيه فعلاً.

الصلة بالاختبار: في اختبار سات يُسأل كثيراً عن الفكرة الرئيسة وعن وظيفة الجملة وعن الدليل الذي يسند دعوى بعينها. والفخ المتوقع هنا أن يُقرأ الانتقاء تقدماً نحو الأفضل، مع أن النص يقول إن الآلية بلا ذاكرة ولا هدف. ويقترب المقطع بالمقطع الأول من المستوى الأول في أسئلة النص المتقابلين.

Two Copies and a Shuffle

The three to one ratio that Mendel counted follows from three facts, none of which he could see. First, a pea plant carries two copies of each gene, one from each parent. Second, the two copies may be different versions, and each version is called an allele, meaning one of the alternative versions of a gene. Third, when the plant makes pollen or egg cells, the two copies separate and each cell receives one of them at random.

Follow a cross with that in hand. A true-breeding tall plant carries two tall alleles and a short plant carries two short. Their offspring must receive one of each, so every plant in the first generation carries one of both. All of them are tall, because the tall allele is dominant, meaning the version that shows whenever it is present. The short allele is still there and still intact. When that generation breeds among itself, each parent contributes either a tall or a short allele with equal chance, which gives four equally likely combinations. Three of the four contain at least one tall allele.

That is the whole derivation, and it predicts more than the ratio. It predicts that about one third of the tall plants in the second generation will breed true and two thirds will not, which Mendel also tested and confirmed. It predicts that two features carried on different chromosomes will emerge in all four combinations in fixed proportions. It fails, usefully, for features carried close together on the same chromosome, and that failure is how the first gene maps were later drawn. Mendel had no word for a gene and no knowledge of chromosomes, both of which arrived decades later. What he had was a counting habit and seven features that behaved simply.

WHAT THIS PASSAGE IS FOR

- Each plant carries two copies and passes on one at random.
 - The first generation is uniform because one allele is dominant.
 - The derivation predicts more than the ratio and fails usefully.
-

Questions 62.1 to 62.10

on passage 62, Two Copies and a Shuffle

62.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Mendel had no word for a gene and no knowledge of chromosomes
- B) The short allele is diluted away in the first generation
- C) Three unseen facts about inheritance derive the ratio and predict more besides
- D) Seven features of the pea plant happen to behave simply

62.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what proportion of the tall plants in the second generation will breed true?

- A) About one third of them
- B) About three quarters of them
- C) All of them without exception
- D) About two thirds of them

62.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the derivation is worth more than the ratio it was built to explain?

- A) “A true-breeding tall plant carries two tall alleles and a short plant carries two short”
- B) “That is the whole derivation, and it predicts more than the ratio”
- C) “It fails, usefully, for features carried close together on the same chromosome, and that failure is how the first gene maps were later drawn”
- D) “Mendel had no word for a gene and no knowledge of chromosomes, both of which arrived decades later”

62.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

When that generation breeds among itself, each parent contributes either a tall or a short allele with equal chance, which gives four equally likely combinations. Three of the four contain at least one tall allele. The ratio of three to one is therefore ____

Which choice most logically completes the text?

- A) a measurement that varies from one cross to another
- B) a fact about chromosomes that Mendel had observed
- C) an average that only very large counts can approach
- D) an arithmetical consequence of how the alleles combine

62.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “emerge” most nearly mean?

- A) escape notice
- B) rise to the surface
- C) appear among the offspring
- D) leave the population

62.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about features carried close together?

- A) It restates the three facts from which the ratio follows
- B) It names a limit of the derivation that later proved useful
- C) It abandons the derivation as a failed account of inheritance
- D) It introduces the four equally likely combinations for the first time

62.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 12 of this book. It reports that Mendel grew about twenty-eight thousand pea plants between 1856 and 1863, chose seven features that came in two clear forms, found a ratio close to three to one for all seven, and published in 1866 to almost no readers.

Text 1 derives the three to one ratio from three facts. Based on Text 2, what would be added to that account?

- A) The scale of the counting on which the ratio actually rests
- B) Each version of a gene is called an allele
- C) Three of the four combinations contain a tall allele
- D) Mendel drew the first gene maps from his own crosses

62.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

It predicts that about one third of the tall plants in the second generation will breed true and two thirds will not. ___ it predicts that two features carried on different chromosomes will emerge in all four combinations in fixed proportions.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Therefore,
- C) That is,
- D) Further,

62.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Mendel had no word for a gene and no knowledge of chromosomes ___ both of which arrived decades later.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) chromosomes; both
- B) chromosomes, both
- C) chromosomes both
- D) chromosomes: both

62.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A pea plant carries two copies of each gene, one from each parent.
- Each parent contributes either allele with equal chance, giving four equally likely combinations.
- The derivation predicts that about one third of the tall plants will breed true.
- Mendel also tested that prediction and confirmed it.

The student wants to present the derivation as a test rather than a story. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A pea plant carries two copies of each gene, one from each parent
- B) Four equally likely combinations arise when each parent contributes one allele
- C) The derivation predicts that about one third of the tall plants will breed true
- D) The derivation predicted that one third of the tall plants would breed true, and Mendel tested that prediction and confirmed it

ملخص المقطع 62 بالعربية

خلاصة: نسبة ثلاثة إلى واحد التي أحصاها مندل تنشأ من ثلاث حقائق لم يكن يراها: أنَّ نبات البازلاء يحمل نسختين من كلِّ جين، واحدة من كلِّ والد؛ وأنَّ النسختين قد تختلفان فُتسمَّى كلُّ صورة أليلاً؛ وأنَّ النسختين تنفصلان عند تكوين اللقاح والبويضة فتأخذ كلُّ خلية واحدة منهما بالقرعة. المعنى: المعنى أنَّ الاستدلال يُجرى بالورقة والقلم: نبات طويل صافي النسل يحمل أليلين طويلين، والقصير يحمل قصيرين، فالجيل الأول يحمل واحدًا من كلِّ، وكله طويل لأنَّ الأليل الطويل سائد. وإذا تلاق ذلك الجيل نتجت أربع تراكيب متساوية الاحتمال، ثلاث منها تحمل أليلًا طويلًا. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الاستدلال يتنبأ بأكثر من النسبة، إذ يتنبأ بأنَّ ثلث الطوال يصمِّي نسله وتلثيها لا. وقد اختبر مندل ذلك وأكده، ويفشل فشلًا مفيدًا في الصفات المتجاورة على كروموسوم واحد. الصلة بالاختبار: في اختبار سات تتكرر أسئلة الفكرة الرئيسة ووظيفة الجملة وإكمال النصِّ إكمالاً منطقيًا. والفخ المتوقَّع هنا أن يُحسب الأليل القصير قد ذاب في الجيل الأول، مع أنَّ النص يقول إنه باقٍ سليم. ويقترن المقطع بالمقطع الثاني من المستوى الأول في أسئلة النصِّين المتقابلين.

With Oxygen and Without

A cell does not use sugar directly. It converts the energy in sugar into a molecule called ATP, which is the working currency of energy inside every living thing, and then spends the ATP on whatever needs doing. The question for any cell is how many units of that currency a single sugar molecule will yield, and the answer depends entirely on whether oxygen is available.

The first stage is the same either way. Glycolysis, which is the step that splits the sugar in half, happens in the main body of the cell and nets two units of ATP. Without oxygen that is where the accounting stops. The half-molecules must be disposed of, and yeast disposes of them as alcohol while a working human muscle disposes of them as lactate. Either way the cell keeps its two units and throws away most of the chemical energy it was handed.

With oxygen the halves are taken into the mitochondria and dismantled completely to carbon dioxide and water. That path yields something in the region of thirty units rather than two. The difference explains a great deal of biology. It explains why a sprinter can run flat out for twenty seconds and not for twenty minutes, since the fast path cannot sustain the pace. It explains why yeast in a sealed vessel grows slowly. It also explains why oxygen-breathing life could support large active animals at all, because fifteen times the yield from the same food is the margin that pays for muscle, nerve and a warm body. The figure of about thirty units is an estimate rather than a constant, and textbooks have revised it downward over the years. It depends on how much energy the cell spends moving materials across the mitochondrial membrane.

WHAT THIS PASSAGE IS FOR

- A cell spends ATP, not sugar.
 - The first stage nets two units whether or not oxygen is present.
 - The oxygen path yields roughly fifteen times as much.
-

Questions 63.1 to 63.10

on passage 63, With Oxygen and Without

63.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Yeast in a sealed vessel grows slowly for want of oxygen
- B) Glycolysis happens in the mitochondria rather than the cell body
- C) The figure of about thirty units has been revised downward over the years
- D) The yield of energy currency from one sugar depends entirely on whether oxygen is available

63.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a working human muscle do with the half-molecules when oxygen is short?

- A) It converts them to alcohol
- B) It disposes of them as lactate
- C) It takes them into the mitochondria
- D) It stores them for later use

63.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the difference in yield has consequences beyond the single cell?

- A) “Glycolysis, which is the step that splits the sugar in half, happens in the main body of the cell and nets two units of ATP”
- B) “Either way the cell keeps its two units and throws away most of the chemical energy it was handed”
- C) “fifteen times the yield from the same food is the margin that pays for muscle, nerve and a warm body”
- D) “It depends on how much energy the cell spends moving materials across the mitochondrial membrane”

63.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It explains why a sprinter can run flat out for twenty seconds and not for twenty minutes, since the fast path cannot sustain the pace. A sprinter at full effort is therefore

—
Which choice most logically completes the text?

- A) spending a currency that is being replaced too slowly
- B) relying on the mitochondria for most of the yield
- C) producing alcohol in the muscles as yeast does
- D) working at about thirty units per sugar molecule

63.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “sustain” most nearly mean?

- A) justify by argument
- B) suffer or undergo
- C) raise still higher
- D) keep up over time

63.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three consequences listed after the yields are compared?

- A) They supply the method by which the yields were measured
- B) They qualify the figure of about thirty units
- C) They show how much of biology the difference in yield accounts for
- D) They introduce glycolysis for the first time

63.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 13 of this book. It reports that yeast stirred into warm sugar water foams within ten minutes, that a baker wants the gas and a brewer the alcohol, and that Pasteur showed in the 1860s how much more energy the cell gets when air is present.

Text 1 compares the yields with and without oxygen. Based on Text 2, what would be added to that account?

- A) Glycolysis nets two units of the currency either way
- B) A case in which both products of the fast path are wanted
- C) The fast path yields far less energy than the slow one
- D) Brewers measured the yields before Pasteur did

63.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Without oxygen that is where the accounting stops. ___ with oxygen the halves are taken into the mitochondria and dismantled completely to carbon dioxide and water.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Likewise,
- C) As a result,
- D) In particular,

63.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A cell does not use sugar directly ___ it converts the energy in sugar into a molecule that serves as the working currency of energy.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) directly, it
- B) directly it
- C) directly; it
- D) directly, and, it

63.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Glycolysis nets two units of the energy currency per sugar molecule.
- Complete breakdown with oxygen yields something in the region of thirty units.
- A sprinter can run flat out for twenty seconds and not for twenty minutes.
- Fifteen times the yield is the margin that pays for muscle, nerve and a warm body.

The student wants to explain why the fast path limits what an animal can do. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The fast path nets two units rather than about thirty, which is why a sprinter can hold full effort for twenty seconds and not twenty minutes
- Glycolysis nets two units of the energy currency per sugar molecule
- Complete breakdown with oxygen yields about thirty units of the currency
- Animals that breathe oxygen can afford muscle, nerve and a warm body

ملخص المقطع 63 بالعربية

خلاصة: الخلية لا تستعمل السكر مباشرة، بل تحوّل طاقته إلى جزيء يُعدّ عملة العمل داخل كلّ كائن حيّ، ثمّ تصرف تلك العملة على ما يلزم. والسؤال في أي خلية هو كم وحدة من هذه العملة يعطي جزيء سكر واحد، والجواب متعلّق كلّ بتوافر الأكسجين أو انعدامه.

المعنى: المعنى أنّ المرحلة الأولى واحدة في الحالين: انحلال السكر يشطره نصفين في جسم الخلية ويربح وحدتين. فإذا لم يكن أكسجين توقّف الحساب هناك، وتخلّصت الخميرة من النصفين كحولاً، وتخلّص العضل العامل منهما لبناً. وإذا توافر الأكسجين فكّكت الأنصاف تفكيكاً تاماً إلى ماء وغاز، فبلغ الربح نحو ثلاثين وحدة.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: هذا الفرق يفسّر لماذا يعدو العداء بأقصى جهده عشرين ثانية لا عشرين دقيقة، ولماذا استطاعت الحياة المتنفّسة أن تحمل حيوانات كبيرة نشيطة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن المقارنة بين مسارين وعن وظيفة التحوّل بين الجملتين. والفجّ المتوقّع هنا أن يُحسب رقم الثلاثين ثابتاً، مع أنّ النصّ يسمّيه تقديراً نُقّص على السنين. ويقترن المقطع بالمقطع الثالث من المستوى الأول في أسئلة النصّين المتقابلين.

Why Wolves Are Rare

Every food web has a shape, and the shape follows from one arithmetical fact. Energy is lost at every transfer. A plant captures a small fraction of the sunlight falling on it. An animal that eats the plant uses most of what it takes in on moving, breathing and staying warm, and stores only a fraction as its own tissue. The rough figure used in textbooks is ten percent, meaning that about a tenth of the energy at one trophic level, which is a step in the chain of who eats whom, becomes available at the next.

Run that forward and the consequences are strict. If a hundred units of plant material supports ten units of grazing animal, then ten units of grazer supports one unit of predator. The biomass, meaning the total weight of living material, therefore falls by roughly a factor of ten at each step. That is why grass is abundant, deer are common, wolves are rare, and animals that eat wolves effectively do not exist. Four or five steps is the practical limit for a food chain anywhere on Earth.

The same arithmetic explains the Yellowstone observations without any appeal to design. A small number of wolves can affect a large quantity of willow, because each wolf represents a great deal of elk, and each elk represents a great deal of plant tissue. The leverage runs downward through the chain. It also explains why top predators are the first species lost when a habitat shrinks, since they need the largest area to support the smallest number of animals. The ten percent figure is a convenience rather than a law, and measured transfer efficiencies range from about one percent to over thirty. Cold-blooded animals do better than warm-blooded ones, because they spend nothing on holding a temperature.

WHAT THIS PASSAGE IS FOR

- Energy is lost at every transfer in a food web.
 - Biomass falls by roughly a factor of ten at each step.
 - Four or five steps is the practical limit for a food chain.
-

Questions 64.1 to 64.10

on passage 64, Why Wolves Are Rare

64.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Energy lost at every transfer sets the shape of every food web
- B) Cold-blooded animals transfer energy better than warm-blooded ones
- C) Four or five steps is the practical limit for a food chain
- D) Wolves affect willows because the park service designed the release that way

64.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, by roughly what factor does biomass fall at each step of a food chain?

- A) By about a third at each step
- B) It rises by about a factor of ten
- C) By about a factor of ten at each step
- D) By a factor that measurement has never fixed

64.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the ten percent figure is a convenience rather than a law?

- A) “An animal that eats the plant uses most of what it takes in on moving, breathing and staying warm”
- B) “Four or five steps is the practical limit for a food chain anywhere on Earth”
- C) “A plant captures a small fraction of the sunlight falling on it”
- D) “measured transfer efficiencies range from about one percent to over thirty”

64.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It also explains why top predators are the first species lost when a habitat shrinks, since they need the largest area to support the smallest number of animals. A reserve drawn too small is therefore ____

Which choice most logically completes the text?

- A) able to hold a predator population indefinitely
- B) able to hold the lower levels but not the top one
- C) unable to support any plants at all
- D) able to support four or five further steps

64.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “abundant” most nearly mean?

- A) present in great quantity
- B) generous with resources
- C) rich in nutrients
- D) spread very thinly

64.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the Yellowstone paragraph within the text?

- A) It introduces the ten percent figure for the first time
- B) It concedes that the arithmetic fails in a real food web
- C) It reports the counts of wolves, elk and beaver in the park
- D) It applies the arithmetic to a case without appealing to design

64.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 14 of this book. It reports that thirty-one wolves were released in Yellowstone in 1995 and 1996, that elk numbers on the northern range fell by more than half, and that beaver colonies rose from one in the early 1990s to nine by 2015.

Text 1 explains the leverage a few predators can exert. Based on Text 2, what would be added to that account?

- A) Energy is lost at every transfer along the chain
- B) Top predators are the first species lost when a habitat shrinks
- C) The counted sizes of the change at each level of the chain
- D) The park service released the wolves to restore the willows

64.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The ten percent figure is a convenience rather than a law, and measured transfer efficiencies range from about one percent to over thirty. ___ cold-blooded animals do better than warm-blooded ones, because they spend nothing on holding a temperature.

Which choice completes the text with the most logical transition?

- A) All the same,
- B) In particular,
- C) Therefore,
- D) By contrast,

64.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That is why grass is abundant ___ deer are common, wolves are rare, and animals that eat wolves effectively do not exist.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) abundant; deer
- B) abundant deer
- C) abundant: deer
- D) abundant, deer

64.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- About a tenth of the energy at one trophic level becomes available at the next.
- Biomass falls by roughly a factor of ten at each step.
- Four or five steps is the practical limit for a food chain anywhere on Earth.
- Animals that eat wolves effectively do not exist.

The student wants to explain why no animal eats wolves. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Biomass falls by roughly a factor of ten at each step of the chain
- B) Each step leaves about a tenth of the energy, so by the level above the wolf there is too little left to support anything
- C) Four or five steps is the practical limit for a food chain
- D) Animals that eat wolves effectively do not exist anywhere on Earth

ملخص المقطع 64 بالعربية

خلاصة: لكل شبكة غذائية شكل، وشكلها ناتج عن واقعة حسابية واحدة: الطاقة تُفقد في كل انتقال. فالنبات يأسر كسرًا صغيرًا من ضوء الشمس، والحيوان الذي يأكله يصرف معظم ما يأخذ على الحركة والتنفس والدفء، ولا يُخزّن إلا كسرًا في نسيجه. والرقم المستعمل في الكتب نحو عشرة في المئة.

المعنى: المعنى أن النتائج صارمة: إن كانت مئة وحدة من النبات تحمل عشر وحدات من الراعي، فعشر وحدات من الراعي تحمل وحدة واحدة من المفترس. فالكتلة الحيّة تهبط نحو عشرة أضعاف في كل خطوة، ولهذا كان العشب غزيرًا والأيتل كثيرة والذئاب نادرة، وأربع خطوات أو خمس هي الحد العملي.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الحساب نفسه يفسر مشاهدات يلوستون بلا دعوى تصميم، ويفسر أن المفترسات العليا أول ما يُفقد إذا ضاق الموئل.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى بعينها وعن إكمال النص. والفتح المتوقع هنا أن يُحسب رقم العشرة في المئة قانونًا، مع أن النص يقول إن الكفاءات المقيسة تتراوح من واحد في المئة إلى ما فوق الثلاثين. ويقترن المقطع بالمقطع الرابع من المستوى الأول في أسئلة النصين المتقابلين.

The Ceiling and the Overshoot

Two curves describe almost all population growth. The first is exponential growth, meaning growth in which the increase is proportional to the number already present. Thirty reindeer producing offspring at a steady rate give sixty, then a hundred and twenty, and the absolute increase gets larger every year although the rate per animal has not changed. Plotted on paper the line curves upward and keeps curving.

Nothing grows that way for long, because something eventually runs short. The second curve, the logistic, bends over and flattens at a level called the carrying capacity, which is the number the habitat can support indefinitely. As food gets scarce, births fall or deaths rise, and the population settles near that level. This is the textbook picture, and the textbook picture has a flaw: it assumes the population feels the shortage immediately.

Real populations respond late, and the delay is what killed the reindeer on St Matthew Island. A reindeer born in a good year is large, healthy and fertile, and goes on breeding for several years afterward on the strength of that start. The herd therefore keeps growing after the lichen has begun to fail, passes its own ceiling, and eats into the stock that the ceiling depended on. The crash then falls below where the population would have settled, because the resource itself has been damaged. Populations with delays of this kind do not settle. They fluctuate, and the longer the delay, the wilder the swing. The same arithmetic applies to any renewable resource harvested by anything, which is why fishery managers argue about lags. A quota set from last season's catch data is a quota set on a delay. Fishery scientists call the resulting pattern a boom and bust, and they can produce it in a tank with water fleas.

WHAT THIS PASSAGE IS FOR

- Exponential growth increases in proportion to the number present.
 - The logistic curve flattens at the carrying capacity.
 - Delay lets a population overshoot and damage its own ceiling.
-

Questions 65.1 to 65.10

on passage 65, The Ceiling and the Overshoot

65.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Fishery managers argue about the lags in their data
- B) A delayed response to shortage is what turns a ceiling into an overshoot
- C) Exponential growth continues until the habitat is full
- D) Water fleas in a tank produce the same pattern

65.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what makes a reindeer born in a good year keep the herd growing?

- A) It leaves the island before the lichen fails
- B) It eats less lichen than an animal born later
- C) It responds at once to the shortage of food
- D) It is large and fertile and breeds for several years afterward

65.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the crash falls below the level the population would otherwise have held?

- A) “The crash then falls below where the population would have settled, because the resource itself has been damaged”
- B) “As food gets scarce, births fall or deaths rise, and the population settles near that level”
- C) “Populations with delays of this kind do not settle. They fluctuate, and the longer the delay, the wilder the swing”
- D) “Thirty reindeer producing offspring at a steady rate give sixty, then a hundred and twenty”

65.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A quota set from last season's catch data is a quota set on a delay. A manager working from such data is therefore ____

Which choice most logically completes the text?

- A) measuring the carrying capacity directly
- B) certain to drive the stock to extinction
- C) at risk of setting it above what the stock can bear
- D) working from a figure that cannot be collected

65.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “fluctuate” most nearly mean?

- A) drift slowly downward
- B) swing up and down
- C) hold near one level
- D) grow without limit

65.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence naming a flaw in the textbook picture?

- A) It turns from the standard account to the correction the text will develop
- B) It introduces the logistic curve for the first time
- C) It abandons both curves as useless descriptions
- D) It reports the counts taken on St Matthew Island

65.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 15 of this book. It reports that twenty-nine reindeer were put ashore on St Matthew Island in 1944, that the herd was about thirteen hundred in 1957 and six thousand in 1963, that forty-two animals were left in 1966, and that lichen grows back over decades.

Text 1 explains the overshoot in terms of a delay. Based on Text 2, what would be added to that account?

- A) A reindeer born in a good year goes on breeding for years
- B) Real populations respond late to a shortage of food
- C) The lichen on the island grew back within a few years
- D) The counted sizes of the herd before and after the crash

65.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Plotted on paper the line curves upward and keeps curving. ____ nothing grows that way for long, because something eventually runs short.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) As a result,
- C) In reality,
- D) Likewise,

65.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Real populations respond late ____ and the delay is what killed the reindeer on St Matthew Island.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) late, and
- B) late and
- C) late; and
- D) late and,

65.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The logistic curve flattens at the carrying capacity, the number the habitat can support indefinitely.
- The textbook picture assumes the population feels the shortage immediately.
- A reindeer born in a good year goes on breeding for several years afterward.
- The herd keeps growing after the lichen has begun to fail.

The student wants to explain why a population can pass its own ceiling. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The logistic curve flattens at the number the habitat can support indefinitely
- B) The textbook picture assumes that a population feels a shortage immediately
- C) Because animals born in good years keep breeding, the herd grows on after the lichen has begun to fail and so passes the ceiling
- D) A population that passes its ceiling will crash below where it started

ملخص المقطع 65 بالعربية

خلاصة: منحنيان يصفان معظم نموّ الجماعات. الأول نموّ أُشّي، أي نموّ تكون الزيادة فيه متناسبة مع العدد الموجود أصلاً، فتلاتون من الرنة تصير ستين ثم مئة وعشرين، وتكبر الزيادة المطلقة كلّ سنة وإن لم يتغيّر معدلها للحيوان الواحد. والثاني ينثني ويستوي عند حدّ يُسمّى سعة الحمل. المعنى: المعنى أنّ الصورة المدرسية فيها خلل: فهي تفترض أنّ الجماعة تشعر بالنقص فوراً. والجماعات الحقيقية تتأخّر في الاستجابة، وهذا التأخّر هو الذي أفنى الرنة في جزيرة سانت ماثيو، إذ يبقى المولود في سنة طليبة كبيراً خصيباً يتوالد سنوات بعدها. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: القطيع يتجاوز سقفه ويأكل الرصيد الذي قام عليه السقف، فيهبط الانهيار إلى ما تحت المستوى الذي كان سيستقرّ عنده، لأنّ المورد نفسه أصيب. الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة الجملة وعن التحوّل المنطقي وعن الاستنتاج من جملة ناقصة. والفخّ المتوقع هنا أن يُقرأ المنحنى اللوجستي وصفاً كافياً، مع أنّ النصّ يبيّن أنّ التأخّر يجعل الجماعات تتقلّب لا تستقرّ. ويقترن المقطع بالمقطع الخامس من المستوى الأول في أسئلة النصّين المتقابلين.

Dose, Route and the Number R

An outbreak is governed by a small number of quantities, and public health work consists largely of measuring them and then changing one. The first is the route. Cholera travels in water, influenza in air and on hands, malaria in mosquitoes, and each route suggests a different intervention: a pump handle, a mask, a net. The second is dose, since most infections require more than one organism to establish, which is why dilution matters and why a leaking cesspit beside a well is worse than one at a distance.

The third quantity is the reproduction number, meaning the average number of new cases that one case produces in a population with no immunity. If that number is above one the outbreak grows, and if it is below one the outbreak dies out. Nothing else about the disease changes that threshold. Measles has a reproduction number in the range of twelve to eighteen, which is why it needs very high vaccination coverage, while influenza is usually between one and two.

The fourth is the incubation period, meaning the gap between infection and the first symptom, and it decides whether contact tracing can work at all. A long incubation gives time to find and isolate contacts before they infect others. A short one, or an infection that spreads before symptoms appear, lets cases disperse through a population faster than any tracing team can follow. John Snow could act on a map in 1854 because cholera is waterborne and the source was fixed in one place. An airborne infection with a two-day incubation offers no equivalent handle. Each of these numbers is estimated from data collected during an outbreak, which means the early estimates are the worst ones. They are also local: a reproduction number is a property of a disease in a particular population, not of the organism alone.

WHAT THIS PASSAGE IS FOR

- Each route of transmission suggests a different intervention.
 - An outbreak grows if the reproduction number is above one.
 - A short incubation period defeats contact tracing.
-

Questions 66.1 to 66.10

on passage 66, Dose, Route and the Number R

66.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Measles has a reproduction number of twelve to eighteen
- B) John Snow could act on a map of Soho in 1854
- C) Four measurable quantities govern an outbreak and decide what can be done
- D) Early estimates of these numbers are the most reliable

66.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a reproduction number below one mean for an outbreak?

- A) The outbreak dies out
- B) The outbreak grows more slowly
- C) Contact tracing becomes impossible
- D) Immunity in the population is complete

66.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that an estimate of these quantities is tied to a particular population?

- A) “Measles has a reproduction number in the range of twelve to eighteen, which is why it needs very high vaccination coverage”
- B) “a reproduction number is a property of a disease in a particular population, not of the organism alone”
- C) “Each of these numbers is estimated from data collected during an outbreak, which means the early estimates are the worst ones”
- D) “A long incubation gives time to find and isolate contacts before they infect others”

66.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A short one, or an infection that spreads before symptoms appear, lets cases disperse through a population faster than any tracing team can follow. A tracing program aimed at such an infection is therefore ____

Which choice most logically completes the text?

- A) the most reliable tool available
- B) certain to find every contact in time
- C) better suited to a waterborne disease
- D) always working behind the spread it means to stop

66.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “disperse” most nearly mean?

- A) break up and weaken
- B) settle in one place
- C) scatter widely through it
- D) be driven away by force

66.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the comparison between cholera in 1854 and an airborne infection?

- A) It introduces the reproduction number for the first time
- B) It shows that the four quantities decide which methods can work
- C) It argues that mapping is the best method in every case
- D) It reports the figure of twelve to eighteen for measles

66.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 16 of this book. It reports that John Snow marked every traced death on a street map of Soho in 1854, that the bars piled up around one public pump on Broad Street, that brewery workers who drank their own well water did not fall ill, and that deaths were already falling when the handle came off.

Text 1 lists the quantities that govern an outbreak. Based on Text 2, what would be added to that account?

- A) A worked case in which the route was established from exceptions
- B) Cholera travels in water rather than in air
- C) A short incubation defeats any contact tracing team
- D) Snow measured the reproduction number of cholera in Soho

66.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The second is dose, since most infections require more than one organism to establish, which is why dilution matters. ___ a leaking cesspit beside a well is worse than one at a distance.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) All the same,
- C) That is to say,
- D) For the same reason,

66.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Cholera travels in water, influenza in air and on hands, malaria in mosquitoes ___ and each route suggests a different intervention.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) mosquitoes and
- B) mosquitoes, and
- C) mosquitoes; and
- D) mosquitoes and,

66.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Cholera travels in water and influenza in air and on hands.
- A long incubation gives time to find and isolate contacts before they infect others.
- Snow could act on a map in 1854 because cholera is waterborne and the source was fixed in one place.
- An airborne infection with a two-day incubation offers no equivalent handle.

The student wants to explain why mapping worked in Soho but would not work everywhere. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Cholera travels in water while influenza travels in air and on hands
- B) A long incubation gives time to find and isolate contacts
- C) An airborne infection with a two-day incubation offers no equivalent handle
- D) A map worked because the source was waterborne and fixed in one place, which an airborne infection with a two-day incubation never is

ملخص المقطع 66 بالعربية

خلاصة: الوباء تحكمه كميات قليلة، وعمل الصحة العامة في جُلّه قياسها ثم تغيير واحدة منها. الأولى طريق الانتقال: الكوليرا في الماء، والإنفلونزا في الهواء وعلى الأيدي، والملاريا في البعوض، وكلّ طريق يقترح تدخلاً مختلفاً: مقبض مضخة، أو كامامة، أو ناموسية.

المعنى: المعنى أنّ الثانية هي الجرعة، إذ تحتاج معظم الإصابات إلى أكثر من كائن واحد لتستقرّ، ولهذا يهَمّ التخفيف. والثالثة عدد التكاثر، أي متوسط ما يُحدثه المصاب الواحد من إصابات جديدة في جماعة بلا مناعة؛ فإن زاد على الواحد نما الوباء، وإن نقص عنه انقرض.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الرابعة مدة الحضانة، وهي الفاصل بين الإصابة وأول عَرَض، وهي التي تحدّد هل يصلح تتبّع المخالطين أصلاً أو لا يصلح.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة المقارنة بين حالتين. والفخّ المتوقع هنا أن تُحسب هذه الأرقام صفاتٍ للكائن نفسه، مع أنّ النصّ يقول إنّ عدد التكاثر صفة لمرض في جماعة بعينها. ويقترن المقطع بالمقطع السادس من المستوى الأول في أسئلة النصّين المتقابلين.

Four Steps in the Nitrogen Cycle

Nitrogen is four fifths of the air and almost useless in that form. The two atoms in a nitrogen molecule are held together so tightly that very few living things can break them apart. Fixation, which is the conversion of nitrogen gas into a form that living things can use, is therefore the gate through which all biological nitrogen must pass. In nature it is done by bacteria, some free in the soil and some in the root nodules of clover and its relatives, and in small amounts by lightning.

Once fixed, the nitrogen moves. Plants take it up through their roots as nitrate or ammonium and build it into protein. Animals eat the plants. Both eventually die, and other bacteria break the remains back down, releasing nitrogen into the soil again. A third group of bacteria completes the circle by turning soil nitrogen back into gas, which returns to the atmosphere. The cycle is closed, but a field is not a closed system.

Three leaks matter to anyone growing a crop. The harvest removes nitrogen in the grain and takes it away in a truck. Leaching, which is the washing of dissolved nitrogen down below the root zone by rain, removes more, and nitrate is highly soluble. Gas losses take a further share. A field cropped year after year without return is therefore depleted at a rate that can be estimated, and the Norfolk rotation worked because clover and grazing animals put back roughly what the wheat took out. Since 1913 the Haber process has fixed nitrogen industrially, using high pressure, high temperature and a great deal of gas. Something close to half the nitrogen in a person alive today passed through that process. Soil tests now measure what is there before a field is dressed.

WHAT THIS PASSAGE IS FOR

- Nitrogen gas must be fixed before anything living can use it.
 - Harvest, leaching and gas losses are the three leaks from a field.
 - The rotation worked because clover replaced what wheat removed.
-

Questions 67.1 to 67.10

on passage 67, Four Steps in the Nitrogen Cycle

67.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Soil tests now measure what is there before a field is dressed
- B) Nitrogen gas is directly usable by most living things
- C) The Haber process has fixed nitrogen industrially since 1913
- D) A closed cycle runs through a field that leaks nitrogen three ways

67.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which organisms complete the circle by returning nitrogen to the air?

- A) The bacteria living in the root nodules of clover
- B) A third group of bacteria in the soil
- C) The plants that take up nitrate through their roots
- D) The animals that eat the plants and then die

67.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the Norfolk rotation worked because the losses could be matched?

- A) “Plants take it up through their roots as nitrate or ammonium and build it into protein”
- B) “Since 1913 the Haber process has fixed nitrogen industrially, using high pressure, high temperature and a great deal of gas”
- C) “the Norfolk rotation worked because clover and grazing animals put back roughly what the wheat took out”
- D) “Something close to half the nitrogen in a person alive today passed through that process”

67.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The harvest removes nitrogen in the grain and takes it away in a truck. A field cropped year after year without return is therefore ____

Which choice most logically completes the text?

- A) losing nitrogen at a rate that can be estimated
- B) closed in the same sense as the cycle itself
- C) certain to grow nothing at all within a year
- D) gaining nitrogen from lightning at the same rate

67.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “depleted” most nearly mean?

- A) made heavier by rain
- B) cleared of weeds
- C) built up again
- D) drawn down in supply

67.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that calls fixation a gate?

- A) It introduces the three leaks that matter to a grower
- B) It concedes that the cycle cannot be traced at all
- C) It explains why one step controls all the rest of the cycle
- D) It reports the pressure and temperature the Haber process needs

67.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 17 of this book. It reports that wheat sown after clover beats wheat sown after wheat by a third or more, that the Norfolk four-course rotation of turnips, barley, clover and wheat became standard in the eighteenth century, and that yields roughly doubled over that century.

Text 1 sets out the steps and the leaks of the cycle. Based on Text 2, what would be added to that account?

- A) Bacteria in the root nodules of clover fix nitrogen from the air
- B) The measured size of the gain that a rotation produced
- C) Nitrate is highly soluble and washes below the root zone
- D) The rotation was adopted because the chemistry was understood

67.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Once fixed, the nitrogen moves. ___ plants take it up through their roots as nitrate or ammonium and build it into protein.

Which choice completes the text with the most logical transition?

- A) To begin with,
- B) By contrast,
- C) Even so,
- D) As a result,

67.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The cycle is closed ___ a field is not a closed system.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) closed, a field
- B) closed a field
- C) closed, but a field
- D) closed; but, a field

67.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Fixation is the gate through which all biological nitrogen must pass.
- The harvest removes nitrogen in the grain and takes it away in a truck.
- Leaching washes dissolved nitrogen below the root zone, and nitrate is highly soluble.
- Gas losses take a further share.

The student wants to explain why a cropped field loses nitrogen although the cycle is closed. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The cycle returns nitrogen to the air, but harvest, leaching and gas losses carry it off the field, so what is closed overall is open here
- B) Fixation is the gate through which all biological nitrogen must pass
- C) The harvest removes nitrogen in the grain and takes it away in a truck
- D) Nitrate is highly soluble and washes below the root zone after rain

ملخص المقطع 67 بالعربية

خلاصة: النيتروجين أربعة أخماس الهواء وهو في تلك الصورة شبه عديم النفع، لأن ذرتيه مرتبطتان ارتباطاً شديداً لا تفكّه إلا كائنات قليلة جداً. فالتثبيت، أي تحويل غاز النيتروجين إلى صورة تنتفع بها الأحياء، هو الباب الذي لا بد أن يمر منه كل نيتروجين حيوي.

المعنى: المعنى أن النيتروجين بعد تثبيته يتحرك: تأخذ النباتات بجذورها نترات أو أمونيوم فتبنيه بروتيناً، وتأكّلها الحيوانات، ثم تموت كلّها فتحلّلها بكتيريا أخرى فتعيده إلى التراب، وتُثَمّ طائفة ثالثة الدائرة إذ تردّه غازاً إلى الجوّ.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الدائرة مغلقة لكنّ الحقل ليس نظاماً مغلقاً، فله ثلاثة منافذ تهّم كلّ مزارع: الحصاد، والغسل تحت منطقة الجذور، والفقد الغازي.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة الجملة وعن الدليل وعن إكمال النصّ إكمالاً منطقيّاً. والفخ المتوقّع هنا أن يُقرأ غلق الدائرة غلقاً للحقل أيضاً، مع أنّ النصّ ينصّ على خلاف ذلك. ويقترن المقطع بالمقطع السابع من المستوى الأول في أسئلة النصّين المتقابلين.

Why the Gas Holds Heat

Sunlight arrives mostly as visible light, passes through the atmosphere with little absorption, and warms the ground. The ground then radiates that energy back upward, but at much longer wavelengths, in the infrared, which is the band at which any warm surface radiates. The atmosphere is not transparent to those wavelengths. Water vapor and carbon dioxide absorb strongly in parts of the infrared band, take up the energy and re-emit it in all directions, including downward.

The mechanism is therefore not a blanket and not a trap. It is a delay. Energy still leaves the planet, and must, or the temperature would rise without limit. What changes when the concentration of an absorbing gas rises is the height in the atmosphere from which the escaping radiation finally gets away, and therefore the surface temperature needed to balance the books. The effect of each added unit is smaller than the last, because the strongest parts of the band are already saturated, and the useful absorption happens at the edges.

Two further quantities decide how much this matters. The first is residence time, meaning how long a molecule may inhabit the air before being taken up elsewhere. Methane breaks down in about a decade. Carbon dioxide is partly absorbed by the ocean within years, but a substantial fraction stays in circulation for centuries, which is why the Mauna Loa curve has no downward step after any recession. The second is feedback: a warmer atmosphere holds more water vapor, and water vapor is itself a strong absorber in the infrared. John Tyndall measured the absorption of several gases in a laboratory in 1859 and identified water vapor and carbon dioxide as the important ones. His apparatus was a brass tube, a heat source and a sensitive thermopile.

WHAT THIS PASSAGE IS FOR

- The ground radiates in the infrared, where the atmosphere is not transparent.
 - The mechanism is a delay in escape, not a trap.
 - A substantial fraction of carbon dioxide stays in circulation for centuries.
-

Questions 68.1 to 68.10

on passage 68, Why the Gas Holds Heat

68.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The effect is a delay in escape, not a blanket or a trap
- B) Tyndall used a brass tube, a heat source and a thermopile
- C) Added units of the gas each have a larger effect than the last
- D) Methane breaks down in about a decade in the atmosphere

68.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what changes when the concentration of an absorbing gas rises?

- A) The wavelength at which the ground radiates its energy
- B) The amount of energy that finally leaves the planet
- C) The height from which the escaping radiation gets away
- D) The residence time of a molecule in the atmosphere

68.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the warming is not a simple matter of adding more gas?

- A) “Water vapor and carbon dioxide absorb strongly in parts of the infrared band”
- B) “Energy still leaves the planet, and must, or the temperature would rise without limit”
- C) “John Tyndall measured the absorption of several gases in a laboratory in 1859”
- D) “The effect of each added unit is smaller than the last, because the strongest parts of the band are already saturated”

68.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The second is feedback: a warmer atmosphere holds more water vapor, and water vapor is itself a strong absorber in the infrared. A small warming from another gas can therefore ____

Which choice most logically completes the text?

- A) be cancelled by the extra water vapor
- B) be enlarged by the water vapor it brings in
- C) be measured in a laboratory brass tube
- D) raise the temperature without any limit

68.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “inhabit” most nearly mean?

- A) remain present in
- B) make a home among
- C) pass quickly through
- D) fill completely

68.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence denying that the effect is a blanket?

- A) It introduces the two further quantities that follow
- B) It concedes that the mechanism cannot be described
- C) It reports the result of the laboratory work of 1859
- D) It clears away a familiar image before the real account

68.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 18 of this book. It reports that an instrument near the top of Mauna Loa has measured carbon dioxide every hour since 1958, that the readings wobble by about six parts per million each year as northern plants grow and die back, and that the level climbed from about three hundred and fifteen to over four hundred.

Text 1 explains why the gas holds heat. Based on Text 2, what would be added to that account?

- A) Carbon dioxide absorbs strongly in parts of the infrared band
- B) A substantial fraction stays in circulation for centuries
- C) A continuous record of the rising concentration itself
- D) The yearly wobble is caused by the absorption of infrared

68.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Energy still leaves the planet, and must, or the temperature would rise without limit. ____ what changes when the concentration of an absorbing gas rises is the height from which the escaping radiation finally gets away.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) Instead,
- C) As a result,
- D) In short,

68.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The mechanism is therefore not a blanket and not a trap ____ it is a delay.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) trap, it
- B) trap it
- C) trap, and, it
- D) trap. It

68.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Methane breaks down in about a decade.
- Carbon dioxide is partly absorbed by the ocean within years.
- A substantial fraction of it stays in circulation for centuries.
- The Mauna Loa curve has no downward step after any recession.

The student wants to explain why the record shows no downward step after a recession. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Methane breaks down in about a decade in the atmosphere
- Because a substantial fraction stays in circulation for centuries, a few lean years leave no mark on the curve
- Carbon dioxide is partly absorbed by the ocean within years
- The Mauna Loa curve has no downward step after any recession

ملخص المقطع 68 بالعربية

خلاصة: ضوء الشمس يصل في معظمه ضوءاً مرئياً، يمرّ في الجوّ بامتصاص قليل فيسخّن الأرض. ثمّ تُعيد الأرض إشعاع تلك الطاقة إلى أعلى بأطوال موجية أكبر بكثير، في المدى تحت الأحمر، وهو المدى الذي يشعّ به كلّ سطح دافئ. والجوّ ليس شفافاً لتلك الأطوال.

المعنى: المعنى أن الآلية ليست بظّانية ولا مصيدة، بل تأخير. فالطاقة لا تزال تخرج من الكوكب، ولا بدّ أن تخرج، وإلاّ لصعدت الحرارة بلا حدّ. والذي يتغيّر بارتفاع تركيز الغاز الماصّ هو الارتفاع الذي يفلت منه الإشعاع أخيراً، ومعه حرارة السطح اللازمة لتوازن الحساب.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: أثر كلّ وحدة مضافة أصغر من أثر ما قبلها لأنّ أقوى أجزاء المدى مُشبعة، ومدة البقاء والتغذية الراجعة تحدّدان مقدار ما يهتم.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل وعن التحوّل المنطقي وعن وظيفة الجملة التي تنفي صورة شائعة. والفخ المتوقّع هنا أن يُقال إنّ الطاقة تُحتجز فلا تخرج، مع أنّ النض ينض على خروجها. ويقترن المقطع بالمقطع الثامن من المستوى الأول في أسئلة النصّين المتقابلين.

What Moving Plates Produce

The surface of the Earth is broken into about a dozen large plates and several dozen small ones, and every one of them is moving, at a speed of between one and ten centimeters a year. Since the plates cannot overlap and cannot leave gaps, everything interesting happens at their edges, and there are only three kinds of edge.

Where two plates move apart, as at Thingvellir, magma, which is molten rock from below, rises into the gap and freezes onto both sides. That builds new crust and produces ridges, rift valleys and shallow earthquakes. Where two plates move toward each other, one of them usually goes down beneath the other, a process called subduction. The descending plate drags the sea floor into a deep trench, melts at depth, and feeds a line of volcanoes above it, which is the origin of the Andes, Japan and the Cascades. Where two plates slide past one another, as in California, nothing is made or destroyed and the motion is released in earthquakes along a fault.

The three kinds of edge account for the distribution of nearly every mountain range, volcano and major earthquake on the planet. They also set up a race. Collision lifts rock upward at a few millimeters a year, while rain, ice and rivers erode it downward, and the height of a range is the balance between the two rates. The Himalaya is still rising because the collision has not finished. The Appalachians, whose collision ended long ago, are the worn remains of something that once stood as high. Satellite positioning now measures plate motion directly. The precision is about a millimeter a year. Before that it was inferred from magnetic stripes on the sea floor and from the ages of volcanic islands.

WHAT THIS PASSAGE IS FOR

- There are only three kinds of plate edge.
 - Subduction feeds a line of volcanoes above the descending plate.
 - The height of a range is a balance between uplift and erosion.
-

Questions 69.1 to 69.10

on passage 69, What Moving Plates Produce

69.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Satellite positioning measures plate motion to about a millimeter a year
- B) Three kinds of plate edge account for nearly every large feature
- C) Plates move at between one and ten centimeters a year
- D) The Appalachians are still rising because their collision continues

69.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happens where two plates slide past one another?

- A) A line of volcanoes is fed from below
- B) New crust is built from rising magma
- C) Rock is lifted at a few millimeters a year
- D) Nothing is made or destroyed and earthquakes release the motion

69.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the height of a range is the outcome of a contest between two rates?

- A) “Collision lifts rock upward at a few millimeters a year, while rain, ice and rivers erode it downward”
- B) “The Himalaya is still rising because the collision has not finished”
- C) “Satellite positioning now measures plate motion directly”
- D) “The descending plate drags the sea floor into a deep trench, melts at depth, and feeds a line of volcanoes above it”

69.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The Appalachians, whose collision ended long ago, are the worn remains of something that once stood as high. The difference between the two ranges is therefore ____

Which choice most logically completes the text?

- A) a difference in the rate at which rock erodes
- B) a sign that the Appalachians were never very high
- C) a difference in whether the lifting is still going on
- D) a result of measurement to about a millimeter a year

69.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “erode” most nearly mean?

- A) weaken a claim
- B) wear away over time
- C) lift in slow steps
- D) cover with new rock

69.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about overlapping and gaps?

- A) It explains why the edges are where everything happens
- B) It introduces the three kinds of edge by name
- C) It reports the speed at which the plates move
- D) It concedes that the plates sometimes do overlap

69.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 19 of this book. It reports that the valley at Thingvellir in Iceland lies between the torn edges of a crack in the crust, that a visitor can walk along the floor between them, that the ground pulls apart at about an inch a year, and that surveyors have measured the width since the 1990s.

Text 1 classifies the three kinds of plate edge. Based on Text 2, what would be added to that account?

- A) Magma rises into the gap and freezes onto both sides
- B) Plates move at between one and ten centimeters a year
- C) Iceland lies above a subduction zone rather than a ridge
- D) A spreading edge seen at one place that a visitor can walk

69.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Where two plates move apart, as at Thingvellir, magma rises into the gap and freezes onto both sides. ___ where two plates move toward each other, one of them usually goes down beneath the other.

Which choice completes the text with the most logical transition?

- A) For that reason,
- B) In other words,
- C) By contrast,
- D) Likewise,

69.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Where two plates slide past one another, as in California, nothing is made or destroyed ___ and the motion is released in earthquakes along a fault.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) destroyed, and
- B) destroyed and
- C) destroyed; and
- D) destroyed and,

69.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- About a dozen large plates and several dozen small ones are all moving.
- The plates cannot overlap and cannot leave gaps.
- Everything interesting happens at their edges.
- The three kinds of edge are moving apart, moving together and sliding past.

The student wants to explain why only three kinds of boundary are needed. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- About a dozen large plates and several dozen small ones are all moving
- Everything interesting happens at the edges of the plates
- Since the plates can neither overlap nor leave gaps, two edges can only move apart, move together or slide past
- The three kinds of edge are moving apart, moving together and sliding past

ملخص المقطع 69 بالعربية

خلاصة: سطح الأرض مكسور إلى نحو اثنتي عشرة صفيحة كبيرة وعشرات صغيرة، وكلها متحركة بسرعة بين سنتيمتر وعشرة سنتيمترات في السنة. ولأن الصفائح لا تتراكب ولا تترك فراغاً، فكل ما يُهم يحدث عند حوافها، والحواف ثلاثة أنواع لا أكثر. المعنى: المعنى أن الحافة التي تتباعد عندها الصفيحتان تصعد فيها الصهارة فتتجمد على الجانبين فتبني قشرة جديدة؛ والحافة التي تتقارب عندها تنزل إحداها تحت الأخرى فتحفر خندقاً وتغذي صفاً من البراكين؛ والحافة التي تتزحلق عندها لا يُمنع فيها شيء ولا يُهدم، وإنما تتفرج الحركة زلازل. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: الأنواع الثلاثة تفسر توزع كل سلسلة جبال وبركان وزلازل كبير، وتقيم مسابقة بين الرفع والتعرية، وارتفاع السلسلة حميلة المعدلين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن التصنيف وعن وظيفة الجملة التي تمهد له وعن إكمال النص. والفخ المتوقع هنا أن يُنسب الارتفاع المستمر إلى الأبلش، مع أن النص يقول إن الهيمالايا هي التي ما زالت ترتفع. ويقترن المقطع بالمقطع التاسع من المستوى الأول في أسئلة النصين المتقابلين.

Why Warm Water Does the Work

Water is a far better carrier of heat than air, which is why a swimmer feels cold at a temperature that feels mild on land. The same comparison explains why Antarctic ice is being lost from below rather than from above. Melting ice also absorbs a great deal of energy without changing temperature at all, a quantity called latent heat, so a current only two degrees above freezing can remove an enormous amount of ice if it keeps arriving.

Around West Antarctica a mass of relatively warm salty water sits at depth, below a colder and fresher surface layer. Wind patterns determine how much of it is pushed up onto the continental shelf and into the cavities beneath the floating ice. Once there it melts the underside, and the fresh melt water, being lighter, rises along the sloping ice and draws more warm water in behind it. The circulation is self-sustaining while the warm water continues to migrate shoreward.

The sea bed decides how this ends. Under Thwaites the rock surface deepens as it goes inland, which is called a retrograde slope. On such a slope every retreat of the grounding line puts the ice front into deeper water, where the ice is thicker, so more ice is exposed to melting and the retreat accelerates. On a slope of the opposite sense the retreat would slow itself and stop. That single geometrical fact is why Thwaites is studied more closely than glaciers that are losing ice faster today. The shape of the bed under the ice was mapped by aircraft carrying ice-penetrating radar, flown in grids over several seasons. Gaps in that map are still the largest source of uncertainty in the projections. The grounding line under Thwaites has about eighty miles of such slope ahead of it.

WHAT THIS PASSAGE IS FOR

- Water carries heat far better than air.
 - Melt water rising along the ice draws more warm water in.
 - A bed that deepens inland makes retreat accelerate.
-

Questions 70.1 to 70.10

on passage 70, Why Warm Water Does the Work

70.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The bed under the ice was mapped by aircraft carrying radar
- B) Antarctic ice is being lost from above rather than from below
- C) Warm water and the shape of the bed together drive the retreat
- D) Melting ice absorbs energy without changing temperature

70.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a retrograde slope mean for the grounding line?

- A) Every retreat puts the front into deeper water
- B) Every retreat slows the following retreat down
- C) The grounding line cannot move inland at all
- D) The melt water sinks instead of rising

70.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the reason Thwaites is watched so closely is a fact about its bed?

- A) “Wind patterns determine how much of it is pushed up onto the continental shelf”
- B) “That single geometrical fact is why Thwaites is studied more closely than glaciers that are losing ice faster today”
- C) “Water is a far better carrier of heat than air, which is why a swimmer feels cold at a temperature that feels mild on land”
- D) “Gaps in that map are still the largest source of uncertainty in the projections”

70.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Once there it melts the underside, and the fresh melt water, being lighter, rises along the sloping ice and draws more warm water in behind it. The melting therefore ____

Which choice most logically completes the text?

- A) stops as soon as the melt water forms
- B) depends on the air temperature above
- C) is limited by the strength of the wind alone
- D) keeps the current that causes it running

70.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “migrate” most nearly mean?

- A) travel between seasons
- B) settle in a new place
- C) move steadily along
- D) rise toward the surface

70.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the comparison with a swimmer?

- A) It introduces the retrograde slope for the first time
- B) It makes a familiar case of the point about water and air
- C) It argues that air temperature governs the melting
- D) It reports the depth to which the aircraft radar reached

70.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 20 of this book. It reports that Thwaites reaches the sea along a front about eighty miles wide, that the grounding line retreated about nine miles between 1992 and 2011 in one sector, and that a team drilled through six hundred meters of ice in 2019 to measure the melting directly.

Text 1 explains why the water rather than the air does the melting. Based on Text 2, what would be added to that account?

- A) A measured retreat and a direct measurement of the melting
- B) Air temperatures there stay below freezing for most of the year
- C) The warm water is about two degrees above the freezing point
- D) The drilling in 2019 measured the shape of the bed

70.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Around West Antarctica a mass of relatively warm salty water sits at depth, below a colder and fresher surface layer. ___ wind patterns determine how much of it is pushed up onto the continental shelf and into the cavities beneath the floating ice.

Which choice completes the text with the most logical transition?

- A) All the same,
- B) In other words,
- C) By contrast,
- D) From there,

70.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The sea bed decides how this ends ___ under Thwaites the rock surface deepens as it goes inland.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) ends, under
- B) ends. Under
- C) ends under
- D) ends, and, under

70.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Water is a far better carrier of heat than air.
- Melting ice absorbs a great deal of energy without changing temperature, a quantity called latent heat.
- A current two degrees above freezing can remove an enormous amount of ice if it keeps arriving.
- The fresh melt water rises along the sloping ice and draws more warm water in behind it.

The student wants to explain why a current only two degrees above freezing matters. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Water is a far better carrier of heat than air, as a swimmer can feel
- B) Melting ice absorbs a great deal of energy without changing temperature
- C) The fresh melt water rises along the ice and draws more warm water in behind it
- D) Water carries heat far better than air, and the melting keeps drawing more of it in, so a small margin arriving steadily removes a great deal of ice

ملخص المقطع 70 بالعربية

خلاصة: الماء ناقل للحرارة أفضل من الهواء بكثير، ولهذا يحس السباح بالبرد في درجة تبدو معتدلة على البر. والمقارنة نفسها تفسر لماذا يُفقد جليد أنتاركتيكا من أسفل لا من أعلى. والجليد الذائب يمتص طاقة كبيرة دون أن تتغير درجته، وهي الحرارة الكامنة. المعنى: المعنى أن كتلة من ماء مالح دافئ نسبياً تقبع في العمق حول غرب أنتاركتيكا تحت طبقة سطحية أبرد وأعذب، وأنماط الرياح تحدّد كم يُدفع منها إلى الرفق القاري وإلى التجاويف تحت الجليد الطافي، فيذيب أسفله، ويصعد ماء الذوبان الأعذب فيجرّ وراءه ماءً دافئاً جديداً. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الآلية: قاع البحر هو الذي يحدّد النهاية، فسطح الصخر تحت ثوابتس يزداد عمقاً نحو الداخل، وهو ما يُسمّى الميل المعاكس، فكلّ تراجع يضع الجبهة في ماء أعمق وجليد أسمك فيتسارع التراجع. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة المقارنة التمهيدية. والفحّ المتوقّع هنا أن يُقال إنَّ الفقد من أعلى، مع أنّ النصّ يبيّن أنّه من أسفل. ويقترن المقطع بالمقطع العاشر من المستوى الأول في أسئلة النصّين المتقابلين.

Scatter and Bias

The spread in eleven weighings comes from two quite different sources, and confusing them is the commonest mistake in handling data. Random error is scatter that falls on both sides of the true value, caused by air movement, vibration and the limits of the instrument. Systematic error is an error that pushes every reading the same way, caused by a balance that reads high, a ruler that has shrunk, or a stopwatch started late by the same half second every time.

Averaging repairs the first and is helpless against the second. Take enough readings and the random part shrinks in proportion to the square root of the number of readings, so a hundred weighings are ten times better than one. Nothing about repetition touches a balance that reads two milligrams high, because that error is present and identical in every reading, including the average. A thousand careful measurements of the wrong thing give a very precise wrong answer.

The two therefore require different remedies. Random error is reduced by repeating, by steadying the apparatus, and by using a finer instrument. Systematic error is found only by comparison with something independent, such as a second balance, a mass certified by the National Institute of Standards and Technology, or a different method altogether. Experimenters refine a result by attacking both, and they report them separately, which is why a careful paper distinguishes a statistical uncertainty from a systematic one. When two laboratories disagree by more than their stated uncertainties, at least one of them has a systematic error it has not found. The distinction has a famous example. Measurements of the speed of light published between 1900 and 1950 drifted steadily, each new value sitting inside the error bars of the last and all of them wrong in the same direction. Later workers concluded that experimenters had unconsciously weighted their results toward the accepted figure.

WHAT THIS PASSAGE IS FOR

- Random error scatters both ways; systematic error pushes one way.
 - Averaging shrinks random error with the square root of the number of readings.
 - Systematic error is found only by independent comparison.
-

Questions 71.1 to 71.10

on passage 71, Scatter and Bias

71.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Measurements of the speed of light drifted between 1900 and 1950
- B) Two kinds of error need two different remedies
- C) Repetition removes every kind of error from a result
- D) Random error falls as the square root of the number of readings

71.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how is a systematic error found?

- A) By taking a hundred readings instead of one
- B) By steadying the apparatus on a firmer bench
- C) By reporting it alongside the statistical figure
- D) By comparison with something independent

71.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that precision and correctness are different things?

- A) “A thousand careful measurements of the wrong thing give a very precise wrong answer”
- B) “Random error is reduced by repeating, by steadying the apparatus, and by using a finer instrument”
- C) “a hundred weighings are ten times better than one”
- D) “Later workers concluded that experimenters had unconsciously weighted their results toward the accepted figure”

71.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

When two laboratories disagree by more than their stated uncertainties, at least one of them has a systematic error it has not found. A pair of laboratories that agreed closely would therefore ____

Which choice most logically completes the text?

- A) have shown that neither has a bias
- B) have reduced their random error to zero
- C) still be able to share the same bias
- D) have used two independent methods by definition

71.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “refine” most nearly mean?

- A) purify a raw material
- B) improve by correction
- C) state more politely
- D) reduce to a single figure

71.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the balance reading two milligrams high?

- A) It shows why repetition cannot reach the second kind of error
- B) It introduces the square root rule for the first time
- C) It concedes that averaging is of no use at all
- D) It reports the figure a certified mass carries

71.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 21 of this book. It reports eleven weighings of one stone on a laboratory balance, names the door, the vibration, the oil and the warming room as sources of the spread, and gives the average with the spread beside it.

Text 1 separates two kinds of error. Based on Text 2, what would be added to that separation?

- A) Averaging is helpless against a balance that reads high
- B) Random scatter falls on both sides of the true value
- C) The eleven readings revealed a bias in the balance
- D) A worked case of the first kind of error alone

71.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Averaging repairs the first and is helpless against the second. ___ take enough readings and the random part shrinks in proportion to the square root of the number of readings.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In the first case,
- D) In conclusion,

71.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Random error is scatter that falls on both sides of the true value ___ and systematic error pushes every reading the same way.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) value, and
- B) value and
- C) value; and
- D) value and,

71.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A systematic error is identical in every reading and survives averaging.
- It is found only by comparison with something independent.
- Measurements of the speed of light drifted steadily between 1900 and 1950.
- Each new value sat inside the error bars of the last and all were wrong the same way.

The student wants to explain why agreement between laboratories is not proof. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A systematic error survives averaging in every reading taken
- B) A bias is found only by comparison with something independent
- C) The published speeds of light agreed with each other for fifty years and were all wrong in the same direction
- D) Measurements of the speed of light drifted steadily for fifty years

ملخص المقطع 71 بالعربية

خلاصة: التبّد في إحدى عشرة وزنة يأتي من مصدرين مختلفين اختلافاً تاماً، وخطبهما أشيع الأخطاء في معالجة البيانات. فالخطأ العشوائي تبّد يقع على جانبي القيمة الحقيقية، سببه حركة الهواء والرجفة وحدود الآلة. والخطأ المنهجي خطأ يدفع كلّ قراءة في جهة واحدة، سببه ميزان يقرأ زائداً أو مسطرة تقلّصت.

المعنى: المعنى أنّ المتوسط يصلح الأول ولا يملك شيئاً تجاه الثاني. فإذا أكثرت القراءات تقلّص الجزء العشوائي بنسبة الجذر التربيعي لعددها، فمئة وزنة أحسن من واحدة عشر مرّات. ولا يمسّ التكرار ميزاناً يقرأ مليغرامين زائداً، لأنّ ذلك الخطأ حاضر بعينه في كلّ قراءة وفي المتوسط. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: لكلّ خطأ دواؤه، فالعشوائي يُقلّل بالتكرار وبتثبيت الجهاز وبآلة أدقّ، والمنهجي لا يكشف إلّا بمقارنة بشيء مستقلّ، كميزان ثانٍ أو كتلة مُصدّقة أو منهج آخر كله. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة المفسّرة وعن معنى كلمة في سياقها. والفخّ المتوقّع هنا أن يُحسب التكرار كافياً لكلّ خطأ، مع أنّ النصّ ينفي ذلك. ويقترن المقطع بالمقطع الحادي والعشرين في أسئلة النصّين المتقابلين.

Why a Truck Takes Longer to Stop

A loaded truck and a small car moving at the same speed on the same road will not stop in the same distance. The reason is a chain of three steps rather than a single fact, and Isaac Newton supplied all three of them. The first step is that stopping requires a force, and the only force available is friction, which is the force between the tires and the road surface. That force is roughly proportional to the weight pressing down, so a heavy vehicle does get more braking force than a light one.

The second step undoes the first. A heavier vehicle also carries more kinetic energy, which is the energy an object has because it is moving, and that energy must all be removed as heat in the brakes and tires. Mass appears on both sides of the problem and largely cancels. What does not cancel is speed, because kinetic energy rises with the square of the speed. Double the speed and the stopping distance roughly quadruples, which is why the braking distance at seventy miles an hour is about four times that at thirty-five.

The third step is the one drivers forget. Before any braking happens the vehicle travels for the time it takes to notice and react, usually near three quarters of a second. In that time it covers a distance proportional to the speed, not to its square. The two parts add. A truck loses further because of load transfer, brake heating on long descents, and tires that cannot accelerate sideways while already working hard to slow down. Stopping distance tables in driving manuals are built from exactly this arithmetic and then rounded. They assume a dry road and a fit driver, and both assumptions fail regularly.

WHAT THIS PASSAGE IS FOR

- Friction is the only force available to stop a vehicle.
 - Mass appears on both sides of the problem and largely cancels.
 - Stopping distance rises with the square of the speed.
-

Questions 72.1 to 72.10

on passage 72, Why a Truck Takes Longer to Stop

72.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Driving manuals round their stopping distance tables
- B) A heavy vehicle stops in a shorter distance than a light one
- C) Mass largely cancels, and speed is what decides the distance
- D) Reaction time is usually near three quarters of a second

72.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how does reaction distance depend on speed?

- A) It is proportional to the speed itself
- B) It rises with the square of the speed
- C) It is fixed at three quarters of a second
- D) It falls as the speed rises

72.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the heavier vehicle gains and loses at the same time?

- A) “the only force available is friction, which is the force between the tires and the road surface”
- B) “Mass appears on both sides of the problem and largely cancels”
- C) “Double the speed and the stopping distance roughly quadruples”
- D) “They assume a dry road and a fit driver, and both assumptions fail regularly”

72.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Before any braking happens the vehicle travels for the time it takes to notice and react, usually near three quarters of a second. In that time it covers a distance proportional to the speed, not to its square. A tired driver therefore ____

Which choice most logically completes the text?

- A) quadruples the braking part of the distance
- B) removes the reaction part altogether
- C) changes the friction between tire and road
- D) adds to the part that rises with speed alone

72.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “accelerate” most nearly mean?

- A) hurry a process along
- B) gain in speed
- C) change direction of motion
- D) press harder on the road

72.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the second step undoes the first?

- A) It introduces the reaction time for the first time
- B) It warns a reader that the chain is not cumulative
- C) It concedes that friction plays no part at all
- D) It reports the figure for stopping at seventy miles

72.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 22 of this book. It reports that a hammer and a feather dropped on the Moon in 1971 landed together, and that the difference on Earth comes from air rather than from weight.

Text 1 explains why mass cancels in stopping. Based on Text 2, what would be added to that explanation?

- A) A case in which mass makes no difference at all
- B) A heavy vehicle gets more braking force than a light one
- C) Kinetic energy rises with the square of the speed
- D) Air resistance is what makes a truck stop slowly

72.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

That force is roughly proportional to the weight pressing down, so a heavy vehicle does get more braking force than a light one. ____ the second step undoes the first.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) For instance,
- C) In other words,
- D) All the same,

72.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Mass appears on both sides of the problem and largely cancels ____ and what does not cancel is speed.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cancels and
- B) cancels, and
- C) cancels; and
- D) cancels and,

72.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Kinetic energy rises with the square of the speed.
- That energy must all be removed as heat in the brakes and tires.
- Double the speed and the stopping distance roughly quadruples.
- Reaction distance is proportional to the speed rather than to its square.

The student wants to explain why doubling the speed does more than double the distance. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Kinetic energy rises with the square of the speed of the vehicle
- B) Reaction distance is proportional to the speed rather than its square
- C) That energy must all be removed as heat in the brakes and tires
- D) The energy to be removed goes up with the square of the speed, so twice the speed takes roughly four times the braking distance

ملخص المقطع 72 بالعربية

خلاصة: شاحنة محملة وسيارة صغيرة تسيران بالسرعة نفسها على الطريق نفسه لا تقفان في مسافة واحدة، والسبب سلسلة ثلاث خطوات لا واقعة واحدة. فالخطوة الأولى أن الوقوف يحتاج قوة، والقوة المتاحة وحيدة هي الاحتكاك، وهي تتناسب تقريباً مع الوزن الضاغط. المعنى: المعنى أن الخطوة الثانية تنقص الأولى: فالمركبة الأثقل تحمل طاقة حركة أكبر، ولا بد أن تُزال كلُّها حرارةً في المكابح والإطارات، فتظهر الكتلة في طرفي المسألة وتنقص في معظمها. والذي لا يتقاص هو السرعة، لأن طاقة الحركة ترتفع بمربعها. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: والخطوة الثالثة هي التي ينسأها السائقون، فالمركبة تسير قبل الكبح مدة الانتباه والاستجابة، نحو ثلاثة أرباع الثانية، وتقطع في تلك المدة مسافة تتناسب مع السرعة لا مع مربعها، والجزءان يُجمعان. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تنقص ما قبلها وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُقال إنَّ الأثقل يقف في مسافة أقصر، مع أنَّ النصَّ يبيِّن التقاَص. ويقترن المقطع بالمقطع الثاني والعشرين في أسئلة النصِّ المتقابلين.

Where the Energy Goes

Energy accounting rests on one rule, the conservation of energy, which states that energy is never created or destroyed but only moved or converted. That rule makes every machine auditable. Whatever goes in must come out somewhere, and the only question is how much of it comes out in the form that was wanted. The fraction that does is the efficiency, meaning the share of the energy put in that emerges in the useful form.

Multiply the steps and the losses compound. In a coal power station the chemical energy of the fuel becomes heat. The heat becomes steam, the steam turns a turbine, and the turbine drives a generator. Each stage has its own efficiency, and the biggest loss is unavoidable. A heat engine working between a boiler and a cooling tower cannot convert more than a limited share of its heat into motion, and that limit depends only on the two temperatures. Modern coal plants yield about forty percent of the fuel energy as electricity and discard the rest as warm water and gas.

Transmission loses a few percent more, and then the appliance has its own efficiency. The whole chain therefore multiplies rather than adds. An electric heater is close to perfect at its own step, since all the electricity becomes heat. But if that electricity came from a coal station, it represents more than twice the fuel that burning the coal in the room would have needed. Comparing two technologies by their last step alone is the standard way of getting this wrong. The theoretical limit on a heat engine was worked out by Sadi Carnot in 1824, before anyone had a clear idea of what heat was. His result still sets the ceiling for every power station built since.

WHAT THIS PASSAGE IS FOR

- Conservation of energy makes every machine auditable.
 - A heat engine is limited by its two temperatures alone.
 - Efficiencies multiply along a chain rather than adding.
-

Questions 73.1 to 73.10

on passage 73, Where the Energy Goes

73.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Carnot worked out the limit in 1824
- B) An electric heater wastes most of the electricity it uses
- C) Transmission loses about forty percent of the power
- D) Efficiencies multiply along a chain, so the last step misleads

73.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the ceiling on a heat engine depend on?

- A) On the chemical energy of the fuel burned
- B) On its hot and its cold temperatures
- C) On the efficiency of the generator it drives
- D) On the share lost in transmission

73.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a judgment about one step can mislead about the whole?

- A) “Whatever goes in must come out somewhere, and the only question is how much of it comes out in the form that was wanted”
- B) “Modern coal plants yield about forty percent of the fuel energy as electricity”
- C) “Comparing two technologies by their last step alone is the standard way of getting this wrong”
- D) “The theoretical limit on a heat engine was worked out by Sadi Carnot in 1824, before anyone had a clear idea of what heat was”

73.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

But if that electricity came from a coal station, it represents more than twice the fuel that burning the coal in the room would have needed. An electric heater is therefore ____

Which choice most logically completes the text?

- A) efficient at its step and wasteful overall
- B) the most efficient way to warm a room
- C) inefficient at its own step as well
- D) limited by the temperatures of the boiler

73.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “yield” most nearly mean?

- A) give way to pressure
- B) bend without breaking
- C) surrender a claim
- D) deliver as output

73.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the heater and the coal?

- A) It introduces the conservation of energy for the first time
- B) It concedes that the chain of steps cannot be audited
- C) It gives a case where one step flatters the whole
- D) It reports the year Carnot published his result

73.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 23 of this book. It follows energy from a Scottish lake down a pipe to a turbine, a generator and a kitchen bulb, and says the chain is only as efficient as its worst step.

Text 1 explains how efficiencies multiply. Based on Text 2, what would be added to that explanation?

- A) Each stage of the chain has its own efficiency
- B) A chain whose worst step is at the user, not the plant
- C) The whole chain multiplies rather than adds
- D) A water turbine is bound by the same temperature ceiling

73.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Each stage has its own efficiency, and the biggest loss is unavoidable. ___ a heat engine working between a boiler and a cooling tower cannot convert more than a limited share of its heat into motion.

Which choice completes the text with the most logical transition?

- A) In particular,
- B) By contrast,
- C) Even so,
- D) In conclusion,

73.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That rule makes every machine auditable ___ whatever goes in must come out somewhere.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) auditable, whatever
- B) auditable whatever
- C) auditable. Whatever
- D) auditable, and, whatever

73.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Energy is never created or destroyed but only moved or converted.
- Each stage of the chain has its own efficiency, and the losses compound.
- An electric heater turns all the electricity it uses into heat.
- Electricity from a coal station represents more than twice the fuel burned in the room.

The student wants to explain why a technology cannot be judged by its last step. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The heater is perfect at its own step, but the station behind it burned twice the fuel, so the chain settles the question
- Each stage of the chain has its own efficiency and the losses compound
- An electric heater turns all the electricity it uses into heat
- Energy is never created or destroyed but only moved or converted

ملخص المقطع 73 بالعربية

خلاصة: حساب الطاقة يقوم على قاعدة واحدة، وهي حفظ الطاقة: أن الطاقة لا تُخلق ولا تُفنى وإنما تُنقل أو تُحوّل. وتلك القاعدة تجعل كل آلة قابلة للمراجعة، فما دخل لا بد أن يخرج في مكان، والسؤال الوحيد كم يخرج منه في الصورة المطلوبة.

المعنى: المعنى أن الحصة الخارجة في الصورة المطلوبة هي المردود، وأن الخسائر تتراكم بتعدد الخطوات. ففي محطة الفحم تصير طاقة الوقود الكيميائية حرارة، والحرارة بخارًا، والبخار يدير عنفة، والعنفة تدير مولّدًا، ولكل مرحلة مردودها، وأكبر الخسائر لا مهرب منه.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: الآلة الحرارية بين مرجل وبرج تبريد لا تحوّل من حرارتها إلى حركة إلا حصة محدودة، وذلك الحدّ متعلّق بالدرجتين وهدهما، فتعطي محطات الفحم الحديثة نحو أربعين في المئة كهرباء.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة المثال وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُقاس تقنيتان بخطوتيهما الأخيرة وحدهما، مع أن النصّ يسمّي ذلك أشيع طرق الخطأ. ويقترن المقطع بالمقطع الثالث والعشرين في أسئلة النصّ المتقابلين.

Three Quantities, One Relation

The behavior of a gas is governed by a single relation among three quantities. Pressure multiplied by volume is proportional to the absolute temperature, which is temperature counted from the coldest possible point rather than from the freezing point of water. Fix any two of the three and the third follows. That one sentence predicts a surprising amount, provided the gas is not close to becoming a liquid.

Work through the cases. Hold the temperature steady and compress the gas into half the volume, and the pressure doubles: that is a bicycle pump with the valve shut. Hold the volume steady and warm the gas, and the pressure rises: that is why a sealed container in a fire bursts, and why a tire gauge reads higher after a long drive. Hold the pressure steady and warm the gas, and it expands: that is a hot air balloon, where warming the air inside by about eighty degrees makes it light enough to lift a basket.

The fourth case is the useful one for weather. Air pushed up a mountainside arrives at a height where the surrounding pressure is lower, expands, does work on the air around it, and cools without losing any heat to anything. The rate is about ten degrees for every thousand meters of dry ascent. That is why mountain tops are cold, why cloud forms on the windward slope, and why the air coming down the far side arrives warm and dry. The relation was assembled from three separate laws found by Boyle, Charles and Gay-Lussac over about a century and a half. It holds well for air at ordinary pressures and fails badly for steam near its boiling point. Weather forecasters apply the same relation several million times a day inside their models.

WHAT THIS PASSAGE IS FOR

- Pressure times volume is proportional to absolute temperature.
 - A sealed container in a fire bursts because volume is fixed.
 - Rising air expands and cools without losing heat to anything.
-

Questions 74.1 to 74.10

on passage 74, Three Quantities, One Relation

74.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) One relation among three quantities predicts a great deal
- B) The relation holds well for steam near its boiling point
- C) Warming the air in a balloon by eighty degrees lifts a basket
- D) Forecasters apply the relation several million times a day

74.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, at what rate does dry rising air cool?

- A) About eighty degrees in a balloon
- B) About one degree per thousand meters
- C) About ten degrees per thousand meters
- D) It warms rather than cools as it rises

74.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the relation has a boundary beyond which it fails?

- A) “Pressure multiplied by volume is proportional to the absolute temperature”
- B) “Hold the temperature steady and compress the gas into half the volume, and the pressure doubles”
- C) “The relation was assembled from three separate laws found by Boyle, Charles and Gay-Lussac over about a century and a half”
- D) “It holds well for air at ordinary pressures and fails badly for steam near its boiling point”

74.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Air pushed up a mountainside arrives at a height where the surrounding pressure is lower, expands, does work on the air around it, and cools without losing any heat to anything. The cooling is therefore ____

Which choice most logically completes the text?

- A) caused by heat passing to the surrounding air
- B) the price of the work the air has done
- C) the result of the mountain being cold
- D) about one degree per thousand meters

74.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “compress” most nearly mean?

- A) squeeze into less room
- B) shorten an account
- C) press down upon
- D) cool by expansion

74.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three cases before the weather case?

- A) They introduce the absolute temperature for the first time
- B) They concede that the relation predicts very little
- C) They report the rate at which dry air cools
- D) They hold each quantity still in turn to show the rest

74.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 24 of this book. It reports that the barrel of a bicycle pump grows hot within thirty strokes, that the work of the piston goes into the motion of the molecules, and that a refrigerator uses the same relation in reverse.

Text 1 states one relation among three quantities. Based on Text 2, what would be added to that statement?

- A) Fixing any two of the three quantities settles the third
- B) Compressing a gas at fixed temperature doubles the pressure
- C) What the squeezing does to the molecules themselves
- D) A refrigerator warms the gas by letting it expand

74.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Hold the pressure steady and warm the gas, and it expands: that is a hot air balloon. ____ the fourth case is the useful one for weather.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Finally,
- C) In other words,
- D) For instance,

74.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Hold the volume steady and warm the gas ____ and the pressure rises.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) gas; and
- B) gas and
- C) gas: and
- D) gas, and

74.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Pressure multiplied by volume is proportional to the absolute temperature.
- Air pushed up a mountainside arrives where the surrounding pressure is lower.
- It expands, does work on the air around it, and cools without losing heat.
- The rate is about ten degrees for every thousand meters of dry ascent.

The student wants to explain why a mountain top is cold. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Pressure multiplied by volume is proportional to the absolute temperature
- B) Air rising up a slope expands into lower pressure and cools about ten degrees for every thousand meters
- C) Air pushed up a mountainside arrives where the pressure is lower
- D) The rate is about ten degrees for every thousand meters of ascent

ملخص المقطع 74 بالعربية

خلاصة: سلوك الغاز تحكمه علاقة واحدة بين ثلاث كميات: الضغط مضروباً في الحجم يتناسب مع الحرارة المطلقة، وهي الحرارة محسوبة من أبرد نقطة ممكنة لا من نقطة تجمد الماء. فتثبت أيتين من الثلاث يتبع الثالث، وتلك الجملة الواحدة تتنبأ بقدر مُدهش.

المعنى: المعنى أن الحالات تُستعرض واحدة واحدة: تثبت الحرارة واضغط الغاز في نصف الحجم فيتضاعف الضغط، وذلك منفاخ دراجة بصمامه مغلق؛ وثبتت الحجم وسخن الغاز فيرتفع الضغط، ولهذا ينفجر وعاء محكم في حريق؛ وثبتت الضغط وسخن الغاز فيتوسع، وذلك منطاد الهواء الحار.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: والحالة الرابعة هي النافعة للجو، فالهواء المدفوع على سفح جبل يبلغ علوًا ضغطاً ما حوله فيه أقل، فيتوسع ويعمل عملاً على ما حوله ويبرد دون أن يفقد حرارة إلى شيء، بنحو عشر درجات لكل ألف متر.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة سلسلة الحالات وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب العلاقة صالحة في كل حال، مع أن النص يقول إنها تفشل فشلاً شديداً في البخار قرب غليانه. ويقترن المقطع بالمقطع الرابع والعشرين في أسئلة النصين المتقابلين.

Why the Thin Wire Gets Hot

Four quantities describe any circuit, and two relations connect them. Voltage is the push. Current is the rate of flow. Resistance is the opposition a conductor offers to that flow, and it depends on the material, the length and the thickness of the wire. The first relation says that current equals voltage divided by resistance. The second says that power, which is the rate at which energy is delivered or lost, equals current multiplied by voltage.

Combining them gives the fact that matters in a wall. The power lost as heat in a wire is the current squared multiplied by the resistance of that wire. Current squared is the harsh term. Double the current and the heating in the cable goes up fourfold, which is why an overloaded circuit does not warm gently but runs away. A thin wire makes this worse twice over, because halving the cross-section roughly doubles the resistance.

The same arithmetic explains why electricity is sent across country at high voltage. To deliver a given amount of power, a higher voltage needs a smaller current, and a smaller current loses far less in the line. A transmission line at four hundred thousand volts carries the output of a power station with losses of a few percent, where the same power at household voltage would be gone within a mile. Thick copper conducts well, but no practical thickness of copper can beat the arithmetic of raising the voltage and lowering the current. Transformers make the voltage changes possible, and they work only with alternating current. That is the technical reason the alternating system won the argument in the 1890s, against direct current and against Edison. Household wiring is therefore sized by the current it must carry, and the table of sizes is set by law.

WHAT THIS PASSAGE IS FOR

- Current equals voltage divided by resistance.
 - Heating in a wire rises with the square of the current.
 - High voltage means low current and small losses.
-

Questions 75.1 to 75.10

on passage 75, Why the Thin Wire Gets Hot

75.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Transformers work only with alternating current
- B) A squared term in the current decides how a wire heats
- C) Thick copper can beat the arithmetic of high voltage
- D) Household wiring is sized by law in a table

75.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does halving the cross-section of a wire do?

- A) It halves the resistance of the wire
- B) It quadruples the current in the wire
- C) It lowers the voltage across the wire
- D) It roughly doubles the resistance

75.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the gain from high voltage cannot be had any other way?

- A) “no practical thickness of copper can beat the arithmetic of raising the voltage and lowering the current”
- B) “Double the current and the heating in the cable goes up fourfold”
- C) “Transformers make the voltage changes possible, and they work only with alternating current”
- D) “Household wiring is therefore sized by the current it must carry”

75.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

To deliver a given amount of power, a higher voltage needs a smaller current, and a smaller current loses far less in the line. A line carrying power at household voltage would therefore ____

Which choice most logically completes the text?

- A) lose about the same as a high voltage line
- B) need a transformer at each end of the run
- C) lose its power within a short distance
- D) carry a smaller current than before

75.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “conducts” most nearly mean?

- A) direct an orchestra
- B) carry a current well
- C) behave in a manner
- D) resist a flow

75.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the squared term harsh?

- A) It marks the step that the rest of the text uses
- B) It introduces the four quantities for the first time
- C) It concedes that the heating is gentle after all
- D) It reports the voltage on a transmission line

75.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 25 of this book. It reports a kitchen where three appliances trip a breaker, compares voltage to pressure and current to flow, and says the breaker is sized to protect the buried cable rather than the kettle.

Text 1 derives the heating in a conductor. Based on Text 2, what would be added to that derivation?

- A) A thin wire has more resistance than a thick one
- B) Power lost as heat is the current squared times the resistance
- C) A breaker is sized to protect the kettle it feeds
- D) The device that acts before the arithmetic does harm

75.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Current squared is the harsh term. ___ double the current and the heating in the cable goes up fourfold.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) That is to say,
- D) In conclusion,

75.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Voltage is the push ___ current is the rate of flow.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) push. Current
- B) push, current
- C) push current
- D) push, and, current

75.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The power lost as heat in a wire is the current squared times the resistance.
- Double the current and the heating in the cable goes up fourfold.
- Halving the cross-section roughly doubles the resistance.
- A thin wire makes this worse twice over.

The student wants to explain why an overloaded circuit does not warm gently. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The power lost as heat is the current squared times the resistance
- B) Halving the cross-section of a wire roughly doubles its resistance
- C) Because the heating goes with the square of the current, a doubled load heats the cable four times as hard
- D) A thin wire makes the heating worse twice over in a wall

ملخص المقطع 75 بالعربية

خلاصة: أربع كميات تصف أيّ دائرة، وعلاقتهان تربطانهما: الجهد هو الدفع، والتيار هو معدل الجريان، والمقاومة هي ما يعارض به الموصل ذلك الجريان، وهي متعلقة بالمادة وبالطول وبالسلك. والأولى أنّ التيار يساوي الجهد مقسوماً على المقاومة، والثانية أنّ القدرة تساوي التيار مضروباً في الجهد. المعنى: المعنى أنّ جمع العلاقتين يعطي ما يهمّ في الحائط: القدرة المفقودة حرارةً في سلك هي مربع التيار مضروباً في مقاومة ذلك السلك. ومربع التيار هو الحدّ القاشي: ضاعف التيار فيصعد التسخين أربعة أضعاف، ولهذا لا تدفأ الدارة المحملة فوق طاقتها دفئاً لطيفاً بل تجمح. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: والحساب نفسه يفسر إرسال الكهرباء على جهد عال، فإيصال قدرة معلومة بجهد أعلى يحتاج تياراً أصغر، والتيار الأصغر يفقد في الخط أقل بكثير. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تُبرز حدّاً وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقال إنّ النحاس السميك يكفي، مع أنّ النصّ ينفي ذلك. ويقتزن المقطع بالمقطع الخامس والعشرين في أسئلة النصّين المتقابلين.

One Rule, Three Effects

Reflection, refraction and diffraction look like three subjects and are one. Each follows from the behavior of a wavefront, which is the moving line along which a wave has the same phase. One simple rule does the work: every point on such a line acts as a source of the next ripple. Work out where the ripples overlap and the three effects fall out of the same calculation.

Where a wavefront meets a flat barrier the ripples add up along a path that leaves at the same angle it arrived, which is reflection. Where the front crosses into a material in which the wave moves more slowly, the side that enters first falls behind, so the whole front swings. That is refraction. Where the front meets an edge or a narrow opening, the ripples from the surviving points spread into the space behind, which is diffraction, meaning the spreading of a wave after it passes an edge or a gap.

The amount of spreading depends on the size of the gap compared with the wavelength, and that comparison explains a familiar asymmetry. Sound has wavelengths of about a meter, so it bends round a doorway and a voice can be heard from the next room. Visible light has wavelengths under a thousandth of a millimeter, so it casts sharp shadows instead. A telescope mirror cannot resolve detail finer than diffraction allows, and that limit, not the quality of the glass, is what eventually distorts the image of a distant star into a small disc. Christiaan Huygens published the rule about every point acting as a source in 1690. It was ignored for a century in favor of a particle account, and then revived when interference was demonstrated. The same limit applies to a camera lens and to the human eye.

WHAT THIS PASSAGE IS FOR

- All three effects follow from one rule about wavefronts.
 - Diffraction depends on the gap compared with the wavelength.
 - Diffraction, not glass quality, sets the limit on a telescope.
-

Questions 76.1 to 76.10

on passage 76, One Rule, Three Effects

76.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Huygens published the rule in 1690
- B) Reflection, refraction and diffraction are three separate subjects
- C) One rule about wavefronts yields all three effects
- D) Sound has wavelengths of about a meter

76.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the amount of spreading depend on?

- A) The size of the gap compared with the wavelength
- B) The angle at which the front arrives
- C) The quality of the glass in the mirror
- D) The speed of the wave in the second material

76.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the limit on a telescope is not a matter of workmanship?

- A) “every point on such a line acts as a source of the next ripple”
- B) “that limit, not the quality of the glass, is what eventually distorts the image of a distant star into a small disc”
- C) “Sound has wavelengths of about a meter, so it bends round a doorway”
- D) “It was ignored for a century in favor of a particle account”

76.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Sound has wavelengths of about a meter, so it bends round a doorway and a voice can be heard from the next room. Visible light has wavelengths under a thousandth of a millimeter, so it casts sharp shadows instead. The difference between them is therefore —

Which choice most logically completes the text?

- A) a difference in the speed of the two waves
- B) proof that light is not a wave at all
- C) caused by the width of the doorway alone
- D) a difference of scale, not of rule

76.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “distorts” most nearly mean?

- A) misreports a fact
- B) enlarges greatly
- C) alters the shape of
- D) blocks from view

76.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three sentences that each begin with the word where?

- A) They introduce the rule about wavefronts for the first time
- B) They derive each of the three effects from the one rule
- C) They concede that the three effects are unrelated
- D) They report the year Huygens published his principle

76.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 26 of this book. It reports that a straw in a glass of water appears to break at the surface, explains that light crosses the surface more slowly and the beam swings, and says the eye cannot detect the change of direction.

Text 1 derives three effects from one rule. Based on Text 2, what would be added to that derivation?

- A) What the second of the three effects looks like to an eye
- B) A front crossing into a slower material swings as a whole
- C) Diffraction is the spreading of a wave past an edge
- D) The eye corrects for the bending of the light

76.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The amount of spreading depends on the size of the gap compared with the wavelength, and that comparison explains a familiar asymmetry. ___ sound has wavelengths of about a meter, so it bends round a doorway.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In conclusion,
- D) For example,

76.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Reflection, refraction and diffraction look like three subjects ___ and they are one.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) subjects and
- B) subjects, and
- C) subjects; and
- D) subjects and,

76.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Every point on a wavefront acts as a source of the next ripple.
- The amount of spreading depends on the size of the gap compared with the wavelength.
- Sound has wavelengths of about a meter.
- Visible light has wavelengths under a thousandth of a millimeter.

The student wants to explain why a voice carries round a corner and a shadow does not. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Every point on a wavefront acts as a source of the next ripple
- B) Sound has wavelengths of about a meter in ordinary air
- C) Visible light has wavelengths under a thousandth of a millimeter
- D) A wave spreads past a gap of its own size, so a meter of sound turns a doorway and a wavelength of light cannot

ملخص المقطع 76 بالعربية

خلاصة: الانعكاس والانكسار والانعراج تبدو ثلاثة موضوعات وهي موضوع واحد، فكلّ منها يتبع سلوك جبهة الموجة، وهي الخط المتحرك الذي للموجة عليه طور واحد. وقاعدة واحدة بسيطة تفعل كلّ شيء: كلّ نقطة على ذلك الخط تعمل مصدرًا للتموج التالي.

المعنى: المعنى أنّ الجبهة إذا لاقت حاجزًا مستويًا تجمعت التموّجات على مسار يخرج بالزاوية التي دخل بها، وذلك الانعكاس؛ وإذا عبرت إلى مادة تبطئ الموجة تأخر الجانب الداخل أولًا فأنحرفت الجبهة كلّها، وذلك الانكسار؛ وإذا لاقت حدًا أو فتحة ضيقة انتشرت التموّجات في الفراغ خلفها، وذلك الانعراج.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: مقدار الانتشار متعلّق بحجم الفتحة مقيسًا بطول الموجة، وهذه المقاييس تفسّر تفاوتًا مألوفًا: فالصوت أطواله نحو متر فيلتفّ حول باب، والضوء المرئي أطواله أقلّ من ألف من المليمتر فيرسم ظلالًا حادة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة سلسلة الجمل وعن معنى كلمة في سياقها. والفجّ المتوقّع هنا أن تُحسب الآثار الثلاثة موضوعات مستقلة، مع أنّ النصّ يردّها إلى قاعدة واحدة. ويقترن المقطع بالمقطع السادس والعشرين في أسئلة النصّين المتقابلين.

Barriers, Rates and Surfaces

A reaction that releases energy overall does not necessarily happen. Paper in air at room temperature sits next to a reaction that would release a great deal of heat, and it sits there for centuries. Svante Arrhenius put the matter on a quantitative footing in 1889. The reason is the activation energy, meaning the push a reaction needs before it will start even when the overall balance is favorable. Bonds must be broken before new ones can form, and breaking them costs energy that has to be supplied first.

That single idea explains the whole set of levers available for changing a rate. Heat supplies the push, so raising the temperature increases the proportion of molecules carrying enough energy to get over the barrier, which is why a rough rule of thumb has reaction rates roughly doubling for every ten degrees. Concentration raises the number of collisions. Surface area raises the number of places where collisions can happen, which is the whole difference between steel wool and a steel bar. A catalyst, which is a substance that lowers the barrier without being consumed, provides an easier route over it.

Dissolving a solid is a useful case to think through, because it is governed by the same accounting. A sugar cube and the same sugar ground to powder dissolve at very different rates and reach the same end point. Stirring removes the saturated layer at the surface and lets fresh water reach the solid. Hot water supplies more energy per collision. None of these change how much sugar will eventually dissolve, which is set by temperature alone. Rate and extent are separate questions, and confusing them is the usual error. Catalysts are the reason modern chemical industry exists at all, since most useful reactions are far too slow unaided.

WHAT THIS PASSAGE IS FOR

- A favorable reaction can still be slow because of a barrier.
 - Heat, concentration, surface and catalysts all act on the same barrier.
 - Rate and extent are separate questions.
-

Questions 77.1 to 77.10

on passage 77, Barriers, Rates and Surfaces

77.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Arrhenius put the matter on a quantitative footing in 1889
- B) A catalyst is consumed in the reaction it speeds up
- C) Stirring changes how much sugar will eventually dissolve
- D) One barrier explains every lever available for changing a rate

77.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what sets how much sugar will eventually dissolve?

- A) The surface area of the solid
- B) The temperature of the water alone
- C) The amount of stirring applied
- D) The size of the activation barrier

77.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a favorable balance does not make a reaction happen?

- A) “Heat supplies the push, so raising the temperature increases the proportion of molecules carrying enough energy”
- B) “Stirring removes the saturated layer at the surface and lets fresh water reach the solid”
- C) “Paper in air at room temperature sits next to a reaction that would release a great deal of heat, and it sits there for centuries”
- D) “Catalysts are the reason modern chemical industry exists at all”

77.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Surface area raises the number of places where collisions can happen, which is the whole difference between steel wool and a steel bar. Grinding a solid finer therefore ____

Which choice most logically completes the text?

- A) raises the rate without lowering the barrier
- B) lowers the barrier as a catalyst does
- C) raises how much of it will dissolve
- D) doubles the rate for every ten degrees

77.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “dissolve” most nearly mean?

- A) break up a meeting
- B) melt under heat
- C) fade from sight
- D) pass into a liquid

77.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sugar example near the end?

- A) It introduces the activation energy for the first time
- B) It concedes that the levers do not work on a solid
- C) It separates the rate of a change from its extent
- D) It reports the year Arrhenius published his account

77.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 27 of this book. It reports that a match lights a pad of fine steel wool and not a steel bar, says what differs is surface, and extends the point to flour mills and grain silos.

Text 1 lists the levers that change a rate. Based on Text 2, what would be added to that list?

- A) Surface area raises the number of places collisions can happen
- B) How large one of those levers can be in practice
- C) A catalyst lowers the barrier without being consumed
- D) A steel bar burns more readily than fine steel wool

77.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

That single idea explains the whole set of levers available for changing a rate. ___ heat supplies the push, so raising the temperature increases the proportion of molecules carrying enough energy to get over the barrier.

Which choice completes the text with the most logical transition?

- A) To begin with,
- B) By contrast,
- C) Even so,
- D) In conclusion,

77.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A reaction that releases energy overall does not necessarily happen ___ paper in air at room temperature sits there for centuries.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) happen, paper
- B) happen paper
- C) happen. Paper
- D) happen, and, paper

77.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A sugar cube and the same sugar as powder dissolve at very different rates.
- They reach the same end point.
- Stirring and hot water both speed the dissolving.
- How much sugar will dissolve is set by temperature alone.

The student wants to explain why rate and extent must be kept apart. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Powder dissolves faster than a cube and no more of it dissolves, so speed and amount answer different questions
- B) A sugar cube and the same sugar as powder dissolve at different rates
- C) Stirring and hot water both speed the dissolving of the sugar
- D) How much sugar will dissolve is set by temperature alone

ملخص المقطع 77 بالعربية

خلاصة: التفاعل الذي يُطلق طاقة في جملته لا يقع بالضرورة: فالورق في الهواء في حرارة الغرفة مجاور لتفاعل يُطلق حرارة كثيرة، ويبقى هناك قروناً. والسبب طاقة التنشيط، أي الدفعة التي يحتاجها التفاعل ليعتد وأن كان ميزانه العام مواتياً، لأن الروابط لا بد أن تُكسر قبل أن تُعقد غيرها. المعنى: المعنى أن تلك الفكرة الواحدة تفسر كل ما في اليد من عتلات لتغيير المعدل: فالحرارة تعطي الدفعة، فرفعها يزيد نسبة الجزيئات الحاملة طاقة تكفي لتجاوز الحاجز، والتركيز يزيد عدد التصادمات، ومساحة السطح تزيد مواضع التصادم، والعامل الحافز يفتح طريقاً أسهل فوقه بلا استهلاك الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: الذوبان حالة نافعة للتفكير، فمكعب السكر والسكر نفسه مسحوقاً يذوبان بمعدلين مختلفين جداً ويبلغان الغاية نفسها، إذ لا يغير شيء من ذلك مقدار ما سيذوب، وهو مقرر بالحرارة وحدها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة المثال الختامي وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُخلط المعدل بالمقدار، والنص يسمي ذلك الخطأ المعتاد. ويقترن المقطع بالمقطع السابع والعشرين في أسئلة النصين المتقابلين.

Four Numbers That Decide a Design

An engineer choosing a material needs four numbers, and the Tay Bridge failed because two of them were not considered. The first is stress, which is the force carried by each unit of area, and it is the reason a thin rod and a thick one made of the same steel behave differently under the same load. The second is the yield point, meaning the load beyond which the material keeps the shape it is bent into rather than springing back.

The third is the ultimate strength, the stress at which the material finally parts. The gap between the yield point and that final figure is where the safety of a structure actually lives. A material with a wide gap bends, sags visibly, and gives warning before it breaks. A material with almost no gap, such as cast iron, holds its shape until the moment it shatters, and offers no warning at all. The fourth number is toughness, which measures how much energy a material absorbs before fracture, and it falls sharply in some steels as the temperature drops.

Those four explain most failures. A structure that bends and stays bent has yielded and can often be repaired. A structure of brittle material under a sudden sideways load can collapse in seconds from a crack that nobody could have seen. Cold makes some steels brittle, which is why several wartime cargo ships broke in half in the North Atlantic while sister ships in warm water did not. The choice of material is a choice about what kind of failure is acceptable. Modern practice therefore prefers materials that give warning, and designs load paths with more than one route. A bridge with a single critical member is a bridge with no margin, whatever the arithmetic says.

WHAT THIS PASSAGE IS FOR

- Stress is force divided by area, not force alone.
 - The gap between yield and fracture is where safety lives.
 - Brittle material gives no warning before it shatters.
-

Questions 78.1 to 78.10

on passage 78, Four Numbers That Decide a Design

78.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Four numbers decide what kind of failure a design allows
- B) Cast iron gives ample warning before it breaks
- C) Toughness measures the energy absorbed before fracture
- D) Wartime cargo ships broke in half in warm water

78.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, where does the safety of a structure actually live?

- A) In the stress carried by each unit of area
- B) In the toughness of the steel at low temperature
- C) In the gap between yielding and final fracture
- D) In the single critical member of the design

78.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a material can fail without giving any sign beforehand?

- A) “it is the reason a thin rod and a thick one made of the same steel behave differently under the same load”
- B) “A material with a wide gap bends, sags visibly, and gives warning before it breaks”
- C) “Modern practice therefore prefers materials that give warning, and designs load paths with more than one route”
- D) “A material with almost no gap, such as cast iron, holds its shape until the moment it shatters, and offers no warning at all”

78.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Cold makes some steels brittle, which is why several wartime cargo ships broke in half in the North Atlantic while sister ships in warm water did not. A design proved in warm water is therefore ____

Which choice most logically completes the text?

- A) proved for any water it will meet
- B) untested where the steel turns brittle
- C) bound to break in half within a year
- D) limited by the stress on each unit of area

78.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “collapse” most nearly mean?

- A) fall down suddenly
- B) fold up for storage
- C) lose value over time
- D) bend and stay bent

78.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the Tay Bridge?

- A) It introduces the four numbers by name
- B) It concedes that the four numbers are not useful
- C) It reports the cause of the cargo ship failures
- D) It ties the four numbers to a failure a reader knows

78.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 28 of this book. It reports that the first Tay Bridge fell in a gale in 1879, that the inquiry found a chain of causes including cast iron columns and holes filled with wax, and that the replacement was designed against a stated wind load.

Text 1 names four numbers a designer needs. Based on Text 2, what would be added to that naming?

- A) Cast iron holds its shape until the moment it shatters
- B) The gap between yielding and fracture carries the safety
- C) What the missing numbers cost on a particular night
- D) The second bridge used cast iron columns throughout

78.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A material with a wide gap bends, sags visibly, and gives warning before it breaks. ___ a material with almost no gap, such as cast iron, holds its shape until the moment it shatters.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) By contrast,
- C) As a result,
- D) In other words,

78.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A structure that bends and stays bent has yielded ___ and it can often be repaired.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) yielded; and
- B) yielded and
- C) yielded: and
- D) yielded, and

78.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A material with a wide gap bends, sags visibly, and gives warning before it breaks.
- Cast iron holds its shape until the moment it shatters.
- A structure that has yielded can often be repaired.
- Modern practice prefers materials that give warning.

The student wants to explain why modern practice prefers a material that bends. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Cast iron holds its shape until the moment that it shatters
- B) A material that sags gives warning and can often be repaired, where a brittle one goes without notice
- C) A structure that has yielded can often be repaired afterward
- D) Modern practice prefers materials that give warning in service

ملخص المقطع 78 بالعربية

خلاصة: المهندس الذي يختار مادة يحتاج أربعة أرقام، وقد سقط جسر تاي لأن اثنين منها لم يُنظر فيهما. الأول الإجهاد، وهو القوة التي يحملها كل وحدة مساحة، وهو سبب اختلاف سلوك قضيب رقيق وقضيب غليظ من الفولاذ نفسه تحت الحمل نفسه. المعنى: المعنى أن الثاني هو نقطة الخضوع، أي الحمل الذي يبقى بعده الشكل الذي انحنت إليه المادة بدل أن ترجع؛ والثالث هو المتانة النهائية، أي الإجهاد الذي تتفارق عنده المادة؛ والفرجة بين النقطتين هي موضع سلامة البناء فعلاً. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: المادة واسعة الفرجة تنحني وتتهذّل ظاهراً فتُنذر قبل أن تنكسر، والمادة التي لا فرجة لها تقريباً كحديد الزهر تُمسك شكلها إلى لحظة تشظّيها ولا تُنذر بشيء، والرابع هو الصلادة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة الافتتاحية وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقال إن حديد الزهر يُنذر قبل كسره، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الثامن والعشرين في أسئلة النصّين المتقابلين.

Half-Life, Dose and Distance

Radiation exposure is governed by three numbers, and the women at the Orange factory were unlucky in all three. The first is half-life, meaning the time in which half of a quantity of a radioactive element decays away. Radium has a half-life of about sixteen hundred years, so a quantity of it in a body will emit radiation at a nearly constant rate for the whole of a human life. Elements with short half-lives are intensely active and gone quickly, which is a different and often more manageable problem.

The second is the kind of radiation. Alpha particles are heavy and stopped by a sheet of paper or the outer layer of skin, so an alpha emitter outside the body is almost harmless. Inside the body, with no barrier at all between the source and living tissue, the same particles deposit all their energy within a fraction of a millimeter. Radium is an alpha emitter. Paint on a brush that is shaped with the lips crosses from the harmless case to the worst one.

The third is dose, meaning the energy absorbed per unit of body mass, and it falls off with distance and with shielding. A technician standing two meters from a source receives a quarter of the dose received at one meter, because the intensity falls with the square of the distance. Lead absorbs most of what reaches it. None of these three remedies is available for a source that the body has built into bone, which is why internal emitters are treated as a separate class of hazard with its own limits. The modern unit of dose is the sievert, and a typical annual exposure from natural sources is about two or three thousandths of one. Occupational limits are set at twenty thousandths a year, averaged over five years.

WHAT THIS PASSAGE IS FOR

- Radium has a half-life of about sixteen hundred years.
 - An alpha emitter is nearly harmless outside the body and dangerous inside it.
 - Dose falls with the square of the distance.
-

Questions 79.1 to 79.10

on passage 79, Half-Life, Dose and Distance

79.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The modern unit of dose is the sievert
- B) Three numbers govern exposure, and none of them helps inside bone
- C) An alpha emitter outside the body is the worst case
- D) Radium has a half-life of about sixteen hundred years

79.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what dose does a technician two meters away receive?

- A) Half of the dose received at one meter
- B) Twice the dose received at one meter
- C) The same dose as at one meter
- D) A quarter of the dose received at one meter

79.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the same particle can be harmless or the worst case?

- A) “an alpha emitter outside the body is almost harmless. Inside the body, with no barrier at all between the source and living tissue, the same particles deposit all their energy within a fraction of a millimeter”
- B) “Elements with short half-lives are intensely active and gone quickly, which is a different and often more manageable problem”
- C) “The third is dose, meaning the energy absorbed per unit of body mass, and it falls off with distance and with shielding”
- D) “which is why internal emitters are treated as a separate class of hazard with its own limits”

79.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Paint on a brush that is shaped with the lips crosses from the harmless case to the worst one. The lip-pointing was therefore ____

Which choice most logically completes the text?

- A) a matter of hygiene rather than of radiation
- B) safe because alpha particles are easily stopped
- C) the step that mattered most of all
- D) a way of reducing the dose received

79.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “emit” most nearly mean?

- A) let out a sound
- B) give off from itself
- C) take in from outside
- D) decay into another element

79.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about short half-lives?

- A) It sets the long case against a different problem
- B) It introduces the kind of radiation for the first time
- C) It concedes that half-life does not matter
- D) It reports the half-life of radium in years

79.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 29 of this book. It reports the dial painting works at Orange, the shaping of brushes with the lips, the death of Mollie Maggia in 1922 and the lawsuit of 1927 that established liability for a delayed disease.

Text 1 sets out three quantities that govern exposure. Based on Text 2, what would be added to that account?

- A) Radium is an alpha emitter with a long half-life
- B) Dose falls off with distance and with shielding
- C) Alpha particles pass easily through the outer skin
- D) What the three quantities together did to seventy women

79.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Alpha particles are heavy and stopped by a sheet of paper or the outer layer of skin, so an alpha emitter outside the body is almost harmless. ___ inside the body, with no barrier at all between the source and living tissue, the same particles deposit all their energy within a fraction of a millimeter.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) As a result,
- C) By contrast,
- D) In short,

79.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Radium is an alpha emitter ___ paint on a brush shaped with the lips crosses from the harmless case to the worst one.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) emitter. Paint
- B) emitter, paint
- C) emitter paint
- D) emitter, and, paint

79.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Radium has a half-life of about sixteen hundred years.
- Alpha particles are stopped by paper or the outer layer of skin.
- Dose falls off with distance and with shielding.
- No one of those three remedies reaches a source built into bone.

The student wants to explain why an internal source is treated as its own class. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Radium has a half-life of about sixteen hundred years in all
- B) Alpha particles are stopped by paper or the outer layer of skin
- C) Distance, shielding and a short life are all unavailable once the source sits inside the bone
- D) Dose falls off with distance and with shielding from lead

ملخص المقطع 79 بالعربية

خلاصة: التعرض للإشعاع تحكمه ثلاثة أرقام، وقد كان حظ نساء مصنع أوراني سيئاً في الثلاثة جميعاً. الأول عمر النصف، أي المدة التي يتحلل فيها نصف كمية من عنصر مشع، وعمر نصف الراديوم نحو ألف وستمئة سنة، فكمية منه في جسم تبعث إشعاعها بمعدل شبه ثابت طول عمر إنسان. المعنى: المعنى أن الثاني هو نوع الإشعاع: جسيمات ألفا ثقيلة توقفها ورقة أو طبقة الجلد الخارجية، فباعت ألفا خارج الجسم شبه غير مؤذٍ؛ وداخل الجسم، بلا حاجز بين المصدر والنسيج الحي، تودع الجسيمات نفسها طاقتها كلها في كسر من المليمتر، والراديوم باعث ألفا. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: والثالث هو الجرعة، أي الطاقة الممتصة لكل وحدة من كتلة الجسم، وهي تهبط بالمسافة وبالتدريج، فمن يقف على مترين ينال ربع ما يُنال على متر، لأنَّ الشدة تهبط بمرتع المسافة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة التحول بين حالتين وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب باعث ألفا خارج الجسم أشدَّ الحالات، مع أنَّ النص يقول عكس ذلك. ويقرن المقطع بالمقطع التاسع والعشرين في أسئلة النصين المتقابلين.

The Ladder of Distance

Nobody has ever measured the distance to a star directly, by any means at all. No tape reaches that far. Astronomical distances come instead from a ladder of methods, each rung calibrated by the one below it. The structure is only as sound as its lowest steps, and those steps are plain geometry of a kind any surveyor would recognize at once. Every figure printed in an astronomy textbook rests on that chain.

The first rung is geometry. Parallax, which is the shift in a star's position as the Earth moves from one side of its orbit to the other, gives a distance by triangulation, exactly as a surveyor uses a baseline. The baseline is the width of the Earth's orbit, about three hundred million kilometers, and even so the angles are tiny. The nearest star shifts by less than one second of arc, which is the width of a coin seen from three miles. Ground telescopes manage parallax out to a few hundred light years, and a satellite has now pushed it to tens of thousands.

Beyond that, brightness takes over. If an object's true brightness is known, its apparent dimness gives its distance, because light spreads out with the square of distance. Such an object is called a standard candle. Certain pulsating stars and certain exploding stars both serve. Their true brightness is fixed by finding examples close enough to have a parallax, or in clusters densely enough populated to be measured another way. Each rung is tied to the one below, so an error low on the ladder moves every distance in the universe above it. The ladder now reaches billions of light years. Edwin Hubble used that chain in 1924 to establish that other galaxies lie outside our own.

WHAT THIS PASSAGE IS FOR

- Astronomical distances come from a ladder of methods.
 - Parallax is triangulation from the width of the Earth's orbit.
 - An error low on the ladder moves every distance above it.
-

Questions 80.1 to 80.10

on passage 80, The Ladder of Distance

80.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Hubble used the chain in 1924
- B) The distance to a star has been measured directly with a tape
- C) Every distance in the sky rests on a ladder of calibrated steps
- D) The nearest star shifts by less than one second of arc

80.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what serves as the baseline for parallax?

- A) The width of the orbit of the Earth
- B) The width of a coin seen from three miles
- C) A few hundred light years of distance
- D) The true brightness of a pulsating star

80.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a mistake low on the ladder is not a local mistake?

- A) “Ground telescopes manage parallax out to a few hundred light years”
- B) “Each rung is tied to the one below, so an error low on the ladder moves every distance in the universe above it”
- C) “If an object's true brightness is known, its apparent dimness gives its distance”
- D) “Edwin Hubble used that chain in 1924 to establish that other galaxies lie outside our own”

80.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Their true brightness is fixed by finding examples close enough to have a parallax, or in clusters densely enough populated to be measured another way. A standard candle is therefore ____

Which choice most logically completes the text?

- A) independent of the geometry below it
- B) measured directly with a tape at last
- C) only useful inside a few hundred light years
- D) as sound as the parallax that calibrated it

80.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “densely” most nearly mean?

- A) heavily for its size
- B) slowly and dimly
- C) closely crowded together
- D) hard to understand

80.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the surveyor comparison in the text?

- A) It introduces the standard candle for the first time
- B) It places the lowest rung in familiar ground
- C) It argues that astronomy is the same as surveying
- D) It reports the reach of a satellite measurement

80.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 30 of this book. It turns distances in the sky into times, reporting eight minutes and twenty seconds for sunlight and two and a half million years for Andromeda, and says no view of the sky is of the present.

Text 1 describes how a distance is established. Based on Text 2, what would be added to that description?

- A) What those distances mean once they are converted
- B) Parallax gives a distance by triangulation from a baseline
- C) Each rung of the ladder is tied to the one below
- D) Light years are measured directly rather than inferred

80.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Ground telescopes manage parallax out to a few hundred light years, and a satellite has now pushed it to tens of thousands. ___ brightness takes over.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) In other words,
- C) For instance,
- D) Past that point,

80.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The first rung is geometry ___ parallax gives a distance by triangulation, exactly as a surveyor uses a baseline.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) geometry, parallax
- B) geometry. Parallax
- C) geometry parallax
- D) geometry, and, parallax

80.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- No tape reaches a star, so distances come from a ladder of methods.
- The lowest steps are plain geometry of the kind a surveyor would recognize.
- Each rung is calibrated by the one below it.
- An error low on the ladder moves every distance above it.

The student wants to explain why the lowest steps matter most. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) No tape reaches a star, so distances come from a ladder of methods
- B) The lowest steps are plain geometry a surveyor would recognize
- C) Each rung of the ladder is calibrated by the one below it
- D) Because every rung is calibrated by the one beneath it, an error in the geometry shifts every distance above

ملخص المقطع 80 بالعربية

خلاصة: لم يَقسَ أحد قط المسافة إلى نجم قياساً مباشراً بأي وسيلة، فلا شريط يبلغ ذلك البعد. والمسافات الفلكية تأتي عموماً عن ذلك من سلم مناهج، كل درجة فيه مُعايرة بالتي تحتها، والبناء كله ليس أصلب من أدنى درجاته.

المعنى: المعنى أن الدرجة الأولى هندسة: فالترجيح، وهو انزياح موضع النجم مع انتقال الأرض من جانب مدارها إلى الجانب الآخر، يعطي المسافة بالتثليث كما يفعل المساح بخط أساس. وخط الأساس هو عرض مدار الأرض، نحو ثلاثمئة مليون كيلومتر، ومع ذلك فالزوايا دقيقة جداً.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الآلية: ثم يتولى السطوع، فإذا عُرف سطوع جسم الحقيقي دلّ خفوته الظاهر على بعده، لأن الضوء ينتشر بمرتع المسافة، ويُسمى ذلك الجسم شمعة معيارية، ويُعابر سطوعه بأمثلة قريبة لها تزيح.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة التشبيه وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب المسافات الفلكية مقيسة قياساً مباشراً، مع أن النص ينفي ذلك في أول جملة. ويقترن المقطع بالمقطع الثلاثين في أسئلة النصين المتقابلين.

What Each Position Can Report

A narrator is defined by access rather than by personality, and there are three standard positions. A first-person narrator reports only what one character perceives, remembers or guesses. A third-person limited narrator stands outside but stays with one mind at a time, so the reader learns what that character notices and nothing more. An omniscient narrator, meaning one with access to every mind in the book, may report what two people think at the same moment and may also comment on both.

Each position decides what kind of surprise is available. Deception works easily in the first person, because the reader is inside the deceived mind. Irony works easily in the omniscient position, because the voice can show a character being wrong in a sentence the character would endorse. Suspense of the simplest kind, in which the reader fears something the character does not suspect, is almost impossible in strict first person and routine in the others.

Nineteenth-century novelists developed a fourth option which is now the commonest of all. In free indirect style, meaning a third-person voice that slides into a character's way of thinking without announcing it, the sentence carries the character's vocabulary and judgments while staying grammatically outside. Jane Austen uses it constantly, and so does almost every modern novel. It lets a writer convey a mind from the inside and withdraw to judge it in the next clause. Recognizing the shift is a skill worth practicing, because the whole effect depends on the reader not quite noticing where the voice changed. An examiner asking about tone is usually asking about exactly that movement. The test is simple: ask whether the sentence could be spoken by the character, and whether it could be endorsed by the author.

WHAT THIS PASSAGE IS FOR

- A narrator is defined by access rather than by personality.
 - Each position decides what kind of surprise is possible.
 - Free indirect style carries a character's judgments from grammatically outside.
-

Questions 81.1 to 81.10

on passage 81, What Each Position Can Report

81.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Jane Austen uses free indirect style constantly
- B) What a narrator can report decides what surprises are possible
- C) An omniscient narrator may comment on two characters
- D) A narrator is defined by personality rather than access

81.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which kind of surprise is almost impossible in strict first person?

- A) Deception of the narrator
- B) Irony at a character's expense
- C) A comment on two minds at once
- D) Fear of what the character does not suspect

81.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that free indirect style lets a writer judge a mind it has just occupied?

- A) “It lets a writer convey a mind from the inside and withdraw to judge it in the next clause”
- B) “Jane Austen uses it constantly, and so does almost every modern novel”
- C) “A first-person narrator reports only what one character perceives, remembers or guesses”
- D) “Recognizing the shift is a skill worth practicing”

81.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Irony works easily in the omniscient position, because the voice can show a character being wrong in a sentence the character would endorse. A novel that stayed inside one mind throughout would therefore ____

Which choice most logically completes the text?

- A) produce irony more easily still
- B) be unable to deceive its reader
- C) have to get its irony another way
- D) need a fourth narrative position

81.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “convey” most nearly mean?

- A) carry from place to place
- B) render for a reader
- C) transfer legal title to
- D) escort under guard

81.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that closes the text with a test?

- A) It supplies a test for telling the voices apart
- B) It defines the omniscient position for the first time
- C) It names the three standard narrative positions
- D) It concedes that the shift cannot be detected

81.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 31 of this book. It compares the first person of Jane Eyre with the outside voice of Pride and Prejudice, says neither is better, and grants the outside voice movement between rooms and years and a judgment on two characters at once.

Text 1 says each position decides what surprise is available. Based on Text 2, which choice best describes what the first person gives up?

- A) Access to the mind of the deceived character
- B) The vocabulary of the character it follows
- C) A reader who finds out when the narrator does
- D) Movement between rooms and years, and a verdict on both

81.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Deception works easily in the first person, because the reader is inside the deceived mind. ___ irony works easily in the omniscient position, because the voice can show a character being wrong.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) In other words,
- C) By contrast,
- D) For instance,

81.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Jane Austen uses it constantly ___ and so does almost every modern novel.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) constantly, and
- B) constantly and
- C) constantly; and
- D) constantly and,

81.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Free indirect style carries a character's vocabulary while staying outside.
- The effect depends on the reader not quite noticing where the voice changed.
- An examiner asking about tone is usually asking about that movement.
- The test is whether the character could speak the sentence and the author endorse it.

The student wants to explain why an examiner asking about tone is asking about the narrator. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Free indirect style keeps a third-person voice while borrowing a character's words
- B) The effect depends on the reader not quite noticing the change
- C) A question about tone is a question about where the voice slid from the character to the author
- D) The test is whether the character could speak the sentence

ملخص المقطع 81 بالعربية

خلاصة: يُعرّف الراوي بما يصل إليه لا بشخصيته، وللرواية ثلاثة مواضع قياسية: متكلم لا يروي إلا ما يدركه شخص واحد أو يذكره أو يحده، وغائب محدود يقف خارجاً ويلزم عقلاً واحداً في المرة، وعليم له وصول إلى كل عقل في الكتاب فيُخبر بما يفكر فيه اثنان في اللحظة نفسها. المعنى: المعنى أن كل موضع يحدد نوع المفاجأة المتاحة: الخديعة تسهل في المتكلم لأن القارئ داخل العقل المخدوع، والسخرية تسهل في العليم لأن الصوت يظهر شخصاً مخطئاً في جملة يوافق عليها، والتشويق البسيط يكاد يستحيل في المتكلم الصارم. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: طوّر روائيو القرن التاسع عشر خياراً رابعاً هو الأشيع اليوم، وهو الأسلوب غير المباشر الحر: صوت غائب ينزلق إلى طريقة تفكير الشخص دون إعلان، فتحمل الجملة معجمه وأحكامه وتبقى نحوياً خارجة. الصلة بالاختبار: في اختبار سات أكثر السؤال عن النبذة وعن وظيفة جزء من النصّ وعن معنى كلمة في سياقها، وسؤال النبذة في الحقيقة سؤال عن موضع الصوت. والفخ المتوقّع هنا أن يُعرّف الراوي بشخصيته، مع أن النصّ يعرفه بوصوله. ويقترب المقطع بالمقطع الحادي والثلاثين.

Four Ways to Build a Motive

A reader infers motive from four kinds of evidence, and a writer chooses how much of each to supply. The first is exposition, meaning direct statement of background by the narrator: this man lost a brother at sea and has not spoken of it since.

Exposition is efficient and expensive, because a reader who is told why a character acts has nothing left to work out. The second is action, including the small choices that nobody in the story remarks on, such as which of two chairs a visitor takes.

The third is speech, and it is less reliable than it looks. Characters lie, boast, and tell themselves stories, so a stated motive is evidence about the speaker rather than about the cause. The fourth is interiority, which is direct access to what a character is thinking, available only in positions that allow it. Each kind can also be withheld, and withholding is itself a device. Melville gives *Bartleby* action and speech and no interiority at all.

The effects differ in a way worth naming. Motive supplied by exposition is settled and inert. Motive built from action and silence stays open, and readers argue about it for a century, which is a kind of value an author may prefer to certainty. The risk is obvious: a character whose motive is too subtle to recover reads as arbitrary rather than deep. Writers manage that risk with pattern, by repeating a gesture or an avoidance often enough that a reader can see a shape without being handed a reason. Henry James described the technique as a matter of what to leave in shadow. Chekhov said that an author should not solve problems but state them correctly. A reader who cannot say what a character wants is usually reading a book that has decided not to say.

WHAT THIS PASSAGE IS FOR

- Motive comes from exposition, action, speech and interiority.
 - A stated motive is evidence about the speaker.
 - Pattern is what keeps a withheld motive from reading as arbitrary.
-

Questions 82.1 to 82.10

on passage 82, Four Ways to Build a Motive

82.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Chekhov said an author should state problems correctly
- B) Exposition is the most efficient way to give a motive
- C) A writer chooses among four kinds of evidence, and may withhold any
- D) A withheld motive always reads as arbitrary

82.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why is speech less reliable than it looks?

- A) Characters lie, boast and tell themselves stories
- B) Speech is available only in certain positions
- C) Speech leaves the reader nothing to work out
- D) Speech is repeated too often to be noticed

82.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that an open motive can be worth more to a writer than a settled one?

- A) “Exposition is efficient and expensive, because a reader who is told why a character acts has nothing left to work out”
- B) “Motive built from action and silence stays open, and readers argue about it for a century, which is a kind of value an author may prefer to certainty”
- C) “Melville gives Bartleby action and speech and no interiority at all”
- D) “Henry James described the technique as a matter of what to leave in shadow”

82.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Writers manage that risk with pattern, by repeating a gesture or an avoidance often enough that a reader can see a shape without being handed a reason. A character who acts only once, without pattern, would therefore ____

Which choice most logically completes the text?

- A) be easier to explain than a repeated one
- B) require exposition from an omniscient voice
- C) have a motive settled and inert
- D) risk reading as arbitrary rather than deep

82.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “subtle” most nearly mean?

- A) quietly clever
- B) deliberately unkind
- C) faintly marked
- D) plainly stated

82.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the reference to *Bartleby*?

- A) It defines interiority for the first time
- B) It gives an instance of a kind withheld
- C) It argues that Melville used exposition
- D) It names the four kinds of evidence

82.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 32 of this book. It reports a story in which a clerk refuses work without explanation, says the withholding is the design, and observes that the pressure of the story falls on the narrator instead.

Text 1 says withholding is itself a device. Based on Text 2, which choice best describes what the withholding in *Bartleby* produces?

- A) The pressure of the story falls on the narrator
- B) The lawyer accepts the dead letter office as the cause
- C) *Bartleby* is given action and speech and no interiority
- D) Melville had published *Moby-Dick* two years earlier

82.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Motive supplied by exposition is settled and inert. ____ motive built from action and silence stays open, and readers argue about it for a century.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) In other words,
- D) By contrast,

82.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Exposition is efficient and expensive ____ and a reader who is told why a character acts has nothing left to work out.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) expensive and
- B) expensive, and
- C) expensive; and
- D) expensive and,

82.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A motive too faint to recover reads as arbitrary rather than deep.
- Writers manage the risk with pattern.
- A gesture or an avoidance is repeated often enough to show a shape.
- The reader sees the shape without being handed a reason.

The student wants to explain how a writer keeps a withheld motive from reading as arbitrary. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A motive too faint to recover reads as arbitrary rather than deep
- B) Writers manage the risk of a withheld motive with pattern
- C) The reader is never handed a reason for the behavior
- D) Repeating one gesture often enough shows a shape, so the reader sees design without a reason

ملخص المقطع 82 بالعربية

خلاصة: يستنتج القارئ الدافع من أربعة أنواع من الدليل، والكاتب يختار كم يُعطى من كل نوع: الشرح، أي تصريح الراوي بالخلفية، والفعل بما فيه الاختيارات الصغيرة التي لا يعلّق عليها أحد، والكلام، والباطن، أي الوصول المباشر إلى ما يفكر فيه الشخص. المعنى: المعنى أن الشرح نافع ومكثف، فمن قيل له لماذا يفعل الشخص لم يبق له ما يستخرجه. والكلام أقل ثقة مما يبدو، فالأشخاص يكذبون ويفخرون ويحكون لأنفسهم حكايات، فالدافع المعلن دليل على المتكلم لا على السبب. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: كل نوع يمكن حجب، والحجب نفسه حيلة. فملفل يعطي بارتلي فعلًا وكلامًا ولا باطن له البتة. والدافع المبني على الفعل والصمت يبقى مفتوحًا فيتجادل القراء فيه قرئًا، وهي قيمة قد يفضلها مؤلف على اليقين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصين المتقابلين. والفخ المتوقع هنا أن يُحسب كل دافع محجوب تعسفًا، مع أن النص يسمي النمط المتكرر علاجًا للخطر. ويقترن المقطع بالمقطع الثاني والثلاثين.

Three Moves With Words

Figurative language is usually taught as a list of names, which hides the fact that the figures do different work. A simile, meaning a comparison that announces itself with the word like or as, keeps the two things separate: the reader is told to hold a hand and a leaf side by side and notice a resemblance. A metaphor removes the announcement and asserts the identity, so that the hand is the leaf, and the reader must do the work of deciding in what respect.

Metonymy is a third operation and a different one. It names a thing by something associated with it rather than something like it, as when the press means journalists, or the crown means a monarchy, or Washington means a government. Nothing is being compared. The reader is being pointed at a whole through one of its parts or attachments, which is why metonymy feels like plain speech while metaphor feels like writing. Most newspaper prose is thick with metonymy and nobody calls it poetic.

What all three share is economy. An image that is vivid makes the reader supply the detail, so four words do the work of a paragraph. That is also where they fail. An image that points in two directions at once confuses rather than compresses, and a metaphor repeated until nobody notices it, as in the heart of the matter, has stopped doing any work at all. Such expressions are dead metaphors, and the usual advice is to use a live one or a plain word, not something halfway. Orwell made the test practical in 1946: can the writer see the image. A writer who says a thing is a hotbed of unrest is not seeing a bed, and the sentence has gone to sleep.

WHAT THIS PASSAGE IS FOR

- A simile keeps the two things separate; a metaphor asserts identity.
 - Metonymy names a thing by association, not by resemblance.
 - All three work by economy and fail by confusion.
-

Questions 83.1 to 83.10

on passage 83, Three Moves With Words

83.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Orwell made the test practical in 1946
- B) Most newspaper prose is thick with metonymy
- C) A simile and a metonymy do the same work
- D) The named figures do different work, and share only economy

83.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does metonymy do with a thing it names?

- A) Announces a comparison with like or as
- B) Names it by something associated with it
- C) Asserts that one thing is another thing
- D) Repeats an image until nobody notices it

83.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that metonymy is not a comparison at all?

- A) “Most newspaper prose is thick with metonymy and nobody calls it poetic”
- B) “A metaphor removes the announcement and asserts the identity”
- C) “Nothing is being compared. The reader is being pointed at a whole through one of its parts or attachments”
- D) “keeps the two things separate: the reader is told to hold a hand and a leaf side by side”

83.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A metaphor repeated until nobody notices it, as in the heart of the matter, has stopped doing any work at all. A writer who reaches for such an expression is therefore ____

Which choice most logically completes the text?

- A) getting neither an image nor plain speech
- B) compressing four words into a paragraph
- C) using a live metaphor instead of a plain word
- D) pointing at a whole through one of its parts

83.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “vivid” most nearly mean?

- A) brightly colored
- B) still alive
- C) briefly stated
- D) sharply present

83.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the reference to Orwell?

- A) It defines metonymy for the first time
- B) It names three figures and their differences
- C) It turns the diagnosis into a usable test
- D) It concedes that dead metaphors still work

83.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 33 of this book. It describes a sixteen-word poem that names three objects and says a great deal depends on them, leaving the reader to supply the rest, and reports that replacing the objects with abstractions kills the poem.

Text 1 says an image makes the reader supply the detail. Based on Text 2, which choice best shows that mechanism at work?

- A) Williams was a doctor who wrote between patients
- B) Three objects are handed over and the rest is left to the reader
- C) The poem is now one of the most anthologized in English
- D) Replacing the objects with abstractions kills the poem

83.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Metonymy is a third operation and a different one. ____ it names a thing by something associated with it rather than something like it.

Which choice completes the text with the most logical transition?

- A) That is,
- B) By contrast,
- C) All the same,
- D) For instance,

83.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nothing is being compared ____ and the reader is being pointed at a whole through one of its parts.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) compared and
- B) compared; and
- C) compared, and
- D) compared and,

83.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A list of names hides the fact that the figures do different work.
- A simile keeps two things separate and a metaphor asserts an identity.
- Metonymy compares nothing and points at a whole through a part.
- What all three share is economy.

The student wants to explain why figurative language is taught badly as a list of names. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A list of names hides three different operations that happen to share one economy
- B) A simile keeps two things separate and a metaphor asserts an identity
- C) Metonymy compares nothing and points at a whole through a part
- D) What all three of the figures share is economy

ملخص المقطع 83 بالعربية

خلاصة: تُدرّس اللغة المجازية قائمة أسماء، وهذا يحجب أن الصور تعمل أعمالاً مختلفة. فالتشبيه يُعلن المقارنة بأداة ويُبقى الشئين منفصلين؛ والاستعارة تحذف الإعلان وتثبت الهوية فيلزم القارئ أن يحدّد في أيّ وجه؛ والكناية عملية ثالثة مختلفة. المعنى: المعنى أن الكناية تسمّي الشيء بما يُقترن به لا بما يشابهه، كأن تُراد الصحافة بالمحفيين، أو الحكم بالتاج، أو الحكومة بالعاصمة. فلا شيء يُقارَن هنا، بل يُشار إلى الكلّ بجزء منه أو بملحق به، ولهذا تبدو الكناية كلاماً عادياً. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: ما تشترك فيه الثلاث هو الاقتصاد، فالصورة الحيّة تدفع القارئ إلى إمداد التفصيل، فتعمل أربع كلمات عمل فقرة. وهنا يقع الفشل أيضاً: صورة تشير في جهتين تُربك، واستعارة أُعيدت حتّى لا يلحظها أحد كُفّت عن العمل. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخّ المتوقّع هنا أن يُسوّى بين التشبيه والكناية، مع أن النصّ يفصل بينهما فصلاً صريحاً. ويقترن المقطع بالمقطع الثالث والثلاثين.

Expectation and the Broken Line

A fixed form works by setting up an expectation that can then be used. Once a reader has heard three lines of ten syllables, the fourth is predicted, and a poet who delivers eleven has done something the reader feels before being able to name it. The effect does not require the reader to be counting consciously, any more than a listener counts the beats in a dance tune.

Two devices exploit the line directly. Enjambment, meaning the running of a sentence past the end of a line without a pause, sets the grammar against the rhythm, so that the eye arrives at the line break while the sense keeps going. That produces a small suspension, and poets use it to hang a word in the air. A caesura, which is a strong break inside a line, does the opposite, stopping the voice where the meter says to continue. Both only work because the underlying pattern is regular enough to be felt.

This is why metrical substitution carries weight. A line that is iambic throughout and then reverses one foot puts a stress where none was expected, and the reversed foot is almost always on a word the poet wants struck. Shakespeare opens a sonnet with *Shall I compare thee*, which is regular, and elsewhere opens with a reversed foot that lands like a hand on a table. A lyrical effect of this kind is produced by arithmetic. The reader hears the feeling and the poet counted. Free verse does not escape the mechanism, because a reader brings expectations to any line. What it does is make the poet establish the pattern inside the poem rather than inherit one. Reading a line aloud twice, once flat and once with the stresses, is the quickest way to hear it.

WHAT THIS PASSAGE IS FOR

- A fixed form works by creating an expectation that can be used.
 - Enjambment sets the grammar against the rhythm.
 - A reversed foot lands on a word the poet wants struck.
-

Questions 84.1 to 84.10on passage 84, *Expectation and the Broken Line***84.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Devices work by setting something against a felt pattern
- B) Enjambment runs a sentence past the end of a line
- C) Free verse escapes the mechanism entirely
- D) Reading a line aloud twice is the quickest way to hear it

84.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a caesura do to the voice?

- A) Runs it past the end of a line
- B) Puts a stress where none was expected
- C) Stops it where the meter says to continue
- D) Leaves a strong beat silent

84.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a reader need not be counting for the effect to land?

- A) “Both only work because the underlying pattern is regular enough to be felt”
- B) “A caesura, which is a strong break inside a line, does the opposite”
- C) “Free verse does not escape the mechanism, because a reader brings expectations to any line”
- D) “The effect does not require the reader to be counting consciously, any more than a listener counts the beats in a dance tune”

84.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A line that is iambic throughout and then reverses one foot puts a stress where none was expected, and the reversed foot is almost always on a word the poet wants struck. A reader looking for the emphasis in such a line should therefore ____

Which choice most logically completes the text?

- A) count the syllables in every line of the poem
- B) look at the word that broke the pattern
- C) read the closing couplet of the poem first
- D) ignore the regular feet that came before

84.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “lyrical” most nearly mean?

- A) warmly expressive
- B) set to music
- C) written in lines
- D) coolly measured

84.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the dance tune comparison?

- A) It defines enjambment for the first time
- B) It names the two devices that exploit the line
- C) It argues that meter must be counted aloud
- D) It makes an unconscious response familiar

84.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 34 of this book. It describes the fourteen-line sonnet and its turn, and reports a sonnet that spends twelve lines listing what the mistress is not before a closing pair says he loves her all the same.

Text 1 explains how a felt pattern can be exploited. Based on Text 2, which choice best illustrates a pattern being used that way?

- A) A sonnet has fourteen lines and reached England from Italy
- B) Each line runs to ten syllables with a stress on every second
- C) Twelve lines of denial are reversed by the closing pair
- D) Hayes published seventy sonnets titled the same way

84.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A caesura stops the voice where the meter says to continue. ____ both only work because the underlying pattern is regular enough to be felt.

Which choice completes the text with the most logical transition?

- A) For example,
- B) In both cases,
- C) By contrast,
- D) In other words,

84.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The reader hears the feeling ____ and the poet counted.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) feeling and
- B) feeling; and
- C) feeling and,
- D) feeling, and

84.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Three lines of ten syllables make the fourth one predictable.
- A reader feels an eleventh syllable before being able to name it.
- Enjambment and caesura work only against a felt pattern.
- A reversed foot puts a stress where none was expected.

The student wants to explain why a regular meter is worth establishing. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Three lines of ten syllables make the fourth one predictable
- B) A pattern a reader can feel is what gives any break its force
- C) Enjambment and caesura work only against a felt pattern
- D) A reversed foot puts a stress where none was expected

ملخص المقطع 84 بالعربية

خلاصة: يعمل الشكل الثابت بإنشاء توقع يمكن استعماله بعد ذلك. فمن سمع ثلاثة أسطر من عشرة مقاطع صار الرابع متوقعًا، ومن قدم أحد عشر مقطعًا فعل شيئًا يحسه القارئ قبل أن يقدر على تسميته، ولا يلزم أن يكون عاديًا واعيًا.

المعنى: المعنى أن أداتين تستغلان السطر مباشرة: التدوير، وهو إجراء الجملة إلى ما بعد نهاية السطر دون وقفة، فيصطدم النحو بالإيقاع ويعلق الشاعر كلمة في الهواء؛ والوقفة الداخلية، وهي قطع قوي داخل السطر يوقف الصوت حيث يأمر الوزن بالمتابعة.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: لا تعمل الأدوات إلا لأن النمط تحتها منتظم بقدر يُحس، ولهذا يتقل الإبدال الوزني: سطر يأمي كله ثم تُقلب تفعيلية واحدة فيقع النبر حيث لم يُتوقع، والتفعيلية المقلوبة تكون على كلمة يريد الشاعر ضربها.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن الانتقال الأكثر منطقية. والفخ المتوقع هنا أن يُحسب الشعر الحر ناجيًا من الآلية، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الرابع والثلاثين.

How a Building Writes a Play

Several habits of Elizabethan playwriting are consequences of the building rather than choices of taste. The audience stood in daylight on three sides of a platform, so an actor could speak directly to them without breaking anything. That is why the aside, meaning a line spoken to the audience and not to the other characters, is a standard device rather than a trick. A dark auditorium with a lit stage makes the same line awkward, which is why the aside nearly disappeared in the nineteenth century and returned when playhouses went back to open staging.

Because there was no scenery, place had to be established in the dialogue, and Shakespeare does it in the first few lines of almost every scene. Because there was no front curtain, a scene could not end with a held tableau and had to end with an exit. That is why so many scenes finish on a rhyming couplet that tells the audience the stage is clearing. Because the stage had a discovery space, which is a curtained opening at the back, a body or a sleeper or a statue could be revealed rather than carried on.

The conditions also set the length of a speech. An actor in the open air with two thousand people standing has to hold attention by voice alone, and the verse renders that possible by giving the voice a pattern to lean on. Prose in these plays is used for different registers and rarely sustains a long solo turn. None of this makes the plays less artful. It locates the art in a particular room. Modern productions indoors have to solve problems that the original staging did not have. Cutting an aside, or lighting a soliloquy as private thought, changes the relationship the line was written for.

WHAT THIS PASSAGE IS FOR

- Daylight on three sides made the aside a standard device.
 - With no scenery, place had to be established in dialogue.
 - Verse gave the voice a pattern to lean on in the open air.
-

Questions 85.1 to 85.10on passage 85, *How a Building Writes a Play***85.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The aside nearly disappeared in the nineteenth century
- B) Habits of the writing follow from the room it was written for
- C) Prose in these plays is used for different registers
- D) The art of the plays is lessened by its conditions

85.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did a scene have to end with an exit?

- A) Because the stage had a discovery space
- B) Because the audience stood in daylight
- C) Because the verse gave the voice a pattern
- D) Because there was no front curtain

85.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the aside depends on the room rather than on taste?

- A) “which is why the aside nearly disappeared in the nineteenth century and returned when playhouses went back to open staging”
- B) “Because there was no scenery, place had to be established in the dialogue”
- C) “Prose in these plays is used for different registers and rarely sustains a long solo turn”
- D) “Cutting an aside, or lighting a soliloquy as private thought, changes the relationship the line was written for”

85.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

An actor in the open air with two thousand people standing has to hold attention by voice alone, and the verse renders that possible by giving the voice a pattern to lean on. A long speech written for a small indoor room would therefore ____

Which choice most logically completes the text?

- A) need a louder voice than the open air does
- B) require a discovery space at the back
- C) have less need of that pattern to lean on
- D) end with a rhyming couplet to clear the stage

85.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “renders” most nearly mean?

- A) performs for an audience
- B) causes to be
- C) translates into words
- D) hands over to

85.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence denying that the plays are less artful?

- A) It blocks a conclusion the explanation invites
- B) It defines the discovery space at the back
- C) It reports when the aside disappeared
- D) It argues that modern staging is superior

85.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 35 of this book. It describes the Globe as a ring of galleries open to the sky with a platform pushed into the yard, and says the cheapest paid a penny and stood in the open around three sides of the stage in the early afternoon.

Text 1 derives the habits of the writing from the building. Based on Text 2, which choice best supplies the physical fact behind the aside?

- A) The theater burned down in 1613 after a cannon
- B) A modern copy plays in daylight without microphones
- C) The platform had a trap door for a grave or a devil
- D) The cheapest stood in the open on three sides of the stage

85.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Because there was no front curtain, a scene could not end with a held tableau and had to end with an exit. ____ so many scenes finish on a rhyming couplet that tells the audience the stage is clearing.

Which choice completes the text with the most logical transition?

- A) Conversely,
- B) To illustrate,
- C) Consequently,
- D) Put differently,

85.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The audience stood in daylight on three sides of a platform ____ and an actor could speak directly to them without breaking anything.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) platform, and
- B) platform and
- C) platform; and
- D) platform and,

85.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The aside was written for an audience standing in daylight.
- A dark auditorium with a lit stage makes the same line awkward.
- Cutting an aside changes the relationship the line was written for.
- Modern productions indoors face problems the original staging did not have.

The student wants to explain what a modern indoor production has to solve. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The aside was written for an audience standing in daylight
- B) Modern productions indoors face problems the original staging did not
- C) A line written for a lit house turns awkward in a dark one, and cutting it changes what it was for
- D) A dark auditorium with a lit stage makes the line awkward

ملخص المقطع 85 بالعربية

خلاصة: عدّة عادات في الكتابة المسرحية الإليزابيثية نتائج للبناء لا اختيارات في الذوق. فالجمهور كان يقف في ضوء النهار على ثلاث جهات من منضّة، فيستطيع الممثل أن يخاطبه مباشرة دون أن يُجَلّ بشيء، ولهذا كان الهمس الجاني أداة قياسية لا حيلة. المعنى: المعنى أن قاعة مظلمة ومنضّة مضاءة تجعل السطر نفسه متكلّفًا، ولهذا كاد الهمس الجاني يزول في القرن التاسع عشر ثم عاد حين رجعت المسارح إلى التمثيل المكشوف. ولانعدام المناظر لزم أن يُثبت المكان في الحوار، ولانعدام السّتر الأمامي لزم أن ينتهي المشهد بخروج الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: الشروط حدّدت طول الخطبة أيضًا، فالممثل في الهواء المكشوف أمام ألفي واقف يحبس الانتباه بالصوت وحده، والشعر يجعل ذلك ممكنًا لأنّه يعطي الصوت نمطًا يستند إليه. ولا شيء من هذا ينقص فنّ المسرحيات، بل يوظفه في غرفة بعينها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن السبب المذكور في النصّ وعن النصّين المتقابلين. والفخ المتوقّع هنا أن يُستنتج أن الشروط تنقص الفنّ، مع أن النصّ ينفي ذلك صريحًا. ويقترن المقطع بالمقطع الخامس والثلاثين.

The Uses of a Rule

A convention, meaning a rule that a kind of story is expected to follow, does two jobs at once. It tells a reader how to read. A body in the first chapter signals that the rest of the book is a search for a cause, and the reader begins sorting detail into clues without being asked. It also creates the possibility of significant deviation, because a rule that everybody knows can be broken on purpose and the breaking will be noticed.

Detective fiction wrote its conventions down. In the 1920s members of a London club drew up a list of rules. One was the requirement of fair play, meaning that every clue must be shown to the reader before the solution is given. Agatha Christie then built her most famous book on an apparent breach of one of them, and the argument about whether she had cheated is still going. The scandal only existed because the rule existed. A reader with no expectations cannot be surprised.

The same mechanism works through allusion, which lets a later work lean on an earlier one. A western in which the hero walks down a street at noon is borrowing a hundred earlier walks. A film that shows the hero arriving to find the street empty comments on all of them in one shot. None of this requires the audience to have studied the history. Recognition can be entirely unconscious, and the writer only needs the pattern to be present, not to be named. Genres also drift, because every successful breach becomes the next convention. The unreliable narrator was a shock in 1926 and is now a standard item on a publisher's list. The useful question about any genre work is therefore which rule it is leaning on and which it is pushing against.

WHAT THIS PASSAGE IS FOR

- A convention tells a reader how to read.
 - Fair play requires every clue to be shown before the solution.
 - A reader with no expectations cannot be surprised.
-

Questions 86.1 to 86.10

on passage 86, The Uses of a Rule

86.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A London club drew up a list of rules in the 1920s
- B) The unreliable narrator was a shock in 1926
- C) A rule both guides a reader and makes a breach legible
- D) A reader with no expectations is the most easily surprised

86.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the fair play rule require?

- A) That every clue be shown before the solution
- B) That a body appear in the first chapter
- C) That the narrator be reliable throughout
- D) That a breach of a rule be announced

86.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a reader need not know the history for an allusion to work?

- A) “A western in which the hero walks down a street at noon is borrowing a hundred earlier walks”
- B) “Recognition can be entirely unconscious, and the writer only needs the pattern to be present, not to be named”
- C) “Genres also drift, because every successful breach becomes the next convention”
- D) “The scandal only existed because the rule existed”

86.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Genres also drift, because every successful breach becomes the next convention. The unreliable narrator was a shock in 1926 and is now a standard item on a list. A novelist who used that device today would therefore ____

Which choice most logically completes the text?

- A) be accused of cheating by the London club
- B) shock a reader as the 1926 book did
- C) have broken the requirement of fair play
- D) be leaning on a rule rather than breaking one

86.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “allusion” most nearly mean?

- A) a misleading appearance
- B) an open quotation
- C) an unannounced reference
- D) a hint at a solution

86.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the Christie novel?

- A) It defines the requirement of fair play
- B) It shows a rule making a breach visible
- C) It reports when the London club was founded
- D) It settles the question of whether she cheated

86.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 36 of this book. It reports an 1841 story that introduced a brilliant private reasoner, a slower companion, a competent and wrong police force and a mechanical solution, and says later writers counted on a reader knowing the pattern.

Text 1 says a convention makes a deliberate breach noticeable. Based on Text 2, which choice best shows where the detective convention came from?

- A) One story in 1841 supplied the parts still in use
- B) Doyle had Holmes dismiss Dupin by name
- C) Christie built a career on breaking the rules
- D) Poe wrote only three stories about Dupin

86.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A convention tells a reader how to read. ____ it creates the possibility of significant deviation, because a rule that everybody knows can be broken on purpose.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) In other words,
- D) Beyond that,

86.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Detective fiction wrote its conventions down ____ and in the 1920s members of a London club drew up a list of rules.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) down and
- B) down, and
- C) down; and
- D) down and,

86.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A convention tells a reader how to read.
- It also makes a deliberate breach noticeable.
- Every successful breach becomes the next convention.
- The useful question is which rule a work leans on and which it pushes against.

The student wants to explain the one question worth asking about a genre work. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A convention tells a reader how to read the book
- B) Every successful breach becomes the next convention
- C) A convention also makes a deliberate breach noticeable
- D) Since rules both guide and get broken, ask which one a work leans on and which it resists

ملخص المقطع 86 بالعربية

خلاصة: العُرف، أي قاعدة يُتوقع من نوع من الحكايات أن يتبعها، يؤدّي عملين في وقت واحد: يعلّم القارئ كيف يقرأ، فجسد في الفصل الأول يُشير إلى أنّ بقية الكتاب بحث عن سبب، فيبدأ القارئ يصنّف التفاصيل قرائن بلا طلب.

المعنى: المعنى أنّ العُرف يُنشئ أيضًا إمكان الانحراف الدالّ، لأنّ قاعدة يعرفها الجميع يمكن نقضها عن قصد وسيلخطّ النقض. وقد كتبت القصة البوليسية أعرافها: في عشرينيات القرن العشرين وضع أعضاء نادٍ لندنيّ قائمة قواعد، منها شرط اللعب النزيه.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: الفضيحة لم تكن لتوجد لولا وجود القاعدة، فمن لا تتوقع له لا يُفاجأ. وتعمل الآلية نفسها بالتلميح الذي يُسند عملاً لاحقاً إلى عمل سابق، ولا يلزم أن يكون الجمهور قد درس التاريخ.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب القارئ الخالي من التوقع أسهل مفاجأة، مع أنّ النص يقول عكسه. ويقترن المقطع بالمقطع السادس والثلاثين.

Where the Eye Is Sent

A painting is read in an order, and the painter decides that order. Composition, meaning the arrangement of shapes and spaces within the frame, is the machinery for doing it, and three devices carry most of the load. The first is tonal contrast, which is the difference between the lightest and the darkest areas. The eye goes to the strongest contrast first, which is why Vermeer puts his brightest white on the milk and the cap and leaves the rest of the wall in a narrow range.

The second device is line. Edges that run diagonally lead the eye along them, and painters arrange table edges, floor tiles, arms and gazes to point where they want attention to travel. The third is scale and position. A figure placed on a diagonal from a corner reads differently from one on the center line. An object cut by the frame reads as continuing beyond it, which pulls the viewer into imagining a room rather than a panel.

What follows is a working method for looking. Ask where the eye went first and why. Follow the path it took afterward and find the edge or the gaze that sent it. Notice what has been left in low contrast, because that is what the painter decided could wait. A crowded and ornate picture is not necessarily badly composed, since a painter may want the eye to wander, but a composition that fails will leave the eye drifting without arriving. The test is whether the order of looking can be described at all. Conservators can sometimes show that an artist moved a figure to improve this order. X-ray images of the Milkmaid reveal a map on the back wall and a basket that were painted out.

WHAT THIS PASSAGE IS FOR

- The eye goes to the strongest tonal contrast first.
 - Diagonal edges lead the eye along them.
 - A failed composition leaves the eye drifting without arriving.
-

Questions 87.1 to 87.10on passage 87, *Where the Eye Is Sent***87.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) X-ray images reveal a map painted out of the Milkmaid
- B) The eye goes to the strongest contrast in a picture first
- C) A crowded picture is always badly composed
- D) A painter decides the order in which a picture is read

87.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how does an object cut by the frame read?

- A) As the strongest contrast in the picture
- B) As continuing beyond the frame
- C) As a figure placed on the center line
- D) As an edge that leads the eye along it

87.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a failed composition can be told from a merely busy one?

- A) “The eye goes to the strongest contrast first, which is why Vermeer puts his brightest white on the milk and the cap”
- B) “Edges that run diagonally lead the eye along them, and painters arrange table edges, floor tiles, arms and gazes to point where they want attention to travel”
- C) “a painter may want the eye to wander, but a composition that fails will leave the eye drifting without arriving”
- D) “Conservators can sometimes show that an artist moved a figure to improve this order”

87.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Notice what has been left in low contrast, because that is what the painter decided could wait. A viewer who starts with the dimmest corner is therefore ____

Which choice most logically completes the text?

- A) beginning where the painter meant them to end
- B) following the strongest contrast in the picture
- C) looking at an object cut by the frame
- D) reading the picture in the intended order

87.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ornate” most nearly mean?

- A) formally arranged
- B) brightly lit
- C) plainly finished
- D) heavily decorated

87.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the three instructions for looking?

- A) They define tonal contrast for the first time
- B) They report what an X-ray of the picture showed
- C) They turn the three devices into a procedure
- D) They concede that the order cannot be described

87.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 37 of this book. It lists the surfaces Vermeer recorded in a small kitchen picture, among them a hard highlight on the jug, crumbs of thick paint on the bread and a whitewashed wall warm in the sun and cool in the shadow.

Text 1 says the eye goes to the strongest contrast first. Based on Text 2, which choice best explains why the wall comes last in that order?

- A) The wall carries a nail and a nail hole
- B) Its warm and cool areas stay close together in tone
- C) The bread crust holds small dots of thick paint
- D) The milk is the only moving thing in the painting

87.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A figure placed on a diagonal from a corner reads differently from one on the center line. ___ an object cut by the frame reads as continuing beyond it.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) By contrast,
- C) As a result,
- D) In short,

87.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A painting is read in an order ___ and the painter decides that order.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) order and
- B) order; and
- C) order, and
- D) order and,

87.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Ask where the eye went first and why.
- Follow the path it took and find the edge or gaze that sent it.
- Notice what was left in low contrast.
- The test is whether the order of looking can be described at all.

The student wants to give a viewer something to do in front of a painting. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Trace the order of looking from the first stop to the dimmest, then try to describe it
- B) Ask where the eye went first in the picture and why
- C) Notice what the painter left in low contrast
- D) The test is whether the order of looking can be described

ملخص المقطع 87 بالعربية

خلاصة: تُقرأ اللوحة في ترتيب، والرسام هو الذي يقرّر ذلك الترتيب. والتأليف، أي تنظيم الأشكال والفراغات داخل الإطار، هو آلة ذلك، وثلاث أدوات تحمل معظم الحمل. أولها التضاؤ الضوئي، وهو الفرق بين أفتح المناطق وأغمقها. المعنى: المعنى أن العين تذهب إلى أقوى تضاؤ أولاً، ولهذا يضع فرمير أشدّ بياضه على اللين والخمار ويترك سائر الجدار في مدّى ضيق. والأداة الثانية الخط، فالحروف المائلة تقود العين على امتدادها. والثالثة الحجم والموضع، فجسم يقطع الإطار يُقرأ ممتدّاً خارجه. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: ثم طريقة عمل في النظر: أسأل أين ذهبت العين أولاً ولماذا، واتبع المسار الذي سلكته بعد ذلك، والخط ما ترك في تضاؤ منخفض لأنه ما قرّر الرسام أنه يمكن أن ينتظر. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقّع هنا أن تُحسب اللوحة المزدحمة فاشلة التأليف، مع أن النص ينفي ذلك ويضع الفشل في عين تهيم بلا وصول. ويقترن المقطع بالمقطع السابع والثلاثين.

Tension, Delay and Arrival

Music works on expectation in a way that can be described without technical training. A piece in a key establishes a home note, the tonic, and a listener who has heard a few bars can hum it without knowing its name. Moving away from that home creates tension. Returning to it releases the tension. Almost everything else is management of the distance and the delay between those two events.

A cadence, meaning a closing formula that signals an ending, is the standard machinery of arrival. Composers learned early that an expected cadence can be interrupted, and the interruption is one of the strongest effects available. The music arrives at the moment of resolution and goes somewhere else, often to a chord that is close by and wrong, and the listener feels the swerve as a physical disappointment. Haydn built jokes on it and Wagner built whole acts by refusing to arrive for an hour at a time.

Rhythm does the same job in time rather than in pitch. A pattern once established can be stretched, interrupted or contradicted, and a strong beat left silent is louder than any note. What this means for a listener is practical. The question to ask of a passage is not whether it is beautiful but what it has set up and whether it has paid. A piece that evokes grief usually does so by establishing something and then withholding it, and the emotion sits in the gap rather than in the notes. Film composers work almost entirely with this mechanism and often with very simple material. A single unresolved chord held under dialogue is doing the work of a page of script. That is why a description of a piece as sad is less useful than a note of where it was expected to resolve and did not.

WHAT THIS PASSAGE IS FOR

- Moving away from the home note creates tension and returning releases it.
 - An interrupted cadence is felt as a physical disappointment.
 - A strong beat left silent is louder than any note.
-

Questions 88.1 to 88.10

on passage 88, Tension, Delay and Arrival

88.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Music works by managing the distance from a home note and back
- B) A cadence is a closing formula that signals an ending
- C) Film composers work with very simple material
- D) Emotion in music sits in the notes themselves

88.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happens in an interrupted cadence?

- A) The home note is established for the listener
- B) A strong beat is left silent in the pattern
- C) The music reaches resolution and goes elsewhere
- D) The listener hums the tonic without naming it

88.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a feeling in music can be located in what did not happen?

- A) “A piece in a key establishes a home note, the tonic, and a listener who has heard a few bars can hum it without knowing its name”
- B) “Haydn built jokes on it and Wagner built whole acts by refusing to arrive for an hour at a time”
- C) “Rhythm does the same job in time rather than in pitch. A pattern once established can be stretched, interrupted or contradicted”
- D) “A piece that evokes grief usually does so by establishing something and then withholding it, and the emotion sits in the gap rather than in the notes”

88.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A pattern once established can be stretched, interrupted or contradicted, and a strong beat left silent is louder than any note. A silence in a piece with no established pattern would therefore ____

Which choice most logically completes the text?

- A) be louder than any note in the piece
- B) have nothing to be heard against
- C) resolve the tension the key set up
- D) interrupt an expected cadence instead

88.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “evokes” most nearly mean?

- A) calls up in a listener
- B) cries out against
- C) states in words
- D) remembers from before

88.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about film composers?

- A) It defines the tonic for the first time
- B) It reports that Haydn built jokes on it
- C) It argues that film music needs no pattern
- D) It shows the mechanism carrying very little material

88.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 38 of this book. It describes a set of twelve variations on an eight-bar tune, says the tune is stated plainly first so that every listener knows what will be worked on, and locates the pleasure in hearing the original survive.

Text 1 says an effect requires something to have been set up. Based on Text 2, which choice best shows a composer doing the setting up?

- A) Beethoven wrote thirty-three variations on a waltz
- B) One variation turns the key from major to minor
- C) The tune is stated plainly before it is changed
- D) Jazz musicians take a theme apart every night

88.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Moving away from that home creates tension. ___ returning to it releases the tension.

Which choice completes the text with the most logical transition?

- A) For example,
- B) Conversely,
- C) As a result,
- D) In other words,

88.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The music arrives at the moment of resolution ___ and it goes somewhere else.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) resolution and
- B) resolution; and
- C) resolution and,
- D) resolution, and

88.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Moving away from the home note creates tension and returning releases it.
- A cadence can be interrupted, which is one of the strongest effects available.
- The question to ask is what a passage set up and whether it has paid.
- A description of a piece as sad is less useful than a note of where it was expected to resolve.

The student wants to give a listener a better question than whether a passage is beautiful. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Moving away from the home note creates tension and returning releases it
- B) Ask what the passage set up and whether it paid, and note where it failed to resolve
- C) An interrupted cadence is one of the strongest effects available
- D) A description of a piece as sad is less useful than other descriptions

ملخص المقطع 88 بالعربية

خلاصة: تعمل الموسيقى على التوقع عملاً يمكن وصفه بلا تدريب فني. فالقطة في مقام تُقيم نغمة بيت تُسمى الركيزة، ومن سمع موازير قليلة يقدر على ترنيمها دون أن يعرف اسمها. والبعد عن ذلك البيت يُنشئ الشد، والرجوع إليه يُفرجه. المعنى: المعنى أن كل ما بقي تدبير للمسافة والتأخير بين هذين الحدثين. والقطة، أي صيغة ختامية تُشير إلى الانتهاء، هي آلة الوصول القياسية، وقد تعلم المؤلفون مبكراً أن القطة المتوقعة يمكن قطعها، والقطع من أقوى الآثار المتاحة. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: تصل الموسيقى إلى لحظة الحل فتذهب إلى مكان آخر، غالباً إلى وتر قريب خاطئ، فيحس السامع الانزياح خيبة جسيمة. والإيقاع يعمل العمل نفسه في الزمن لا في الحدة، والنبرة القوية المتروكة صامتة أعلى من أي نغمة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصين المتقابلين. والفتح المتوقع هنا أن يوضع الشعور في النغمات، مع أن النص يضعه في الفجوة بين ما أُقيم وما حُجب. ويقترن المقطع بالمقطع الثامن والثلاثين.

What Makes a Street Work

A street can be described by numbers, and a few of them predict most of what it feels like to walk down. The first is frontage, meaning the length of building face that meets the pavement, and more exactly active frontage, which is frontage with doors and windows that people actually use. A hundred meters with twelve doorways behaves quite differently from a hundred meters with one, even if the buildings are the same height and the same age.

The second number is width, and the proportion of width to building height decides whether a street reads as a room or as a gap. Older European streets commonly run between one to one and one to two, and above about one to three the space stops holding together. The third is permeability, counted as the number of ways out of a block. A fine grid gives walkers' choices and spreads traffic; a single loop road forces everyone onto one route and makes walking pointless.

These numbers conflict, which is the whole difficulty. Wide roads move vehicles and break walking routes. Large blocks are cheaper to build and produce long blank walls. A tower set back in open ground may be austere and handsome from a distance and leave the pavement beside it dead, because nothing at ground level opens onto it. Jane Jacobs made the argument from observation in 1961, counting uses and watching sidewalks, and most of what she claimed has since been measured by people who walked the same streets with clipboards. Transport departments now count footfall, crossings and dwell time as a matter of routine. The counts tend to confirm that doorways per hundred meters predicts street life better than architectural quality does. A street can be measured in an afternoon with a tape and a counter.

WHAT THIS PASSAGE IS FOR

- Active frontage is frontage with doors and windows people use.
 - The ratio of width to height decides whether a street reads as a room.
 - The numbers conflict, which is the whole difficulty.
-

Questions 89.1 to 89.10

on passage 89, What Makes a Street Work

89.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Jane Jacobs made her argument from observation in 1961
- B) A few measurable numbers predict how a street feels, and they conflict
- C) A street can be measured in an afternoon with a tape
- D) Architectural quality predicts street life best

89.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how is permeability counted?

- A) By the length of building face meeting the pavement
- B) By the proportion of width to building height
- C) By the number of doorways per hundred meters
- D) By the number of ways out of a block

89.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a handsome building can still kill the pavement beside it?

- A) “A tower set back in open ground may be austere and handsome from a distance and leave the pavement beside it dead, because nothing at ground level opens onto it”
- B) “Wide roads move vehicles and break walking routes. Large blocks are cheaper to build and produce long blank walls”
- C) “Transport departments now count footfall, crossings and dwell time as a matter of routine”
- D) “A hundred meters with twelve doorways behaves quite differently from a hundred meters with one”

89.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A fine grid gives walkers' choices and spreads traffic; a single loop road forces everyone onto one route and makes walking pointless. A neighborhood built on one loop road would therefore ____

Which choice most logically completes the text?

- A) spread its traffic across many routes
- B) count more doorways per hundred meters
- C) score low on the third of the numbers
- D) read as a room rather than as a gap

89.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “austere” most nearly mean?

- A) harshly strict
- B) plain and spare
- C) richly detailed
- D) strongly built

89.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the numbers conflict?

- A) It turns a list of measures into a problem
- B) It defines active frontage for the first time
- C) It reports what transport departments count
- D) It concludes that the numbers are useless

89.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 39 of this book. It describes a covered lane about six hundred feet long, lined on both sides with small shops under a glass roof, in which a shopper could walk the whole length dry and look in forty windows.

Text 1 names the numbers that predict street life. Based on Text 2, which choice best describes how the arcade scores on the first of them?

- A) Its glass roof was admired as engineering
- B) It has beadles who forbid running and whistling
- C) It is about six hundred feet long from end to end
- D) Small shops line both of its sides for its whole length

89.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A hundred meters with twelve doorways behaves quite differently from a hundred meters with one. ____ the second number is width, and the proportion of width to building height decides whether a street reads as a room.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) After that,
- D) For example,

89.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Wide roads move vehicles and break walking routes ____ and large blocks are cheaper to build.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) routes, and
- B) routes and
- C) routes; and
- D) routes and,

89.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Active frontage counts doorways and windows that people use.
- Doorways per hundred meters predicts street life better than architectural quality.
- Jacobs made the argument by counting uses and watching sidewalks.
- A street can be measured in an afternoon with a tape and a counter.

The student wants to explain why a street can be judged without an architect. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Active frontage counts the doorways and windows people use
- B) Jacobs counted uses and watched sidewalks to make her argument
- C) A tape and a counter measure the doorways that predict street life better than quality does
- D) A street can be measured in an afternoon with a tape

ملخص المقطع 89 بالعربية

خلاصة: يمكن وصف الشارع بأرقام، وقليل منها يتنبأ بمعظم ما يُحسّ عند المشي فيه. أولها الواجهة، أي طول وجه البناء الملاقي للرصيف، وأدقّ منه الواجهة النشطة، وهي الواجهة ذات الأبواب والنوافذ التي يستعملها الناس فعلاً.

المعنى: المعنى أن مئة متر فيها اثنا عشر باباً تسلك سلوكاً مختلفاً عن مئة متر فيها باب واحد، ولو تساوى البناءان ارتفاعاً وعمراً. والرقم الثاني العرض، ونسبة العرض إلى ارتفاع البناء تقرّر هل يُقرأ الشارع غرفة أو فجوة. والثالث النفاذية، وتُعدّ بعدد المخارج من المربع.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: هذه الأرقام تتعارض، وذلك هو كلّ الصعوبة. فالطرق العريضة تنقل المركبات وتقطع مسارات المشي، والمربعات الكبيرة أرخص بناءً وتُنتج جدراناً صماءً طويلة، والبرج المتراجع في أرض مكشوفة قد يكون جميلاً من بعيد ويترك الرصيف ميئاً.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصّين المتقابلين. والفخ المتوقّع هنا أن تُقدّم جودة العمارة على عدّ الأبواب، مع أنّ النص يقول عكسه. ويقترن المقطع بالمقطع التاسع والثلاثين.

What a Judgment Needs

A critical judgment that can be examined has three parts. There is a claim, which must say something that could be false. There is evidence, drawn from the work itself and quoted or described closely enough that a reader can check it. And there is a criterion, meaning the standard against which the work is being judged, which is the part most often left out.

Each part fails in a characteristic way. A claim fails by being unfalsifiable, as when a reviewer calls a novel important without saying what would make it unimportant. Evidence fails by being about something else, which is why a review that spends its length on the author's biography is not a review of the book. The criterion fails by staying hidden, and a hidden standard produces the commonest kind of useless disagreement, in which two people argue about a work while measuring it against different things.

Making the criterion explicit changes the argument. If a critic says that a play fails because its characters are not psychologically consistent, a reader can ask whether psychological consistency is the right test for a morality play written in 1590. If another says that a film is poor because it does not satirize the system it depicts, a reader can fairly ask whether satire was ever the aim. Samuel Johnson insisted on the point in 1765. Neither question settles the matter, and both move it to the one place where it can be argued productively. Critics who name their standards can be disagreed with. Critics who do not can only be ignored or believed. Academic criticism makes the standard explicit as a matter of convention, which is part of why it reads so unlike journalism. The convention costs it readers and buys it the ability to be refuted.

WHAT THIS PASSAGE IS FOR

- A judgment needs a claim, evidence and a criterion.
 - A hidden standard produces useless disagreement.
 - Critics who name their standards can be disagreed with.
-

Questions 90.1 to 90.10

on passage 90, What a Judgment Needs

90.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Samuel Johnson insisted on the point in 1765
- B) Academic criticism reads unlike journalism
- C) A judgment can be examined only if its three parts are present
- D) A hidden standard makes a disagreement easier to settle

90.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how does a claim fail?

- A) By being impossible to show false
- B) By being about the author instead
- C) By staying hidden from the reader
- D) By quoting the work too closely

90.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that naming a standard makes a dispute workable rather than settling it?

- A) “The criterion fails by staying hidden, and a hidden standard produces the commonest kind of useless disagreement”
- B) “Neither question settles the matter, and both move it to the one place where it can be argued productively”
- C) “Academic criticism makes the standard explicit as a matter of convention”
- D) “Evidence fails by being about something else, which is why a review that spends its length on the author's biography is not a review of the book”

90.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Critics who name their standards can be disagreed with. Critics who do not can only be ignored or believed. A reader who wants to argue with a review therefore needs ____

Which choice most logically completes the text?

- A) a longer review with more quotation
- B) a reviewer who shares the reader's taste
- C) an author willing to answer the charge
- D) the standard the review was using

90.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “satirize” most nearly mean?

- A) describe in detail
- B) borrow a style from
- C) attack by ridicule
- D) satisfy the demands of

90.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the two questions in the text?

- A) They define the criterion for the first time
- B) They show what an explicit standard lets a reader ask
- C) They report the year Johnson insisted on the point
- D) They settle both of the disputes they raise

90.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 40 of this book. It reports three reviews of one first performance, notes that all three critics sat in the same room for the same thirty-three minutes, and says each had a different standard in mind.

Text 1 says a hidden criterion produces useless disagreement. Based on Text 2, which choice best illustrates that outcome?

- A) Three reviews of one evening disagreed because each wanted something different
- B) The audience fought in the aisles within the first minutes
- C) Stravinsky gave several accounts that do not agree either
- D) The theater had opened only six weeks before

90.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A claim fails by being unfalsifiable. ___ evidence fails by being about something else, which is why a review that spends its length on a biography is not a review of the book.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) In other words,
- C) All the same,
- D) Similarly,

90.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Critics who name their standards can be disagreed with ___ and critics who do not can only be ignored or believed.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) with and
- B) with, and
- C) with; and
- D) with and,

90.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The criterion is the part most often left out.
- A hidden standard produces useless disagreement.
- Academic criticism makes the standard explicit by convention.
- The convention costs it readers and buys it the ability to be refuted.

The student wants to explain what academic criticism gains by naming its standard. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The criterion is the part of a judgment most often left out
- B) A hidden standard produces the commonest useless disagreement
- C) Academic criticism makes its standard explicit by convention
- D) Stating the standard loses readers and buys the chance of being refuted

ملخص المقطع 90 بالعربية

خلاصة: للحكم النقدي الذي يمكن فحصه ثلاثة أجزاء: دعوى يجب أن تقول شيئاً قابلاً للتكذيب، ودليل مأخوذ من العمل نفسه مقتبساً أو موصوفاً وصفاً يتيح للقارئ التحقق، ومقياس، أي المقياس الذي يُحاكم العمل إليه، وهو الجزء الأكثر إغفالاً.

المعنى: المعنى أن كل جزء يفسد فساداً مميّزاً: الدعوى تفسد بأن تكون غير قابلة للتكذيب، كناقد بسمي رواية مهمة ولا يقول ما الذي يجعلها غير مهمة؛ والدليل يفسد بأن يكون عن شيء آخر؛ والمقياس يفسد ببقائه خفياً.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الآلية: المعيار الخفي يُنتج أشيع خلاف عديم النفع، حيث يتجادل اثنان في عمل وهما يقيسانه إلى شيئين مختلفين. وإظهار المعيار يغيّر الجدال، فمن قال إن مسرحية تفشل لعدم اتساق شخصياتها نفسياً جاز أن يُسأل أهذا هو المقياس الصحيح.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب المعيار الخفي مُيسراً للحكم، مع أن النص يجعله سبب الخلاف العقيم. ويقترن المقطع بالمقطع الأربعين.

Three Ways a Survey Fails

A survey can be wrong in three separate ways, and the remedies are different in each case. The first is the sampling frame, meaning the list from which the people to be asked are drawn. A telephone poll on landlines reaches a list older and more settled than the population. No amount of courtesy on the call fixes a frame that excludes a third of the country.

The second is nonresponse, which is the failure of selected people to answer at all. Response rates to telephone polls in the United States have fallen from around seventy percent in the 1970s to under ten percent, and the people who still answer are not a small copy of those who do not. They are more interested in the subject, more trusting of institutions and older. Statisticians correct for this by weighting, which multiplies the answers of underrepresented groups, and weighting works only for characteristics that are known and measured.

The third failure is in the instrument, and it includes the wording effects from the earlier passage in this strand along with order effects and the pressure to give an acceptable answer. Respondents understate how much they drink and overstate whether they voted, by a margin large enough to be measured against official records. A bias of this kind is not removed by a larger sample. That is the central point of all three failures. Sample size governs only random error, so a poorly framed poll of fifty thousand people is worse than a well framed poll of a thousand, and more confident. Good practice therefore reports the frame, the response rate and the weighting scheme alongside the figures. Where a report gives only a margin of error, that margin describes the least of its problems.

WHAT THIS PASSAGE IS FOR

- A landline frame excludes much of the population.
 - Response rates have fallen from about seventy percent to under ten.
 - Sample size governs only random error.
-

Questions 91.1 to 91.10

on passage 91, Three Ways a Survey Fails

91.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Telephone response rates fell below ten percent
- B) A bias of any of the three kinds survives a larger sample
- C) Weighting corrects for every unmeasured difference
- D) A margin of error describes the worst of the problems

91.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does weighting correct for?

- A) Every characteristic of those who refuse
- B) The exclusion of a third of the country
- C) The pressure to give an acceptable answer
- D) Characteristics that are known and measured

91.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the people who still answer differ from those who do not?

- A) “the people who still answer are not a small copy of those who do not. They are more interested in the subject, more trusting of institutions and older”
- B) “A telephone poll on landlines reaches a list older and more settled than the population”
- C) “Respondents understate how much they drink and overstate whether they voted”
- D) “Sample size governs only random error, so a poorly framed poll of fifty thousand people is worse than a well framed poll of a thousand”

91.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Sample size governs only random error, so a poorly framed poll of fifty thousand people is worse than a well framed poll of a thousand, and more confident. A reader shown a very large sample should therefore ____

Which choice most logically completes the text?

- A) treat the figure as settled
- B) expect a smaller frame problem
- C) ask about the frame as well
- D) weight the answers by age

91.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “bias” most nearly mean?

- A) a personal prejudice
- B) a systematic error
- C) a random fluctuation
- D) a diagonal cut of cloth

91.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about fifty thousand people?

- A) It shows size failing to rescue a bad frame
- B) It defines nonresponse for a reader
- C) It reports the fall in response rates
- D) It argues that small polls are always better

91.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 41 of this book. It reports a 1940 test in which about fifty-four percent would forbid public speeches while about seventy-five percent would refuse to allow them, a gap of roughly twenty points made by the wording alone.

Text 1 names the instrument as one source of error. Based on Text 2, which choice best illustrates that source?

- A) A landline list older than the population
- B) A response rate that has fallen below ten percent
- C) A weighting scheme published with the figures
- D) A twenty-point gap between forbid and allow

91.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A telephone poll on landlines reaches a list older and more settled than the population. ___ no amount of courtesy on the call fixes a frame that excludes a third of the country.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For instance,
- C) As a result,
- D) In other words,

91.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A survey can be wrong in three separate ways ___ and the remedies are different in each case.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) ways, and
- B) ways and
- C) ways; and
- D) ways and,

91.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The three failures are the frame, nonresponse and the instrument.
- A bias of that kind is not removed by a larger sample.
- Good practice reports the frame, the response rate and the weighting scheme.
- A margin of error describes the least of the problems.

The student wants to explain what a report should publish alongside its figures. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The three failures are the frame, nonresponse and the instrument
- A margin of error describes the least of the problems
- The frame, the response rate and the weighting, since a margin of error covers the smallest fault
- Good practice reports the frame and the response rate

ملخص المقطع 91 بالعربية

خلاصة: يمكن أن يُخطئ المسح في ثلاث جهات منفصلة، وعلاج كل واحدة مختلف. أولها إطار المعاينة، أي القائمة التي يُسحب منها من سُؤالون. فمسح هاتفي على الخطوط الأرضية يصل إلى قائمة أكبر سناً وأكثر استقراراً من السكان. المعنى: المعنى أن الثانية عدم الاستجابة، وهي تخلف المختارين عن الإجابة أصلاً. فقد هبطت نسب الاستجابة للمسوح الهاتفية في الولايات المتحدة من نحو سبعين في المئة في السبعينيات إلى أقل من عشرة، ومن يجيب اليوم ليس نسخة صغيرة ممّن لا يجيب. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: والثالثة في الأداة، وتشمل آثار الصياغة من المقطع السابق مع آثار الترتيب وضغط الجواب المقبول. وبيت القصيد في الثلاث أن تحيزاً من هذا النوع لا يزيله حجم أكبر للعينة، فحجم العينة يحكم الخطأ العشوائي وحده. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الترجيح مُصلياً لكل فرق، مع أنه لا يعمل إلا في خصائص معروفة ومقاسة. ويقترن المقطع بالمقطع الحادي والأربعين.

Why the Lot Matters

Matching looks like a reasonable substitute for a lottery and is not. A researcher comparing two schools can match them on size, income, and the qualifications of the teachers, and still be defeated by something not on the list. The danger is a confounder, meaning a difference between the groups that affects the outcome as well as the treatment, and the fatal property of confounders is that the dangerous ones are the ones nobody thought of.

Randomization solves a problem that matching cannot. When a lottery is used to allocate people to a treatment and to a control group, meaning the group that does not receive it, the two groups are made alike on every characteristic at once. That includes the ones nobody has measured or imagined. That is a remarkable property and it is purely a consequence of chance. It also comes with a stated size of uncertainty, because the two groups will differ a little by luck, and the arithmetic of that luck is known.

What randomization does not do is also worth stating. It says nothing about whether the result transfers to another population, another scale or another decade. A trial in seventy-nine Tennessee schools tells us about those schools in those years. It cannot tell us whether the state would have found enough good teachers to staff small classes everywhere, which is a question about supply rather than about effect. It also does not survive people dropping out in different numbers from the two groups, which is the commonest way a good design is spoiled in practice. Medicine faced the same argument a generation earlier and settled it the same way. The streptomycin trial of 1948 is usually cited as the first properly randomized clinical trial.

WHAT THIS PASSAGE IS FOR

- The dangerous confounders are the ones nobody thought of.
 - A lottery makes groups alike on characteristics nobody measured.
 - Randomization says nothing about transfer to another population.
-

Questions 92.1 to 92.10

on passage 92, Why the Lot Matters

92.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The streptomycin trial of 1948 is usually cited first
- B) Matching equalizes the characteristics on the list
- C) A lottery balances what nobody has thought to measure
- D) A randomized result transfers to any population

92.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the fatal property of confounders?

- A) The dangerous ones go unthought of
- B) They are listed before the study begins
- C) They affect only the control group
- D) They vanish when people drop out

92.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the balance a lottery produces is a matter of chance?

- A) “A researcher comparing two schools can match them on size, income, and the qualifications of the teachers”
- B) “That is a remarkable property and it is purely a consequence of chance. It also comes with a stated size of uncertainty”
- C) “A trial in seventy-nine Tennessee schools tells us about those schools in those years”
- D) “It also does not survive people dropping out in different numbers from the two groups”

92.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It says nothing about whether the result transfers to another population, another scale or another decade. A state that found small classes effective in seventy-nine schools would therefore ____

Which choice most logically completes the text?

- A) know that the result holds statewide
- B) have balanced the unmeasured differences
- C) be running an unrandomized comparison
- D) still face a question about supply

92.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “allocate” most nearly mean?

- A) speak at length about
- B) set aside as a reserve
- C) assign to a group
- D) remove from a list

92.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the Tennessee schools?

- A) It defines a control group for a reader
- B) It shows the limit of what a trial covers
- C) It dates the first randomized clinical trial
- D) It argues that the trial was badly run

92.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 42 of this book. It describes a Tennessee experiment in which about eleven thousand six hundred pupils were assigned by lot to small or regular classes, and ends by saying nothing except the class size distinguished the groups at the start.

Text 1 says a lottery makes two groups alike at once. Based on Text 2, which choice best describes that property in practice?

- A) Nothing but the class size distinguished the groups
- B) Small classes are common in rich districts
- C) The experiment also cost a great deal to run
- D) The gap was larger for children from poorer families

92.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Matching looks like a reasonable substitute for a lottery and is not. ____ a researcher comparing two schools can still be defeated by something not on the list.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) After all,

92.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Randomization solves a problem that matching cannot ____ and the two groups are made alike on every characteristic at once.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cannot and
- B) cannot, and
- C) cannot; and
- D) cannot and,

92.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A lottery makes the groups alike on every characteristic at once.
- It comes with a stated size of uncertainty.
- It says nothing about transfer to another population or decade.
- It fails when people drop out unevenly.

The student wants to explain the exact reach of a randomized result. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A lottery makes the groups alike on every characteristic at once
- B) The design comes with a stated size of uncertainty
- C) It fails when people drop out unevenly from the two groups
- D) The groups are balanced here, and nothing follows about another place or time

ملخص المقطع 92 بالعربية

خلاصة: يبدو التماثل بديلاً معقولاً من القرعة وليس كذلك. فالباحث الذي يقارن مدرستين يستطيع أن يماثلهما في الحجم والدخل ومؤشرات المعلمين، ثم يهزمه شيء ليس في القائمة.

المعنى: المعنى أن الخطر هو المثلث، أي فرق بين المجموعتين يؤثر في النتيجة كما يؤثر فيها العلاج، وخصيصته القائلة أن المثلثات الخطيرة هي التي لم يفكر فيها أحد. والعشوائية تحل مشكلة لا يحلها التماثل.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: حين تُستعمل القرعة لتوزيع الناس على علاج وعلى مجموعة ضابطة، تُصنع المجموعتان متماثلتين في كل خصيصة في وقت واحد، ومنها ما لم يقسه أحد ولم يتخيله، وهي خصيصة لافتة أثر خالص للمصادفة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب نتيجة التجربة منقولة إلى كل سكان، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الثاني والأربعين.

Three Reasons a Pattern Misleads

Two measurements that correlate may stand in any of four relations, and only one of them licenses action. The first possibility is the obvious one: the first thing causes the second. The second is reverse causation, meaning that the outcome is producing the supposed cause. Hospitals with more staff per bed have higher death rates, which looks alarming until one notices that the sickest patients are sent to the best staffed units.

The third possibility is a common cause, which is what the chocolate and Nobel case shows. The fourth is a selection effect, meaning a pattern produced by how the cases entered the data at all. A study of the fitness of soldiers says little about the population, because the unfit were never enlisted. A famous wartime example concerns aircraft armor. The planes that returned had most of their damage on the wings, so armoring the wings was exactly the wrong conclusion. The planes hit in the engines had not come back to be inspected.

Distinguishing the four requires something beyond the correlation. Time order helps a little, since a cause must precede its effect, though anticipation can reverse the apparent order. The strongest ordinary tool is a source of variation unrelated to everything else of interest, which is what a lottery provides and what a natural experiment imitates. Until something of that kind is in hand, a correlation is a question rather than a finding. Abraham Wald worked out the aircraft armor problem for the United States Navy in 1943. His solution was to reason about the missing planes rather than the ones in front of him. Dose response helps more, because a cause that acts in proportion is harder to fake. The strongest ordinary tool remains an outside source of variation that nobody chose.

WHAT THIS PASSAGE IS FOR

- Hospitals with more staff per bed have higher death rates.
 - A selection effect is a pattern produced by how cases entered the data.
 - A correlation on its own is a question rather than a finding.
-

Questions 93.1 to 93.10

on passage 93, Three Reasons a Pattern Misleads

93.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Wald worked out the armor problem in 1943
- B) The best staffed units receive the sickest patients
- C) A correlation licenses action by itself
- D) Only one of four relations licenses action

93.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did the returning planes show damage on the wings?

- A) Because the wings carried the least armor
- B) Because planes hit in the engines did not return
- C) Because the unfit were never enlisted at all
- D) Because the sickest patients went to the best units

93.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a correlation becomes a finding only with outside variation?

- A) “Hospitals with more staff per bed have higher death rates”
- B) “Time order helps a little, since a cause must precede its effect”
- C) “Until something of that kind is in hand, a correlation is a question rather than a finding”
- D) “His solution was to reason about the missing planes rather than the ones in front of him”

93.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A study of the fitness of soldiers says little about the population, because the unfit were never enlisted. A survey of the graduates of a selective course would therefore ____

Which choice most logically completes the text?

- A) describe the people the course admitted
- B) measure the population at large
- C) reverse the direction of the cause
- D) require a dose response to interpret

93.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “correlate” most nearly mean?

- A) cause one another
- B) agree in meaning
- C) arrive at the same time
- D) move together in value

93.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the hospital example?

- A) It defines a selection effect for a reader
- B) It reports what Wald recommended in 1943
- C) It gives a case of the second possibility
- D) It argues that staffing raises death rates

93.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 43 of this book. It reports a tight fit between chocolate eaten and Nobel prizes won across twenty-three countries and notes that rich countries eat more chocolate and also fund more laboratories.

Text 1 names a common cause as its third possibility. Based on Text 2, which choice best supplies the common cause in that case?

- A) The crudeness of the prize measure
- B) The wealth that buys both chocolate and laboratories
- C) A country of two million with one laureate
- D) A joke with a serious point behind it

93.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Time order helps a little, since a cause must precede its effect. ____ anticipation can reverse the apparent order.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) As a result,
- C) For instance,
- D) In other words,

93.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The planes that returned had most of their damage on the wings ____ and the planes hit in the engines had not come back.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) wings and
- B) wings; and
- C) wings, and
- D) wings and,

93.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The planes that returned had most of their damage on the wings.
- The planes hit in the engines had not come back to be inspected.
- The pattern was produced by how the cases entered the data.
- Wald reasoned about the missing planes rather than the ones in front of him.

The student wants to explain why armoring the wings was the wrong conclusion. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The wings showed damage because the planes hit elsewhere never arrived to be seen
- B) The returning planes had most of their damage on the wings
- C) Wald reasoned about the planes that were missing
- D) The pattern came from how the cases entered the data

ملخص المقطع 93 بالعربية

خلاصة: قياسان يتلازمان قد يقومان في أي من أربع علاقات، وواحدة منها وحدها تُجيز العمل. الأولى الظاهرة: الأول يُحدث الثاني. والثانية السببية المعكوسة، أي أن النتيجة هي التي تُحدث السبب المفترض.

المعنى: المعنى أن المستشفيات ذات العدد الأكبر من العاملين لكل سرير فيها معدلات وفاة أعلى، وهذا مُقلق حتى يُلاحظ أن أشد المرضى يُرسلون إلى أفضل الأقسام تجهيزًا. والثالثة سبب مشترك، وهو ما تُظهره حالة الشوكولاتة ونوبل.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: والرابعة أثر الانتقاء، أي نمط ينشأ من كيفية دخول الحالات في البيانات أصلًا. فدراسة لياقة الجنود تقول قليلًا عن السكان لأن غير اللائقين لم يُجنّدوا، والطائرات العائدة كان أكثر عطبها في الأجنحة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفق المتوقع هنا أن يُقرأ التلازم إجازة للعمل، مع أن واحدة من أربع علاقات وحدها تُجيزه. ويفترن المقطع بالمقطع الثالث والأربعين.

Four Numbers and What They Hide

Any set of numbers can be summarized by four quantities, and each one hides something different. The mean is the total divided by the count. The median is the middle case. The standard deviation, meaning a measure of how far the typical case sits from the average, describes the spread. And the skew describes whether the distribution has a long tail on one side, which income always does and height never does.

Two groups can share a mean and a median and differ in every way that matters. A town where everyone earns thirty thousand dollars and a town where half earn ten and half earn fifty have the same mean, and a policy built for one would be useless in the other. Two schools with the same average score may differ in whether the result comes from a uniform middle or from a split between a strong half and a failing half, and only the spread shows it.

The practical rule is to ask for the shape and not the summary. A histogram, which sorts the cases into bins and draws the counts, usually settles in one glance questions that an aggregate figure leaves open. Where a shape is not available, two numbers are much better than one, and a mean with a standard deviation is the usual pairing. The worst case is a single figure with no spread and no sample size, which is also the most common way a statistic arrives in public. Francis Anscombe assembled four data sets in 1973 with identical means, variances and correlations and completely different shapes. The point of the exercise was that anyone who had plotted them would have seen the difference immediately. A school report that gives an average with no spread is withholding the more useful of the two numbers.

WHAT THIS PASSAGE IS FOR

- Each summary number hides something different.
 - Two towns can share a mean and differ in everything that matters.
 - A single figure with no spread and no sample size is the worst case.
-

Questions 94.1 to 94.10

on passage 94, Four Numbers and What They Hide

94.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Each summary figure hides something the shape would show
- B) Anscombe published four data sets in 1973
- C) Income distributions always have a long upper tail
- D) A single figure with no spread is enough

94.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the skew describe?

- A) How far the typical case sits from the average
- B) The total divided by the count of cases
- C) Whether a long tail sits on one side
- D) Which case stands in the middle of the line

94.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that two groups can match on the summaries and differ entirely?

- A) “The mean is the total divided by the count. The median is the middle case”
- B) “A histogram, which sorts the cases into bins and draws the counts, usually settles in one glance questions that an aggregate figure leaves open”
- C) “Where a shape is not available, two numbers are much better than one”
- D) “Francis Anscombe assembled four data sets in 1973 with identical means, variances and correlations and completely different shapes”

94.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A town where everyone earns thirty thousand dollars and a town where half earn ten and half earn fifty have the same mean, and a policy built for one would be useless in the other. A planner given only the mean would therefore ____

Which choice most logically completes the text?

- A) know which town is being described
- B) be unable to tell the two apart
- C) see the long tail in the distribution
- D) have the standard deviation as well

94.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “aggregate” most nearly mean?

- A) summed into one total
- B) crushed stone for building
- C) drawn as a picture
- D) collected at random

94.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the two-school comparison?

- A) It defines the standard deviation for a reader
- B) It reports the figures in the Anscombe sets
- C) It argues that averages should be abandoned
- D) It shows the spread carrying the difference

94.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 44 of this book. It describes a street of nine households at forty thousand dollars and one at four million, where the mean of four hundred and four thousand describes nobody while the median matches the middle household.

Text 1 lists four summary quantities. Based on Text 2, which choice best describes what the first two did on the street?

- A) Both figures landed on forty thousand dollars
- B) Both figures rose with the tenth household
- C) One described nobody and the other described nine
- D) Neither figure could be calculated at all

94.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Two groups can share a mean and a median and differ in every way that matters. ___ a town where everyone earns thirty thousand dollars and a town where half earn ten and half earn fifty have the same mean.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For instance,
- C) As a result,
- D) In other words,

94.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The mean is the total divided by the count ___ and the median is the middle case.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) count and
- B) count; and
- C) count and,
- D) count, and

94.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The practical rule is to ask for the shape and not the summary.
- Where no shape is available, two numbers beat one.
- A mean with a standard deviation is the usual pairing.
- The worst case is a single figure with no spread and no sample size.

The student wants to explain what the worst way to publish a statistic is. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The practical rule is to ask for the shape and not the summary
- B) One figure alone, with no spread and no sample size, is the least a reader can use
- C) A mean with a standard deviation is the usual pairing
- D) Where no shape is available, two numbers beat one

ملخص المقطع 94 بالعربية

خلاصة: أي مجموعة أرقام تُلخّص بأربع كمّيات، وكلّ واحدة تحجب شيئاً آخر: المتوسط هو المجموع مقسوماً على العدد، والوسيط هو الحالة الوسطى، والانحراف المعياري مقياس لبعدها الحالة النمطية عن المتوسط، والالتواء يصف أذنب التوزيع طويل في جهة. المعنى: المعنى أنّ مجموعتين قد تشتركان في المتوسط والوسيط وتختلفان في كلّ ما يهمّ: فبلدة يكسب فيها الجميع ثلاثين ألفاً وبلدة يكسب نصفها عشرة ونصفها خمسين لهما المتوسط نفسه، وسياسة مبنية لإحداهما عديمة النفع في الأخرى. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: ومدرستان لهما المعدل نفسه قد تختلفان في أنّ النتيجة من وسط متساوٍ أو من انقسام بين نصف قويّ ونصف راسب، ولا يُظهر ذلك إلا الانتشار. والقاعدة العملية أنّ تُطلب الهيئة لا الملخص. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقنّع برقم واحد بلا انتشار، مع أنّ النض يسمّيه أسوأ الحالات. ويقترن المقطع بالمقطع الرابع والأربعين.

Price, Salience and Substitution

An incentive works through three properties. The size of the sum is often the least important. The first is salience, meaning how noticeable the cost or benefit is at the moment of choosing. A parking charge paid at a meter before walking away is salient; the same amount added to an annual tax bill is not, and the two produce quite different behavior for identical money.

The second is the availability of a substitute, meaning an alternative that is easy to switch to. A charge of five cents on plastic bags cut their use sharply in Ireland and in Wales. A cloth bag is a close substitute and the decision is made at the till. A charge of the same size on gasoline changes very little in the short run, because nobody can substitute for the journey to work this week. The lesson is that the effect of a price depends on what else is available, not on the price alone.

The third property is timing. A cost that arrives at the moment of the decision changes behavior more than a cost that arrives in three months, and people discount the future steeply. That is why deposit schemes on bottles work and why fines for late payment often do not. Together the three properties explain why a well-placed nuisance can outperform a large sum badly placed. They also explain why many incentives fail. The money is real but arrives in the wrong form, at the wrong moment, where nothing can be switched to. Economists call the extreme cases of this inelastic demand, and they test for it by looking at what happened when prices moved. Fuel and tobacco are the standard examples, and both become more responsive over a period of years.

WHAT THIS PASSAGE IS FOR

- Salience is how noticeable a cost is at the moment of choosing.
 - The effect of a price depends on what else is available.
 - People discount the future steeply, so deferred costs change less.
-

Questions 95.1 to 95.10

on passage 95, Price, Salience and Substitution

95.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A five cent charge cut plastic bag use sharply
- B) An incentive works through placement rather than size
- C) The size of the sum is the most important property
- D) Fuel and tobacco become more responsive over years

95.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why does a charge on gasoline change little?

- A) Because the sum charged is too small
- B) Because the cost arrives in three months
- C) Because the charge is paid at a meter
- D) Because the journey has no substitute

95.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the same sum can act differently depending on where it lands?

- A) “A parking charge paid at a meter before walking away is salient; the same amount added to an annual tax bill is not, and the two produce quite different behavior for identical money”
- B) “A charge of five cents on plastic bags cut their use sharply in Ireland and in Wales”
- C) “Economists call the extreme cases of this inelastic demand, and they test for it by looking at what happened when prices moved”
- D) “A cost that arrives at the moment of the decision changes behavior more than a cost that arrives in three months”

95.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A cost that arrives at the moment of the decision changes behavior more than a cost that arrives in three months, and people discount the future steeply. A fine for late payment therefore ____

Which choice most logically completes the text?

- A) acts at the moment of the decision
- B) offers a close substitute to the payer
- C) arrives too late to shape the choice
- D) works better than a bottle deposit

95.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “incentive” most nearly mean?

- A) a motive of conscience
- B) a cost or benefit that steers a choice
- C) a bonus paid at the end of a year
- D) a rule backed by a penalty

95.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that sets the amount of money aside?

- A) It demotes the obvious property before the three
- B) It defines salience for a reader
- C) It reports the charge on plastic bags
- D) It concludes that price has no effect

95.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 45 of this book. It describes parking rates adjusted block by block in San Francisco and says the policy works by letting the price reward whoever is willing to walk two blocks.

Text 1 names a substitute as the second property. Based on Text 2, which choice best describes the substitute a driver had?

- A) A tax bill arriving once a year
- B) A sensor reporting the empty space
- C) A campaign asking drivers to circle less
- D) A cheaper block two streets away

95.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A cloth bag is a close substitute and the decision is made at the till. ____ a charge of the same size on gasoline changes very little in the short run.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) By contrast,
- D) In other words,

95.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

An incentive works through three properties ____ and the size of the sum is often the least important.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) properties, and
- B) properties and
- C) properties; and
- D) properties and,

95.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The money is real but arrives in the wrong form.
- It arrives at the wrong moment.
- It arrives where nothing can be switched to.
- A well-placed nuisance can outperform a large sum badly placed.

The student wants to explain why many incentives fail. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The money in a failing incentive is real enough
- B) A well-placed nuisance can outperform a large sum
- C) Real money fails when its form, its moment and the alternatives are all wrong
- D) It arrives where nothing at all can be switched to

ملخص المقطع 95 بالعربية

خلاصة: يعمل المُخَيَّر بثلاث خصائص، وحجم المبلغ أقلها أهمية في الغالب. أولاً البروز، أي مدى ظهور الكلفة أو الفائدة في لحظة الاختيار: فاجرة ركن تُدفع عند عَدَد قبل المشي بارزة، والمبلغ نفسه مضافاً إلى فاتورة ضريبة سنوية ليس بارزاً. المعنى: المعنى أنَّ الثانية وجود البديل، أي خيار يسهل الانتقال إليه. فرسمٌ بخمسة سنتات على الأكياس البلاستيكية قلص استعمالها قليلاً حاداً في أيرلندا وويلز، لأنَّ كيس القماش بديل قريب والقرار يُتخذ عند الصندوق. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: ورسمٌ بالحجم نفسه على البنزين يغيّر قليلاً جداً في الأمد القصير، لأنَّ أحدًا لا يستطيع أن يستبدل رحلة العمل هذا الأسبوع. والثالثة التوقيت: فكلّفة تأتي في لحظة القرار تغيّر السلوك أكثر من كلفة تأتي بعد ثلاثة أشهر. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب حجم المبلغ هو الحاكم، مع أنَّ النض يجعله أقل الخصائص أهمية. ويقترن المقطع بالمقطع الخامس والأربعين.

How a Norm Is Enforced

An unwritten rule survives because breaking it costs something, and the costs are supplied by other people. The machinery has four parts. There must be observation, so that a breach is seen at all, and there must be a sanction, meaning a penalty applied by other people rather than by law, which may be as small as a look. There must be some willingness to apply it, since a sanction nobody bothers with is no sanction. And the rule itself must be known, because people cannot follow a rule they have no way of inferring.

The strength of a norm therefore depends on visibility more than on agreement. Littering falls where people can be seen littering. Tax compliance is higher where returns are public, as they are in Norway. A norm that governs private behavior has no enforcement machinery at all and survives only as a belief. This also explains why norms collapse quickly rather than fading. Once enough people visibly break a rule, the descriptive norm, meaning what people actually do as distinct from what they say should be done, has changed. Each further breach is then cheaper than the last.

The hotel towel result follows directly. A card that reports the descriptive norm is providing the information that the enforcement machinery needs and cannot otherwise get, since a guest cannot see what strangers did in other rooms. This also predicts the failure case, which has been observed: telling people that most of their neighbors do the undesirable thing makes the undesirable thing more common. The message is only as good as the fact it reports. Campaigns that advertise how widespread a problem is run exactly that risk. Several anti-littering and tax-evasion campaigns have been measured doing harm for that reason. The practical question about any unwritten rule is therefore who can see a breach.

WHAT THIS PASSAGE IS FOR

- Norm enforcement needs observation, a sanction and willingness to use it.
 - Strength depends on visibility more than on agreement.
 - Reporting an undesirable norm makes it more common.
-

Questions 96.1 to 96.10

on passage 96, How a Norm Is Enforced

96.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Tax compliance is higher where returns are public
- B) A sanction may be as small as a look
- C) The strength of a norm depends on what can be seen
- D) A norm governing private behavior is the strongest kind

96.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is a sanction?

- A) A penalty applied by other people
- B) A rule written into the law
- C) What people actually do in practice
- D) A belief held in private

96.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a norm can be made worse by reporting it?

- A) “Littering falls where people can be seen littering”
- B) “telling people that most of their neighbors do the undesirable thing makes the undesirable thing more common”
- C) “Each further breach is then cheaper than the last”
- D) “There must be some willingness to apply it, since a sanction nobody bothers with is no sanction”

96.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A norm that governs private behavior has no enforcement machinery at all and survives only as a belief. A rule about what people do behind closed doors would therefore ____

Which choice most logically completes the text?

- A) be enforced by a look from a neighbor
- B) depend on returns being made public
- C) collapse faster than a visible rule
- D) hold only as long as it is believed

96.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “norm” most nearly mean?

- A) an average figure
- B) a written statute
- C) an unwritten rule
- D) a personal habit

96.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the hotel towel result?

- A) It defines the descriptive norm for a reader
- B) It fits an earlier finding to the machinery
- C) It reports where tax returns are public
- D) It argues that the card had no effect

96.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 46 of this book. It reports a hotel experiment in which a card saying that most guests reuse their towels raised reuse by roughly a quarter, and a card naming the room itself did better still.

Text 1 says visibility decides the strength of a norm. Based on Text 2, which choice best shows visibility being manufactured?

- A) A card telling a guest what others in that room did
- B) Housekeeping staff recording the hung towels
- C) An appeal asking guests to save the environment
- D) A hotel that saved money on its laundry

96.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The strength of a norm therefore depends on visibility more than on agreement. ____ littering falls where people can be seen littering.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For instance,

96.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

An unwritten rule survives because breaking it costs something ____ and the costs are supplied by other people.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) something and
- B) something, and
- C) something; and
- D) something and,

96.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A card that reports the descriptive norm supplies the missing information.
- The message is only as good as the fact it reports.
- Telling people that most neighbors do the undesirable thing makes it more common.
- Campaigns that advertise how widespread a problem is run that risk.

The student wants to explain why a campaign can do harm. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A card reporting the descriptive norm supplies missing information
- B) The message is only as good as the fact that it reports
- C) Campaigns advertising a widespread problem run exactly that risk
- D) Advertising how many people offend tells the rest that offending is normal

ملخص المقطع 96 بالعربية

خلاصة: القاعدة غير المكتوبة تبقى لأن نقضها يُكلف شيئاً، والكُلّف يقَدِّمها الناس الآخرون. وللاّلة أربعة أجزاء: لا بدّ من ملاحظة حتّى يُرى النقص، ولا بدّ من جزاء، أيّ عقوبة يوقعها الناس لا القانون، وقد تكون نظرة.

المعنى: المعنى أنّه لا بدّ أيضاً من استعداد لإيقاعه، فجزاء لا يبالي به أحد ليس جزاءً، ولا بدّ أن تكون القاعدة معلومة لأنّ الناس لا يتبعون قاعدة لا سبيل لهم إلى استنتاجها. فقوّة العُرف تتعلّق بالظهور أكثر من الاتفاق.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: فالقَدْر يقلّ حيث يُرى الملقى، والالتزام الضريبيّ أعلى حيث تكون الإقرارات علنية كما في النرويج، وعُرف يحكم سلوكاً خاصاً لا آلة تنفيذ له فيبقى اعتقاداً فحسب.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب العُرف الخاصّ أقوى، مع أنّ النّص ينزع عنه آلة التنفيذ. ويقترن المقطع بالمقطع السادس والأربعين.

The Trade a Household Makes

Where people live is largely settled by a single trade. Land near the center of a city is scarce and therefore expensive, and travel from the edge costs time and money. A household chooses a point on that line, and the economists' description of the choice is bid rent, meaning the amount a household or firm will pay for land at a given distance from the center. Bid rent falls as distance rises, and the slope of the fall is set by the cost of travel.

Two consequences follow immediately. If travel becomes cheaper or faster, the slope flattens and the city spreads, which is what streetcars, then cars, then suburban rail each did in turn. If travel becomes dearer or slower, the city tightens. The second consequence concerns who ends up where. Households differ in how much they perceive travel time to cost them. A family with two earners and expensive hours may outbid a family with cheaper hours for land near the center, or may not, depending on how each values space.

The model is crude and useful. It predicts that firms needing many workers cluster where many workers can reach them, which is why offices concentrate. It predicts that a new road reduces congestion for a while and then fills, since cheaper travel brings more distant land into play. The quantity that decides all of this is generalized cost, meaning travel time and money added together as one figure, and transport planners calculate it for every scheme they assess. The original formal version is credited to William Alonso in 1964, with earlier agricultural versions going back to von Thunen in 1826. Both were arguing about farms before anyone applied the reasoning to commuters. Every one of these predictions can be and has been tested against city data.

WHAT THIS PASSAGE IS FOR

- Bid rent falls with distance and its slope is set by travel cost.
 - Cheaper travel flattens the slope and spreads the city.
 - A new road fills because cheaper travel brings distant land into play.
-

Questions 97.1 to 97.10on passage 97, *The Trade a Household Makes***97.1**

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Alonso set out the formal version in 1964
- B) Offices concentrate where many workers can reach them
- C) Land near the center is cheap and plentiful
- D) The cost of travel sets the shape of the city

97.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does generalized cost combine?

- A) Rent and the price of land
- B) Travel time and money
- C) Distance and building height
- D) Congestion and road width

97.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a new road buys less relief than it seems to?

- A) “Land near the center of a city is scarce and therefore expensive”
- B) “It predicts that firms needing many workers cluster where many workers can reach them”
- C) “It predicts that a new road reduces congestion for a while and then fills, since cheaper travel brings more distant land into play”
- D) “Households differ in how much they perceive travel time to cost them”

97.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

If travel becomes cheaper or faster, the slope flattens and the city spreads. If travel becomes dearer or slower, the city tightens. A sharp rise in the price of fuel would therefore ____

Which choice most logically completes the text?

- A) steepen the slope and draw the city in
- B) flatten the slope and spread the city
- C) leave the shape of the city unchanged
- D) raise the number of ways out of a block

97.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “perceive” most nearly mean?

- A) see with the eyes
- B) understand in full
- C) measure exactly
- D) reckon the cost of

97.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the model crude and useful?

- A) It defines bid rent for a reader
- B) It dates the formal version of the model
- C) It concedes a weakness before listing the predictions
- D) It abandons the model as unworkable

97.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 47 of this book. It reports that Boston spread from a two-mile city to a ten-mile one between 1870 and 1900 as omnibus, railway and streetcar put land four or five miles out within reach of a downtown office.

Text 1 says cheaper travel flattens the slope and spreads a city. Based on Text 2, which choice best records that spreading?

- A) A clerk who walked to a counting house by eight
- B) A two-mile city becoming a ten-mile one
- C) A fare of five cents in each direction
- D) Builders buying fields along the new lines

97.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Bid rent falls as distance rises, and the slope of the fall is set by the cost of travel. ____ two consequences follow immediately.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) By contrast,
- C) For instance,
- D) In other words,

97.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Land near the center of a city is scarce and therefore expensive ____ and travel from the edge costs time and money.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) expensive and
- B) expensive; and
- C) expensive, and
- D) expensive and,

97.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The slope of bid rent is set by the cost of travel.
- Generalized cost adds travel time and money into one figure.
- Transport planners calculate it for every scheme they assess.
- Every prediction of the model has been tested against city data.

The student wants to explain what a transport planner is really calculating. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) One figure combining time and money, since it is what sets the slope of the rent
- B) Generalized cost adds travel time and money into one figure
- C) The slope of bid rent is set by the cost of travel
- D) Planners calculate it for every scheme that they assess

ملخص المقطع 97 بالعربية

خلاصة: موضع سكن الناس يُحسَم في الأغلب بمقايضة واحدة: الأرض قرب مركز المدينة نادرة ولذلك غالية، والسفر من الحاشية يُكلّف وقتاً ومالاً. والأسرة تختار نقطة على ذلك الخط، ووصف الاقتصاديين للاختيار هو الإيجار المعروض. المعنى: المعنى أن الإيجار المعروض هو المبلغ الذي تدفعه أسرة أو شركة للأرض على مسافة معيّنة من المركز، وهو يهبط كلما ارتفعت المسافة، وميل الهبوط تحدّد كلفة السفر. فإن صار السفر أرخص أو أسرع استوى الميل وانتشرت المدينة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: وإن صار السفر أغلى أو أبطأ تقلّصت المدينة. والنتيجة الثانية تخض من ينتهي إلى أين، فالأشهر تختلف في تقديرها لكلفة وقت السفر عليها. والكمية التي تحكم ذلك كله هي الكلفة المعممة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُحسب أرض المركز رخيصة وفيرة، مع أن النص يقول عكسه. ويقترن المقطع بالمقطع السابع والأربعين.

What Sets a Wage

Adam Smith named the elements in 1776, and three of them still do the work. They pull in different directions. The first is what the work produces for the employer, which fixes a ceiling. The second is the reservation wage, meaning the lowest pay at which a person will take the work, which fixes a floor and depends on what else is available, including savings and family support. Between the floor and the ceiling the wage is settled by bargaining power, which is the third thing.

Bargaining power depends on how many alternatives each side has. A worker in a town with one employer is in a market called monopsony, meaning one buyer, or few, for a particular kind of labor, and such a worker has a weak position however scarce the skill. The dock arrangement engineered this deliberately. By hiring at a gate twice a day the companies ensured that each man competed against a crowd for that day only, and no individual could threaten to withdraw, since the next man was already present.

The arrangement also shows why wages can stick far below the ceiling. Dock work in the 1880s was productive and the trade was profitable, but the men had no way to capture any of it. What changed in 1889 was not productivity but organization, which replaced a thousand individual bargains with one. The longer-run effects are harder to see and matter as much. A cohort that enters a labor market in a bad year can be measured earning less than neighboring years for a decade or more afterward, because the first job sets the next. Studies of graduates entering work in recessions find losses persisting ten to fifteen years. The size varies by country and by how easily people can move between regions.

WHAT THIS PASSAGE IS FOR

- Productivity fixes a ceiling and the reservation wage a floor.
 - Gate hiring made each man compete against a crowd for one day.
 - What changed in 1889 was organization, not productivity.
-

Questions 98.1 to 98.10

on passage 98, What Sets a Wage

98.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A wage sits between two limits and bargaining decides the rest
- B) Adam Smith named the elements in 1776
- C) A scarce skill guarantees a strong position
- D) Dock work in the 1880s was unprofitable

98.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is a reservation wage?

- A) What the work produces for the employer
- B) The pay offered by a single employer
- C) The lowest pay at which work is taken
- D) The wage set by a collective bargain

98.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that organization rather than output changed the dock wage?

- A) “A worker in a town with one employer is in a market called monopsony”
- B) “By hiring at a gate twice a day the companies ensured that each man competed against a crowd for that day only”
- C) “Studies of graduates entering work in recessions find losses persisting ten to fifteen years”
- D) “What changed in 1889 was not productivity but organization, which replaced a thousand individual bargains with one”

98.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Bargaining power depends on how many alternatives each side has. A worker in a town with one employer therefore ____

Which choice most logically completes the text?

- A) can set the wage at the ceiling
- B) has little to threaten the employer with
- C) enjoys a high reservation wage
- D) earns more in a recession year

98.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “cohort” most nearly mean?

- A) a group entering at one time
- B) a companion in arms
- C) a unit of the Roman army
- D) a single worker in a market

98.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the dock arrangement?

- A) It defines monopsony for a reader
- B) It reports what Adam Smith named
- C) It argues that productivity was low
- D) It shows monopsony produced on purpose

98.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 48 of this book. It describes London dockers hired twice a day at a gate, with a crowd always larger than the number of jobs and a man who went home with nothing if he was passed over.

Text 1 says each man competed against a crowd for one day only. Based on Text 2, which choice best records that crowd?

- A) A strike that drew support from Australia
- B) A foreman who could be bought a drink
- C) A gathering always larger than the jobs available
- D) A practice that lasted in Britain until 1967

98.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The arrangement also shows why wages can stick far below the ceiling. ____ dock work in the 1880s was productive and the trade was profitable.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Indeed,
- C) As a result,
- D) In other words,

98.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Adam Smith named the elements in 1776 ____ and three of them still do the work.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) 1776 and
- B) 1776; and
- C) 1776 and,
- D) 1776, and

98.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A cohort entering a labor market in a bad year earns less for a decade or more.
- The first job sets the next.
- Studies find losses persisting ten to fifteen years.
- The size varies by country and by how easily people can move.

The student wants to explain why a first job matters for a decade. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A cohort entering in a bad year earns less for a decade
- B) Because each job sets the next, a bad first year is still paid for ten years later
- C) Studies find the losses persisting ten to fifteen years
- D) The size of the loss varies by country and by mobility

ملخص المقطع 98 بالعربية

خلاصة: سمى آدم سميث العناصر سنة ألف وسبعمئة وست وسبعين، وثلاثة منها ما زالت تعمل، وهي تجذب في جهات مختلفة. أولها ما يُنتجه العمل لصاحب العمل، وهو يثبت سقفاً.

المعنى: المعنى أن الثاني أجر التحفظ، أي أدنى أجر يقبل به الشخص العمل، وهو يثبت أرضاً ويتعلق بما هو متاح غيره من مُدَّخِر وعون أسرة. وبين الأرض والسقف يُحسم الأجر بقوة التفاوض، وهي الأمر الثالث.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: قوة التفاوض تتعلق بعدد البدائل لكل طرف. فالعامل في بلدة فيها صاحب عمل واحد يكون في سوق تُسمى احتكار الشراء، أي مشتر واحد أو قليل لنوع من العمل، وموضعه ضعيف وإن كانت المهارة نادرة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب ندرة المهارة كافية للقوة، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الثامن والأربعين.

Three Different Inequalities

Three quantities are routinely confused under one word. Income is a flow, measured over a year and gone at the end of it. Wealth, meaning what a household owns minus what it owes, is a stock, accumulated over a life and inherited across generations. Mobility is neither of those. Intergenerational mobility, meaning how much a child's position depends on the parents' position, can be high in a country with wide income gaps.

The three behave differently because their mechanisms differ. Wealth inequality is always larger than income inequality, in every country measured. Savings compound and so do debts, and a person on a modest income may still own a house. Income inequality responds to wages, taxes and transfers within a few years of any change to them. Wealth inequality responds over decades, and inheritance is the reason. Mobility depends on schooling, neighborhood, early childhood and the labor market, and it responds slowest of all.

A country can reduce income inequality by taxing and transferring while its wealth gaps widen, which several European countries did between 1980 and 2010. A country can have high mobility between the middle and the top and almost none out of the bottom, which is what the American data show. None of the three captures the experience of being poor, where stigma, insecurity and the cost of credit do damage that no distribution figure records. Wealth is measured from surveys that the very rich do not answer, so published wealth gaps are probably understated. Any serious argument about inequality therefore has to say which of the three quantities it is about, and a good many arguments never do. The three also respond at very different speeds, so a government can honestly report progress on income while the wealth gap widens behind it. Mobility is slower still, since a change in schooling shows up in the figures a generation later.

WHAT THIS PASSAGE IS FOR

- Income is a flow, wealth a stock, mobility neither.
 - Wealth inequality exceeds income inequality in every country measured.
 - A country can cut income gaps while its wealth gaps widen.
-

Questions 99.1 to 99.10

on passage 99, Three Different Inequalities

99.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Wealth inequality is larger than income inequality everywhere
- B) An argument about inequality must say which quantity it is about
- C) Published wealth gaps are probably overstated
- D) Mobility responds faster than income inequality

99.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, which of the three responds slowest?

- A) Income inequality
- B) Wealth inequality
- C) The cost of credit
- D) Mobility

99.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a government can report progress while a gap widens?

- A) “A country can reduce income inequality by taxing and transferring while its wealth gaps widen, which several European countries did between 1980 and 2010”
- B) “Savings compound and so do debts, and a person on a modest income may still own a house”
- C) “Wealth is measured from surveys that the very rich do not answer”
- D) “Mobility depends on schooling, neighborhood, early childhood and the labor market”

99.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Wealth is measured from surveys that the very rich do not answer, so published wealth gaps are probably understated. A figure taken from such a survey therefore ____

Which choice most logically completes the text?

- A) overstates the gap it reports
- B) measures income rather than wealth
- C) gives a floor rather than the figure
- D) captures the cost of credit as well

99.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “stigma” most nearly mean?

- A) a visible scar
- B) a mark of disgrace
- C) a measure of income
- D) a legal penalty

99.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the three speeds?

- A) It explains how an honest report can mislead
- B) It defines intergenerational mobility for a reader
- C) It reports what the American data show
- D) It argues that the three are really one

99.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 49 of this book. It reports a thirty-year gap in life expectancy between two Chicago neighborhoods and lists the housing, the grocery stores, the air quality and the travel to medical care that differ alongside it.

Text 1 says no distribution figure records the experience of being poor. Based on Text 2, which choice best shows a measure that reaches further?

- A) A gap of thirty years between two neighborhoods
- B) A boundary drawn by a lending map
- C) A figure published for most large cities
- D) A count of grocery stores and the quality of housing

99.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Income inequality responds to wages, taxes and transfers within a few years of any change to them. ___ wealth inequality responds over decades.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) By contrast,
- D) In other words,

99.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Income is a flow, measured over a year ___ and wealth is a stock, accumulated over a life.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) year, and
- B) year and
- C) year; and
- D) year and,

99.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- None of the three captures the experience of being poor.
- Stigma, insecurity and the cost of credit do damage.
- No distribution figure records that damage.
- Wealth gaps are probably understated by the surveys.

The student wants to explain what a figure about inequality fails to reach. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) None of the three captures the experience of being poor
- B) Wealth gaps are probably understated by the surveys used
- C) The shame, the insecurity and the price of credit, none of which a distribution records
- D) No distribution figure records the damage that is done

ملخص المقطع 99 بالعربية

خلاصة: ثلاث كميات تُخلط عادةً تحت كلمة واحدة: الدخل جريان يُقاس على سنة وينتهي بانتهائها، والثروة، أي ما تملكه الأسرة ناقصًا ما عليها، مخزون يتراكم عبر عمر ويورث عبر الأجيال، والحركة ليست واحدة منهما. المعنى: المعنى أن الحركة بين الأجيال، أي مدى اعتماد موضع الابن على موضع الأبوين، قد تكون عالية في بلد فيه فجوات دخل واسعة. والثلاث تسلك سلوكًا مختلفًا لاختلاف آلياتها: فعدم مساواة الثروة أكبر دائمًا من عدم مساواة الدخل في كل بلد قيس. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: فالمُدخرات تتراكم وكذلك الديون، ومن له دخل متوسط قد يملك بيتًا. وعدم مساواة الدخل يستجيب للأجور والضرائب والتحويلات في سنوات، وعدم مساواة الثروة يستجيب في عقود، والميراث هو السبب، والحركة أبطأ الجميع. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب فجوات الثروة المنشورة مبالغًا فيها، مع أن النص يقول إنها أقل من الواقع. ويقترن المقطع بالمقطع التاسع والأربعين.

Three Errors With Names

The base rate error is one of a family, and the family members have been demonstrated often enough to be predictable. Anchoring, meaning the pull of an irrelevant number on a later estimate, is the simplest. People asked to spin a wheel and then to estimate a quantity give answers pulled toward whatever the wheel showed, and the effect survives when the subjects are told that the number is random. Estate agents given different asking prices for the same house value it differently.

Availability is the second, and it means judging how common something is by how easily examples come to mind. Deaths from causes that make the news are overestimated by large factors and deaths from common illnesses are underestimated, and the ordering of estimates follows newspaper coverage more closely than it follows the figures. The third is framing. The same medical choice described in terms of survival and in terms of death produces different decisions from the same doctors.

What makes these useful rather than merely entertaining is that they are systematic. A random error would cancel over many judgments, but these all deviate in the same direction for the same reason, which means the mistake can be anticipated and designed around. Checklists in operating theaters, standard forms for sentencing, and the practice of writing down a prediction before seeing the outcome all exist for that purpose. Whether these patterns show that people are irrational, or only that they are using cheap rules that usually work, is the subject of the last passage in this strand. Daniel Kahneman and Amos Tversky set out the first three in a paper in 1974. Much of the later work has been about which effects survive replication and how large they really are.

WHAT THIS PASSAGE IS FOR

- Anchoring pulls an estimate toward an irrelevant number.
 - Availability makes newspaper coverage drive estimates of risk.
 - These errors are systematic rather than random.
-

Questions 100.1 to 100.10

on passage 100, Three Errors With Names

100.1

CENTRAL IDEA · EASY · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Kahneman and Tversky set out three errors in 1974
- B) Estate agents value the same house differently
- C) The errors are systematic, so they can be designed around
- D) The errors cancel out over many judgments

100.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happens when subjects are told the number is random?

- A) The pull of that number survives
- B) The estimate becomes accurate
- C) The framing effect disappears
- D) The news coverage is ignored

100.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that these errors can be planned for in advance?

- A) “Estate agents given different asking prices for the same house value it differently”
- B) “these all deviate in the same direction for the same reason, which means the mistake can be anticipated and designed around”
- C) “Deaths from causes that make the news are overestimated by large factors”
- D) “The same medical choice described in terms of survival and in terms of death produces different decisions from the same doctors”

100.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A random error would cancel over many judgments, but these all deviate in the same direction for the same reason. A hospital that averaged many such judgments would therefore ____

Which choice most logically completes the text?

- A) remove the error from the average
- B) produce a framing effect instead
- C) need a different asking price
- D) average a set of errors that agree

100.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “deviate” most nearly mean?

- A) wander without aim
- B) behave improperly
- C) depart from the truth
- D) return to an average

100.6

STRUCTURE · MEDIUM · CRAFT AND STRUCTURE

Which choice best describes the function of the list of checklists and standard forms?

- A) It defines availability for a reader
- B) It gives the remedies the systematic error allows
- C) It reports the year the first account appeared
- D) It argues that people are simply irrational

100.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 50 of this book. It reports a problem on which most of sixty doctors answered ninety-five percent where the right answer was about two, and says the five percent figure is vivid while the one in a thousand figure is not.

Text 1 calls the base rate error one of a family. Based on Text 2, which choice best describes the error itself?

- A) A rare condition is forgotten beside a vivid rate
- B) A test that never misses a case was used
- C) Sixty doctors were asked a short question
- D) Screening programs are designed around the arithmetic

100.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Availability is the second, and it means judging how common something is by how easily examples come to mind. ___ deaths from causes that make the news are overestimated by large factors.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For instance,

100.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The base rate error is one of a family ___ and the family members have been demonstrated often enough to be predictable.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) family and
- B) family, and
- C) family; and
- D) family and,

100.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The three effects are anchoring, availability and framing.
- A random error would cancel over many judgments.
- These all deviate in the same direction for the same reason.
- The mistake can be anticipated and designed around.

The student wants to explain what makes these patterns useful rather than entertaining. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The three effects are anchoring, availability and framing
- B) A random error would cancel over many judgments
- C) The mistake can be anticipated and designed around
- D) Because the errors all lean the same way, a procedure can be built to catch them

ملخص المقطع 100 بالعربية

خلاصة: خطأ المعزل الأساسي واحد من أسرة، وأفراد الأسرة أظهروا مَرَات تكفي للتنبؤ بهم. فالتنبؤ، أي جذب رقم لا صلة له لتقدير لاحق، أبسطها: فمن مُلَب منه أن يدور عجلة ثم يقدر كمية جاء جوابه منجذباً إلى ما أظهرته العجلة. المعنى: المعنى أن الأثر يبقى حين يُقال للمُختبرين إن الرقم عشوائي، وأن وكلاء العقار إذا أعطوا أسعار طلب مختلفة للبيت نفسه قدره تقديرًا مختلفًا. والثانية الإتاحة، وهي الحكم في شيوخ شيء بسهولة ورود أمثلته إلى الذهن. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الآلية: فالوفيات من أسباب تصنع الأخبار تُقدّر أعلى بمقادير كبيرة، وترتيب التقديرات يتبع تغطية الصحف أكثر مما يتبع الأرقام. والثالثة التأطير: فالخيار الطي نفسه موصوفًا بالنجاة وموصوفًا بالموت يُنتج قرارين مختلفين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب هذه الأخطاء متعادلةً عبر كثرة الأحكام، مع أنها تميل جميعًا في جهة واحدة. ويقترن المقطع بالمقطع الخمسين.

LEVEL 3

Target

evidence

How anyone knows: the study, the document, the measurement, and its limits.

Passage length — 288 to 312 words

Sentences — averaging 19 to 24 words

Vocabulary assumed — the top 30,000 most frequent word forms

Words above that — at most 6, explained or inferable

Clue to the reader — Read for the warrant. Someone had to find this out. These passages name the study, the document, or the measurement behind the claim, and say what it cannot show. The limit is part of the finding, not an apology for it.

History and Civics

HIS · S01 · evidence

What the Rough Draft Shows

The Declaration exists in more than one state, and the differences are evidence. What survives includes Jefferson's rough draft, meaning the working manuscript with its crossings-out and insertions still visible, several fair copies he made for friends, the printed broadside of July 4, and the engrossed parchment signed in August. Historians read these against one another in the way a textual critic reads the manuscripts of a poem, and the method is identical. Where two versions differ, the question is who altered the wording, and at what stage of the proceedings.

The most studied difference is a deletion. Jefferson's draft contained a long passage blaming George III for the slave trade, in language calling it a cruel war against human nature. Congress struck the whole passage out before approving the text. Jefferson himself recorded that delegates from South Carolina and Georgia objected, and that northern members who profited from the trade were not sorry to see it go. The deleted paragraph is therefore a double piece of evidence about the proceedings. It shows what one drafter was prepared to say, and it shows what a body of fifty-six could be brought to sign.

A draft will not bear every weight, and the limits are worth being exact about. A deletion tells us that a sentence was removed and not, by itself, why. Jefferson wrote his account of the objection decades later, when his memory had reasons of its own. The passage also blamed the king for a trade in which Virginia planters were participants, so its removal cannot simply be read as the moment when the republic repudiated its own stated principle. What the manuscript establishes is narrower and still substantial: the question was raised in 1776, in writing, by the author, and was taken out. The rough draft is held at the Library of Congress and has been photographed at high resolution.

WHAT THIS PASSAGE IS FOR

- The document survives in several states and the differences are evidence.
 - The deleted passage shows what fifty-six men could be brought to sign.
 - A deletion shows that a sentence was removed, not why.
-

Questions 101.1 to 101.10

on passage 101, What the Rough Draft Shows

101.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The rough draft is held at the Library of Congress and has been photographed
- B) The surviving versions are evidence, and the deleted passage establishes something narrow but firm
- C) The deletion proves that the republic repudiated its own stated principle
- D) Delegates from South Carolina and Georgia objected to a passage

101.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, who recorded the reason for the objection?

- A) A shorthand writer present at the proceedings
- B) The delegates from South Carolina and Georgia
- C) A northern member who profited from the trade
- D) Jefferson himself, decades after the event

101.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a manuscript deletion establishes less than readers assume?

- A) “A deletion tells us that a sentence was removed and not, by itself, why”
- B) “Historians read these against one another in the way a textual critic reads the manuscripts of a poem”
- C) “Congress struck the whole passage out before approving the text”
- D) “The rough draft is held at the Library of Congress and has been photographed at high resolution”

101.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The passage also blamed the king for a trade in which Virginia planters were participants, so its removal cannot simply be read as the moment when the republic repudiated its own stated principle. The deletion therefore ____

Which choice most logically completes the text?

- A) shows that Jefferson had no part in the trade
- B) proves that the objection came from the North
- C) admits of more than one explanation at once
- D) was reversed by Congress later that summer

101.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “repudiated” most nearly mean?

- A) restated in public
- B) disowned as binding
- C) made law at last
- D) argued over in committee

101.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the comparison with a textual critic?

- A) It identifies the method by which the versions are read
- B) It concedes that the manuscripts are literary rather than legal
- C) It explains why the rough draft was photographed at high resolution
- D) It introduces the objection from South Carolina and Georgia

101.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 51 of this book. It analyses the second paragraph of the Declaration as a legal brief moving from premises to a conclusion, with the grievances offered as evidence for a factual claim rather than as argument about principle.

Text 1 reports a passage on the slave trade that was struck out. Based on Text 2, where in the structure would that passage have stood?

- A) Among the premises offered without proof
- B) In the answer to the objection about light and transient causes
- C) In the conclusion that a government may be altered
- D) Among the grievances offered as evidence against the king

101.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Jefferson wrote his account of the objection decades later, when his memory had reasons of its own. ___ the passage also blamed the king for a trade in which Virginia planters were participants.

Which choice completes the text with the most logical transition?

- A) In other words,
- B) As a result,
- C) Beyond that,
- D) For instance,

101.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

What the manuscript establishes is narrower and still substantial ___ the question was raised in 1776, in writing, by the author, and was taken out.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) substantial: the
- B) substantial, the
- C) substantial the
- D) substantial; the,

101.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Jefferson's draft blamed George III for the slave trade.
- Congress struck the whole passage out before approving the text.
- A deletion tells us that a sentence was removed and not, by itself, why.
- The question was raised in 1776, in writing, by the author, and was taken out.

The student wants to explain to a reader how much the deleted passage proves. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Jefferson's draft blamed George III for the slave trade and Congress struck it out
- A deletion tells a historian that a sentence was removed and nothing further
- The manuscript proves that the question was raised in writing in 1776 and then removed, though not why it was removed
- Congress struck the whole passage out before it approved the text of the document

ملخص المقطع 101 بالعربية

خلاصة: يوجد إعلان الاستقلال في أكثر من حالة، والفروق بينها دليل. فالباقى يشمل مسودة جيفرسون الخشنة بما فيها من شطب وإضافات، ونسخاً نظيفة كتبها لأصدقائه، والمنشور المطبوع في الرابع من تموز، والرقّ الموقع في آب. والفروق الأكثر درساً حذف: مقطع طويل يحتمل الملك جورج الثالث مسؤولية تجارة العبيد، شطبه المؤتمر قبل الإقرار. المعنى: المعنى أن المسودة دليل مزدوج على ما جرى: تُظهر ما كان كاتب واحد مستعداً لقوله، وتُظهر ما أمكن حمل ستة وخمسين رجلاً على التوقيع عليه. لكنّ الحذف يقول إن جملة أزيلت، ولا يقول بذاته لماذا أزيلت. الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: كيف يعرف أحد شيئاً، وما حدود ما يحمله المصدر. وما تثبته المخطوطة أضيف وأمن: أن المسألة أثبتت عام ألف وسبعمئة وستة وسبعين، كتابةً، من المؤلف، ثم أخرجت. الصلة بالاختبار: في اختبار سات يُسأل كثيراً عن حدود ما يثبته دليل، وعن وظيفة جملة تقرّر تحفظاً. والفخّ الشائع أن يُحمل الحذف معنى كاملاً لا يحمله، أو أن تُقرأ رواية متأخرة كأنها محضر وقتي. ويقتزن المقطع بالمقطع الحادي والخمسين في أسئلة النصّين المتقابلين.

Reading the Ratification Debates

The Federalist is the most quoted source on the Constitution and the least representative. It consists of eighty-five newspaper essays written to persuade New York to ratify, by three men with an interest in the outcome. Reading it as a neutral explanation of the document is like reading a campaign pamphlet as a description of a policy. It is first-class evidence of what its authors wanted understood.

The rest of the surviving record is a great deal larger and considerably messier. Each state held a ratifying convention, meaning an assembly elected to vote on the Constitution, and the debates in several of them were taken down by shorthand writers of uneven skill and published later, sometimes by partisans. Essays opposing ratification appeared under names such as Brutus and the Federal Farmer, the Pennsylvania minority published a dissent, and private letters survive in considerable quantity. Madison's own notes of the convention, the fullest account of what was said in Philadelphia, were not published until 1840, after every participant was dead.

Each kind of source carries a characteristic defect that can be stated. Published debates were edited before printing, and in one well-known case the reporter admitted that he had improved the speeches as he set them down. Private letters are candid and partial in the same breath. Madison's notes were revised by him over forty years, and the revisions can be dated by the ink and the paper. A historian who wants to show that executive power was later usurped, or that it was always intended to be large, can find support in the record for either claim. That is why the argument at the end of this strand has outlasted everyone who began it. Modern editions print the sources side by side with notes on their reliability. The Documentary History of the Ratification of the Constitution now runs to more than thirty volumes.

WHAT THIS PASSAGE IS FOR

- The Federalist is persuasive writing, not neutral explanation.
 - Madison's notes appeared in 1840, after every participant was dead.
 - The record supports either claim about executive power.
-

Questions 102.1 to 102.10

on passage 102, Reading the Ratification Debates

102.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Documentary History of the Ratification now runs to more than thirty volumes
- B) Madison's notes were not published until 1840, after every participant was dead
- C) Every source on the Constitution carries a defect that can be named, which is why the argument persists
- D) The Federalist is the only reliable guide to what the Constitution means

102.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what was The Federalist written to do?

- A) Persuade New York to ratify the Constitution
- B) Record what was said at the Philadelphia convention
- C) Answer the dissent published by the Pennsylvania minority
- D) Explain the document neutrally to later readers

102.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that published debates cannot be taken as verbatim records?

- A) "Private letters are candid and partial in the same breath"
- B) "in one well-known case the reporter admitted that he had improved the speeches as he set them down"
- C) "Essays opposing ratification appeared under names such as Brutus and the Federal Farmer"
- D) "Modern editions print the sources side by side with notes on their reliability"

102.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A historian who wants to show that executive power was later usurped, or that it was always intended to be large, can find support in the record for either claim. The size of the record therefore ____

Which choice most logically completes the text?

- A) settles the question in favor of the larger reading
- B) makes the sources easier to weigh against each other
- C) shows that none of the surviving sources is reliable
- D) does not by itself narrow the range of defensible readings

102.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word "usurped" most nearly mean?

- A) delegated by statute
- B) argued for in public
- C) seized without right
- D) divided among branches

102.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the comparison with a campaign pamphlet?

- A) It concedes that the essays are unreliable on every point
- B) It states what kind of evidence The Federalist actually is
- C) It explains why the essays were published under a pen name
- D) It introduces the shorthand writers of the state conventions

102.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 52 of this book. It presents Federalist 10, in which Madison treats faction as impossible to prevent and offers the size of the republic and representation as the two mechanisms for controlling its effects.

Text 1 warns against reading The Federalist as neutral. Based on that warning, how should the argument in Text 2 be used?

- A) As evidence of what one advocate wanted the design understood to do
- B) As the only surviving account of the Philadelphia convention
- C) As a neutral summary of what the Constitution requires
- D) As a record of the Pennsylvania minority dissent

102.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The Federalist is the most quoted source on the Constitution and the least representative. ___ it is first-class evidence of what its authors wanted understood.

Which choice completes the text with the most logical transition?

- A) For example,
- B) In short,
- C) Therefore,
- D) Even so,

102.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Madison's notes were revised by him over forty years ___ the revisions can be dated by the ink and the paper.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) years the
- B) years, and
- C) years; and
- D) years, the

102.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The Federalist was written by three men with an interest in the outcome.
- Published state debates were edited before printing.
- Madison's notes were revised over forty years and not published until 1840.
- Modern editions print the sources side by side with notes on their reliability.

The student wants to advise a reader how to weigh the sources on the Constitution. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The Federalist was written by three men who had an interest in the outcome
- B) Madison's notes were revised over forty years and published only in 1840
- C) Published state debates were edited by their reporters before they were printed
- D) Each source carries a defect that can be named, so they should be read against one another with their reliability noted

ملخص المقطع 102 بالعربية

خلاصة: مجموعة الفيدرالي أكثر المصادر اقتباساً عن الدستور وأقلها تمثيلاً: خمسة وثمانون مقالاً صحفياً كُتبت لإقناع نيويورك بالتصديق، بأقلام ثلاثة رجال لهم مصلحة في النتيجة. وقراءتها تفسيراً محيلاً للوثيقة كقراءة منشور انتخابي وصفاً لسياسة. وبقية السجل أكبر بكثير وأكثر فوضى. المعنى: المعنى أن لكل نوع من المصادر عيباً يمكن تسميته: المناقشات المنشورة خُزرت قبل الطبع، وأقر أحد المحررين بأنه حسن الخطب وهو يكتبها؛ والرسائل الخاصة صريحة ومتحيزة في النفس الواحد؛ وملاحظات ماديسون نُقّحها أربعين سنة، والتنقيحات تُورّخ بالحبر والورق. الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: ليس ما قيل بل بأي ثقة نعرف أنه قيل. ولهذا يستطيع مؤرخ يريد إثبات أن السلطة التنفيذية اغتُصبت لاحقاً، أو أنها قُصدت واسعة من البداية، أن يجد في السجل سنداً لأجيال الدعويين. الصلة بالاختبار: في اختبار سات يُسأل عن موثوقية المصدر وعن الفكرة المركزية وعن وظيفة جملة. والفخ الشائع أن تُعامل مجموعة الفيدرالي كشرح محيّد، مع أن النصّ يسميها دليلاً من الطرف الأول على ما أراد مؤلفوها أن يُفهم. ويقترن المقطع بالمقطع الثاني والخمسين في أسئلة النصّ المتقابلين.

Signatures, Poll Books and a Trial

Four kinds of record carry the history of the suffrage campaign, and they measure different things. Petitions survive in bulk, with names, addresses and sometimes occupations, and Congress preserved them by the cartload. A signature count measures organizing capacity rather than opinion, because gathering fifty thousand names tells a historian mainly that somebody could pay for canvassers and print the sheets. Membership rolls of the suffrage associations measure that same capacity rather more directly, and they were kept with varying care from one state association to the next.

The third record is the poll book, meaning the register of who actually voted in a given election, and it supplies the hardest evidence in the whole subject. In 1872 Susan Anthony and fourteen other women registered and voted in Rochester, New York, arguing that the Fourteenth Amendment already gave them a mandate to do so. The poll book records the votes. The subsequent prosecution produced the fourth record, a court transcript, in which the judge directed the jury to find her guilty and fined her a hundred dollars, which she never paid. The case had been invited on purpose, and the judge refused to let it go further.

Each record has a boundary. Petitions say nothing about those who declined to sign, and poll books record who voted rather than what any of them thought. Transcripts record what was said in a room where everyone was performing for a result. Newspaper coverage, which survives in the greatest quantity of all, mainly measures what editors thought their readers would enjoy. The combination is still enough to answer specific questions, and it is the reason historians can state with confidence that the campaign was organized state by state rather than directed from one center. Digitization has changed the field in twenty years, since petition signatures can now be matched against census records by name and street.

WHAT THIS PASSAGE IS FOR

- A signature count measures organizing capacity rather than opinion.
 - Anthony and fourteen others voted in Rochester in 1872.
 - Poll books record who voted, not what they thought.
-

Questions 103.1 to 103.10

on passage 103, Signatures, Poll Books and a Trial

103.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Digitization has changed the field in twenty years
- B) Susan Anthony was fined a hundred dollars and never paid it
- C) Newspaper coverage survives in the greatest quantity of all four records
- D) Four kinds of record measure different things, and each has a boundary that can be stated

103.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a signature count measure?

- A) The opinion of those who signed the petition
- B) The capacity of a campaign to organize
- C) The number of women who voted in 1872
- D) The reliability of a published court transcript

103.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the prosecution was arranged rather than stumbled into?

- A) “Petitions survive in bulk, with names, addresses and sometimes occupations”
- B) “the judge directed the jury to find her guilty and fined her a hundred dollars, which she never paid”
- C) “The case had been invited on purpose, and the judge refused to let it go further”
- D) “Membership rolls of the suffrage associations measure that same capacity rather more directly”

103.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Petitions say nothing about those who declined to sign, and poll books record who voted rather than what any of them thought. A historian wanting to know what people believed therefore ____

Which choice most logically completes the text?

- A) must reason from records that measure something else
- B) can rely on the newspaper coverage of the period
- C) should prefer membership rolls to all other sources
- D) has no evidence of any kind to work from

103.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “mandate” most nearly mean?

- A) an order from a court
- B) a term of elected office
- C) a duty laid on a citizen
- D) an authorization to act

103.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about newspaper coverage?

- A) It names the record that survives in the smallest quantity
- B) It explains why petition signatures can now be matched to censuses
- C) It identifies what the most plentiful record actually measures
- D) It adds a fifth record whose boundary is the sharpest of all

103.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 53 of this book. It argues that voting was restricted by four separate barriers coming down at different times, and that a constitutional amendment settles the rule and settles nothing else.

Text 1 reports an attempt to vote in 1872 under the Fourteenth Amendment. Based on Text 2, why would that attempt fail?

- A) Because the amendment had not yet been ratified by the states
- B) Because the rule was settled while the machinery was not
- C) Because property requirements still stood in New York
- D) Because poll books were not kept in Rochester that year

103.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

In 1872 Susan Anthony and fourteen other women registered and voted in Rochester. ___ the poll book records the votes.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) Nevertheless,
- C) In other words,
- D) For instance,

103.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The third record is the poll book ___ the register of who actually voted in a given election.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) book the
- B) book; the
- C) book, the
- D) book: the,

103.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Petitions survive with names, addresses and sometimes occupations.
- Membership rolls were kept with varying care from one state association to the next.
- The combination of records answers specific questions.
- Historians state with confidence that the campaign was organized state by state.

The student wants to explain why the campaign is known to have been organized state by state. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Petitions and state membership rolls, kept with differing care in each state, together show organization built locally rather than directed centrally
- B) Petitions survive with names, addresses and sometimes the occupations of signers
- C) Membership rolls were kept with varying care from one state association to the next
- D) The combination of the four records answers a number of specific questions

ملخص المقطع 103 بالعربية

خلاصة: أربعة أنواع من السجلات تحمل تاريخ حملة حق الانتخاب، وكل نوع يقيس شيئاً مختلفاً. العرائض باقية بكثافة بأسماء وعناوين ومهن، وعدد التوقيعات يقيس القدرة على التنظيم لا الرأي. وسجلات العضوية تقيس القدرة نفسها بصورة أوضح. والثالث سجل الاقتراع، أي قائمة من صوّت فعلاً. وهو أمّتن دليل في الموضوع كله.

المعنى: المعنى أن لكل سجل حداً. فالعرائض لا تقول شيئاً عن من رفض التوقيع، وسجلات الاقتراع تسجل من صوّت لا ما كان يفكر فيه، ومحاضر المحاكم تسجل ما قيل في غرفة يؤدى فيها الجميع أدواراً من أجل نتيجة. وتغطية المحف، وهي الأوفر كمّاً، تقيس ما ظلّ المحزرون أن قراءهم سيستمعون به.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: ما يقيسه كل سجل وما لا يقيسه. والتركيبه تكفي مع ذلك للإجابة عن أسئلة محدّدة، ومنها أن الحملة نُظمت ولايةً ولايةً لا من مركز واحد.

الصلة بالاختبار: في اختبار سات يُسأل عن حدود الدليل وعن استنتاج يكمل النص. والفخ الشائع أن يُقرأ عدد التوقيعات قياساً للرأي العام، مع أن النص يسمّيه قياساً لقدرة التنظيم. ويقرن المقطع بالمقطع الثالث والخمسين في أسئلة النصّين المتقابلين.

Ledgers, Narratives and Manifests

The history of slavery is written from four kinds of source, each with a distortion that can be stated precisely. Ships manifests, meaning the lists of people and goods carried on particular voyages, survive in large numbers because they were commercial and legal documents. A database assembled from them now covers more than thirty-six thousand Atlantic voyages and permits estimates of numbers, routes and mortality. What it cannot contain is anyone name, because the people listed were entered as cargo by age and sex.

Plantation ledgers supply the opposite kind of detail: individuals, with names, prices, tasks and punishments, recorded by the person applying the coercion. They are precise and they are testimony by an interested party. Published narratives by formerly enslaved people, such as those of Frederick Douglass and Harriet Jacobs, supply the inside view, and they were written to persuade, often with an abolitionist editor involved. Contemporaries disputed their accuracy, and modern historians have since verified much of the detail from other records.

The fourth source is the set of interviews recorded in the 1930s with people who had been children in slavery. There are more than two thousand of them, and they are the most difficult of all. The speakers were in their eighties and nineties, most interviewers were white, and many interviews took place in states where the speaker still depended on local goodwill. The transcripts were also written in a dialect spelling imposed by the interviewer. Historians use them, carefully, and the care consists in reading across many interviews rather than quoting one. The slave trade database is now public and can be queried by anyone with a browser. It was built over thirty years from archives in seven countries and is still being corrected.

WHAT THIS PASSAGE IS FOR

- Manifests permit estimates of numbers but contain no names.
 - Ledgers are precise testimony by an interested party.
 - The 1930s interviews are used by reading across many, not by quoting one.
-

Questions 104.1 to 104.10

on passage 104, Ledgers, Narratives and Manifests

104.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Four kinds of source carry the subject, each with a distortion that can be stated
- B) The slave trade database covers more than thirty-six thousand voyages
- C) The interviews of the 1930s are the most reliable source of the four
- D) Published narratives were disputed by contemporaries at the time

104.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what do ships manifests fail to record?

- A) The routes taken by particular voyages
- B) The mortality suffered on the crossing
- C) The name of any person carried
- D) The age and sex of those listed

104.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that precision in a source is not the same as impartiality?

- A) “There are more than two thousand of them, and they are the most difficult of all”
- B) “The slave trade database is now public and can be queried by anyone with a browser”
- C) “Contemporaries disputed their accuracy, and modern historians have since verified much of the detail”
- D) “They are precise and they are testimony by an interested party”

104.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The speakers were in their eighties and nineties, most interviewers were white, and many interviews took place in states where the speaker still depended on local goodwill. Reading one such interview alone therefore ____

Which choice most logically completes the text?

- A) supplies the inside view that the narratives lack
- B) risks mistaking a constrained answer for a candid one
- C) is the method historians have settled on
- D) removes the dialect spelling imposed by the interviewer

104.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “coercion” most nearly mean?

- A) compulsion by force
- B) persuasion by argument
- C) agreement under contract
- D) instruction in a skill

104.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about dialect spelling?

- A) It explains why the interviews number more than two thousand
- B) It reports that the interviewers were mostly white
- C) It shows that the speakers were unwilling to be recorded
- D) It adds a further distortion introduced after the speaking

104.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 54 of this book. It sets out the antislavery case from unalienable rights against a defense arguing from social order and from constitutional recognition, and says the two sides disagreed about what counts as evidence.

Text 1 describes four kinds of source. Based on Text 2, which of them would each side of that argument have reached for?

- A) Both sides would have used the ships manifests in the same way
- B) Neither side would have found the ledgers of any use at all
- C) One side the narratives of the enslaved, the other the ledgers of the owners
- D) Both sides would have relied on the interviews recorded in the 1930s

104.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Published narratives supply the inside view, and they were written to persuade. ____ contemporaries disputed their accuracy.

Which choice completes the text with the most logical transition?

- A) In other words,
- B) Unsurprisingly,
- C) By contrast,
- D) For instance,

104.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Plantation ledgers supply the opposite kind of detail ____ individuals, with names, prices, tasks and punishments.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) detail individuals
- B) detail, individuals
- C) detail; individuals
- D) detail: individuals

104.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The speakers were in their eighties and nineties.
- Most interviewers were white.
- Many interviews took place where the speaker still depended on local goodwill.
- The care consists in reading across many interviews rather than quoting one.

The student wants to explain to a reader why historians read many interviews rather than one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The speakers in the interviews were in their eighties and nineties by then
- B) Because each speaker answered under pressures of age and local dependence, only the pattern across many interviews can be trusted
- C) The care consists in reading across many interviews rather than quoting one
- D) Most of the interviewers who recorded the speakers were white

ملخص المقطع 104 بالعربية

خلاصة: يُكتب تاريخ العبودية من أربعة أنواع من المصادر، لكل منها تشويه يمكن تحديده بدقة. فقوائم السفن باقية بأعداد كبيرة لأنها كانت وثائق تجارية وقانونية، وقاعدة بيانات بُنيت منها تغطي أكثر من سئة وثلاثين ألف رحلة أطلسية. وما لا تحتويه هو اسم أي إنسان، لأنّ المدرّجين سُجّلوا بضاعةً بالعمر والجنس.

المعنى: المعنى أنّ سجلّات المزارع تقدّم النوع المقابل من التفصيل: أفرادًا بأسماء وأسعار ومهامّ وعقوبات، سجّلها من كان يمارس القهر. فهي دقيقة وهي شهادة طرف ذي مصلحة. أمّا الروايات المنشورة لمن كانوا مستعبدين فتقدّم النظرة من الداخل، وقد كُتبت للإقناع.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: كلّ مصدر وتشويهه. وأصعب المصادر مقابلات ثلاثينيات القرن العشرين مع من كانوا أطفالاً في العبودية: متحدّثون في الثمانينات، ومحاورون بيض في الغالب، ومقابلات في ولايات يعتمد فيها المتحدّث على رضى محلي.

الملة بالاختبار: في اختبار سات يُسأل عن موثوقية المصدر وعن الاستنتاج. والفخ الشائع أن تُعامل الدقّة كأنّها حياد، مع أنّ سجلّ المزرعة دقيق وشهادة متحيّزة في الوقت نفسه. ويقترن المقطع بالمقطع الرابع والخمسين في أسئلة النصّين المتقابلين.

Thirteen Volumes of Testimony

In 1871 a joint committee of Congress took sworn testimony, meaning evidence given under oath and taken down by a clerk, on violence in the southern states. The published result runs to thirteen volumes. Hundreds of witnesses appear, including people who had been attacked, people accused of attacking them, sheriffs, teachers, planters and former officers. It is one of the fullest records of political violence anywhere in the nineteenth century, and it exists because a congressional majority wanted the violence on the record.

Testimony of that kind has two uses and two problems. It establishes particular events in detail, with names and dates that can be checked against local papers and court files. It also preserves the voices of people who left no other written trace, which is rare. The problems are that witnesses were selected by committee members with purposes, and that both sides understood what the hearings were for, so the accused denied and minimized while the committee pressed for the worst cases.

Registration rolls, which are the official lists of those entitled to vote, answer a different question and answer it coldly. They show how many Black men were registered in a county in 1867 and in 1904, and the fall is not a matter of interpretation. What they cannot show is why any individual stopped registering, since a roll records an absence without a reason. Put the two sources together and the picture is reasonably firm: a pattern of violence established by testimony, followed by an entrenched legal exclusion established by the rolls, with a decade in between where the evidence is thinner than historians would like. The hearings are now searchable online, which has produced a series of local studies. Several of them have matched named witnesses to census entries and property records.

WHAT THIS PASSAGE IS FOR

- The 1871 hearings run to thirteen volumes of sworn testimony.
 - Witnesses were selected by members with purposes.
 - A roll records an absence without a reason.
-

Questions 105.1 to 105.10

on passage 105, Thirteen Volumes of Testimony

105.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The hearings are now searchable online, which has produced local studies
- B) Testimony and registration rolls answer different questions, and together they make the picture firm
- C) The thirteen volumes prove that the committee was impartial
- D) Several local studies have matched named witnesses to census entries

105.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what can a registration roll not show?

- A) How many Black men were registered in a county
- B) The change in registration between 1867 and 1904
- C) The official list of those entitled to vote
- D) Why any individual stopped registering

105.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that both sides of the hearings understood what the record was for?

- A) “the accused denied and minimized while the committee pressed for the worst cases”
- B) “It also preserves the voices of people who left no other written trace, which is rare”
- C) “The hearings are now searchable online, which has produced a series of local studies”
- D) “They show how many Black men were registered in a county in 1867 and in 1904”

105.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A pattern of violence is established by testimony, and an entrenched legal exclusion is established by the rolls, with a decade in between where the evidence is thinner than historians would like. The combined account is therefore ____

Which choice most logically completes the text?

- A) stronger than either source taken alone would be
- B) no better than the weaker of its two sources
- C) firm at both ends and weak in the middle
- D) incapable of establishing any pattern at all

105.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “entrenched” most nearly mean?

- A) dug into the ground
- B) firmly established
- C) recently introduced
- D) widely resented

105.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying that a roll answers coldly?

- A) It contrasts the reach of a count with the reach of a voice
- B) It marks the registers as the less valuable of the two sources
- C) It introduces the hearings described in the first paragraph
- D) It explains why the rolls survive in such quantity

105.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 55 of this book. It argues that Reconstruction was reversed by four instruments working together: organized violence, narrow court rulings, the national settlement of 1876, and new state law.

Text 1 describes two kinds of surviving record. Based on Text 2, which instruments do those two records document?

- A) The narrow court rulings and the settlement of 1876
- B) The federal prosecutions and the enforcement acts
- C) The national indifference and the printed convention debates
- D) The organized violence and the new state law

105.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

It establishes particular events in detail, with names and dates that can be checked against local papers and court files. ___ it preserves the voices of people who left no other written trace.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) For instance,
- C) Beyond that,
- D) In other words,

105.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Hundreds of witnesses appear ___ people who had been attacked, sheriffs, teachers, planters and former officers.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) appear: people
- B) appear, people
- C) appear people
- D) appear; people,

105.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The hearings took sworn testimony in 1871.
- Registration rolls show the position in 1867 and in 1904.
- A roll records an absence without a reason.
- The evidence for the decade in between is thinner than historians would like.

The student wants to explain why the decade between the two records is the weakest part of the account. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The hearings of 1871 took sworn testimony on violence in the southern states
- B) Registration rolls show the position in 1867 and again in 1904
- C) The testimony stops in 1871 and the rolls resume in 1904, and a roll records an absence without giving its reason
- D) A registration roll records an absence without ever supplying a reason

ملخص المقطع 105 بالعربية

خلاصة: في عام ألف وثمانمئة وواحد وسبعين أخذت لجنة مشتركة في الكونغرس شهادات بالقسم عن العنف في الولايات الجنوبية، وبلغت النتيجة المنشورة ثلاثة عشر مجلدًا. ويظهر فيها مئات الشهود: من هُجموا، ومن اتُّهموا بالهجوم، ومأمورون ومعلمون ومزارعون وضباط سابقون. وهي من أوفى سجلات العنف السياسي في القرن التاسع عشر.

المعنى: المعنى أن للشهادة استخدامين ومشكلتين. فهي تثبت وقائع بعينها بأسماء وتواريخ يمكن مراجعتها، وتحفظ أصوات من لم يتركوا أثرًا مكتوبًا غيرها. والمشكلتان أن الشهود اختارهم أعضاء لجنة لهم أغراض، وأن الطرفين عرفا الغرض من الجلسات، فأنكر المتهمون وضغطت اللجنة نحو أسوأ الحالات.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: ما يثبت نوع من السجلات وما يصمت عنه. فسجلات التسجيل الانتخابي تجيب عن سؤال آخر ببرود: كم رجلًا أسود كان مسجلًا في مقاطعة عام ألف وثمانمئة وسبعة وستين وعام ألف وتسعمئة وأربعة.

الصلة بالاختبار: في اختبار سات يُسأل عن حدود الدليل وعن الجمع بين مصدرين. والفخ الشائع أن يُطلب من سجل غياب أن يفسر سببه، مع أن السجل يسجل الغياب بلا سبب. ويقترن المقطع بالمقطع الخامس والخمسين في أسئلة النصين المتقابلين.

Mortality Tables and Their Gaps

Factory legislation in Britain and in New York was argued from numbers, and those numbers came from three places. There were commission reports with their collected testimony, the annual returns of the factory inspectors, and the registers of deaths kept by the civil authorities. Each was collected for a purpose other than research, which is the normal condition of historical statistics and the first thing to hold in mind.

Three defects recur. The first is the missing denominator, meaning the figure a count must be divided by before it means anything. A report that a trade killed four hundred men in a year is uninterpretable without knowing how many men worked in it, and employment figures by trade were poor before the twentieth century. The second is cause of death coding. A weaver who died of tuberculosis after twenty years in a damp shed was recorded as dying of tuberculosis, and the shed appears nowhere in the record, so industrial disease was systematically invisible while industrial accident was not.

The third defect is reporting incentive. Accidents were reported by employers to inspectors who could prosecute them. Comparisons across years are therefore contaminated by changes in how willing employers were to report, and a fall in recorded accidents after a new law may mean fewer accidents or more concealment. Historians handle this by looking for series collected by somebody with no stake, such as burial registers or union benefit payments, and by comparing trades that were covered by a law with trades that were not. Measures that appeared to ameliorate conditions sometimes only improved the paperwork, and the distinction can usually be settled with a second source. Union sick-pay records have turned out to be among the best series available. They were kept carefully because money depended on them, and nobody involved had a reason to flatter an employer.

WHAT THIS PASSAGE IS FOR

- Historical statistics were collected for purposes other than research.
 - A count without a denominator cannot be interpreted.
 - A fall in recorded accidents may mean concealment.
-

Questions 106.1 to 106.10

on passage 106, Mortality Tables and Their Gaps

106.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Union sick-pay records have turned out to be among the best series available
- B) Industrial disease was systematically invisible while accident was not
- C) Three recurring defects limit the statistics, and a second source can usually settle the matter
- D) Employment figures by trade were poor before the twentieth century

106.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, who reported accidents to the inspectors?

- A) Employers, who could be prosecuted by them
- B) The civil authorities who kept the death registers
- C) The trade unions that paid sick benefit
- D) The commissions that collected testimony

106.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a fall in the figures is not by itself a fall in the hazard?

- A) “Each was collected for a purpose other than research”
- B) “a fall in recorded accidents after a new law may mean fewer accidents or more concealment”
- C) “Union sick-pay records have turned out to be among the best series available”
- D) “employment figures by trade were poor before the twentieth century”

106.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A report that a trade killed four hundred men in a year is uninterpretable without knowing how many men worked in it. A count without its denominator therefore ____

Which choice most logically completes the text?

- A) understates the danger of the trade in question
- B) can be compared across years but not across trades
- C) is contaminated by the willingness of employers to report
- D) supports no statement about how dangerous the work was

106.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ameliorate” most nearly mean?

- A) measure accurately
- B) conceal from view
- C) make less bad
- D) bring to an end

106.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the weaver who died of tuberculosis?

- A) It explains why employment figures by trade were poor
- B) It gives a case that shows how a coding rule hides a cause
- C) It introduces the burial registers used as a check
- D) It reports the number of deaths in a single trade

106.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 56 of this book. It sets out four instruments for making factories safer, a rule with an inspector behind it, liability, insurance pricing and a limit on hours, and reports that no single instrument did much alone.

Text 1 warns that recorded accidents may fall through concealment. Based on Text 2, which instrument produces figures most independent of that problem?

- A) Insurance pricing, since insurers inspected and graded plants themselves
- B) A rule enforced by inspectors who can prosecute employers
- C) A commission report collecting testimony from employers
- D) The hours law, since it depends on employer returns

106.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Accidents were reported by employers to inspectors who could prosecute them. ____ comparisons across years are contaminated by changes in how willing employers were to report.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) In other words,
- C) For instance,
- D) Consequently,

106.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Historians handle this by looking for series collected by somebody with no stake ____ such as burial registers or union benefit payments.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) stake; such
- B) stake, such
- C) stake such
- D) stake: such,

106.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Accidents were reported by employers to inspectors who could prosecute them.
- A fall in recorded accidents may mean fewer accidents or more concealment.
- Burial registers and union benefit payments were collected by people with no stake.
- Trades covered by a law can be compared with trades that were not.

The student wants to advise a reader how to tell a real improvement from a paper one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A fall in recorded accidents may mean fewer accidents or more concealment
- B) Accidents were reported to inspectors by the employers they could prosecute
- C) Trades covered by a law can be compared with trades that were not covered
- D) Check the fall against a series kept by somebody with no stake, and against trades the law did not cover

ملخص المقطع 106 بالعربية

خلاصة: نُوقِشت تشريعات المصانع في بريطانيا ونيويورك بالأرقام، وجاءت تلك الأرقام من ثلاثة مصادر: تقارير اللجان وشهاداتها، والعائدات السنوية لمفتشي المصانع، وسجلات الوفيات لدى السلطات المدنية. وكلها جُمعت لغرض غير البحث، وهذه هي الحالة المعتادة للإحصاءات التاريخية وأول ما ينبغي تذكره.

المعنى: المعنى أن ثلاثة عيوب تتركز: المقام الغائب، أي الرقم الذي يجب أن يُقسم عليه العدد ليعني شيئاً؛ وترميز سبب الوفاة، فالنساج الذي مات بالسُّل بعد عشرين سنة في سقيفة رطبة سُجِّل مريضاً بالسُّل ولا تظهر السقيفة في السُّجِّل؛ وحافز الإبلاغ، فالحوادث يبلغ عنها أصحاب العمل لمفتشين قادرين على مقاضاتهم.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: كيف تُقرأ سلسلة إحصائية جُمعت لغرض آخر. والعلاج النظر إلى سلاسل جمعها من لا مصلحة له، كسجلات الدفن أو مدفوعات صناديق النقابات، ومقارنة مهن شملها القانون بمهن لم يشملها.

الصلة بالاختبار: في اختبار سات تتركز أسئلة التعليق على بيانات وعلى حدودها. والفُخ الشائع أن يُقرأ انخفاض الحوادث المسجلة انخفاضاً في الحوادث، مع أنه قد يكون زيادة في الإخفاء. ويقترن المقطع بالمقطع السادس والخمسين في أسئلة النصين المتقابلين.

What the Files Turned Out to Hold

The civil rights period is unusually well documented, and a large part of the documentation was created by people trying to stop it. Court transcripts and pleadings survive for thousands of cases, and registration figures by county were collected by the federal government in order to decide which areas the 1965 Act would cover, which is why they are unusually careful. Organizations kept minutes, and the movement itself produced a flood of printed material.

Then there are the surveillance files. The Federal Bureau of Investigation watched the main organizations and their leaders, tapped telephones under warrants it had obtained by misrepresenting the purpose, and compiled files that ran to thousands of pages. Much of this became available after 1974, when amendments to the freedom of information statute, which is a right to demand government documents, gave researchers a usable instrument. The files are a strange source. They record meetings in detail because an agent was present, and they record them through a lens that treated the subject as a threat.

Using them requires a particular discipline. An informer report is evidence that something was said and no evidence at all that it was true, since informers were paid and had reason to produce material. An agency summary is a partisan document whose purpose was to justify continued attention. Where a file can be matched against a minute, a newspaper account or a participant recollection, the match is often close on facts and wide apart on meaning. Historians therefore treat the files as a record of what was observed rather than as a record of what was happening. Some files are still closed, and several thousand pages remain redacted. A standing committee reviews the releases, and material has continued to appear into the present decade.

WHAT THIS PASSAGE IS FOR

- Much of the documentation was created by people trying to stop the movement.
 - Registration figures were collected to decide which areas the Act would cover.
 - An informer report shows what was said, not that it was true.
-

Questions 107.1 to 107.10

on passage 107, What the Files Turned Out to Hold

107.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Some files are still closed and several thousand pages remain redacted
- B) The Bureau tapped telephones under warrants obtained by misrepresentation
- C) Registration figures by county were collected unusually carefully
- D) The period is richly documented, much of it by its opponents, and each source needs its own discipline

107.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why were registration figures unusually careful?

- A) Because organizations kept minutes of their own meetings
- B) Because they were used to decide which areas the 1965 Act would cover
- C) Because the freedom of information statute required accuracy
- D) Because an agent was present when they were compiled

107.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a surveillance file records observation rather than events?

- A) “Much of this became available after 1974”
- B) “An agency summary is a partisan document whose purpose was to justify continued attention”
- C) “they record them through a lens that treated the subject as a threat”
- D) “A standing committee reviews the releases, and material has continued to appear”

107.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

An informer report is evidence that something was said and no evidence at all that it was true, since informers were paid and had reason to produce material. A historian quoting such a report therefore ____

Which choice most logically completes the text?

- A) must say who was paid to produce it
- B) may treat it as a verbatim transcript
- C) should discard the file as worthless
- D) has established what the meeting decided

107.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “partisan” most nearly mean?

- A) written in secret
- B) incomplete in places
- C) belonging to a political party
- D) serving one side of a dispute

107.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about matching a file against a minute?

- A) It explains why some files remain closed to readers
- B) It introduces the amendments to the freedom of information statute
- C) It states where the files agree with other records and where they do not
- D) It reports how many pages the files eventually ran to

107.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 57 of this book. It argues that Brown created no enforcement machinery and so moved at the speed of litigation, while the Voting Rights Act of 1965 created machinery that worked without a plaintiff.

Text 1 says the registration figures were collected to decide coverage. Based on Text 2, what does that tell a reader about the 1965 Act?

- A) It relied on the commerce power rather than on the Fourteenth Amendment
- B) Its machinery needed a measurement before it could be pointed anywhere
- C) It depended on lawsuits brought district by district
- D) It was narrowed by the Supreme Court within a decade

107.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The files record meetings in detail because an agent was present. ____ they record them through a lens that treated the subject as a threat.

Which choice completes the text with the most logical transition?

- A) At the same time,
- B) Consequently,
- C) In short,
- D) For example,

107.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Much of this became available after 1974 ____ when amendments to the freedom of information statute gave researchers a usable instrument.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) 1974; when
- B) 1974 when
- C) 1974, when
- D) 1974: when,

107.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The files record meetings in detail because an agent was present.
- An informer report is evidence that something was said and not that it was true.
- Where a file can be matched against a minute, the match is close on facts and wide on meaning.
- Historians treat the files as a record of what was observed.

The student wants to explain how a hostile record can still be useful to a historian. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Read as a record of what was observed, the files agree closely with other sources on facts even where they differ on meaning
- B) The files record meetings in detail because an agent was present at them
- C) An informer report is evidence that something was said and not that it was true
- D) Historians treat the files as a record of what was observed at the time

ملخص المقطع 107 بالعربية

خلاصة: فترة الحقوق المدنية موثقة توثيقاً غير معتاد، وجزء كبير من التوثيق صنعه من كانوا يحاولون إيقافها. فمحاضر المحاكم ومرافعاتها باقية لآلاف القضايا، وأرقام التسجيل الانتخابي بحسب المقاطعات جمعتها الحكومة الفدرالية لتقرر أي المناطق يشملها قانون عام ألف وتسعمئة وخمسة وستين، ولهذا هي دقيقة بدرجة غير معتادة.

المعنى: المعنى أن ملفات المراقبة مصدر غريب: تسجل الاجتماعات بتفصيل لأن عميلاً كان حاضراً، وتسجلها عبر عدسة تعامل الموضوع تهديداً. فتقرير المخبر دليل على أن شيئاً قيل، ولا دليل إطلاقاً على أنه صحيح، لأن المخبرين كانوا يدفع لهم ولهم سبب لإنتاج مادة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: ما يسجله مصدر وما يسجله عنه. ولذلك يعامل المؤرخون الملفات سجلاً لما رُصد لا سجلاً لما كان يحدث، وحيث يمكن مطابقة ملف بمحضر أو صحيفة تقارب الوقائع وتتبع المعاني.

الصلة بالاختبار: في اختبار سات يُسأل عن حدود مصدر وعن استنتاج يكمل النص. والفخ الشائع أن يُقرأ تقرير مخبر إثباتاً لمضمونه، مع أن النص يفصل بين أن شيئاً قيل وأنه صحيح. ويقترب المقطع بالمقطع السابع والخمسين في أسئلة النصين المتقابلين.

Whose Numbers Are the Famine Reports

British India generated statistics on an extraordinary scale, and almost all of them were produced by the administration for administrative purposes. The revenue settlement, meaning the periodic assessment that fixed what each district owed, required measurement of land, crops and population, and the resulting series run for a century. A historian therefore has a great deal of data and no independent check on it, which is a specific and awkward position.

The famines illustrate the problem. Mortality figures were compiled by the same district officers whose management was in question, and the usual measure is excess mortality, meaning deaths above the number that would have been expected without the event, which requires a baseline that is itself an estimate. Published figures for the famine of 1876 to 1878 range from five million to over eight million depending on the baseline chosen. The Famine Commission of 1880 collected evidence and made recommendations, and it was also a defense of policy, since it had been appointed by the government whose policy was at issue.

Three practices help. Comparisons between districts under different revenue systems, such as areas where the tax was fixed and areas where it was reassessed, allow something like a natural experiment. Private records kept by merchants and missionaries, who had their own reasons for accuracy, provide a partial check. Later census data can be read backward for the holes left in age structure by a famine twenty years earlier. None of this makes the official series reliable, and none makes it useless. It makes it a source with a known direction of error, which is the most that is usually available when the expedient of collecting new data is not open. Famine codes written after 1880 did change administrative behavior, and the later record shows it.

WHAT THIS PASSAGE IS FOR

- Nearly all the statistics were produced by the administration for its own purposes.
 - Excess mortality requires a baseline that is itself an estimate.
 - The result is a source with a known direction of error.
-

Questions 108.1 to 108.10

on passage 108, Whose Numbers Are the Famine Reports

108.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The official series has a known direction of error, which is usually the most that is available
- B) The Famine Commission of 1880 collected evidence and made recommendations
- C) Famine codes written after 1880 did change administrative behavior
- D) Published figures for the famine of 1876 range widely

108.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a measure of excess mortality require?

- A) A revenue settlement fixed for each district
- B) The private records kept by merchants and missionaries
- C) A baseline that is itself an estimate
- D) A census taken twenty years after the event

108.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the body that investigated the famines had an interest in the answer?

- A) “Comparisons between districts under different revenue systems”
- B) “Later census data can be read backward for the holes left in age structure”
- C) “Private records kept by merchants and missionaries, who had their own reasons for accuracy”
- D) “it had been appointed by the government whose policy was at issue”

108.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Published figures for the famine of 1876 to 1878 range from five million to over eight million depending on the baseline chosen. The width of that range therefore ____

Which choice most logically completes the text?

- A) proves that the lower figure is the correct one
- B) reflects an assumption rather than a disagreement about deaths
- C) shows that no famine of that scale took place
- D) was settled by the Famine Commission of 1880

108.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “expedient” most nearly mean?

- A) convenient course of action
- B) hasty and careless method
- C) formal official inquiry
- D) self-serving excuse

108.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about districts under different revenue systems?

- A) It explains why the revenue settlement required measurement
- B) It reports the range of the published mortality figures
- C) It concedes that no check on the official series exists
- D) It gives the first of three practices that supply a check

108.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 58 of this book. It argues that British India was run by about a thousand British officials over three hundred million people, that the arrangement required the colony to produce a surplus, and that two wars broke the arithmetic.

Text 1 says the data were produced for administrative purposes. Based on Text 2, which administrative purpose produced most of them?

- A) The payment of the Indian officer corps
- B) The recording of sterling balances held in London
- C) The assessment of what each district owed in revenue
- D) The granting of provincial governments in 1935

108.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Mortality figures were compiled by the same district officers whose management was in question. ___ the usual measure is excess mortality, which requires a baseline that is itself an estimate.

Which choice completes the text with the most logical transition?

- A) Instead,
- B) On top of that,
- C) In other words,
- D) By contrast,

108.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

None of this makes the official series reliable ___ none makes it useless.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) reliable and
- B) reliable; and
- C) reliable the
- D) reliable, and

108.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Mortality figures were compiled by the officers whose management was in question.
- Comparisons between districts under different revenue systems allow a natural experiment.
- Private records kept by merchants and missionaries provide a partial check.
- None of this makes the official series reliable, and none makes it useless.

The student wants to explain to a reader what a source with a known direction of error is good for. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Mortality figures were compiled by the very officers whose management was in question
- B) A series whose bias runs one way can still be used, so long as it is read against comparisons and records kept by outsiders
- C) Private records kept by merchants and missionaries provide a partial check on the series
- D) Comparisons between districts under different revenue systems allow a natural experiment

ملخص المقطع 108 بالعربية

خلاصة: أنتجت الهند البريطانية إحصاءات على نطاق هائل، وكلها تقريباً أنتجتها الإدارة لأغراض إدارية. فتسوية الإيراد، أي التقدير الدوري الذي يحدّد ما تدفعه كلّ منطقة، اقتضت قياس الأرض والمحاصيل والسكان، وسلاسلها تمتدّ قرناً. فللمؤرّخ بيانات كثيرة ولا تحقّق مستقلّ فيها، وهو موقف محدّد ومخرج.

المعنى: المعنى أنّ المجاعات تجسّد المشكلة: أرقام الوفيات جمعها ضباط المناطق أنفسهم الذين كانت إدارتهم محلّ السؤال، والمقياس المعتاد هو الوفيات الزائدة، أي الوفيات فوق ما كان متوقّفاً بلا الحادث، وهذا يحتاج خطّ أساس هو نفسه تقدير. ولذلك تتراوح أرقام مجاعة سنّة وسبعين بين خمسة ملايين وأكثر من ثمانية.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: مصدر باتجاه خطأ معروف. وثلاث ممارسات تساعد: مقارنة مناطق بأنظمة إيراد مختلفة، وسجّلات خاصّة لتجار ومبشرين، وقراءة إحصاءات لاحقة إلى الوراء بحثاً عن ثغوب في بنية الأعمار.

الصلة بالاختبار: في اختبار سات تتكرّر أسئلة التعليق على بيانات وعلى خطّ الأساس. والفخّ الشائع أن يُقرأ مدى الأرقام تناقضاً يُسقط المصدر، مع أنّ النصّ يسمّيه اتجاه خطأ معروفاً. ويعترن المقطع بالمقطع الثامن والخمسين في أسئلة النصّين المتقابلين.

Two Reports That Were Not Shown

Two assessments of the loyalty of Japanese Americans were in government hands before the removal was ordered. Curtis Munson, a businessman sent by the State Department, reported in November 1941 that the community presented no substantial danger and that an immense majority were loyal. Kenneth Ringle, a naval intelligence officer who spoke Japanese and had worked in the community, reported in January 1942 that the number of genuinely dangerous individuals was small and already known, and that mass removal was unnecessary.

Neither report was given to the Supreme Court when it heard the cases in 1943 and 1944. The government argued military necessity, and the Court accepted it, upholding the exclusion in *Korematsu* by six votes to three. The dissents are worth reading precisely because they had to be written without the documents. Justice Murphy wrote that the claim of necessity rested on misinformation and half-truths, which turned out to be exactly right, and he had no proof.

Peter Irons, a legal historian, found the suppressed material in government archives in 1981 while writing a book. One memorandum from a Justice Department lawyer warned his superiors that the brief contained statements he believed to be false. Lawyers then brought *coram nobis* petitions, a rare procedure for reopening a conviction on the ground that the court was misled, and the convictions of Fred Korematsu, Gordon Hirabayashi and Minoru Yasui were vacated in the mid-1980s. The precedent set in 1944 was never formally overruled until 2018, in a sentence inside a case about something else. The National Archives holds the files and they are open to any reader. The documents also explain something otherwise puzzling about the dissents, which read as though their authors suspected exactly what was missing. Both were reasoning from the shape of the argument rather than from anything they had seen.

WHAT THIS PASSAGE IS FOR

- Both reports concluded that mass removal was unnecessary.
 - Neither report was given to the Supreme Court.
 - A historian found the suppressed material in 1981.
-

Questions 109.1 to 109.10

on passage 109, Two Reports That Were Not Shown

109.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The National Archives holds the files and they are open to any reader
- B) Two assessments against removal were held and withheld, and the record was corrected only decades later
- C) The precedent of 1944 was formally overruled in 2018
- D) A Justice Department lawyer warned that the brief contained false statements

109.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did Kenneth Ringle report?

- A) That an immense majority of the community were loyal
- B) That the Court had been given misinformation and half-truths
- C) That the brief contained statements believed to be false
- D) That the dangerous individuals were few and already known

109.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the dissenting justices reasoned without the evidence that would have proved them right?

- A) “which turned out to be exactly right, and he had no proof”
- B) “the convictions of Fred Korematsu, Gordon Hirabayashi and Minoru Yasui were vacated”
- C) “One memorandum from a Justice Department lawyer warned his superiors”
- D) “The National Archives holds the files and they are open to any reader”

109.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Both were reasoning from the shape of the argument rather than from anything they had seen. A dissent of that kind therefore ____

Which choice most logically completes the text?

- A) could have been written only after 1981
- B) rested on documents the majority had read
- C) can be right about a case without being able to prove it
- D) was formally overruled in a later decision

109.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “precedent” most nearly mean?

- A) an earlier example of misconduct
- B) a ruling that binds later courts
- C) a procedure for reopening a case
- D) a statement made under oath

109.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the final two sentences of the text?

- A) They account for a feature of the dissents that would otherwise puzzle a reader
- B) They report where the documents are now held and who may read them
- C) They explain why the convictions were vacated in the mid-1980s
- D) They introduce the two reports described in the first paragraph

109.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 59 of this book. It argues that emergency power works through delegation, the suspension of ordinary procedure, and the control of information through censorship and classification.

Text 1 reports two withheld assessments. Based on Text 2, what makes that withholding a predictable feature rather than an accident?

- A) Delegation grants authority without specifying what will be done
- B) Ordinary procedure is suspended to shorten the path to execution
- C) Emergency powers are allowed to lapse rather than being repealed
- D) Classification is one of the standard instruments of emergency power

109.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Neither report was given to the Supreme Court when it heard the cases. ____ the government argued military necessity, and the Court accepted it.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) In other words,
- C) Meanwhile,
- D) Instead,

109.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Lawyers then brought coram nobis petitions ____ a rare procedure for reopening a conviction on the ground that the court was misled.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) petitions, a
- B) petitions a
- C) petitions; a
- D) petitions: a,

109.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Neither report was given to the Court when it heard the cases.
- Justice Murphy wrote that the claim of necessity rested on misinformation and half-truths.
- He had no proof of it, and it turned out to be exactly right.
- Both dissenters were reasoning from the shape of the argument.

The student wants to explain why the dissents in *Korematsu* are worth reading. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Neither of the two reports was given to the Court when it heard the cases
- B) Justice Murphy wrote that the claim of necessity rested on misinformation and half-truths
- C) They were right about the suppressed evidence while reasoning only from the shape of the argument put to them
- D) Both of the dissenting justices were reasoning from the shape of the argument

ملخص المقطع 109 بالعربية

خلاصة: كان تقييمان لولاء الأميركيين اليابانيين في يد الحكومة قبل أن يُؤمر بالترحيل. فقد أفاد كيرتس مَنسن، وهو رجل أعمال أرسلته وزارة الخارجية، في تشرين الثاني عام ألف وتسعمئة وواحد وأربعين بأن الجماعة لا تمثل خطرًا كبيرًا وأن الأغلبية الهائلة الموالية. وأفاد كينيث رنغل، وهو ضابط استخبارات بحرية يتكلم اليابانية، في كانون الثاني عام اثنين وأربعين بأن الترحيل الجماعي غير ضروري. المعنى: المعنى أن أيًا من التقريرين لم يُعرض على المحكمة العليا حين نظرت القضايا، فاحتجت الحكومة بالضرورة العسكرية وقبلت المحكمة والمخالفات تستحق القراءة لأنها كتبت بلا الوثائق: كتب القاضي مرفي أن دعوى الضرورة تقوم على معلومات مغلوطة وأنصاف حقائق، وتبين أنه كان محققًا تمامًا، ولم يكن يملك دليلًا. الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: ما يظهر بعد عقود وما يفعله بالسابقة القضائية. فقد وجد المؤرخ القانوني بيتر أيرونز المادة المحجوبة في الأرشيف عام ألف وتسعمئة وواحد وثمانين، وأبطلت الأحكام في منتصف الثمانينات. الصلة بالاختبار: في اختبار سات يُسأل عن الاستنتاج وعن وظيفة جملة وعن الدليل. والفح الشائع أن يفترض أن المخالفين رأوا الوثائق، مع أن النص يقول إنهم استدلوا من شكل الحجة لا من شيء رأوه. ويقترن المقطع بالمقطع التاسع والخمسين في أسئلة النصين المتقابلين.

Two Million Replies and a Wrong Answer

In 1936 the Literary Digest ran the largest straw poll, meaning an informal canvass with no attempt at a representative sample, that had ever been attempted. It mailed about ten million ballots and received more than two million replies, a sample two thousand times larger than anything a modern pollster uses. It predicted that Alf Landon would beat Franklin Roosevelt by fifty-seven to forty-three. Roosevelt won by sixty-one to thirty-seven, the largest margin in a century, and the magazine was out of business within two years.

The failure had two causes and neither was size. The addresses came from telephone directories, automobile registrations and the magazine own subscription lists, which in 1936 described a population that was richer than the country. That is a frame error. On top of it, only about a fifth of those contacted replied, and people who felt strongly against the administration were more willing to spend a stamp on saying so. That is nonresponse bias. The two pushed in the same direction and the result was wrong by eighteen points.

In the same election George Gallup predicted the outcome correctly from about fifty thousand interviews, and he also predicted, in advance and in print, what the Digest poll would say and why. His method was quota sampling, meaning that interviewers were instructed to fill a set number of respondents in each category to match known proportions in the population. The episode became the founding lesson of survey research, and it has had to be relearned repeatedly, most recently where an enormous but self-selected sample is collected online and reported as though its factional enthusiasm were representative. Gallup's method failed in its turn in 1948, for a different reason, and was replaced by probability sampling. Each generation of the technique has been broken by a change in how people can be reached.

WHAT THIS PASSAGE IS FOR

- The poll had more than two million replies and was wrong by eighteen points.
 - The address lists described a population richer than the country.
 - Gallup predicted the outcome from about fifty thousand interviews.
-

Questions 110.1 to 110.10

on passage 110, Two Million Replies and a Wrong Answer

110.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The magazine was out of business within two years of the election
- B) Gallup's method failed in its turn in 1948, for a different reason
- C) An enormous sample failed for two reasons, and neither of them was size
- D) Gallup predicted the outcome correctly from about fifty thousand interviews

110.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, where did the addresses come from?

- A) Telephone directories, automobile registrations and subscription lists
- B) Interviews filled to match known proportions in the population
- C) A probability sample drawn from the electoral register
- D) About fifty thousand interviews conducted in person

110.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two errors reinforced rather than offset each other?

- A) "It mailed about ten million ballots and received more than two million replies"
- B) "The two pushed in the same direction and the result was wrong by eighteen points"
- C) "His method was quota sampling, meaning that interviewers were instructed to fill a set number"
- D) "Each generation of the technique has been broken by a change in how people can be reached"

110.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Only about a fifth of those contacted replied, and people who felt strongly against the administration were more willing to spend a stamp on saying so. A larger mailing would therefore ____

Which choice most logically completes the text?

- A) have corrected the error in the sampling frame
- B) have produced a representative set of replies
- C) have reduced the margin of error proportionally
- D) have reproduced the same bias on a larger scale

110.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word "factional" most nearly mean?

- A) divided into equal parts
- B) measured as a fraction
- C) belonging to one partisan group
- D) repeated at regular intervals

110.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about Gallup predicting what the Digest poll would say?

- A) It explains why the magazine went out of business within two years
- B) It shows that the failure was foreseeable from the method alone
- C) It introduces the quota sampling described in the next sentence
- D) It reports the number of interviews on which his forecast rested

110.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 60 of this book. It argues that news is a selection from whatever reached a newsroom in usable form before a deadline, and that deadline, competition and narrative each favor a particular kind of event.

Text 1 describes a frame that was richer than the country. Based on Text 2, what is the corresponding defect in news?

- A) Events arrive late or never where no reporter is assigned
- B) Coverage of crime rises and falls with police practice
- C) Slow processes are underreported for want of an event structure
- D) A story that takes six hours to confirm has been overtaken

110.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The addresses came from telephone directories, automobile registrations and subscription lists. ___ only about a fifth of those contacted replied.

Which choice completes the text with the most logical transition?

- A) In other words,
- B) For instance,
- C) Therefore,
- D) On top of that,

110.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Roosevelt won by sixty-one to thirty-seven ___ the largest margin in a century.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) thirty-seven the
- B) thirty-seven, the
- C) thirty-seven; the
- D) thirty-seven: the,

110.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The Digest received more than two million replies.
- The addresses described a population richer than the country.
- Only about a fifth of those contacted replied.
- Gallup predicted the outcome correctly from about fifty thousand interviews.

The student wants to warn a reader that a very large sample can still be wrong. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The Digest received more than two million replies to its mailing
- Only about a fifth of those contacted by the magazine replied at all
- Gallup predicted the outcome correctly from about fifty thousand interviews
- Two million replies drawn from a richer population, with four fifths silent, lost to fifty thousand properly chosen interviews

ملخص المقطع 110 بالعربية

خلاصة: في عام ألف وتسعمئة وستة وثلاثين أجرت مجلة ليراري دايجست أكبر استطلاع غير ممثّل عُرف: أرسلت نحو عشرة ملايين بطاقة وتلّقت أكثر من مليوني ردّ، أي عيّنة أكبر ألفي مرّة من أي عيّنة يستخدمها مستطلع حديث. وتوقّعت فوز ألف لاندون على فرانكلين روزفلت بسبعة وخمسين إلى ثلاثة وأربعين، ففاز روزفلت بواحد وستين إلى سبعة وثلاثين.

المعنى: المعنى أنّ للفشل سببين وليس الحجم أحدهما. فالعناوين جاءت من دفاتر الهاتف وتسجيلات السيارات وقوائم المشتركين، وهي عام ستّة وثلاثين تصف سكّاناً أغنى من البلد، وهذا خطأ في الإطار. وفوق ذلك ردّ نحو خمس من اتّصل بهم فقط، وكان المعارضون أكثر استعداداً لدفع ثمن طابع، وهذا تحيّز عدم الاستجابة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الدليل: كيف تفشل عيّنة ضخمة وتنجح عيّنة صغيرة. فقد توقّع جورج غالوب النتيجة صحيحةً من نحو خمسين ألف مقابلة، وتوقّع سلّفاً ومطبوعاً ما ستقوله المجلة ولماذا.

الصلة بالاختبار: في اختبار سات تتكرّر أسئلة التعليق على بيانات وعلى أسباب الخطأ. والفخ الشائع أن يُنسب الفشل إلى صغر العيّنة، مع أنّ النصّ ينفي ذلك ويسمّي الإطار وعدم الاستجابة. ويقرن المقطع بالمقطع الستين في أسئلة النصّين المتقابلين.

BIO · S01 · evidence

Forty Years of Beaks

Peter and Rosemary Grant began working on Daphne Major, a volcanic cone in the Galapagos about a kilometer across, in 1973, and they kept at it for forty years. Their method was exhaustive rather than clever. Every finch on the island was caught, banded, weighed and measured, which was possible because the population ran to a few hundred birds and the island has no fresh water and almost no visitors. Beak length and depth were recorded to a tenth of a millimeter, and because the birds were individually marked the team could follow particular lineages and establish the heritability of each trait, meaning the share of its variation that is passed to offspring.

Then the weather did the experiment. In 1977 the rains failed, no seeds were set for eighteen months, and about eighty-five percent of the medium ground finches died. The small soft seeds went first, so the survivors were disproportionately the birds with deeper beaks able to crack the large hard fruits that remained, and the mean beak depth of the next generation was measurably greater than that of their parents. In 1983 an exceptional wet year reversed the conditions, small seeds became abundant, and the trait moved back.

What this study provides that no laboratory can is a measured rate of change in a wild population under natural conditions, with the selective agent identified and the inheritance established separately. Its limits are equally clear. One island, a few species, and a trait that happens to be easy to measure. Whether the same rates apply to traits that are not viable to measure in the field, or to populations too large to band individually, is not something this work can settle. The Grants published the measurements in full, which is why others have been able to reanalyze them.

WHAT THIS PASSAGE IS FOR

- Every bird on the island was caught, banded and measured.
 - A drought killed most of the population and shifted mean beak depth.
 - The study gives a measured rate in a wild population.
-

Questions 111.1 to 111.10

on passage 111, Forty Years of Beaks

111.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Grants published their measurements in full
- B) Forty years of banding gave a measured rate of change in the wild
- C) A laboratory could have produced the same measurements
- D) Daphne Major is a volcanic cone about a kilometer across

111.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what happened to mean beak depth after the wet year of 1983?

- A) It rose further than it had after the drought
- B) It stayed at the level reached after the drought
- C) It could no longer be measured in the field
- D) It moved back as small seeds became abundant

111.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the inheritance of the trait was established independently of the change in it?

- A) “because the birds were individually marked the team could follow particular lineages and establish the heritability of each trait”
- B) “Beak length and depth were recorded to a tenth of a millimeter”
- C) “In 1977 the rains failed, no seeds were set for eighteen months, and about eighty-five percent of the medium ground finches died”
- D) “The Grants published the measurements in full, which is why others have been able to reanalyze them”

111.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Its limits are equally clear. One island, a few species, and a trait that happens to be easy to measure. A reader who wants a general rate of evolutionary change is therefore ____

Which choice most logically completes the text?

- A) entitled to apply these figures everywhere
- B) left with no measured rates at all
- C) obliged to look beyond this one study
- D) able to use the wet year of 1983 instead

111.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “viable” most nearly mean?

- A) able to stay alive
- B) practical to carry out
- C) worth the expense
- D) open to dispute

111.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that begins by naming the limits?

- A) It turns from what the study settles to what it cannot
- B) It introduces the drought of 1977 for the first time
- C) It withdraws the measured rate as unreliable
- D) It explains why the birds were banded individually

111.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 61 of this book. It sets out the four conditions that produce selection, variation, heritability, differential reproduction and time, and says that each one can be checked, which is what makes the mechanism testable rather than a story.

Text 1 reports a measured change in a wild population. Based on Text 2, what would be added to that account?

- A) The beak measurements were recorded to a tenth of a millimeter
- B) Birds with deeper beaks could crack the large hard fruits
- C) A wild population can be studied for forty years at a stretch
- D) The four conditions the measurements can be checked against

111.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Then the weather did the experiment. In 1977 the rains failed, no seeds were set for eighteen months, and about eighty-five percent of the medium ground finches died. ____ the small soft seeds went first, so the survivors were disproportionately the birds with deeper beaks.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In particular,
- D) In conclusion,

111.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Their method was exhaustive rather than clever ____ every finch on the island was caught, banded, weighed and measured.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) clever: every
- B) clever, every
- C) clever every
- D) clever; every,

111.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Every finch was caught, banded, weighed and measured over forty years.
- The rains failed in 1977 and about eighty-five percent of the medium ground finches died.
- The mean beak depth of the next generation was measurably greater than that of their parents.
- The selective agent was identified and the inheritance established separately.

The student wants to explain what the island study provides that a laboratory cannot. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Every finch was caught, banded, weighed and measured over forty years
- B) The rains failed in 1977 and most of the medium ground finches died
- C) A wild population was measured through a drought it did not choose, with the agent named and the inheritance settled on its own
- D) Mean beak depth rose in the generation after the drought

ملخص المقطع 111 بالعربية

خلاصة: بدأ بيتر وروزماري غرانت العمل في جزيرة دافني ميجور، وهي مخروط بركاني في غالاباغوس يبلغ نحو كيلومتر عرضاً، سنة ألف وتسعمئة وثلاث وسبعين، ودأباً عليه أربعين سنة. وكان منهجهما مستقصياً لا بارعاً: كلَّ عصفور في الجزيرة يُصاد ويُطَوَّق ويُوزن ويُقاس. المعنى: المعنى أن تطويق كل طائر على حدة أتاح تتبع نسل بعينه وإثبات نسبة التوريث في كل صفة على انفراد. ثم أجرى الجو التجربة: تخلف المطر سنة ألف وتسعمئة وسبع وسبعين، فلم تُعقد بذور ثمانية عشر شهراً، وهلك نحو خمسة وثمانين في المئة من عصافير الأرض الوسطى. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: ما تقدّمه هذه الدراسة ولا يقدّمه مختبر هو معدل تغيّر مقيس في جماعة برّية، مع تسمية العامل المنتقي وإثبات التوريث على انفراد. الصلة بالاختبار: في اختبار سات يكثر السؤال عن حدود الدراسة وعن الدليل الذي يسند دعوى وعن وظيفة الجملة. والفح المتوقّع هنا أن تُعمّم النتائج على كل صفة وكل جماعة، مع أن النصّ يحصرها في جزيرة واحدة وأنواع قليلة. ويقرن المقطع بالمقطع الحادي والسّتين في أسئلة النصّين المتقابلين.

From Linkage Maps to Sequence

Three generations of method have been used to find out where genes are and what they do, and each resolves something the previous one could not. The first was the linkage map, meaning a chart of gene order built from how often two inherited traits are separated in breeding. Alfred Sturtevant drew the first one in 1913 as an undergraduate, using fruit flies, and the logic is indirect but sound: traits that are rarely separated must sit close together, and the frequency of separation can be converted into a distance.

The second generation was physical mapping, which located genes on visible chromosomes using stains, deletions and later fluorescent probes. That gave an actual position rather than a relative order. The third is sequencing, meaning reading the order of the chemical letters along a stretch of DNA, which arrived in a usable form in 1977 and became industrial in the 1990s. A draft of the human sequence was announced in 2001 and completed in stages over the following two decades.

What has not changed is the hard part. A sequence tells a reader the letters and nothing about what they do, and most of the human sequence does not code for protein at all. Establishing function still requires breeding experiments, cell studies and natural variation, which is to say that the nascent methods of 1913 are still in use. The characteristic error of the sequencing era has been to treat a correlation between a sequence variant and a trait as an explanation of it, which it is not, any more than knowing a word position in a dictionary explains its meaning. Each generation also inherited the errors of the last, and linkage maps for several organisms had to be reordered once sequences arrived.

WHAT THIS PASSAGE IS FOR

- A linkage map infers order from how often traits are separated.
 - Sequencing became usable in 1977 and industrial in the 1990s.
 - A sequence gives the letters and not what they do.
-

Questions 112.1 to 112.10

on passage 112, From Linkage Maps to Sequence

112.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Sturtevant drew the first linkage map as an undergraduate
- B) A sequence explains what a stretch of DNA does
- C) Three generations of method each resolve what the last could not
- D) A draft human sequence was announced in 2001

112.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did physical mapping give that a linkage map could not?

- A) An actual position rather than a relative order
- B) The order of the chemical letters along the DNA
- C) The function of each gene that it located
- D) A distance converted from a frequency of separation

112.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the oldest of the three methods has not been retired?

- A) “A draft of the human sequence was announced in 2001 and completed in stages over the following two decades”
- B) “Establishing function still requires breeding experiments, cell studies and natural variation”
- C) “most of the human sequence does not code for protein at all”
- D) “linkage maps for several organisms had to be reordered once sequences arrived”

112.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A sequence tells a reader the letters and nothing about what they do, and most of the human sequence does not code for protein at all. A variant found by sequencing alone is therefore ____

Which choice most logically completes the text?

- A) a complete account of the trait it accompanies
- B) proof that the trait is not inherited
- C) located only in relative order on the chromosome
- D) a correlation still waiting for an explanation

112.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “nascent” most nearly mean?

- A) newly fashionable
- B) about to disappear
- C) early and still forming
- D) poorly understood

112.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the dictionary comparison in the text?

- A) It introduces the third generation of method
- B) It makes the error about correlation concrete for a reader
- C) It argues that a sequence is of no value at all
- D) It reports when sequencing became industrial

112.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 62 of this book. It derives the three to one ratio from two copies of each gene, random separation and dominance, and says the derivation fails usefully for features carried close together on the same chromosome.

Text 1 traces three generations of method. Based on Text 2, what would be added to the account of the first of them?

- A) The reason that close-together features break the simple rule
- B) Traits rarely separated must sit close together on the chromosome
- C) Sequencing arrived in a usable form in 1977
- D) Mendel drew the first linkage map from his own peas

112.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The second generation was physical mapping, which located genes on visible chromosomes using stains, deletions and later fluorescent probes. ____ the third is sequencing, meaning reading the order of the chemical letters along a stretch of DNA.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) As a result,
- D) After that,

112.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A sequence tells a reader the letters and nothing about what they do ____ and most of the human sequence does not code for protein at all.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) do and
- B) do, and
- C) do; and
- D) do and,

112.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A sequence tells a reader the letters and nothing about what they do.
- Most of the human sequence does not code for protein at all.
- Establishing function still requires breeding experiments, cell studies and natural variation.
- A correlation between a sequence variant and a trait is not an explanation of it.

The student wants to explain why a sequence does not settle what a gene does. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Most of the human sequence does not code for protein at all
- B) A correlation between a variant and a trait is not an explanation
- C) Establishing function still requires breeding experiments and cell studies
- D) Because the letters say nothing about function, a variant correlated with a trait still has to be explained by breeding and cell work

ملخص المقطع 112 بالعربية

خلاصة: ثلاثة أجيال من المناهج استُعملت لمعرفة أين تقع الجينات وما تفعل، وكلّ جيل يحسم ما لم يقدر عليه الذي قبله. الأول خريطة الارتباط، وهي جدول ترتيب الجينات مبني على كثرة انفصال صفتين موروثتين في التوالد، وقد رسم أولها ألفرد سترتيفانت سنة ألف وتسعمئة وثلاث عشرة. المعنى: المعنى أنّ الجيل الثاني هو التخریط الفيزيائي الذي حدّد مواقع الجينات على كروموسوماتٍ مرئية فأعطى موضعاً حقيقياً لا ترتيباً نسبياً؛ والثالث هو قراءة تتابع الحروف الكيميائية، وقد صار صناعاً في التسعينيات، وأعلنت مسودة التتابع البشري سنة ألفين وواحد. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: ما لم يتغيّر هو الجزء الصعب، فالتتابع يعطي الحروف ولا يعطي الوظيفة، وإثبات الوظيفة ما زال يحتاج تجارب التوالد ودراسات الخلايا والتنوّع الطبيعي. الصلة بالاختبار: في اختبار سات يكثر السؤال عن حدود المنهج وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب الارتباط بين متغيّر في التتابع وصفة ما تفسيراً لها، مع أنّ النص ينفي ذلك. ويقترن المقطع بالمقطع الثاني والسّتين في أسئلة النصّين المتقابلين.

Poisons, Labels and Broken Cells

Nobody has ever watched a sugar molecule being dismantled. The pathway was established by indirect means, and three tactics did most of the work. The first was the inhibitor, meaning a substance that blocks one particular step. Cyanide stops one reaction near the end of the chain, and in a cell treated with it the substances that accumulate are the ones immediately before the block, so the order of steps can be deduced from what piles up behind each poison.

The second tactic was the isotope label, meaning an atom of unusual weight used to trace a substance through a sequence of reactions. Feed a cell sugar in which particular carbon atoms are heavy, collect the carbon dioxide it breathes out, and the position of the heavy atoms shows which parts of the original molecule ended up where. Rudolph Schoenheimer and others established the technique in the 1930s, and it turned metabolic chemistry from speculation into bookkeeping.

The third was to take the cell apart. In the 1940s mitochondria were separated out by spinning broken cells at carefully chosen speeds, and the isolated particles were shown to carry out the oxygen-dependent steps on their own, which located the pathway in a structure rather than in the cell at large. The limits of all three are worth naming. A poison may attenuate several steps rather than one. A label may be scrambled by reactions nobody suspected. An isolated organelle has been removed from everything it was connected to, and the question of whether it still behaves as it did inside the cell can only be answered by further experiments of the same indirect kind. The last large piece of the account, how the energy gradient is actually converted, was proposed by Peter Mitchell in 1961.

WHAT THIS PASSAGE IS FOR

- Substances pile up behind a blocked step, which reveals the order.
 - Heavy atoms show which part of a molecule ended up where.
 - An isolated organelle has been removed from everything it was connected to.
-

Questions 113.1 to 113.10

on passage 113, Poisons, Labels and Broken Cells

113.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Peter Mitchell proposed the last large piece in 1961
- B) Someone has watched a sugar molecule being dismantled
- C) Mitochondria were isolated by spinning broken cells
- D) Three indirect tactics built the pathway, and each has limits

113.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a cell treated with cyanide reveal about the pathway?

- A) The position of the heavy carbon atoms in the sugar
- B) The order of steps, from what piles up behind the block
- C) Which structure in the cell carries out the steps
- D) That the chain has no end reaction at all

113.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that an isolated part of a cell may not behave as it did inside one?

- A) “mitochondria were separated out by spinning broken cells at carefully chosen speeds”
- B) “A label may be scrambled by reactions nobody suspected”
- C) “An isolated organelle has been removed from everything it was connected to”
- D) “it turned metabolic chemistry from speculation into bookkeeping”

113.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A poison may attenuate several steps rather than one. A label may be scrambled by reactions nobody suspected. The three tactics taken together are therefore ____

Which choice most logically completes the text?

- A) stronger than any one of them alone
- B) each sufficient on its own
- C) useless for establishing any pathway
- D) confined to the oxygen-dependent steps

113.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “attenuate” most nearly mean?

- A) make thinner in shape
- B) bring to a full stop
- C) speed up a little
- D) weaken the action of

113.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the three sentences naming limits?

- A) They introduce the isotope label for the first time
- B) They withdraw the pathway as unestablished
- C) They match one weakness to each tactic in turn
- D) They explain how mitochondria were separated out

113.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 63 of this book. It explains that a cell converts the energy in sugar into a working currency, that the first stage nets two units, and that the oxygen path in the mitochondria yields something near thirty.

Text 1 describes how the pathway was established. Based on Text 2, what would be added to that account?

- A) Mitochondria carry out the oxygen-dependent steps
- B) The accounting that the three tactics were used to settle
- C) An isolated organelle has lost all its connections
- D) Cyanide blocks the first step rather than the last

113.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Cyanide stops one reaction near the end of the chain, and in a cell treated with it the substances that accumulate are the ones immediately before the block. ____ the order of steps can be deduced from what piles up behind each poison.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) By contrast,
- C) Even so,
- D) For example,

113.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Nobody has ever watched a sugar molecule being dismantled ____ the pathway was established by indirect means.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) dismantled, the
- B) dismantled the
- C) dismantled. The
- D) dismantled, and, the

113.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- An inhibitor shows the order of steps from what piles up behind the block.
- An isotope label shows which parts of the original molecule ended up where.
- Spinning broken cells located the pathway in a structure.
- A poison may block several steps and a label may be scrambled.

The student wants to explain why three tactics were needed rather than one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Each tactic answers a different question and can fail on its own, so order, atoms and location had to be settled separately
- B) An inhibitor shows the order of steps from what piles up behind the block
- C) Spinning broken cells located the pathway in a structure
- D) A poison may block several steps and a label may be scrambled

ملخص المقطع 113 بالعربية

خلاصة: لم يرَ أحد قط جزيء سكر وهو يُفكك، وإنما أُقيم المسار بطرائق غير مباشرة، وقام بمعظم العمل ثلاث حيل. الأولى المثبط، أي مادة تسد خطوة واحدة بعينها، فالسيانيد يوقف تفاعلاً قرب نهاية السلسلة، وما يتراكم في الخلية المعالجة به هو ما كان قبل السد مباشرة. المعنى: المعنى أن الثانية هي الوسم النظيري، أي ذرة غير معتادة الوزن تُتبع بها المادة عبر سلسلة تفاعلات: تُغذى الخلية سكرًا ثقيل الكربون، ويُجمع ما تتنفسه من غاز، فيدلّ موضع الذرات الثقيلة على مصير أجزاء الجزيء الأصلي. والثالثة تفكيك الخلية نفسها بالطرد المتفاوت. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: لكل حيلة حد يجب تسميته، فقد يُضعف السم خطوات عدة لا واحدة، وقد تُشوش تفاعلات غير متوقعة الوسم، والعُضبة المعزولة قُطعت عن كل ما كانت موصولة به. الصلة بالاختبار: في اختبار سات يكثر السؤال عن حدود المنهج وعن وظيفة قائمة الجمل وعن التحول الذي يفيد النتيجة. والفخ المتوقع هنا أن تُقرأ قائمة الحدود سحبا للنتيجة، مع أن النص يُقيم المسار ويُسمي حدوده معًا. ويقترن المقطع بالمقطع الثالث والسّتين في أسئلة النصّين المتقابلين.

Fences and Isotope Ratios

A claim that one species controls another is hard to test, because the obvious experiment would require removing a predator from a landscape and waiting. Two methods make the question tractable without that. The first is the enclosure, meaning a fenced plot that keeps a particular animal out while leaving everything else the same. Fence twenty plots along a creek, leave twenty unfenced beside them, and the difference in willow growth after ten years separates the effect of browsing from the effects of water, soil and weather, because those act on both sets of plots equally.

The second method reads the animals themselves. The proportion of heavy to light atoms of nitrogen and carbon in a tissue, called the stable isotope ratio, differs systematically by diet and rises at each step up a food chain. A tuft of hair or a feather therefore carries a record of what its owner had been eating, averaged over the period in which the tissue grew. Museum specimens can be sampled, which allows comparisons with animals that died a century ago.

Both methods have boundaries that matter in the Yellowstone argument. An enclosure tests browsing and cannot test fear, so it cannot distinguish elk eating fewer willows from elk standing in different places. Isotope ratios give diet, not cause, and the baseline ratios in a river valley vary with geology. Anyone who wishes to perturb a system and watch, which is the cleanest design available, is also asking for an experiment at a scale that no institution will fund and no regulator will permit. The reintroduction itself was therefore the experiment, and it was performed without a control. That single fact is the reason the dispute in the next passage has never been settled on the evidence.

WHAT THIS PASSAGE IS FOR

- An enclosure separates browsing from water, soil and weather.
 - Isotope ratios in tissue record what the animal had been eating.
 - An enclosure tests browsing and cannot test fear.
-

Questions 114.1 to 114.10

on passage 114, Fences and Isotope Ratios

114.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Two indirect methods make the question testable, and both have boundaries
- B) The Yellowstone reintroduction was carried out with a control area
- C) Museum specimens can be sampled for isotope ratios
- D) Fear rather than browsing explains the willow recovery

114.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does an enclosure hold constant between the fenced and unfenced plots?

- A) The number of elk standing in each plot
- B) The isotope ratios in the willow tissue
- C) Water, soil and weather, which act on both equally
- D) The period over which the tissue grew

114.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the cleanest available design is not available in practice?

- A) "Museum specimens can be sampled, which allows comparisons with animals that died a century ago"
- B) "An enclosure tests browsing and cannot test fear, so it cannot distinguish elk eating fewer willows from elk standing in different places"
- C) "Isotope ratios give diet, not cause, and the baseline ratios in a river valley vary with geology"
- D) "is also asking for an experiment at a scale that no institution will fund and no regulator will permit"

114.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The reintroduction itself was therefore the experiment, and it was performed without a control. An argument about its results is therefore ____

Which choice most logically completes the text?

- A) settled by the enclosure plots alone
- B) open in a way the evidence cannot close
- C) a question about isotope baselines only
- D) impossible to make at all

114.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word "perturb" most nearly mean?

- A) disturb on purpose
- B) worry about greatly
- C) measure very closely
- D) leave entirely alone

114.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the obvious experiment?

- A) It introduces the stable isotope ratio by name
- B) It concedes that the claim cannot be tested at all
- C) It reports the number of plots along the creek
- D) It sets up the problem the two methods are meant to solve

114.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 64 of this book. It explains that energy is lost at every transfer, that about a tenth of it reaches the next level, and that a few wolves can therefore affect a large quantity of willow without any appeal to design.

Text 1 sets out the methods available. Based on Text 2, what would be added to the problem they address?

- A) An enclosure tests browsing and cannot test fear
- B) Isotope ratios rise at each step up a food chain
- C) The reason a small number of predators could matter at all
- D) The reintroduction included twenty fenced control plots

114.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

An enclosure tests browsing and cannot test fear, so it cannot distinguish elk eating fewer willows from elk standing in different places. ___ isotope ratios give diet, not cause, and the baseline ratios in a river valley vary with geology.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Similarly,
- C) As a result,
- D) In short,

114.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Isotope ratios give diet, not cause ___ and the baseline ratios in a river valley vary with geology.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cause; and
- B) cause and
- C) cause: and
- D) cause, and

114.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- An enclosure tests browsing and cannot test fear.
- Isotope ratios give diet, not cause.
- The cleanest design would require an experiment at a scale no regulator will permit.
- The reintroduction was the experiment, and it was performed without a control.

The student wants to explain why the Yellowstone dispute has not been settled. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) An enclosure tests browsing and cannot test the effect of fear
- B) Neither method reaches cause, and the one experiment that was run had no control, so the evidence cannot decide between the readings
- C) Isotope ratios give diet rather than the cause of a change
- D) The cleanest design is one no regulator would ever permit

ملخص المقطع 114 بالعربية

خلاصة: الدعوى بأن نوعاً يتحكم في نوع آخر صعبة الاختبار، لأن التجربة البديهية تقتضي إزالة مفترس من منظر طبيعي كامل والانتظار. وطريقتان تجعلان السؤال قابلاً للتناول دون ذلك: الأولى المحجر، أي قطعة مسورة تمنع حيواناً بعينه وتترك كل شيء آخر كما هو. المعنى: المعنى أن سياج عشرين قطعة وترك عشرين بجوارها بلا سياج يفصل أثر الرعي عن أثر الماء والتراب والجو، لأن هذه تعمل في المجموعتين سواء. والثانية تقرأ الحيوان نفسه: نسبة النظائر الثقيلة إلى الخفيفة في النسيج تختلف بالغذاء وترتفع في كل خطوة معوذاً في السلسلة. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: للطريقتين حدود تهتم في خلاف يلوستون، فالمحجر يختبر الرعي ولا يختبر الخوف، والنظائر تعطي الغذاء لا السبب، وإعادة الإطلاق نفسها كانت التجربة وقد جرت بلا شاهد ضابط. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة الافتتاحية وعن حدود المنهج. والفخ المتوقع هنا أن يُظن أن المجاهر تحسم السؤال، مع أن النص يقول إنها لا تبلغ السبب. ويقرن المقطع بالمقطع الرابع والستين في أسئلة النصين المتقابلين.

Ninety Years of Fur Returns

The Hudson's Bay Company bought furs across northern Canada for three centuries and kept its accounts. Those accounts were published in the 1930s as a series of annual fur returns, meaning the number of pelts bought in each season, and for lynx and snowshoe hare they run from the 1820s to the 1930s. The series shows something striking: both animals rise and crash on a cycle of roughly ten years, the hare peaks slightly before the lynx, and the pattern repeats for more than a century. No other wild population record of that length exists.

A fur return is a proxy, meaning a measurement used to stand in for a quantity that cannot be observed directly, and it is a proxy for several things at once. It depends on how many animals there were and on how many trappers were working. It also depends on how hard they worked, on fur prices in London, on where the company posts happened to be, and on whether a war or an epidemic had reduced the local human population. Each of those varies over a century, and several vary on their own cycles.

Ecologists have therefore spent decades separating the signal from the record. Price series can be used to correct for effort. Independent counts from the twentieth century overlap the end of the series and can be compared. Tree ring records of hare browsing provide a second and entirely separate proxy, and they show the same cycle, which is the strongest argument that the pattern is real rather than an artifact of commerce. The conclusion drawn is modest and firm: these populations are genuinely cyclic, and a population of that kind is permanently precarious even when its average is healthy. The cycle is also visible in the records of other companies and in the memories of trappers.

WHAT THIS PASSAGE IS FOR

- The fur returns run from the 1820s to the 1930s for lynx and hare.
 - A fur return is a proxy for several things at once.
 - Tree ring records of browsing show the same cycle independently.
-

Questions 115.1 to 115.10on passage 115, *Ninety Years of Fur Returns***115.1**

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The cycle is visible in the memories of trappers
- B) A century-long proxy had to be corrected before it could be read
- C) Fur returns count animals rather than pelts bought
- D) No other wild population record of that length exists

115.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the strongest argument that the cycle is real?

- A) The series runs for more than a century
- B) Price series can be used to correct for effort
- C) The hare peaks slightly before the lynx does
- D) Tree ring records show the same cycle independently

115.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the record measures several things at once?

- A) “It depends on how many animals there were and on how many trappers were working”
- B) “both animals rise and crash on a cycle of roughly ten years”
- C) “The Hudson's Bay Company bought furs across northern Canada for three centuries and kept its accounts”
- D) “Independent counts from the twentieth century overlap the end of the series”

115.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Each of those varies over a century, and several vary on their own cycles. A ten-year rhythm read off the returns alone is therefore ____

Which choice most logically completes the text?

- A) certain to be an artifact of commerce
- B) a direct count of the animals present
- C) open to a second explanation until checked
- D) confirmed by the tree ring records already

115.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “precarious” most nearly mean?

- A) uncertain in its records
- B) always at risk of collapse
- C) small in average number
- D) difficult to count well

115.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the list of things a fur return depends on?

- A) It shows why the series cannot be read as a count
- B) It introduces the tree ring records for the first time
- C) It argues that the accounts were badly kept
- D) It reports the period of the cycle in years

115.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 65 of this book. It explains exponential and logistic growth, says the textbook picture wrongly assumes an immediate response to shortage, and shows that a delayed response makes a population overshoot and then fluctuate.

Text 1 reports a cycle in the fur returns. Based on Text 2, what would be added to that reading?

- A) Tree ring records of browsing show the same cycle
- B) A fur return depends on how many trappers were working
- C) The hare and the lynx peak in the same season
- D) A mechanism that would produce a cycle of that kind

115.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Ecologists have therefore spent decades separating the signal from the record. ___ price series can be used to correct for effort.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) For instance,
- D) In conclusion,

115.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The series shows something striking ___ both animals rise and crash on a cycle of roughly ten years.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) striking: both
- B) striking, both
- C) striking both
- D) striking; both,

115.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A fur return depends on animal numbers and on how many trappers were working.
- It also depends on fur prices in London and on where the company posts were.
- Tree ring records of hare browsing are a second and entirely separate proxy.
- The tree rings show the same cycle.

The student wants to explain why a second proxy was needed. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A fur return depends on animal numbers and on trapper numbers
- B) Tree ring records of hare browsing are an entirely separate proxy
- C) Because the returns also move with prices and posts, a proxy with none of those influences was needed to show the cycle is real
- D) The tree rings and the fur returns show the same ten-year cycle

ملخص المقطع 115 بالعربية

خلاصة: شركة خليج هدسن اشترت الفراء في شمال كندا ثلاثة قرون وحفظت حساباتها، ونشرت تلك الحسابات في الثلاثينيات مردودات فراء سنوية، أي عدد الجلود المشتراة في كل موسم، وهي للوشق وأرنب الثلج تمتد قرناً كاملاً ونيقاً. المعنى: المعنى أن السلسلة تُظهر أمراً لافتاً: الحيوانان يصعدان وينهاران على دورة نحو عشر سنوات، ويسبق الأرنب الوشق بقليل، ويتكرر النمط أكثر من قرن. لكن مردود الفراء بديل، أي قياس يقوم مقام كمية لا تُرى مباشرة، وهو بديل عن أشياء عدة في وقت واحد. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: المردود يتعلّق بعدد الحيوان وعدد الصيادين وأسعار الفراء ومواضع المراكز، ولذلك أمضى علماء البيئة عقوداً في فصل الإشارة عن السجل، وحلقات الأشجار بديل ثانٍ مستقلّ تماماً يُظهر الدورة نفسها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن حدود الدليل وعن وظيفة القائمة وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقرأ مردود الفراء عدداً للحيوان، مع أن النصّ يبيّن أنه بديل مركّب. ويقترن المقطع بالمقطع الخامس والستين في أسئلة النصّين المتقابلين.

The Rules and the Exceptions

Robert Koch laid down conditions that a claim about the cause of a disease should satisfy, and they are still the starting point. The organism must be found in every case of the disease, and it must be isolated from a patient and grown in pure culture. The cultured organism must then produce the disease when introduced into a healthy host, and must be recovered again from that host afterward. A postulate, meaning a condition laid down in advance, is useful precisely because it can fail, and these have failed in instructive ways.

The first condition breaks on the asymptomatic carrier, meaning a person who harbors an organism without becoming ill. Koch himself found cholera in people who were perfectly well, and the organism that causes diphtheria is ubiquitous in some populations with no disease at all. The second breaks on organisms that cannot be grown outside a living cell, which includes every virus and several bacteria. The third breaks wherever the disease occurs only in humans, since the experiment cannot ethically be done.

Workers have therefore treated the postulates as a standard to be approached rather than met. Where an animal model is impossible, the third condition has occasionally been satisfied by a researcher who volunteered. Barry Marshall drank a culture of *Helicobacter pylori* in 1984, developed gastritis, and recovered the organism from his own stomach, which was one step in overturning the view that ulcers were caused by stress. Modern practice replaces the missing steps with statistical association, dose response, and the test of whether removing the organism cures the disease. Molecular versions of the postulates were proposed in 1988 for organisms that cannot be cultured. They substitute the presence of particular genes for the growing of a pure culture.

WHAT THIS PASSAGE IS FOR

- A postulate is useful because it can fail.
 - Asymptomatic carriers break the first condition.
 - Marshall drank a culture in 1984 and recovered the organism from himself.
-

Questions 116.1 to 116.10

on passage 116, The Rules and the Exceptions

116.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Molecular postulates were proposed in 1988
- B) Koch required only that the organism be found in every case
- C) Conditions laid down in advance are useful because they can fail
- D) Marshall overturned the view that ulcers are caused by bacteria

116.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what breaks the second of the conditions?

- A) Organisms that cannot be grown outside a living cell
- B) People who harbor an organism without becoming ill
- C) Diseases that occur only in human beings
- D) Researchers who volunteer to swallow a culture

116.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the conditions are treated as a standard to approach rather than a test to pass?

- A) “Koch himself found cholera in people who were perfectly well, and the organism that causes diphtheria is ubiquitous in some populations with no disease at all”
- B) “Modern practice replaces the missing steps with statistical association, dose response, and the test of whether removing the organism cures the disease”
- C) “Barry Marshall drank a culture of *Helicobacter pylori* in 1984, developed gastritis, and recovered the organism from his own stomach”
- D) “They substitute the presence of particular genes for the growing of a pure culture”

116.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The third breaks wherever the disease occurs only in humans, since the experiment cannot ethically be done. A claim about such a disease must therefore ____

Which choice most logically completes the text?

- A) satisfy all four conditions as Koch wrote them
- B) be abandoned until an animal model appears
- C) rest on the growing of a pure culture alone
- D) rest on evidence of some other kind

116.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ubiquitous” most nearly mean?

- A) unusually dangerous
- B) easily recognized
- C) present nearly everywhere
- D) confined to one place

116.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence defining a postulate?

- A) It introduces the molecular versions proposed in 1988
- B) It explains why the failures that follow are worth having
- C) It concedes that the conditions were badly chosen
- D) It reports the four conditions in their original order

116.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 66 of this book. It argues that an outbreak is governed by route, dose, the reproduction number and the incubation period, and that a reproduction number below one makes an outbreak die out.

Text 1 examines the conditions for naming a cause. Based on Text 2, what would be added to that examination?

- A) Quantities that can be measured once a cause is granted
- B) The organism must be found in every case of the disease
- C) Some carriers harbor an organism without becoming ill
- D) Koch measured the reproduction number of cholera himself

116.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Workers have therefore treated the postulates as a standard to be approached rather than met. ___ where an animal model is impossible, the third condition has occasionally been satisfied by a researcher who volunteered.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In short,
- C) Even so,
- D) For instance,

116.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The organism must be found in every case of the disease ___ and it must be isolated from a patient and grown in pure culture.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) disease and
- B) disease, and
- C) disease; and
- D) disease and,

116.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A postulate is useful precisely because it can fail.
- The first condition breaks on the asymptomatic carrier.
- The second breaks on organisms that cannot be grown outside a living cell.
- Modern practice replaces the missing steps with statistical association and dose response.

The student wants to explain why the postulates are still taught although they fail. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The first condition breaks on the asymptomatic carrier
- Some organisms cannot be grown outside a living cell at all
- Modern practice uses statistical association and dose response
- Each failure shows what is missing and what must replace it, which is why a condition that can fail is worth laying down

ملخص المقطع 116 بالعربية

خلاصة: وضع روبرت كوخ شروطًا ينبغي أن تستوفيها الدعوى في سبب مرض، وهي لا تزال نقطة البداية: أن يوجد الكائن في كل حالة من المرض، وأن يُعزل من مريض ويُنمى زرعًا نقيًا، وأن يحدث المرض إذا أدخل في مضيف سليم، وأن يُستخرج من ذلك المضيف بعدها. المعنى: المعنى أن الشرط الموضوع سلفًا نافع لأنه قابل للفشل، وقد فشلت هذه الشروط فشلًا مفيديًا: فالأول ينكسر على الحامل بلا أعراض، والثاني ينكسر على كائنات لا تُنمى خارج خلية حية ومنها كل فيروس، والثالث ينكسر حيث لا يقع المرض إلا في الإنسان. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: عُدت الشروط معيارًا يُقارَب لا يُستوفى، وحلّت محل الخطوات الناقصة الملازمة الإحصائية واستجابة الجرعة واختبار هل يشفي إزالة الكائن المرض. الصلة بالاختبار: في اختبار سات يكثر السؤال عن حدود المعيار وعن وظيفة جملة التعريف وعن الدليل. والفحّ المتوقّع هنا أن يُقرأ انكسار الشروط إبطالًا لها، مع أن النص يجعل قابلية الفشل هي موضع نفعها. ويقترن المقطع بالمقطع السادس والسّتين في أسئلة النصّين المتقابلين.

The Same Field Since 1843

At Rothamsted in Hertfordshire a field called Broadbalk has been growing wheat under fixed treatments since 1843. The field is divided into strips, and one of them has received nothing at all for a hundred and eighty years. Another has received farmyard manure every year without exception, and the others receive measured combinations of nitrogen, phosphate and potash. The treatments have barely changed, the plots are in the same places, and the yields have been recorded every harvest, which makes this the longest continuous agricultural experiment in the world.

A long-term experiment answers questions that a three-year trial cannot. Soil organic matter changes over decades, so only a series of this length shows the manured strip climbing steadily while the unfertilized strip settles at about a third of the yield and stays there. Slow processes become visible: the accumulation of phosphate, the acidification of soil under ammonium fertilizer, the way weed populations proliferate and then shift in composition as management changes. Rare events are captured because the experiment happens to be running when they occur.

The second, less obvious value is the archive. Soil and grain samples have been stored since the beginning, in sealed jars, and they can be analyzed by methods that did not exist when they were collected. Those jars have since been used to measure the arrival of industrial pollution, the rise of radioactive fallout in the 1950s and its decline, and changes in soil bacteria, none of which anyone in 1843 could have intended. The limits are those of any single site. One soil, one climate, one rotation, and a set of treatments chosen by Victorians. Several other long-term sites now exist, in Illinois, Sweden and India, and comparisons between them are informative. Where two sites disagree, the disagreement is usually about soil type rather than about the chemistry.

WHAT THIS PASSAGE IS FOR

- Broadbalk has grown wheat under fixed treatments since 1843.
 - Only a long series shows soil organic matter changing.
 - Stored samples can be analyzed by methods invented later.
-

Questions 117.1 to 117.10

on passage 117, The Same Field Since 1843

117.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Several other long-term sites exist in Illinois, Sweden and India
- B) The treatments on Broadbalk have changed many times
- C) The unfertilized strip yields about a third of the manured one
- D) A fixed field for a hundred and eighty years answers what short trials cannot

117.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what has been stored at Rothamsted since the beginning?

- A) The original notebooks of the Victorian designers
- B) Soil and grain samples in sealed jars
- C) Weed populations gathered from each strip
- D) Yields recorded at every harvest since 1843

117.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the experiment has produced results nobody set out to obtain?

- A) “one of them has received nothing at all for a hundred and eighty years”
- B) “Soil organic matter changes over decades, so only a series of this length shows the manured strip climbing steadily”
- C) “the rise of radioactive fallout in the 1950s and its decline, and changes in soil bacteria, none of which anyone in 1843 could have intended”
- D) “One soil, one climate, one rotation, and a set of treatments chosen by Victorians”

117.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Rare events are captured because the experiment happens to be running when they occur. A trial that lasts three years is therefore ____

Which choice most logically completes the text?

- A) unlikely to be running when one arrives
- B) certain to miss every slow process entirely
- C) better placed to catch a rare event
- D) limited by the choice of Victorian treatments

117.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “proliferate” most nearly mean?

- A) change in kind
- B) become rarer
- C) spread by seed
- D) increase in number

117.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph about the archive?

- A) It introduces the fixed treatments for the first time
- B) It concedes that the yields were never recorded
- C) It adds a second value the design did not plan for
- D) It reports the yield of the unfertilized strip

117.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 67 of this book. It sets out fixation, uptake, decay and return as the steps of the nitrogen cycle, and names harvest, leaching and gas losses as the three ways a cropped field loses nitrogen.

Text 1 describes a field under fixed treatments. Based on Text 2, what would be added to that description?

- A) The unfertilized strip settles at about a third of the yield
- B) The chemistry that makes the unfertilized strip settle where it does
- C) Soil and grain samples have been stored in sealed jars
- D) Rothamsted measured the leaching of nitrate from the start

117.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The treatments have barely changed, the plots are in the same places, and the yields have been recorded every harvest. ___ this is the longest continuous agricultural experiment in the world.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) By contrast,
- C) Even so,
- D) For example,

117.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Slow processes become visible ___ the accumulation of phosphate, the acidification of soil under ammonium fertilizer, and the shifting of weed populations.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) visible, the
- B) visible the
- C) visible: the
- D) visible; the,

117.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Soil and grain samples have been stored since 1843 in sealed jars.
- They can be analyzed by methods that did not exist when they were collected.
- The jars have been used to measure industrial pollution and radioactive fallout.
- Nobody in 1843 could have intended those measurements.

The student wants to explain why the jars matter as much as the yields. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Because the stored samples can be read by methods invented later, the jars answer questions the design never asked
- B) Soil and grain samples have been stored since 1843 in sealed jars
- C) The jars have been used to measure industrial pollution and fallout
- D) Nobody in 1843 could have intended those measurements

ملخص المقطع 117 بالعربية

خلاصة: في روثامستد بمقاطعة هرتفوردشير حقل يُسمى برودبالك يزرع القمح تحت معاملات ثابتة منذ سنة ألف وثمانمئة وثلاث وأربعين. والحقل مقسوم شرائح، شريحة منها لم تنل شيئاً قط مئة وثمانين سنة، وأخرى تنال سماد المزرعة كل سنة بلا استثناء، والباقي ينال خلائط مقيسة. المعنى: المعنى أن التجربة الطويلة تجيب ما لا تجيبه تجربة ثلاث سنوات. فالمادة العضوية في التراب تتغير على العقود، فلا تظهر إلا في سلسلة بهذا الطول أن الشريحة المسمدة تصعد صعوداً مطرداً وأن غير المسمدة تستقر عند نحو ثلث المحصول وتبقى هناك. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: والقيمة الثانية الأقل ظهوراً هي المحفوظات، فعينات التراب والحب مخزونة في أوعية محكمة منذ البداية، وتُحلل بطرائق لم تكن موجودة يوم جمعت. الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة الفقرة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفتح المتوقع هنا أن يُحسب طول التجربة وحده هو الفائدة، مع أن النض يضيف المحفوظات ونتائج لم يقصدها أحد يوم بدأت. ويفترن المقطع بالمقطع السابع والستين في أسئلة النصين المتقابلين.

Three Proxies, One Picture

The Mauna Loa record begins in 1958. Everything earlier has to be reconstructed, and three independent proxies carry most of the weight. An ice core, meaning a cylinder drilled from a glacier, is the strongest of them, because the air trapped in its bubbles is a physical sample of the atmosphere of the year the snow fell. Cores from Antarctica now reach back about eight hundred thousand years, and the carbon dioxide in them is measured directly rather than inferred.

Tree rings provide annual resolution over the last two thousand years in suitable species, and their width and density respond to temperature and moisture. Corals grow in annual bands whose chemistry records sea surface temperature. Each proxy has a weakness that the others do not share. Ice cores smooth the record, because air diffuses in the snow before the bubbles close, and they come from two polar regions. Tree rings respond to several variables at once and to the age of the tree. Corals are tropical and marine.

Combining them depends on the calibration period, meaning the overlap in which each proxy can be checked against direct measurement. Where instruments and proxies run together for a century, the relation can be established and then extended backward, which is also where the method is most criticized, since a relation fitted in one period may not hold in another. Reconstruction is therefore reported with error bars that widen as they go back. The agreement between three methods with unrelated weaknesses is the real argument, and it is stronger than any one of them, including the one that lay dormant in a freezer for twenty years before anyone thought to measure its bubbles. Cores are stored at low temperature in national facilities and reanalyzed as techniques improve.

WHAT THIS PASSAGE IS FOR

- Air in ice core bubbles is a physical sample of ancient atmosphere.
 - Each proxy has a weakness the others do not share.
 - Agreement between methods with unrelated weaknesses is the real argument.
-

Questions 118.1 to 118.10

on passage 118, Three Proxies, One Picture

118.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Three proxies with unrelated weaknesses agree, and that agreement is the argument
- B) Ice cores measure carbon dioxide by inference rather than directly
- C) Antarctic cores reach back about eight hundred thousand years
- D) Error bars narrow as a reconstruction goes further back

118.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why is an ice core the strongest of the three proxies?

- A) It gives annual resolution over two thousand years
- B) It comes from two polar regions at once
- C) Its trapped air is a physical sample of the atmosphere
- D) Its chemistry records sea surface temperature

118.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the combining of proxies is where the method is most open to challenge?

- A) “Ice cores smooth the record, because air diffuses in the snow before the bubbles close”
- B) “Tree rings respond to several variables at once and to the age of the tree”
- C) “Cores from Antarctica now reach back about eight hundred thousand years”
- D) “a relation fitted in one period may not hold in another”

118.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Each proxy has a weakness that the others do not share. Ice cores smooth the record, and they come from two polar regions. Tree rings respond to several variables at once. A conclusion all three support is therefore ____

Which choice most logically completes the text?

- A) as weak as the weakest of the three
- B) not resting on any one of those flaws
- C) free of every source of uncertainty
- D) confined to the last two thousand years

118.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “dormant” most nearly mean?

- A) unused for a long while
- B) frozen through and through
- C) lost beyond recovery
- D) growing very slowly

118.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the three sentences naming each weakness?

- A) They introduce the calibration period for the first time
- B) They withdraw the reconstruction as unsupported
- C) They report the resolution each proxy achieves
- D) They establish that the three failures are unrelated

118.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 68 of this book. It explains that water vapor and carbon dioxide absorb in the infrared, that the mechanism is a delay rather than a trap, and that residence time and feedback decide how much it matters.

Text 1 describes how earlier concentrations are reconstructed. Based on Text 2, what would be added to that account?

- A) Carbon dioxide in ice cores is measured directly
- B) Error bars widen as a reconstruction goes back
- C) Why a reconstructed concentration is worth having at all
- D) Ice cores record the delay in the escape of radiation

118.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Where instruments and proxies run together for a century, the relation can be established and then extended backward. ___ this is also where the method is most criticized.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) At the same time,
- C) As a result,
- D) In other words,

118.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The Mauna Loa record begins in 1958 ___ everything earlier has to be reconstructed.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) in 1958, everything
- B) in 1958 everything
- C) in 1958, and, everything
- D) in 1958. Everything

118.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- An ice core traps a physical sample of the atmosphere but smooths the record.
- Tree rings give annual resolution but respond to several variables at once.
- Corals record sea surface temperature but are tropical and marine.
- Each proxy has a weakness the others do not share.

The student wants to explain why agreement between the proxies carries more weight than any one of them. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- An ice core traps a physical sample of the atmosphere
- The three weaknesses are unrelated, so a result all three give cannot have been produced by any of them
- Tree rings give annual resolution over the last two thousand years
- Corals are tropical and marine rather than polar

ملخص المقطع 118 بالعربية

خلاصة: سجل ماونا لوا يبدأ سنة ألف وتسعمئة وثمان وخمسين، وكل ما قبله لا بد من إعادة بنائه، وثلاثة بدائل مستقلة تحمل معظم الثقل. وأقواها قلب الجليد، أي أسطوانة تُستخرج من نهر جليدي، لأن الهواء المحتجز في فقاعاتها عينة فيزيائية من جو السنة التي نزل فيها الثلج. المعنى: المعنى أن حلقات الأشجار تعطي ميزاً سنوياً في ألفي سنة الأخيرة في أنواع مناسبة، وأن المرجان ينمو حلقة سنوية تسجل كيميائياً حرارة سطح البحر. ولكل بديل ضعف لا يشاركه فيه الآخران: فالقلوب تملس السجل، والحلقات تستجيب لعوامل عدة، والمرجان مداري بحري. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: الجمع بين البدائل يتوقف على مدة المعايرة، وهي التداخل الذي يُعَارَن فيه البديل بقياس مباشر، وهناك أشد ما يُنتقد المنهج، لأن علاقة رُكبت في مدة قد لا تصح في غيرها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة قائمة الأضعاف وعن الدليل الذي يسند دعوى وعن الاستنتاج من جملة ناقصة. والغف المتوقع هنا أن يُحسب اتفاق البدائل خلواً من كل شك، مع أن النص يقول إن حدود الخطأ تتسع كلما رجعنا. ويقترب المقطع بالمقطع الثامن والستين في أسئلة النصين المتقابلين.

How the Age Was Settled

Before radioactivity there was no way to date a rock, and estimates for the age of the Earth ranged over two orders of magnitude. Radiometric dating, which is the dating of a rock by the proportion of a radioactive element that has decayed, changed that. A radioactive element decays at a rate that nothing in geology alters, so the proportion remaining is a clock. Arthur Holmes spent forty years applying the method to rocks and had the order of magnitude right by the 1920s, when almost nobody believed him.

The remaining problem was that the oldest rock on Earth is younger than the Earth, since the surface has been melted, buried and recycled continuously. Claire Patterson solved it in 1953 by dating meteorites instead, on the argument that they formed from the same cloud of material at the same time and have been undisturbed since. He measured lead isotopes in a fragment of the Canyon Diablo iron and obtained four and a half billion years, a figure that has moved by less than two percent in seventy years of refinement.

The method depends on an assumption that has to be checked rather than assumed: that the sample is a closed system, meaning that nothing relevant has entered or escaped since it formed. Geologists test it in two ways. They date the same rock with two different decay chains, which must agree, and they prefer minerals physically resilient enough to survive heating. Zircon crystals are the favorite, because they hold their uranium and reject lead so strongly that grains four billion years old are still usable. Where two methods disagree, the rock has been disturbed, and the disagreement itself is the evidence. Patterson had to build a clean laboratory to do the work, because ordinary dust carried enough lead to swamp the measurement.

WHAT THIS PASSAGE IS FOR

- A radioactive element decays at a rate nothing in geology alters.
 - Meteorites were dated because the oldest Earth rock is younger than the Earth.
 - Where two methods disagree, the rock has been disturbed.
-

Questions 119.1 to 119.10

on passage 119, How the Age Was Settled

119.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Patterson had to build a clean laboratory to do the work
- B) A clock that geology cannot alter settled the age, once the right sample was found
- C) The oldest rock on Earth gives the age of the Earth
- D) Holmes had the order of magnitude right by the 1920s

119.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did Patterson date meteorites instead of rocks from Earth?

- A) Because meteorites contain more uranium than zircon does
- B) Because lead isotopes cannot be measured in terrestrial rock
- C) Because two decay chains must be compared in the same sample
- D) Because the oldest rock on Earth is younger than the Earth

119.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a disagreement between methods is informative rather than merely awkward?

- A) “Where two methods disagree, the rock has been disturbed, and the disagreement itself is the evidence”
- B) “A radioactive element decays at a rate that nothing in geology alters”
- C) “Arthur Holmes spent forty years applying the method to rocks and had the order of magnitude right by the 1920s”
- D) “they prefer minerals physically resilient enough to survive heating”

119.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Zircon crystals are the favorite, because they hold their uranium and reject lead so strongly that grains four billion years old are still usable. A mineral that let lead in and out would therefore ____

Which choice most logically completes the text?

- A) give an age older than the rock around it
- B) be preferred for its ease of measurement
- C) fail the test of being a closed system
- D) agree with both decay chains at once

119.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “resilient” most nearly mean?

- A) quick to recover afterward
- B) tough enough to last
- C) common in most rocks
- D) easy to date precisely

119.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the assumption to be checked?

- A) It turns from the method to the condition the method needs
- B) It introduces the meteorite measurement for the first time
- C) It concedes that radiometric dating cannot be trusted
- D) It reports the figure Patterson obtained in 1953

119.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 69 of this book. It explains that there are only three kinds of plate edge, that collision lifts rock while rain, ice and rivers wear it down, and that the height of a range is the balance between the two rates.

Text 1 explains how the age of the Earth was fixed. Based on Text 2, what would be added to that explanation?

- A) The surface of the Earth has been melted and recycled
- B) Zircon crystals hold uranium and reject lead strongly
- C) Meteorites have been recycled in the same way as rock
- D) The process that keeps destroying the oldest rock on Earth

119.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Geologists test it in two ways. They date the same rock with two different decay chains, which must agree. ___ they prefer minerals physically resilient enough to survive heating.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) Second,
- D) As a result,

119.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Before radioactivity there was no way to date a rock ___ and estimates for the age of the Earth ranged over two orders of magnitude.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) rock, and
- B) rock and
- C) rock; and
- D) rock and,

119.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The oldest rock on Earth is younger than the Earth, since the surface has been recycled.
- Meteorites formed from the same cloud of material at the same time.
- They have been undisturbed since.
- Patterson measured lead isotopes and obtained four and a half billion years.

The student wants to explain why a meteorite could settle a question about the Earth. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The oldest rock on Earth is younger than the Earth itself
- B) Patterson obtained four and a half billion years from lead isotopes
- C) A meteorite formed with the Earth and has not been disturbed since, so it keeps a clock the recycled surface has lost
- D) Meteorites formed from the same cloud of material at the same time

ملخص المقطع 119 بالعربية

خلاصة: قبل النشاط الإشعاعي لم تكن هناك طريقة لتأريخ صخرة، وتراوحت تقديرات عمر الأرض على مرتبتين من العظم. والتأريخ الإشعاعي، أي تأريخ الصخرة بنسبة ما تحلل من عنصر مشع، غير ذلك، لأن العنصر المشع يتحلل بمعدل لا يغيره شيء في الجيولوجيا، فالنسبة الباقية ساعة. المعنى: المعنى أن المشكلة الباقية هي أن أقدم صخرة على الأرض أحدث من الأرض، لأن السطح يُصهر ويُدفن ويُعاد تدويره بلا انقطاع. فحلها كبير باترسون سنة ألف وتسعمئة وثلاث وخمسين بتأريخ النيازك، بحجة أنها تكوّنت من السحابة نفسها في الوقت نفسه ولم تُضطرب بعدها. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: المنهج يقوم على افتراض يجب فحصه لا تسليمه، وهو أن العينة نظام مغلق، ويُفحص بتأريخ الصخرة نفسها بسلسلي تحلل يجب أن تتفق، وبتفضيل معادن تمصر على التسخين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن وظيفة الجملة التي تسمى شرطًا وعن الدليل وعن إكمال النص. والفخ المتوقع هنا أن يُقرأ ذكر الافتراض تشكيكًا في المنهج، مع أن النص يجعل اختلاف المنهجين نفسه دليلًا. ويقترن المقطع بالمقطع التاسع والسّتين في أسئلة النصّين المتقابلين.

Weighing an Ice Sheet

Two quite different instruments measure what Antarctica is doing, and they were designed by people who had no interest in each other's methods. The first is gravimetry, meaning the measurement of mass by its gravitational pull. A pair of satellites launched in 2002 flew in the same orbit about two hundred kilometers apart, and the distance between them was measured continuously to within a few microns. When the leading satellite passed over a heavier region it was pulled forward slightly, and the change in separation gives the mass below. Repeating the orbit for years gives the change in mass, which for Antarctica came out as a loss of some hundreds of gigatons a year.

The second instrument is older and simpler. A tide gauge, meaning a fixed instrument recording sea level against a local benchmark, has been operating in some harbors since the nineteenth century. Gauges measure the sea where they stand, and the land they are bolted to may itself be rising or sinking, so each record must be corrected using independent measurements of ground movement.

The two methods fail in opposite directions, which is why they are used together. Gravimetry measures mass but cannot see where the water went, and it cannot separate ice loss from water moving in the rock beneath. Tide gauges measure what matters to a harbor but are clustered in the northern hemisphere and in rich countries. Satellite altimetry, which bounces radar off the sea surface, now provides a third series covering the whole ocean since 1992. Planning that aims to mitigate a rise depends on all three, since local sea level is what floods a street and global mass is what drives it. The first satellite pair was replaced in 2018 after the original instruments failed.

WHAT THIS PASSAGE IS FOR

- Satellite separation was measured to within a few microns.
 - The land a tide gauge is bolted to may itself be moving.
 - The two methods fail in opposite directions.
-

Questions 120.1 to 120.10

on passage 120, Weighing an Ice Sheet

120.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The first satellite pair was replaced in 2018
- B) A tide gauge measures the whole ocean at once
- C) Two instruments that fail in opposite directions are used together
- D) Gravimetry measures the distance between two satellites

120.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what must each tide gauge record be corrected for?

- A) Movement of the land the gauge is bolted to
- B) The distance between the two satellites
- C) Water moving in the rock beneath the ice
- D) The radar bounced off the sea surface

120.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two methods are kept because their weaknesses do not overlap?

- A) “the distance between them was measured continuously to within a few microns”
- B) “The two methods fail in opposite directions, which is why they are used together”
- C) “Satellite altimetry, which bounces radar off the sea surface, now provides a third series”
- D) “a loss of some hundreds of gigatons a year”

120.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Gravimetry measures mass but cannot see where the water went, and it cannot separate ice loss from water moving in the rock beneath. A mass figure on its own is therefore ____

Which choice most logically completes the text?

- A) enough to plan a harbor defense
- B) a direct reading of local sea level
- C) corrected by the movement of the ground
- D) an amount without a destination

120.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “mitigate” most nearly mean?

- A) measure with care
- B) argue against openly
- C) lessen the effect of
- D) bring about sooner

120.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph on the tide gauge?

- A) It introduces satellite altimetry for the first time
- B) It sets an older and simpler method beside the new one
- C) It argues that gravimetry should be abandoned
- D) It reports the separation of the two satellites

120.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 70 of this book. It explains that water carries heat far better than air, that a current two degrees above freezing melts the floating ice from below, and that a retrograde slope makes each retreat expose thicker ice.

Text 1 describes how the loss is measured. Based on Text 2, what would be added to that description?

- A) The process that the measured loss of mass is recording
- B) Gravimetry cannot say where the lost water went
- C) A tide gauge measures sea level against a local benchmark
- D) Gravimetry measured the melting beneath the floating ice

120.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Gauges measure the sea where they stand, and the land they are bolted to may itself be rising or sinking. ___ each record must be corrected using independent measurements of ground movement.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For instance,
- C) Even so,
- D) For that reason,

120.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The second instrument is older and simpler ___ a tide gauge has been operating in some harbors since the nineteenth century.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) simpler, a
- B) simpler. A
- C) simpler a
- D) simpler, and, a

120.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Gravimetry measures mass but cannot see where the water went.
- Tide gauges measure what matters to a harbor but are clustered in rich countries.
- Satellite altimetry covers the whole ocean since 1992.
- Local sea level is what floods a street and global mass is what drives it.

The student wants to explain why planning needs more than one of the three series. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Gravimetry measures mass but cannot see where the water went
- B) Satellite altimetry has covered the whole ocean since 1992
- C) Tide gauges are clustered in the northern hemisphere and in rich countries
- D) Local sea level is what floods a street and global mass is what drives it, and no single series gives both

ملخص المقطع 120 بالعربية

خلاصة: آلتان مختلفتان جدًا تقيسان ما يجري في أنتاركتيكا. الأولى قياس الجاذبية، أي قياس الكتلة بجذبها الجاذبي: زوج من الأقمار أطلق سنة ألفين واثنين يطير في المدار نفسه على بعد نحو مئتي كيلومتر، وتُقاس المسافة بينهما باستمرار إلى حدود ميكرونات قليلة.

المعنى: المعنى أن القمر المتقدم إذا مرّ فوق منطقة أثقل انجذب إلى الأمام قليلًا، فيدلّ تغيّر الفرجة على الكتلة تحته، وتكرار المدار سنين يعطي تغيّر الكتلة. والآلة الثانية أقدم وأبسط: مقياس المدّ الثابت الذي يسجل مستوى البحر إلى علامة محلية، وقد تعلق الأرض التي رُكّب عليها أو تهبط.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الدليل: الطريقتان تفشلان في جهتين متعاكستين، ولهذا تُستعملان معًا؛ فالجاذبية تقيس الكتلة ولا ترى إلى أين ذهب الماء، ومقاييس المدّ تقيس ما يهّم الميناء لكنّها متكتلة في نصف الأرض الشمالي.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة وعن معنى كلمة في سياقها. والفخّ المتوقع هنا أن يُقرأ رقم الكتلة الكلّي مستوى بحر محليًا، مع أنّ النصّ يفرّق بينهما. ويقترن المقطع بالمقطع السبعين في أسئلة النصّين المتقابلين.

The Chain Back to a Standard

A reading on a laboratory balance means nothing by itself, and what makes it mean something is traceability, meaning an unbroken chain of comparisons linking the instrument to a national standard. The laboratory balance is checked against a reference mass, meaning a weight certified by comparison with a higher standard. That weight was certified against a better one held by a calibration service. The service compared its own masses against the national standard, and the national standard was compared, until recently, against a cylinder of platinum and iridium kept in a vault near Paris.

Every link in that chain adds a little uncertainty, and the whole point of the arrangement is that the additions are known and recorded. A certificate for a reference mass states its value and its uncertainty, and anyone who wants to calibrate an instrument against it inherits both. The chain also has to be maintained, because masses change: they gain a film of contamination, lose material to handling, and must be cleaned by a prescribed method that is itself part of the standard.

The platinum cylinder turned out to illustrate the weakness of defining a unit by an object. Comparisons across a century showed that the official kilogram and its official copies were drifting apart by tens of micrograms, and nobody could say which had changed. In 2019 the definition was replaced. The kilogram is now fixed by assigning an exact value to a constant of nature and building an apparatus that realizes the unit from it. A laboratory with the right equipment can therefore reproduce the standard, instead of shipping a weight to Paris. Four of the seven base units were redefined on the same day for the same reason. The arrangement is less convenient and very much harder to lose.

WHAT THIS PASSAGE IS FOR

- Traceability is an unbroken chain of comparisons to a national standard.
 - Every link adds uncertainty, and the additions are recorded.
 - The kilogram was redefined in 2019 because the metal cylinder drifted.
-

Questions 121.1 to 121.10

on passage 121, The Chain Back to a Standard

121.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Four of the seven base units were redefined on one day
- B) A reading means something only through a chain of comparisons
- C) A laboratory balance means something by itself
- D) Reference masses must be cleaned by a prescribed method

121.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a certificate for a reference mass state?

- A) The method by which it must be cleaned
- B) The vault in Paris where it is kept
- C) The constant of nature that defines it
- D) Its value and its uncertainty together

121.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that defining a unit by an object has a weakness?

- A) “the official kilogram and its official copies were drifting apart by tens of micrograms, and nobody could say which had changed”
- B) “Every link in that chain adds a little uncertainty, and the whole point of the arrangement is that the additions are known and recorded”
- C) “Four of the seven base units were redefined on the same day for the same reason”
- D) “The arrangement is less convenient and very much harder to lose”

121.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A certificate for a reference mass states its value and its uncertainty, and anyone who wants to calibrate an instrument against it inherits both. A result from that instrument is therefore ____

Which choice most logically completes the text?

- A) free of the uncertainty of the chain above it
- B) certified by the vault in Paris directly
- C) no better than the chain behind it
- D) exact once the balance has been cleaned

121.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “calibrate” most nearly mean?

- A) adjust for comfort
- B) set against a known standard
- C) read with great care
- D) certify as exact

121.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph about the platinum cylinder?

- A) It shows the chain failing at its highest link
- B) It introduces the reference mass for the first time
- C) It concedes that traceability is of no use
- D) It reports the method by which masses are cleaned

121.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 71 of this book. It distinguishes random error, which averaging reduces, from systematic error, which is identical in every reading and is found only by comparison with something independent.

Text 1 describes a chain of comparisons. Based on Text 2, what would be added to that description?

- A) A certificate states a value and an uncertainty
- B) Every link in the chain adds a little uncertainty
- C) Averaging many readings would remove the chain entirely
- D) The name for the error the chain is built to catch

121.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The chain also has to be maintained, because masses change. ____ they gain a film of contamination, lose material to handling, and must be cleaned by a prescribed method.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In particular,
- D) In conclusion,

121.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A reading on a laboratory balance means nothing by itself ____ and what makes it mean something is an unbroken chain of comparisons.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) itself, and
- B) itself and
- C) itself; and
- D) itself and,

121.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The national standard was compared against a platinum cylinder kept in a vault.
- Comparisons across a century showed the official kilogram and its copies drifting apart.
- Nobody could say which of them had changed.
- The unit is now fixed by assigning an exact value to a constant of nature.

The student wants to explain why the kilogram was redefined. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The national standard was compared against a cylinder kept in a vault
- B) The unit is now fixed by assigning a value to a constant of nature
- C) The cylinder and its copies drifted apart with no way to tell which had moved, so the unit was tied to a constant instead
- D) Comparisons across a century showed a drift of tens of micrograms

ملخص المقطع 121 بالعربية

خلاصة: القراءة على ميزان مختبري لا تعني شيئاً بذاتها، والذي يجعلها تعني شيئاً هو قابلية التتبع، أي سلسلة مقاييسات غير مقطوعة تربط الآلة بمعيار وطني. فالميزان يُقاس إلى كتلة مرجعية مُصدّقة بمقاييسات بمعيار أعلى، وتلك صُدّقت بأحسن منها عند خدمة معايرة. المعنى: المعنى أن كل حلقة في تلك السلسلة تضيف قدرًا من الارتياح، وأن مغزى الترتيب كله هو أن تكون الإضافات معلومة مسجلة. فشهادة الكتلة المرجعية تذكر قيمتها وارتياحها، ومن أراد أن يعاير آلة بها ورث الأمرين معًا. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: أسطوانة البلاتين كشفت ضعف تعريف الوحدة بجسم، فقد أظهرت مقاييسات قرن كامل أن الكيلوغرام الرسمي ونسخه يتباعد بعضها عن بعض بعشرات الميكروغرامات، ولم يقدر أحد على تحديد أيها تغير. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب القراءة معنى قائمًا بذاته، مع أن النص ينفي ذلك في أول جملة. ويقتزن المقطع بالمقطع الحادي والسبعين في أسئلة النصين المتقابلين.

Weighing the World With a Wire

Gravity is the weakest force by an enormous margin, and measuring its strength between two ordinary objects is correspondingly difficult. Henry Cavendish did it in 1798 using a torsion balance, meaning a beam hung on a thin fiber which twists by a measurable amount under a tiny force. Two small lead spheres hung from the ends of a six-foot wooden beam. Two large lead spheres, each about three hundred and fifty pounds, were brought up beside them, and the beam turned through a fraction of a degree.

The whole experiment is a study in the control of error. The apparatus was enclosed in a case inside a shuttered room, and Cavendish observed the beam through a telescope from outside so that his body heat would not set up air currents. The twisting of the fiber was calibrated by timing the free oscillation of the beam, which converts a force measurement into a measurement of time. The large spheres were moved from one side to the other and the deflection measured in both directions, so that any constant bias canceled.

The result gave the density of the Earth to within about one percent of the modern figure, and from it the gravitational constant follows. Cavendish did not report the constant, which was not a quantity anyone used at the time, and his paper is titled as an experiment to determine the density of the Earth. The measurement remained the most accurate for about a century. The constant is still the least precisely known of the fundamental constants, because the empirical difficulty Cavendish faced has never gone away: the force is tiny, and everything in the room pulls. Modern versions use the same principle with better fibers and laser readout. Published values still disagree with one another by more than their stated uncertainties, which means somebody has an error nobody has found.

WHAT THIS PASSAGE IS FOR

- A torsion balance twists measurably under a tiny force.
 - Cavendish observed from outside the room to avoid air currents.
 - Moving the spheres both ways cancels any constant bias.
-

Questions 122.1 to 122.10

on passage 122, Weighing the World With a Wire

122.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Cavendish reported the gravitational constant in his paper
- B) Modern versions use laser readout and better fibers
- C) The experiment is remembered for its control of error
- D) Gravity is the weakest force by an enormous margin

122.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why did Cavendish observe from outside the room?

- A) So that his body heat would not stir the air
- B) So that the fiber would twist more freely
- C) So that the large spheres could be moved
- D) So that the telescope could be calibrated

122.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the difficulty has not been removed by better equipment?

- A) “The twisting of the fiber was calibrated by timing the free oscillation of the beam”
- B) “Published values still disagree with one another by more than their stated uncertainties, which means somebody has an error nobody has found”
- C) “The result gave the density of the Earth to within about one percent of the modern figure”
- D) “The measurement remained the most accurate for about a century”

122.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The large spheres were moved from one side to the other and the deflection measured in both directions, so that any constant bias canceled. A bias present in only one direction would therefore ____

Which choice most logically completes the text?

- A) cancel in the same way as a constant one
- B) be removed by timing the free oscillation
- C) make no difference to the final figure
- D) survive the reversal and stay in the result

122.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “empirical” most nearly mean?

- A) imperial in scale
- B) approximate rather than exact
- C) belonging to measurement itself
- D) left over from an earlier age

122.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the work a study in error?

- A) It introduces the torsion balance for the first time
- B) It announces what the following sentences will list
- C) It concedes that the result was never trustworthy
- D) It reports the weight of the large lead spheres

122.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 72 of this book. It explains that braking force is roughly proportional to the weight on the tires, that kinetic energy rises with the square of speed, and that reaction distance is proportional to speed alone.

Text 1 reports a measurement of the weakest force. Based on Text 2, what would be added to that report?

- A) What the same force does at the scale of a road
- B) The experiment used a beam hung on a thin fiber
- C) Gravity is the weakest of the forces by a margin
- D) A torsion balance measures the stopping distance of a truck

122.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Cavendish did not report the constant, which was not a quantity anyone used at the time. ___ his paper is titled as an experiment to determine the density of the Earth.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) For example,
- D) Accordingly,

122.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Two small lead spheres hung from the ends of a six-foot wooden beam ___ two large lead spheres were brought up beside them.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) beam, two
- B) beam. Two
- C) beam two
- D) beam, and, two

122.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Gravity is the weakest force by an enormous margin.
- The force is tiny, and everything in the room pulls.
- Modern versions use the same principle with better fibers and laser readout.
- Published values still disagree by more than their stated uncertainties.

The student wants to explain why the constant is still poorly known. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Gravity is the weakest of the forces by an enormous margin
- B) Modern versions use better fibers and a laser readout
- C) The force is tiny, and everything in the room pulls on it
- D) The pull is tiny and everything nearby adds to it, so modern values still disagree by more than they claim

ملخص المقطع 122 بالعربية

خلاصة: الجاذبية أضعف القوى بفارق هائل، وقياس شدتها بين جسمين عاديين صعب بقدر ذلك. وقد فعله هنري كافندش سنة ألف وسبعمئة وثمان وتسعين بميزان الفتل، أي عارضة معلقة على ليف رقيق يلتوي بمقدار يُقاس تحت قوة ضئيلة. المعنى: المعنى أن كرتين صغيرتين من الرصاص عُلقتا من طرفي عارضة خشبية طولها ست أقدام، وفُزبت منهما كرتان كبيرتان وزن كل منهما نحو ثلاثمئة وخمسين رطلاً، فدارت العارضة كسرًا من الدرجة. والتجربة كلها درس في ضبط الخطأ. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: أغلق الجهاز في صندوق في غرفة مُوصدة، ورمد كافندش العارضة بمنظار من الخارج لئلا تُحدث حرارة بدنه تيارات هواء، وعُوِّلَت استدارة الليف بتوقيت تذبذب العارضة الحرّ، ونُقلت الكرتان الكبيرتان إلى الجهة الأخرى ليتقاضى أيّ تحيز ثابت. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تمهد لقائمة وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُنسب إلى كافندش إبلاغ الثابت، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الثاني والسبعين في أسئلة النصين المتقابلين.

Where to Draw the Boundary

An efficiency figure cannot be stated until somebody chooses a system boundary, meaning the line drawn around whatever is being measured, with everything crossing it counted. Choose the boundary at the terminals of a motor made by Siemens or by any other firm and the efficiency is about ninety-five percent. Put it at the power station fence and the figure for the same motor doing the same work falls to around forty. Put it at the coal mine and it falls again.

None of those numbers is wrong. They answer different questions, and the usual dispute about any energy technology is a dispute about where the line should sit. An electric vehicle has no tailpipe, so inside a boundary drawn at the car it emits nothing at all. Drawn around the generating system it emits whatever that system emits, which varies by country and by hour. Drawn wider still, to include the mining of lithium and the manufacture of the battery, it acquires a debt before it has moved, and that debt is repaid over some number of miles that depends on everything inside the boundary.

The discipline that takes this seriously is life cycle analysis, meaning an accounting that follows energy and materials from extraction through manufacture and use to disposal. Its weakness is that the result depends on assumptions that are not themselves measurable: how long the product lasts, what it displaces, what happens at the end. Two careful analyses of the same object can differ by a factor of two for that reason, and a difference between them that looks negligible in the summary can turn out to be the whole argument once the assumptions are printed. Standards bodies now publish rules for drawing the boundary in particular industries. The rules make studies comparable with each other without making any of them true.

WHAT THIS PASSAGE IS FOR

- An efficiency cannot be stated until a boundary is chosen.
 - The same motor is ninety-five percent or forty percent efficient.
 - Life cycle results depend on assumptions that are not measurable.
-

Questions 123.1 to 123.10

on passage 123, Where to Draw the Boundary

123.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Standards bodies publish rules for drawing the boundary
- B) One of the three efficiency figures for a motor is wrong
- C) An electric vehicle emits nothing at all
- D) An efficiency figure depends on where the line is drawn

123.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the weakness of a life cycle analysis?

- A) It cannot follow a product as far as disposal
- B) It rests on assumptions that cannot be measured
- C) It draws the boundary at the terminals of a motor
- D) It is forbidden by the standards bodies

123.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a small-looking choice can decide the whole result?

- A) “Put it at the power station fence and the figure for the same motor doing the same work falls to around forty”
- B) “An electric vehicle has no tailpipe, so inside a boundary drawn at the car it emits nothing at all”
- C) “a difference between them that looks negligible in the summary can turn out to be the whole argument once the assumptions are printed”
- D) “The rules make studies comparable with each other without making any of them true”

123.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Drawn wider still, to include the mining of lithium and the manufacture of the battery, it acquires a debt before it has moved, and that debt is repaid over some number of miles. A comparison of two vehicles therefore ____

Which choice most logically completes the text?

- A) has to state the mileage it assumes
- B) is settled by the absence of a tailpipe
- C) is independent of where the boundary sits
- D) depends only on the mining of the lithium

123.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “negligible” most nearly mean?

- A) careless in its method
- B) left out on purpose
- C) open to challenge
- D) too small to matter

123.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the three boundaries drawn around a motor?

- A) They introduce the electric vehicle for the first time
- B) They concede that efficiency cannot be measured at all
- C) They show one object carrying three different figures
- D) They report the rules the standards bodies publish

123.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 73 of this book. It explains that efficiencies multiply along a chain, reports that a modern coal plant turns about forty percent of its fuel into electricity, and warns against judging a technology by its last step.

Text 1 argues about where the boundary belongs. Based on Text 2, what would be added to that argument?

- A) A figure at the terminals is higher than one at the fence
- B) The arithmetic that makes the wider boundary so much worse
- C) Not one of the three figures for the motor is wrong
- D) A coal plant turns ninety-five percent of its fuel into power

123.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Not one of those numbers is wrong. ____ they answer different questions, and the usual dispute about any energy technology is a dispute about where the line should sit.

Which choice completes the text with the most logical transition?

- A) Rather,
- B) Likewise,
- C) For instance,
- D) In conclusion,

123.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Put it at the power station fence and the figure falls to around forty ____ put it at the coal mine and it falls again.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) forty, put
- B) forty put
- C) forty. Put
- D) forty, and, put

123.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Life cycle analysis follows energy and materials from extraction to disposal.
- Its result depends on assumptions that are not themselves measurable.
- Those assumptions include how long the product lasts and what it displaces.
- Two careful studies of the same object can differ by a factor of two.

The student wants to explain why two careful studies can disagree by a factor of two. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The method follows the whole chain but rests on unmeasurable assumptions about lifetime and displacement, which two teams may set differently
- Life cycle analysis follows energy and materials from extraction to disposal
- Its result depends on assumptions that are not themselves measurable
- Two careful studies of the same object can differ by a factor of two

ملخص المقطع 123 بالعربية

خلاصة: رقم المردود لا يمكن ذكره قبل أن يختار أحد حدًا للنظام، أي الخط المرسوم حول ما يُقاس، فيُحسب كل ما يعبره. ضع الحد عند أطراف محرك كهربائي فالمردود نحو خمسة وتسعين في المئة؛ وضعه عند سور محطة التوليد فالرقم للمحرك نفسه وللعمل نفسه يهبط إلى نحو أربعين. المعنى: المعنى أن وضعه عند منجم الفحم يهبط به مرة أخرى، وليس واحد من هذه الأرقام خاطئًا، بل تجيب أسئلة مختلفة، والخلاف المعتاد في أي تقنية للطاقة خلاف في موضع الخط. فالسيارة الكهربائية لا عادم لها، فداخل حد مرسوم عند السيارة لا تُطلق شيئًا. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: والعلم الذي يأخذ هذا بجديّة هو تحليل دورة الحياة، أي حساب يتبع الطاقة والمواد من الاستخراج إلى الصنع إلى الاستعمال إلى التخلص، وضعفه أن نتيجته متعلقة بافتراضات غير قابلة للقياس. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الحالات الثلاث وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب أحد الأرقام خاطئًا، مع أن النص يقول إنَّ أيًا منها ليس خاطئًا. ويقترن المقطع بالمقطع الثالث والسبعين في أسئلة النصين المتقابلين.

A Paddle Wheel and a Thermometer

In the 1840s James Joule set out to show that work and heat are two forms of the same thing, and the experiment he is remembered for is almost absurdly simple in conception. A falling weight turned a paddle wheel inside a sealed copper vessel of water. The water was stirred, it warmed, and Joule measured how much. Knowing the weight and the distance it fell gave the work done, and knowing the mass of water and the rise in temperature gave the heat produced. The ratio between them is the mechanical equivalent of heat.

The difficulty was entirely in the precision. The temperature rise in a single run was a fraction of a degree, so Joule had thermometers made that could be read to a two-hundredth. He corrected for the heat the vessel itself absorbed, for the heat leaking through the walls, and for the energy the falling weight still carried when it landed. He repeated the experiment with mercury instead of water, and by forcing water through tubes, and by compressing air, and obtained figures close to one another by three unrelated routes.

The wider significance is that it removed a category. Before Joule, heat was widely treated as a substance that could be transferred but not created, and any amount produced by rubbing had to be attributed to something being squeezed out. Afterward there was one quantity, energy, measured in one unit, and a bookkeeping rule that applies to a steam engine and a stirred bucket alike. Joule reported the figure to four significant digits in 1850, and the modern value differs from it by less than one percent. He is said to have attempted the measurement on his honeymoon, using a waterfall. The story is probably exaggerated and the thermometers were certainly real.

WHAT THIS PASSAGE IS FOR

- A falling weight turned a paddle wheel and warmed the water.
 - The temperature rise in one run was a fraction of a degree.
 - The result replaced two categories with one quantity.
-

Questions 124.1 to 124.10

on passage 124, A Paddle Wheel and a Thermometer

124.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A simple experiment pressed to high precision removed a category
- B) Joule measured the rise in temperature to a whole degree
- C) He attempted the measurement on his honeymoon with a waterfall
- D) Thermometers could be read to a two-hundredth of a degree

124.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what three further routes did Joule take to the same figure?

- A) Water, a waterfall and a steam engine
- B) Mercury, a paddle wheel and a sealed vessel
- C) Mercury, water forced through tubes and compressed air
- D) Water, a falling weight and a thermometer

124.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the result changed the way a quantity was counted?

- A) “A falling weight turned a paddle wheel inside a sealed copper vessel of water”
- B) “He corrected for the heat the vessel itself absorbed, for the heat leaking through the walls”
- C) “Joule reported the figure to four significant digits in 1850, and the modern value differs from it by less than one percent”
- D) “Afterward there was one quantity, energy, measured in one unit, and a bookkeeping rule that applies to a steam engine and a stirred bucket alike”

124.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Before Joule, heat was widely treated as a substance that could be transferred but not created, and any amount produced by rubbing had to be attributed to something being squeezed out. A paddle wheel warming water therefore ____

Which choice most logically completes the text?

- A) confirmed that heat is a substance after all
- B) left the older account with nothing to squeeze
- C) measured the heat leaking through the walls
- D) produced too little warming to be measured

124.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “attributed” most nearly mean?

- A) explained as coming from
- B) credited to a person
- C) measured against a scale
- D) given as a property

124.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph on the wider significance?

- A) It introduces the mechanical equivalent of heat
- B) It concedes that the ratio was never established
- C) It reports the precision of the thermometers used
- D) It says what the measurement cost the older account

124.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 74 of this book. It states the relation among pressure, volume and absolute temperature, works through four cases, and explains why dry rising air cools about ten degrees for every thousand meters.

Text 1 reports a measurement that joined work and heat. Based on Text 2, what would be added to that report?

- A) Work and heat are two forms of the same thing
- B) Joule corrected for the heat leaking through the walls
- C) A case where the work shows up as cooling instead
- D) The gas relation was established by the paddle wheel

124.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The temperature rise in a single run was a fraction of a degree. ____ Joule had thermometers made that could be read to a two-hundredth.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) For that reason,
- C) By contrast,
- D) In other words,

124.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The water was stirred, it warmed ____ and Joule measured how much.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) warmed; and
- B) warmed and
- C) warmed: and
- D) warmed, and

124.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A falling weight turned a paddle wheel in a sealed vessel of water.
- He repeated the work with mercury, with water forced through tubes and by compressing air.
- The three routes gave figures close to one another.
- The difficulty was entirely in the precision.

The student wants to explain why three further routes mattered. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A falling weight turned a paddle wheel in a sealed vessel
- B) Three unrelated arrangements gave figures close to each other, so the number did not belong to one apparatus
- C) He repeated the work with mercury and with compressed air
- D) The difficulty of the experiment was entirely in the precision

ملخص المقطع 124 بالعربية

خلاصة: في الأربعينيات من القرن التاسع عشر مضى جيمس جول يبين أن العمل والحرارة صورتان لشيء واحد، والتجربة التي يُذكر بها بسيطة التصور بسطًا يقارب العبث: ثقل ساقط يدير دولاب تجديد داخل وعاء نحاشي محكم فيه ماء، فيُحرّك الماء ويدفأ، وقاس جول كم دفئ. المعنى: المعنى أن معرفة الثقل والمسافة التي سقطها تعطى العمل المبذول، ومعرفة كتلة الماء وارتفاع حرارته تعطى الحرارة المنتجة، والنسبة بينهما هي المكافئ الميكانيكي للحرارة. والصعوبة كانت كلها في الدقة، فارتفاع الحرارة في الجربة الواحدة كسر من الدرجة. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: أعاد جول التجربة بالزئبق بدل الماء، وبدفع الماء في أنابيب، وبضغط الهواء، فحصل على أرقام متقاربة بثلاث طرائق غير مترابطة، والمغزى الأوسع أنها أسقطت صنفاً كاملاً. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة الختامية وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُقال إن ارتفاع الحرارة كان درجة كاملة، مع أن النص يقول إنه كسر من الدرجة. ويقترن المقطع بالمقطع الرابع والسبعين في أسئلة النصين المتقابلين.

Fifty Hertz as a Signal

An electricity grid, whether in Texas or in France, cannot store anything worth mentioning, so generation must match consumption continuously. The measurement that reveals any mismatch is the grid frequency, meaning the rate at which the alternating current reverses. Every large generator on a network turns in step. When demand exceeds supply the generators are being asked for more than they are receiving in steam or water, they slow very slightly, and the frequency falls below its nominal fifty or sixty cycles a second.

That single number is therefore a continuous readout of the balance of an entire country, and control rooms act on deviations of a few hundredths. The rate at which the frequency moves is governed by inertia, meaning the stored rotational energy of the large spinning machines, which acts like a flywheel and slows any change. A grid with many heavy turbines is forgiving. A grid supplied largely through electronics, as solar and wind are, has less of this stored motion, and the frequency can move faster than human operators can respond, which is why fast automatic reserves have become a salient part of system design.

The record is also used after the event. Because frequency wanders by tiny amounts in a pattern that is the same everywhere on a synchronous network, a recording of mains hum in the background of an audio file can be matched against the archived frequency record and dated to within a short window. Laboratories have used the method in criminal cases. A measurement maintained for the purpose of keeping lights on turns out to double as a clock that nobody designed. The frequency archive for several national grids is published and goes back decades. Its forensic use has been challenged on the ground that the archives themselves are not always complete.

WHAT THIS PASSAGE IS FOR

- Frequency falls when demand exceeds supply.
 - Inertia from heavy turbines slows any change in frequency.
 - Mains hum in a recording can be dated against the frequency archive.
-

Questions 125.1 to 125.10

on passage 125, Fifty Hertz as a Signal

125.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The frequency archive for several grids is published
- B) One number reports the balance of a whole country at once
- C) A grid can store enough electricity to cover a mismatch
- D) Laboratories have used the method in criminal cases

125.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what governs how fast the frequency moves?

- A) The deviation the control room will accept
- B) The number of cycles a second in the country
- C) The completeness of the published archive
- D) The stored rotational energy of the large machines

125.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a measurement can acquire a use nobody intended?

- A) “A measurement maintained for the purpose of keeping lights on turns out to double as a clock that nobody designed”
- B) “Because frequency wanders by tiny amounts in a pattern that is the same everywhere on a synchronous network”
- C) “Laboratories have used the method in criminal cases”
- D) “Its forensic use has been challenged on the ground that the archives themselves are not always complete”

125.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A grid supplied largely through electronics, as solar and wind are, has less of this stored motion, and the frequency can move faster than human operators can respond. Such a grid therefore ____

Which choice most logically completes the text?

- A) needs no reserves of any kind
- B) cannot be balanced at all
- C) has to be balanced by automatic means
- D) runs at a lower nominal frequency

125.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “salient” most nearly mean?

- A) projecting outward
- B) prominent and central
- C) recently invented
- D) easily overlooked

125.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph on mains hum?

- A) It turns from the designed use to an accidental one
- B) It introduces the idea of inertia for the first time
- C) It argues that the frequency record is unreliable
- D) It reports the deviations a control room acts on

125.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 75 of this book. It derives the heating in a conductor as the current squared times the resistance and explains why electricity is sent across country at very high voltage.

Text 1 reads the balance of a grid from one number. Based on Text 2, what would be added to that reading?

- A) The frequency falls when demand exceeds supply
- B) Control rooms act on deviations of a few hundredths
- C) Frequency decides how much power a line can lose
- D) What happens to the power between generator and user

125.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A grid with many heavy turbines is forgiving. ____ a grid supplied largely through electronics has less of this stored motion.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) As a result,
- C) By contrast,
- D) In short,

125.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

An electricity grid cannot store anything worth mentioning ____ so generation must match consumption continuously.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) mentioning, so
- B) mentioning so
- C) mentioning; so
- D) mentioning so,

125.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The rate at which the frequency moves is governed by stored rotational energy.
- A grid with many heavy turbines is forgiving.
- A grid supplied through electronics has less of that stored motion.
- The frequency can then move faster than human operators can respond.

The student wants to explain why a change in the mix of generators changes the design. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A grid with many heavy turbines is a forgiving one to run
- B) The rate of change is governed by stored rotational energy
- C) Electronics carry less stored motion, so the frequency can move faster than an operator and the reserves must be automatic
- D) The frequency can move faster than human operators can respond

ملخص المقطع 125 بالعربية

خلاصة: شبكة الكهرباء لا تقدر على تخزين ما يُذكر، فلا بد أن يطابق التوليد الاستهلاك على الدوام. والقياس الذي يكشف أيّ اختلال هو تردد الشبكة، أي معدل انعكاس التيار المتردد، وكلّ مولّد كبير على الشبكة يدور متساوياً مع غيره. المعنى: المعنى أن الطلب إذا زاد على العرض يُطلب من المولدات أكثر مما تناله من بخار أو ماء، فتبطئ قليلاً جداً، فيهبط التردد تحت قيمته المقررة. فذلك الرقم الواحد قراءة متصلة لنوازن قُطر كامل، وغرف التحكم تتصرّف عند انحرافات من مئات الدورات. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: سرعة حركة التردد تحكمها القصورية، أي الطاقة الدورانية المخزونة في الآلات الكبيرة، فتعمل عمل دولاب الموازنة وتبطئ أيّ تغيّر؛ وشبكة ممدودة بالإلكترونيات أقلّ خزاناً لتلك الحركة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة وعن معنى كلمة في سياقها. والفج المتوقّع هنا أن يُقال إنّ الشبكة تخزن ما يكفي لتغطية الاختلال، مع أنّ النصّ ينفي ذلك. ويقترن المقطع بالمقطع الخامس والسبعين في أسئلة النصّ المتقابلين.

From a Toothed Wheel to a Definition

That light takes time to travel was established before anyone could measure the time. Ole Romer noticed in 1676 that the eclipses of a moon of Jupiter ran late when the Earth was further away, and concluded that light has a finite speed, which was not the general opinion. The first terrestrial measurement came in 1849, when Hippolyte Fizeau sent a beam through the gaps of a rapidly spinning toothed wheel to a mirror five miles away and back. At the right speed the returning light struck the next tooth and vanished, which gave a time of flight, meaning a speed obtained by timing a signal over a known distance, from nothing but a measurement of rotation.

The method was refined for a century. Albert Michelson spent decades on it, using rotating mirrors over longer baselines, and by the 1920s the figure was known to a few parts in a hundred thousand. The limit was no longer the timing but the distance, because the length of a long baseline could not be measured as precisely as the time could.

That is why the problem was eventually dissolved rather than solved. In 1983 the meter was redefined as the distance light travels in a stated fraction of a second, which makes the speed of light a defined constant, meaning a quantity assigned an exact value. It is now exactly 299,792,458 meters per second by definition, and the question of measuring it does not arise. What laboratories measure instead is length, by timing light, which is the same experiment read backward. A constant of nature became a unit conversion, and the uncertainty moved from the speed to the ruler. The same move has since been made for the kilogram and for electrical units. Each redefinition takes a quantity that had been measured and makes it the thing against which measurements are made.

WHAT THIS PASSAGE IS FOR

- Romer inferred a finite speed from late eclipses in 1676.
 - Fizeau timed light with a spinning toothed wheel in 1849.
 - The speed of light is now exact by definition.
-

Questions 126.1 to 126.10

on passage 126, From a Toothed Wheel to a Definition

126.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Romer inferred a finite speed from eclipses in 1676
- B) Laboratories still measure the speed of light directly
- C) A measured constant was turned into the standard for measuring
- D) Fizeau used a toothed wheel and a mirror five miles away

126.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what became the limiting factor by the 1920s?

- A) The length of the long baseline
- B) The timing of the returning light
- C) The speed of the rotating mirror
- D) The fraction of a second chosen

126.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the trouble was removed by a decision rather than an experiment?

- A) “Albert Michelson spent decades on it, using rotating mirrors over longer baselines”
- B) “That is why the problem was eventually dissolved rather than solved”
- C) “What laboratories measure instead is length, by timing light, which is the same experiment read backward”
- D) “Each redefinition takes a quantity that had been measured and makes it the thing against which measurements are made”

126.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A constant of nature became a unit conversion, and the uncertainty moved from the speed to the ruler. A laboratory that wants a more precise length must therefore ____

Which choice most logically completes the text?

- A) measure the speed of light more carefully
- B) wait for the meter to be redefined again
- C) use a longer baseline than Michelson did
- D) time the light over its path more closely

126.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “finite” most nearly mean?

- A) very small indeed
- B) fixed once and for all
- C) limited rather than instant
- D) able to be measured

126.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the limit no longer being the timing?

- A) It introduces the toothed wheel for the first time
- B) It explains why a new definition became attractive
- C) It concedes that the speed was never measured
- D) It reports the figure reached by the 1920s

126.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 76 of this book. It derives reflection, refraction and diffraction from the rule that every point on a wavefront acts as a source, and ties the spreading of a wave to the size of the gap compared with its wavelength.

Text 1 reports how the speed of light was pinned down. Based on Text 2, what would be added to that report?

- A) What the light does on its way along the baseline
- B) Fizeau timed a beam over a known distance and back
- C) The meter is now defined in terms of the speed
- D) Diffraction fixed the speed of light in 1983

126.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The limit was no longer the timing but the distance, because the length of a long baseline could not be measured as precisely as the time could. ____ the problem was eventually dissolved rather than solved.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) For instance,
- D) For that reason,

126.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That light takes time to travel was established before anyone could measure the time ____ and Romer argued it from the eclipses of a moon of Jupiter.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) time and
- B) time, and
- C) time; and
- D) time and,

126.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- By the 1920s the figure was known to a few parts in a hundred thousand.
- The limit was no longer the timing but the length of the baseline.
- In 1983 the meter was redefined as the distance light travels in a stated fraction of a second.
- The speed is now exact by definition.

The student wants to explain why nobody measures the speed of light now. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) By the 1920s the figure was known to a few parts in a hundred thousand
- B) The limit was no longer the timing but the length of the baseline
- C) The meter was redefined in 1983 in terms of the speed of light
- D) The baseline had become the weaker measurement, so the speed was fixed by definition and the meter defined from it

ملخص المقطع 126 بالعربية

خلاصة: أنَّ الضوء يستغرق وقتًا في السير ثبت قبل أن يقدر أحد على قياس ذلك الوقت. فقد لاحظ أوله رومر سنة ألف وستمئة وست وسبعين أنَّ خسوف قمر من أقمار المشتري يتأخر إذا بعدت الأرض، فاستنتج أنَّ للضوء سرعة منتهية، وذلك خلاف الرأي العام حينها. المعنى: المعنى أنَّ أول قياس أرضي كان سنة ألف وثمانمئة وتسع وأربعين، حين أرسل هيبوليت فيزو شعاعًا في فُرَج دولاب مسنن سريع الدوران إلى مرآة على خمسة أميال ورجع، فعند السرعة المناسبة ارتدَّ الضوء على السن التالي فاختم، فأعطى زمن طيران من قياس دوران فحسب. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: صار الحد بحلول العشرينيات لا في التوقيت بل في المسافة، لأنَّ طول خط الأساس الطويل لا يُقاس بدقة التوقيت، ولذلك حُلَّت المسألة بالإذابة لا بالحل، فأعيد تعريف المتر. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تسمي الحد وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُقال إنَّ المختبرات ما زالت تقيس سرعة الضوء، مع أنَّ النص ينفي ذلك. ويقترن المقطع بالمقطع السادس والسبعين في أسئلة النصين المتقابلين.

Gaps That Were Filled

A classification is not a discovery, and the periodic table, which is an arrangement of the elements placing chemically similar ones in the same column, could have been no more than a filing system. What made it something else was that Dmitri Mendeleev, publishing in 1869, left holes in it. His arrangement put the known elements in order of atomic weight and placed chemically similar ones in the same column, and to keep the columns consistent he had to leave three gaps and assert that elements existed to fill them.

He then did something a filing clerk could not. He predicted the properties of the missing elements from their positions, giving estimates for atomic weight, density, the formula of the oxide and the appearance of the metal. Gallium was isolated in 1875 and scandium in 1879, and germanium in 1886 matched his prediction for the gap below silicon closely enough that the chemist who found it said so in print. A table that can be wrong, and is then found to be right, is doing different work from one that merely files what is known.

The table also had defects that mattered. Ordering by atomic weight put a few elements in the wrong place, and the discrepancies were only resolved when atomic number, meaning the count of protons, replaced weight as the ordering principle in the 1910s. The underlying reason that the columns exist at all, which is that electrons occupy discrete shells with room for fixed numbers, was not available to Mendeleev in any form. He had a pattern and a nerve, and the explanation arrived half a century later. He also predicted elements that do not exist, and insisted for years on an error about the position of the rare earths. A table that generates testable claims generates wrong ones as well.

WHAT THIS PASSAGE IS FOR

- Mendeleev left gaps and asserted that elements existed to fill them.
 - He predicted the properties of the missing elements from their positions.
 - Atomic number replaced weight as the ordering principle.
-

Questions 127.1 to 127.10

on passage 127, Gaps That Were Filled

127.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Atomic number replaced atomic weight in the 1910s
- B) Mendeleev filed what was known and nothing more
- C) Germanium was isolated in 1886 below silicon
- D) A table that risked being wrong did more than file

127.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did Mendeleev predict for the missing elements?

- A) The count of protons in each nucleus
- B) Weight, density, the oxide formula and the look of the metal
- C) The year each of them would be isolated
- D) The column in which the rare earths belong

127.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the table was capable of being tested?

- A) “His arrangement put the known elements in order of atomic weight and placed chemically similar ones in the same column”
- B) “He had a pattern and a nerve, and the explanation arrived half a century later”
- C) “A table that can be wrong, and is then found to be right, is doing different work from one that merely files what is known”
- D) “He also predicted elements that do not exist, and insisted for years on an error about the position of the rare earths”

127.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

He then did something a filing clerk could not. He predicted the properties of the missing elements from their positions, giving estimates for atomic weight, density, the formula of the oxide and the appearance of the metal. A gap in his table was therefore

—
Which choice most logically completes the text?

- A) a claim that the next chemist could check
- B) a space left for convenience in printing
- C) an admission that the columns did not work
- D) a prediction about the count of protons

127.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “discrete” most nearly mean?

- A) quiet and tactful
- B) spread out evenly
- C) very small in size
- D) separate and countable

127.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph on the defects of the table?

- A) It introduces the three gaps for the first time
- B) It withdraws the predictions as worthless
- C) It balances the successes with what the table got wrong
- D) It reports the year germanium was isolated

127.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 77 of this book. It explains that a reaction needs an activation barrier crossed first, that heat, concentration, surface area and a catalyst each change a rate, and that rate and extent are separate questions.

Text 1 reports a table that made predictions. Based on Text 2, what would be added to that report?

- A) Similar elements fall in the same column of the table
- B) The chemistry that the arrangement was built to organize
- C) Three gaps were left and later filled by discovery
- D) The table predicted the activation energy of a reaction

127.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A classification is not a discovery, and the periodic table could have been no more than a filing system. ___ what made it something else was that Mendeleev left holes in it.

Which choice completes the text with the most logical transition?

- A) In the event,
- B) Likewise,
- C) As a result,
- D) In conclusion,

127.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He then did something a filing clerk could not ___ he predicted the properties of the missing elements from their positions.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) not, he
- B) not he
- C) not. He
- D) not, and, he

127.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Mendeleev left three gaps to keep the columns consistent.
- He predicted the weight, density, oxide and appearance of the missing elements.
- Germanium matched his prediction for the gap below silicon.
- A table that can be wrong and is then found right does different work.

The student wants to explain why a classification can be more than a filing system. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- By leaving gaps with predicted properties, the table made claims that a later discovery could confirm or refute
- Mendeleev left three gaps to keep the columns consistent
- Germanium matched his prediction for the gap below silicon
- A table that can be wrong does different work from one that files

ملخص المقطع 127 بالعربية

خلاصة: التصنيف ليس كشفًا، والجدول الدوري، وهو ترتيب للعناصر يضع المتشابهة كيميائيًا في عمود واحد، كان يمكن أن يكون مجرد نظام حفظ. والذي جعله شيئًا آخر أن دمترى مندلييف، إذ نشره سنة ألف وثمانمئة وتسع وستين، ترك فيه ثقبًا.

المعنى: المعنى أن ترتيبه رتب العناصر المعروفة بالوزن الذري ووضع المتشابهة في عمود واحد، فاحتاج لإبقاء الأعمدة متسقة أن يترك ثلاث فُرَج ويُثبت أن عناصر توجد لتشغلها. ثم فعل ما لا يقدر عليه كاتب حفظ: تنبأ بخصائص العناصر الغائبة من مواضعها.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: غُزل الغاليوم سنة ألف وثمانمئة وخمس وسبعين والسكانديوم سنة تسع وسبعين، وطابق الجرمانيوم سنة ست وثمانين تنبؤه للفرجة تحت السيليكون مطابقة أعلنها مكتشفه مطبوعة، والجدول الذي يقبل الخطأ يعمل عملاً آخر.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الفقرة التي تذكر العيوب وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الجدول حفظًا لما عُرف فقط، مع أن النص يميزه بالتنبؤ. ويقترب المقطع بالمقطع السابع والسبعين في أسئلة النص المتقابلين.

How a Safety Factor Is Chosen

A material does not have one strength. Test a hundred nominally identical concrete cubes and they break over a range, because strength depends on flaws that are distributed by chance through the material. Engineers therefore do not design to the average. They use a characteristic strength, meaning a value below which only a small stated fraction of specimens fall, commonly five percent, which is obtained by crushing many samples and reading the result off the distribution.

The design figure is then reduced further by a safety factor, meaning the ratio between what the structure is built to withstand and what it is expected to carry. That factor is not a single allowance for ignorance. It covers several distinct things: the variability of the material, the difference between a laboratory specimen and a cast wall, uncertainty in the loads, the possibility of workmanship below specification, and the consequences of failure. Modern codes split it into separate factors applied to the load and to the material, so that each can be argued about on its own evidence.

The inherent limit of the method is that it handles only the hazards that have been listed. A factor of two on strength is no protection against a load nobody considered, which is what happened at the Tay Bridge, and no protection against a mechanism nobody knew about, which is what happened to the welded ships that fractured in cold water. Those failures were not corrected by raising the factor. They were corrected by adding the missing load case and the missing material property to the codes, after which the old factor was adequate. Codes are therefore revised after failures rather than before them, which is an uncomfortable fact about the discipline. The revisions are public, and the history of a code can be read as a list of accidents.

WHAT THIS PASSAGE IS FOR

- A material does not have one strength but a distribution.
 - The safety factor covers several distinct uncertainties.
 - A factor is no protection against a load nobody considered.
-

Questions 128.1 to 128.10

on passage 128, How a Safety Factor Is Chosen

128.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A factor covers listed hazards and nothing else
- B) Engineers design to the average strength of a material
- C) Characteristic strength is commonly set at five percent
- D) The failures were corrected by raising the factor

128.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how were the two famous failures corrected?

- A) By raising the safety factor on strength
- B) By crushing a hundred more concrete cubes
- C) By adding the missing case to the codes
- D) By splitting the factor between load and material

128.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the method is blind in a way a larger margin cannot repair?

- A) “Test a hundred nominally identical concrete cubes and they break over a range”
- B) “Modern codes split it into separate factors applied to the load and to the material”
- C) “Codes are therefore revised after failures rather than before them”
- D) “A factor of two on strength is no protection against a load nobody considered”

128.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Those failures were not corrected by raising the factor. They were corrected by adding the missing load case and the missing material property to the codes, after which the old factor was adequate. The original factor was therefore ____

Which choice most logically completes the text?

- A) too small for the loads it did cover
- B) large enough once the list was complete
- C) the cause of both of the failures
- D) applied to the load and the material separately

128.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “inherent” most nearly mean?

- A) belonging to it by nature
- B) inherited from an earlier code
- C) agreed by the standards bodies
- D) easily removed by revision

128.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the list of things a factor covers?

- A) It introduces the characteristic strength by name
- B) It concedes that the factor covers nothing at all
- C) It reports the figure used for concrete cubes
- D) It shows that the factor is not one allowance

128.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 78 of this book. It sets out stress, the yield point, the ultimate strength and toughness as four numbers a designer needs, and says the choice of material is a choice about what kind of failure is acceptable.

Text 1 explains how a margin is chosen. Based on Text 2, what would be added to that explanation?

- A) A factor covers the variability of the material
- B) Codes are revised after failures rather than before
- C) Which kind of failure the margin is meant to avert
- D) A safety factor replaces the four numbers entirely

128.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

That factor is not a single allowance for ignorance. ___ it covers several distinct things: the variability of the material, the difference between a laboratory specimen and a cast wall, and uncertainty in the loads.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) Instead,
- C) As a result,
- D) For example,

128.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A material does not have one strength ___ and a hundred nominally identical cubes break over a range.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) strength; and
- B) strength and
- C) strength: and
- D) strength, and

128.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The factor handles only the hazards that have been listed.
- A factor of two is no protection against a load nobody considered.
- The failures were corrected by adding the missing case to the codes.
- After that the old factor was adequate.

The student wants to explain why codes are revised after failures. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The factor handles only the hazards that have been listed
- B) A margin protects against listed hazards alone, so a failure is what reveals the item the list was missing
- C) A factor of two is no protection against an unconsidered load
- D) After the addition the old factor turned out to be adequate

ملخص المقطع 128 بالعربية

خلاصة: المادة ليس لها متانة واحدة: اختبار مئة مكعب خرسانة متماثلة في الظاهر فتتكسر على مدى، لأن المتانة متعلقة بعيوب موزعة بالقرعة في المادة. ولذلك لا يصمم المهندسون على المتوسط، بل يستعملون المتانة المميزة، أي قيمة لا يهبط دونها إلا كسر صغير مذكور من العينات. المعنى: المعنى أن رقم التصميم يُنقص بعد ذلك بمعامل سلامة، أي النسبة بين ما يُبنى البناء ليتحمّله وما يُتوقع أن يحمله. وذلك المعامل ليس بدلاً واحداً عن الجهد، بل يغطّي أموراً متميزة: تبدّد المادة، والفرق بين عينة مختبر ودار مصبوب، وارتياح الأحمال، واحتمال صناعة دون المواصفة، وتبعات الانهيار. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: الحدّ الذاتي للمنهج أنّه لا يعالج إلا الأخطار المدرّجة، فمعامل اثنين على المتانة لا يحمي من حمل لم يحسبه أحد، ولا من آلية لم يعرفها أحد. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة القائمة وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقال إن الانهيارات صُحّحت برفع المعامل، مع أنّ النض ينفي ذلك. ويقترن المقطع بالمقطع الثامن والسبعين في أسئلة النضين المتقابلين.

What Carbon Dating Can Date

Radiocarbon, meaning the heavy form of carbon produced continuously in the upper atmosphere, is taken up by every living thing through food or photosynthesis. While an organism is alive its proportion of radiocarbon matches the atmosphere. When it dies the intake stops and the radiocarbon decays with a half-life of about five thousand seven hundred years, so the proportion remaining measures the time since death.

Four conditions have to hold before a date from the Oxford or any other laboratory means anything. The sample must be organic and must have stopped exchanging carbon at the moment of interest, which is why the method dates the death of a tree rather than the building of the house. It must not be contaminated, and a trace of modern carbon makes an old sample look much younger. It must be young enough to measure, which in practice means under about fifty thousand years. And the atmospheric proportion at the time must be known, which it is not, because it has varied with solar activity and with nuclear testing.

The last condition is handled by a calibration curve, meaning a chart that converts a measurement into calendar years using samples whose age is known independently. Tree rings supply that independent age for the last twelve thousand years, one ring at a time. The curve is not a straight line, and in some periods it doubles back, so a single measurement can correspond to two or three possible calendar ranges. A date reported without its calibration and its range is therefore not a date. An anomalous result is more often a contaminated sample or a misunderstood context than a surprise about history. The curve is revised every few years as more tree ring and coral data arrive. Published dates from the 1950s and 1960s often have to be recalculated before they can be compared with modern ones.

WHAT THIS PASSAGE IS FOR

- The method dates the death of the organism, not the use of the object.
 - A trace of modern carbon makes an old sample look much younger.
 - The calibration curve doubles back, so one measurement can give several ranges.
-

Questions 129.1 to 129.10

on passage 129, What Carbon Dating Can Date

129.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The curve is revised every few years
- B) Four conditions must hold before a date means anything
- C) The method dates the building of a house
- D) Tree rings supply ages for the last twelve thousand years

129.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a trace of modern carbon do to an old sample?

- A) It makes the sample impossible to measure
- B) It makes the sample look much older
- C) It shifts the calibration curve itself
- D) It makes the sample look much younger

129.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that one measurement need not pick out one date?

- A) “in some periods it doubles back, so a single measurement can correspond to two or three possible calendar ranges”
- B) “Tree rings supply that independent age for the last twelve thousand years, one ring at a time”
- C) “It must be young enough to measure, which in practice means under about fifty thousand years”
- D) “Published dates from the 1950s and 1960s often have to be recalculated”

129.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The sample must be organic and must have stopped exchanging carbon at the moment of interest, which is why the method dates the death of a tree rather than the building of the house. A beam reused from an older building would therefore ____

Which choice most logically completes the text?

- A) date the second building accurately
- B) be impossible to measure at all
- C) give a date older than the house
- D) need no calibration curve at all

129.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “anomalous” most nearly mean?

- A) reported without a range
- B) out of keeping with the rest
- C) measured a second time
- D) older than expected

129.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the four conditions in the text?

- A) They set out what a date has to satisfy
- B) They introduce the half-life of radiocarbon
- C) They argue that the method cannot be used
- D) They report the revisions made to the curve

129.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 79 of this book. It explains that half-life, the kind of radiation and the dose govern exposure, and that an alpha emitter is almost harmless outside the body and the worst case inside it.

Text 1 lists the conditions a radiocarbon date needs. Based on Text 2, what would be added to that list?

- A) Radiocarbon decays with a half-life of some thousands of years
- B) A contaminated sample looks younger than it is
- C) Radiocarbon in a sample is an alpha emitter in bone
- D) What the same decay does when it happens in a body

129.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

And the atmospheric proportion at the time must be known, which it is not, because it has varied with solar activity and with nuclear testing. ____ the last condition is handled by a calibration curve.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In practice,
- D) In other words,

129.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

While an organism is alive its proportion of radiocarbon matches the atmosphere ____ when it dies the intake stops.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) atmosphere. When
- B) atmosphere, when
- C) atmosphere when
- D) atmosphere, and, when

129.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The atmospheric proportion has varied with solar activity and nuclear testing.
- A calibration curve converts a measurement into calendar years.
- The curve is not a straight line and in some periods doubles back.
- A single measurement can correspond to two or three calendar ranges.

The student wants to explain why a date without a range is not a date. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The atmospheric proportion has varied with solar activity and testing
- A calibration curve converts a measurement into calendar years
- Because the curve doubles back, one measurement can answer to two or three calendar ranges, and a bare figure hides them
- The curve is not a straight line at any point along it

ملخص المقطع 129 بالعربية

خلاصة: الكربون المشع، أي الصورة الثقيلة من الكربون المتكوّنة باستمرار في أعلى الجو، تأخذ كل كائن حيّ بالغذاء أو بالتمثيل الضوئي. وما دام الكائن حيّاً كانت نسبته فيه مطابقة لنسبة الجو، وإذا مات توقّف الأخذ وتحلّل ما فيه بعمر نصف نحو خمسة آلاف وسبعمئة سنة.

المعنى: المعنى أنّ أربعة شروط لا بدّ أن تتحقّق قبل أن يعنى التاريخ شيئاً: أن تكون العيّنة عضوية وأن تكون قد توقّفت عن تبادل الكربون في اللحظة المقصودة، ولذلك يؤرّخ المنهج موت الشجرة لا بناء البيت؛ وألا تكون ملوثة، فأثر من كربون حديث يُظهر عيّنة قديمة أحدث بكثير.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: والشرط الرابع أن تكون نسبة الجو وقتها معلومة، وهي ليست كذلك، فيعالج ذلك بمنحنى معايرة يحوّل القياس إلى سنين تقويمية بعيّنات معلومة العمر، وحلقات الأشجار تعطي ذلك العمر لآخر اثني عشر ألف سنة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الشروط الأربعة وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقال إنّ المنهج يؤرّخ بناء البيت، مع أنّ النصّ يقول إنّهُ يؤرّخ موت الشجرة. ويقترن المقطع بالمقطع التاسع والسبعين في أسئلة النصّين المتقابلين.

A Rule Found in a Pile of Plates

Henrietta Leavitt was employed at Harvard College Observatory to measure the brightness of stars on photographic plates, meaning glass plates coated with emulsion on which images of the sky had been recorded. The work was paid by the hour and the women who did it were called computers. Leavitt was assigned the Magellanic Clouds, and she worked through thousands of plates identifying stars that varied in brightness and measuring how long each took to complete a cycle.

By 1908 she had found hundreds of them, and she noticed that the brighter ones took longer. In 1912 she stated the relation precisely for twenty-five stars: the logarithm of the period varies with the brightness along a straight line. Because all the stars in question lay in the same cloud, they were all at roughly the same distance, so differences in their apparent brightness had to be differences in their real output. That is what made the relation visible there and nowhere else.

The consequence is the single most useful tool in astronomical distance measurement. Find such a star anywhere, time its cycle, and its true brightness follows from the relation; compare that with how bright it looks and the distance follows. Edwin Hubble used it in 1924 to show that the Andromeda nebula lies far outside our own galaxy, which settled a famous argument and enlarged the known universe by a factor nobody had expected. Different calibrations of Leavitt's law converge now within a few percent. Leavitt was not given a share of that work, and she died in 1921. Her name is on the relation in modern textbooks, which was not true for most of the century. The plates she used are still held at Harvard and have been digitized. Her fundamental contribution rests on nothing more exotic than systematic measurement, repeated across thousands of photographic exposures.

WHAT THIS PASSAGE IS FOR

- Leavitt measured brightness on glass plates as paid piece work.
 - Brighter pulsating stars take longer to cycle.
 - Stars in one cloud are at the same distance, which made the relation visible.
-

Questions 130.1 to 130.10

on passage 130, A Rule Found in a Pile of Plates

130.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The plates she used are still held at Harvard
- B) The relation could have been found anywhere in the sky
- C) Systematic measurement in one place yielded a universal tool
- D) Leavitt stated the relation for twenty-five stars in 1912

130.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, why was the relation visible in the Magellanic Clouds?

- A) The stars there lay at roughly the same distance
- B) The plates from the clouds were of better quality
- C) The periods there were longer than elsewhere
- D) Hubble had already measured the distance to them

130.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the relation is what turns a timing into a distance?

- A) “The work was paid by the hour and the women who did it were called computers”
- B) “Find such a star anywhere, time its cycle, and its true brightness follows from the relation; compare that with how bright it looks and the distance follows”
- C) “the logarithm of the period varies with the brightness along a straight line”
- D) “Different calibrations of Leavitt's law converge now within a few percent”

130.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Because all the stars in question lay in the same cloud, they were all at roughly the same distance, so differences in their apparent brightness had to be differences in their real output. That is what made the relation visible there and nowhere else. A survey of the whole sky would therefore ____

Which choice most logically completes the text?

- A) have shown the relation more clearly still
- B) have measured the periods more accurately
- C) have required no photographic plates at all
- D) have mixed near stars with far ones

130.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “converge” most nearly mean?

- A) meet at one point
- B) gather for a meeting
- C) come close in value
- D) move further apart

130.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the same cloud?

- A) It introduces the photographic plates for the first time
- B) It explains why the pattern could be seen at all
- C) It concedes that the relation is only local
- D) It reports the year Hubble used the relation

130.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 80 of this book. It describes a ladder of distance methods, with parallax as the lowest rung and standard candles above it, and says an error low on the ladder moves every distance above it.

Text 1 reports the discovery of a relation. Based on Text 2, what would be added to that report?

- A) Where the relation sits among the other methods
- B) The brighter of the variable stars took longer to cycle
- C) Timing a cycle gives the true brightness of a star
- D) The lowest rung is calibrated by the relation

130.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

By 1908 she had found hundreds of them, and she noticed that the brighter ones took longer. ___ in 1912 she stated the relation precisely for twenty-five stars.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In other words,
- D) Four years later,

130.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The work was paid by the hour ___ and the women who did it were called computers.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) hour and
- B) hour, and
- C) hour; and
- D) hour and,

130.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Leavitt was assigned the Magellanic Clouds and worked through thousands of plates.
- All the stars in question lay in the same cloud.
- They were therefore at roughly the same distance.
- Differences in apparent brightness had to be differences in real output.

The student wants to explain why the relation could be found only in that place. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Leavitt worked through thousands of photographic plates by hand
- B) All the stars in question lay in the same cloud of stars
- C) Differences in apparent brightness had to be differences in output
- D) Stars in one cloud share a distance, so how bright they look reports how bright they are

ملخص المقطع 130 بالعربية

خلاصة: عُيِّنَت هنريتا ليفيت في مرصد كلية هارفرد لتقيس سطوع النجوم على ألواح فوتوغرافية، أي ألواح زجاج مكسوة بمستحلب سُجِّلَت عليه صور السماء. وكان العمل يُدفع بالساعة، والنساء اللاتي قمن به كُنَّ يُسمَّين الحاسبات. المعنى: المعنى أنها كُلِّفَت سحابتى ماجلان، فعملت في آلاف الألواح تتبَّين النجوم المتغيرة السطوع وتقيس مدة الدورة في كل منها. وبحلول سنة ألف وتسعمئة وثمان كانت قد وجدت مئات منها، ولاحظت أنَّ الأسطح يستغرق أطول، ثُمَّ أعلنت العلاقة دقيقة في خمسة وعشرين نجمًا. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الدليل: لأنَّ النجوم كُلُّها في السحابة نفسها كانت على البعد نفسه تقريبًا، فصار فرق السطوع الظاهر بالضرورة فرقًا في الخرج الحقيقي، وذلك ما جعل العلاقة مرئية هناك ولا مكان غيره. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تفسر الشرط وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُقال إنَّ العلاقة كان يمكن إيجادها في أيِّ موضع من السماء، مع أنَّ النصَّ ينفي ذلك. ويقترن المقطع بالمقطع الثمانين في أسئلة النصِّين المتقابلين.

HUM · S01 · evidence

Proving a Narrator Unreliable

Calling a narrator unreliable, meaning a teller whose account the reader has reason to doubt, is a claim that has to be argued from the page rather than asserted. Three kinds of evidence are normally offered, and they differ in strength. The weakest is tone: a reader finds the voice distasteful or self-serving. That is a response and not a proof, since a writer may intend an unpleasant narrator to be entirely accurate.

The second kind is internal contradiction, meaning a place where the text disagrees with itself. Ford Madox Ford gives the narrator of *The Good Soldier* a date that cannot be right and a chronology that will not assemble, and the errors are too systematic to be accidents of composition. The third and strongest kind is a discrepancy between what the narrator reports and how other characters respond. When a narrator describes a mild remark and everybody in the room recoils, the text has supplied a second witness.

The method shows its limits in the long argument over *The Turn of the Screw*, published in 1898. Either the governess sees ghosts or she is describing her own mind, and a century of critics has produced detailed cases for both. The difficulty is that James withheld the second witness: nobody else in the story reports seeing or not seeing anything in terms that settle it, and the one piece of apparent confirmation comes through the governess herself. A text can therefore be enigmatic by construction rather than by accident, and the honest conclusion in such a case is that the question is undecidable on the evidence available. Edmund Wilson argued the psychological reading in 1934 and changed his mind twice in later editions. That record of revision is itself a useful document about how such arguments are made.

WHAT THIS PASSAGE IS FOR

- Tone is a response rather than a proof.
 - A text that disagrees with itself supplies internal evidence.
 - James withheld the second witness, so the question cannot be settled.
-

Questions 131.1 to 131.10

on passage 131, Proving a Narrator Unreliable

131.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Edmund Wilson changed his mind twice in later editions
- B) The claim rests on evidence that varies in strength
- C) An unpleasant narrator is proof of unreliability
- D) The Turn of the Screw was published in 1898

131.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what makes the strongest kind of evidence?

- A) A voice the reader finds self-serving
- B) A date in the narration that cannot be right
- C) A century of detailed critical cases
- D) A gap between a report and how others respond

131.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the errors in The Good Soldier were put there on purpose?

- A) “a date that cannot be right and a chronology that will not assemble, and the errors are too systematic to be accidents of composition”
- B) “internal contradiction, meaning a place where the text disagrees with itself”
- C) “a writer may intend an unpleasant narrator to be entirely accurate”
- D) “the one piece of apparent confirmation comes through the governess herself”

131.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The difficulty is that James withheld the second witness, since nobody else in the story reports anything in terms that settle it. A critic who argues either reading must therefore ____

Which choice most logically completes the text?

- A) rely on a second witness the text supplies
- B) point to a date that cannot be right
- C) rest on the account of the governess alone
- D) treat the tone of the voice as decisive

131.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “enigmatic” most nearly mean?

- A) deliberately hostile
- B) resistant to settlement
- C) written in a code
- D) plainly decidable

131.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the record of revision?

- A) It makes a critic's record into evidence itself
- B) It defines internal contradiction for a reader
- C) It dates the publication of the novella
- D) It settles the argument over the governess

131.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 81 of this book. It names first person, third limited and omniscient as the three standard positions, says a first-person narrator reports only what one character perceives, and adds that deception works easily inside such a mind.

Text 1 argues that unreliability must be shown from the page. Based on Text 2, which choice best explains why a first-person account invites the doubt?

- A) An omniscient voice can comment on two minds at once
- B) Free indirect style borrows a character's vocabulary
- C) Irony works easily in the omniscient position
- D) Such a narrator reports only what one character perceives

131.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

That is a response and not a proof, since a writer may intend an unpleasant narrator to be entirely accurate. ___ the second kind is internal contradiction, meaning a place where the text disagrees with itself.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For example,
- C) After that,
- D) In other words,

131.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Three kinds of evidence are normally offered ___ and they differ in strength.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) offered, and
- B) offered and
- C) offered; and
- D) offered and,

131.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Either the governess sees ghosts or she is describing her own mind.
- James withheld the second witness.
- The one apparent confirmation comes through the governess herself.
- A text can be enigmatic by construction rather than by accident.

The student wants to explain what an honest critic says when the evidence runs out. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Either the governess sees ghosts or she describes her own mind
- B) James withheld the second witness from the story
- C) Built to withhold its second witness, the text leaves the question undecidable
- D) A text can be enigmatic by construction rather than by accident

ملخص المقطع 131 بالعربية

خلاصة: وصف الراوي بأنه غير موثوق، أي راوٍ للقارئ سبب في الشك في روايته، دعوى يجب أن تُحاجج من الصفحة لا أن تُؤكّد تأكيداً. وتُقدّم ثلاثة أنواع من الدليل عادةً، وهي مختلفة في القوة.

المعنى: المعنى أن أضعفها النبوة: أن يجد القارئ الصوت كريهاً أو متخادماً، وذلك ردّ فعل لا برهان، لأن الكاتب قد يقصد راوياً كريهاً دقيقاً تماماً. والثاني التناقض الداخلي، أي موضع يخالف فيه النص نفسه، كتاريخ لا يصحّ وتسلسل لا يتركّب.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: والثالث والأقوى تفاوت بين ما يرويهِ الراوي وكيف يستجيب غيره من الأشخاص، فإن وصف ملاحظة لطيفة وانكفاً كل من في الغرفة فقد قدّم النصّ شاهداً ثانياً. وقد حجب جيمس الشاهد الثاني في لغة اللولب.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُتخذ النبوة الكريهة برهاناً، مع أنّ النصّ يسمّيها ردّ فعل. ويقترن المقطع بالمقطع الحادي والثمانين في أسئلة النصّين المتقابلين.

The Chapter Austen Canceled

Almost no manuscript survives of any completed Jane Austen novel, which makes one exception valuable. Two chapters of *Persuasion* exist in her own hand, and they are the chapters she threw away. The published version carries the famous scene in which Captain Wentworth writes a letter while overhearing a conversation he is not part of, and then puts the folded paper into Anne Elliot's hand before leaving the room. The canceled chapter, meaning the draft section she replaced, handles the same reconciliation through an awkward interview arranged by a third party.

Having both lets a reader see a decision being made. In the draft the feeling is reported and then discussed by the parties concerned, whereas in the revision it is enacted in a public room, with two conversations running at once and a character writing down what he cannot say aloud. The emotional content is the same and the method is entirely different, and the second version turns Wentworth from a man who explains himself into a man who is overheard. That shift is the kind of thing critics assert about writers in general. Here it can be shown.

A manuscript will not answer every question. The canceled pages are undated and the order of composition has to be inferred from the paper and the stitching. Austen died a few months after finishing the novel, so there is no later statement of intention, and the family edited what survived. A draft also shows a writer being ambivalent without recording why. What the evidence establishes is that the alternative existed and was rejected, which is a narrower claim than most of what is written about authorial intention, and very much firmer. The pages are now in the British Library and have been published in facsimile. They are the only substantial draft of a finished Austen novel known to exist.

WHAT THIS PASSAGE IS FOR

- Two canceled chapters of *Persuasion* survive in her own hand.
 - The revision turns an explanation into an overheard scene.
 - The draft shows that an alternative existed and was rejected.
-

Questions 132.1 to 132.10

on passage 132, The Chapter Austen Canceled

132.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Austen died a few months after finishing the novel
- B) The pages are now in the British Library in facsimile
- C) Two surviving drafts let a revision be shown rather than asserted
- D) The manuscript settles what Austen intended by the change

132.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how does the canceled chapter handle the reconciliation?

- A) Through an interview arranged by a third party
- B) Through a letter written in a public room
- C) Through two conversations running at once
- D) Through a scene the family later edited

132.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the revision changes what kind of man Wentworth is?

- A) “Almost no manuscript survives of any completed Jane Austen novel, which makes one exception valuable”
- B) “the second version turns Wentworth from a man who explains himself into a man who is overheard”
- C) “The canceled pages are undated and the order of composition has to be inferred from the paper and the stitching”
- D) “Having both lets a reader see a decision being made”

132.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What the evidence establishes is that the alternative existed and was rejected, which is a narrower claim than most of what is written about authorial intention. A critic who wanted to say why Austen rejected it would therefore ____

Which choice most logically completes the text?

- A) cite the date on the canceled pages
- B) quote a later statement of intention
- C) read the facsimile in the British Library
- D) be going beyond what the pages show

132.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ambivalent” most nearly mean?

- A) openly hostile
- B) carelessly vague
- C) pulled two ways
- D) firmly decided

132.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that limits what a manuscript can answer?

- A) It dates the composition of the two chapters
- B) It opens the account of what the pages leave out
- C) It defines a canceled chapter for a reader
- D) It abandons the comparison just drawn

132.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 82 of this book. It sets out four kinds of evidence for a motive, calls a motive supplied by exposition settled and inert, and says a motive built from action and silence stays open.

Text 1 contrasts a reported feeling with an enacted one. Based on Text 2, which choice best names the change the revision makes?

- A) It trades exposition for action and silence
- B) It supplies interiority the draft withheld
- C) It states the motive the reader must infer
- D) It repeats a gesture often enough to show a shape

132.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

In the draft the feeling is reported and then discussed by the parties concerned. ____ in the revision it is enacted in a public room, with two conversations running at once.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) In other words,
- D) By contrast,

132.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The emotional content is the same ____ and the method is entirely different.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) same and
- B) same, and
- C) same; and
- D) same and,

132.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Two chapters of Persuasion survive in Austen's own hand.
- They are the chapters she threw away.
- The shift is the kind of thing critics assert about writers in general.
- What the evidence establishes is that the alternative existed and was rejected.

The student wants to explain what makes the claim about this revision unusually firm. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Two chapters of Persuasion survive in her own hand
- B) The surviving chapters are the ones she threw away
- C) Critics assert such shifts about writers in general
- D) The rejected alternative survives, so the choice is documented rather than asserted

ملخص المقطع 132 بالعربية

خلاصة: لم تبق مخطوطة لأي رواية أتمتها جين أوستن. ما يجعل استثناءً واحدًا ثمينًا: فصلان من الإقناع بخط يدها، وهما الفصلان الذين رمتهما. والنسخة المنشورة تحمل المشهد المشهور الذي يكتب فيه الكابتن ونتورث رسالة وهو يسمع حوارًا ليس طرّفًا فيه. المعنى: المعنى أن الفصل الملغى يعالج المصالحة نفسها بمقابلة متكلفة برتبها طرف ثالث، ووجود النسختين يُرى القارئ قرارًا وهو يُتخذ: في المسودة يُروى الشعور ثم يتناقش فيه المعنيون، وفي التنقيح يُودى في غرفة عامة وحواران يجريان في وقت واحد. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: المضمون العاطفي واحد والطريقة مختلفة تمامًا، والنسخة الثانية تحوّل ونتورث من رجل يشرح نفسه إلى رجل يُسمع عرضًا. وهذا النوع من التحوّل يزعمه النقاد عن الكتاب عمومًا، وهنا يمكن إظهاره. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصين المتقابلين. والفخ المتوقّع هنا أن يُستخرج من المخطوطة قصّة مُعلن، مع أنّ النصّ يقصر ما تُثبتته على وجود البديل ورفضه. ويقترن المقطع بالمقطع الثاني والثمانين.

Counting the Images

A claim that a play is full of images of disease used to be a matter of impression. The tool that changed it is the concordance, meaning an index listing every occurrence of every word in a text together with its context. Concordances to the Bible were compiled by hand in the Middle Ages, and one to Shakespeare took a Victorian clergyman and his family some sixteen years. Anyone with such an index can check whether an impression survives contact with the text.

Caroline Spurgeon did the work for Shakespeare in 1935, classifying several thousand images by subject and comparing the counts across plays. Some results confirmed what readers had felt: Hamlet does carry an unusual density of images of sickness and rot. Others corrected it. The computer made the method cheap, and a modern researcher can search a corpus, meaning a body of texts assembled to be searched as a whole, of everything printed in English before 1700 in an afternoon.

What counting establishes is presence, distribution and comparison, and those are not small things. What it cannot establish is aesthetic effect. A count shows that a word appears forty times; it cannot show that the forty occurrences work on a reader, or that an image placed at a turning point carries more weight than four placed in passing. The two methods therefore have to be used together, which is the current practice: counting to find where to look, and reading to say what is there. A claim that survives both is about as secure as literary claims get. Spurgeon's work has been criticized for categories that reflect her own period more than the plays. Her counts, however, have been checked and are substantially accurate. The combination is now standard practice in any serious study of a writer's vocabulary, and the counting is usually done first because it is cheap.

WHAT THIS PASSAGE IS FOR

- A concordance indexes every occurrence of every word with its context.
 - Spurgeon classified several thousand images and compared plays.
 - Counting establishes presence and distribution, not effect.
-

Questions 133.1 to 133.10

on passage 133, Counting the Images

133.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Spurgeon published her classification in 1935
- B) A concordance to Shakespeare took sixteen years to compile
- C) Counting has replaced reading in literary study
- D) Counting locates what reading then has to interpret

133.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did the counting confirm about Hamlet?

- A) That its images were classified by subject
- B) An unusual density of images of sickness
- C) That a word in it appears forty times
- D) That its categories reflect a later period

133.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a count leaves the working of an image unsettled?

- A) “Concordances to the Bible were compiled by hand in the Middle Ages”
- B) “Anyone with such an index can check whether an impression survives contact with the text”
- C) “A count shows that a word appears forty times; it cannot show that the forty occurrences work on a reader”
- D) “Spurgeon’s work has been criticized for categories that reflect her own period more than the plays”

133.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What counting establishes is presence, distribution and comparison, and those are not small things. A critic who claimed on counts alone that an image carries the weight of a scene would therefore ____

Which choice most logically completes the text?

- A) be asserting what the method cannot show
- B) have confirmed what readers had felt
- C) need a concordance compiled by hand
- D) be searching a corpus printed before 1700

133.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “aesthetic” most nearly mean?

- A) relating to a category
- B) relating to a count
- C) relating to a period
- D) relating to the effect on a reader

133.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the Victorian clergyman?

- A) It defines a corpus for a reader
- B) It reports the year Spurgeon published
- C) It measures the old cost of the tool
- D) It argues that hand counting was better

133.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 83 of this book. It separates simile, metaphor and metonymy by the work each does and says what all three share is economy, because a vivid image makes the reader supply the detail.

Text 1 limits what counting can establish. Based on Text 2, which choice best describes what a reader has to supply instead?

- A) A list of the names of the figures
- B) The detail that the image leaves to be filled in
- C) A count of every occurrence of a word
- D) An index of the words with their contexts

133.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Some results confirmed what readers had felt. ____ others corrected it.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For example,

133.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The two methods therefore have to be used together ____ and that is the current practice.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) together and
- B) together; and
- C) together, and
- D) together and,

133.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Counting establishes presence, distribution and comparison.
- A count cannot show that the occurrences work on a reader.
- The practice is counting to find where to look and reading to say what is there.
- The counting is usually done first because it is cheap.

The student wants to explain why counting usually comes first. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Cheap counting points to the places that careful reading then has to describe
- B) Counting establishes presence, distribution and comparison
- C) The counting is usually done first because it is cheap
- D) A count leaves the working of the occurrences unshown

ملخص المقطع 133 بالعربية

خلاصة: كانت دعوى أن مسرحية مليئة بـ صور المرض مسألة انطباع، والأداة التي غيّرت ذلك هي الكشف، أي فهرس يُحصي كل ورود لكل كلمة في نص مع سياقها. وقد جُمعت كشافات الكتاب المقدس يداً في القرون الوسطى. المعنى: المعنى أن من بيده فهرس كهذا يستطيع أن يفحص هل ينجو الانطباع من ملامسة النص. وقد أدت كارولين سرجون العمل لشكسبير سنة ألف وتسعمئة وخمس وثلاثين، فصنفت آلاف الصور بالموضوع وقارنت الأعداد بين المسرحيات. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: بعض النتائج أكد ما أحسنه القراء، فهاملت يحمل كثافة غير معتادة من صور السقم والعطن، وبعضها صحح الانطباع. وما يُثبت العَد هو الحضور والتوزيع والمقارنة، وما لا يُثبت هو الأثر الجمالي. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُحسب العَد بديلاً عن القراءة، مع أن النص يقرنهما معاً. ويقترن المقطع بالمقطع الثالث والثمانين.

What Scansion Can Prove

Scansion, meaning the marking of stressed and unstressed syllables in a line, looks like the least consequential of literary skills, and it has produced one of the field's most solid results. Shakespeare's plays are not dated by their title pages, most of which do not exist, and the order in which he wrote them was established largely by counting metrical features.

Three measurable features change steadily across the career of William Shakespeare. The proportion of lines that run on without a pause at the end rises. The proportion of feminine endings, meaning lines that finish on an unstressed extra syllable, rises from under ten percent in the early plays to over thirty in the late ones. The proportion of lines with a break away from the middle rises as well. Counting these in plays whose dates are known from other evidence, such as records of performance, gives a curve against which an undated play can be placed. The method puts the plays in an order that agrees with external evidence wherever external evidence exists, which is the test of it.

Its limits are strict. The method dates a style, not a manuscript, so a play revised late looks late. It cannot distinguish collaboration from development, which is why the authorship of several scenes remains contested. And it says nothing about quality: an understated late style is not better or worse than an emphatic early one, only different, and the counting is silent on the question. What scansion buys is a chronology, which every other kind of argument about development then depends on. Modern work adds function word frequencies and rare collocations to the metrical measures. The results agree with the older counts in most places and have reassigned two or three plays.

WHAT THIS PASSAGE IS FOR

- Feminine endings rise from under ten percent to over thirty.
 - The order agrees with external evidence wherever it exists.
 - The method dates a style rather than a manuscript.
-

Questions 134.1 to 134.10

on passage 134, What Scansion Can Prove

134.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Counting the meter buys a chronology and nothing more
- B) Feminine endings rise across the career
- C) Scansion can tell collaboration from development
- D) The late style is better than the early one

134.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how far do feminine endings rise?

- A) From under ten percent to about twenty
- B) From about thirty percent to over fifty
- C) From under ten percent to over thirty
- D) From two or three plays to several more

134.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the method is tested against evidence from outside the plays?

- A) “The proportion of lines that run on without a pause at the end rises”
- B) “Modern work adds function word frequencies and rare collocations to the metrical measures”
- C) “The method dates a style, not a manuscript, so a play revised late looks late”
- D) “The method puts the plays in an order that agrees with external evidence wherever external evidence exists, which is the test of it”

134.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The method dates a style, not a manuscript, so a play revised late looks late. A play written early and reworked in the final years would therefore ____

Which choice most logically completes the text?

- A) fall at the start of the curve
- B) be placed later than it was written
- C) show under ten percent feminine endings
- D) settle the authorship of its contested scenes

134.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “understated” most nearly mean?

- A) held back in effect
- B) incompletely described
- C) stated too briefly
- D) loudly insistent

134.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the limits are strict?

- A) It defines a feminine ending for a reader
- B) It reports what modern work has added
- C) It abandons the chronology just built
- D) It opens the account of what the counting misses

134.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 84 of this book. It explains that enjambment runs a sentence past the end of a line without a pause, setting the grammar against the rhythm, and that a caesura stops the voice where the meter says to continue.

Text 1 counts three metrical features across a career. Based on Text 2, which choice best describes what the first of them does in a line?

- A) It stops the voice where the meter says to continue
- B) It puts a stress where none was expected
- C) It sets the grammar against the rhythm
- D) It establishes the pattern inside the poem

134.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Scansion looks like the least consequential of literary skills. ___ it has produced one of the most solid results in the field.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) Even so,
- C) In other words,
- D) For instance,

134.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The method dates a style ___ and a play revised late looks late.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) style and
- B) style; and
- C) style and,
- D) style, and

134.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The plays are dated by something other than their title pages.
- Three metrical features change steadily across the career.
- Counting them against plays with known dates gives a curve.
- What scansion buys is a chronology.

The student wants to explain what every argument about development depends on. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Three metrical features change steadily across the career
- B) Counting the meter supplies the order that every later argument rests on
- C) The plays are dated by something other than their title pages
- D) What scansion buys for a reader is a chronology

ملخص المقطع 134 بالعربية

خلاصة: التقطيع، أي تعليم المقاطع المنبورة وغير المنبورة في السطر، يبدو أقل المهارات الأدبية أثرًا، وقد أنتج واحدة من أمتن نتائج المجال. فمسرحيّات شكسبير لا تُورّخ بصفحات عنوانها، وأكثرها غير موجود، وإنما أُقيم ترتيب كتابتها بعد ملامح وزنية. المعنى: المعنى أن ثلاثة ملامح قابلة للقياس تتغير باطراد عبر المسيرة: نسبة الأسطر التي تمضي بلا وقفة في آخرها ترتفع، ونسبة النهايات المؤنثة، أي أسطر تنتهي بمقطع زائد غير منبور، ترتفع من أقل من عشرة في المئة إلى أكثر من ثلاثين. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: عدّ هذه الملامح في مسرحيّات تواريخها معلومة من دليل خارجي يعطي منحى تُنزل عليه مسرحية غير مؤرّخة، والطريقة تضع المسرحيّات في ترتيب يوافق الدليل الخارجي حيث وُجد، وذلك هو اختبارها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُنسب إلى الطريقة قدرة على التفريق بين التشارك والتطور، مع أنّ النصّ ينفىها. ويقترن المقطع بالمقطع الرابع والثمانين.

What the Promptbook Records

A printed play is a text, whereas a performance is an event, and the documentary record of events is both thinner and considerably stranger. The most useful document is the promptbook, meaning a working copy marked up by the stage manager of one production, and major collections hold thousands of them. A promptbook carries the cuts, the entrances and exits as actually performed, the cues for music and effects, the positions of the furniture, and sometimes the timings of each act written in pencil in the margin.

What it reveals most often is the extent of cutting. Nineteenth-century productions of Shakespeare routinely removed a third of the lines, rearranged scenes and sometimes changed the ending, and the promptbooks show precisely what was removed and when it came back. Hamlet was performed for a century in a version shorter than the printed play by an hour. A reader who knows only the canonical text has an incomplete picture of what audiences actually saw.

The record also has characteristic gaps. A promptbook describes what was planned and revised in rehearsal rather than what happened on a particular night. It does not record how a line was delivered, since no notation for that exists. Reviews, letters and memoirs fill some of the space, and all three are unreliable in the ordinary and familiar ways. Photographs from the later nineteenth century show poses rather than performances, because the exposures were too long for movement. The result is a documentary record good enough to establish what was done and almost never good enough to establish how it felt. Recordings change this completely from the middle of the twentieth century onward, and the record after that date is of a different kind altogether. They also create a new problem, since a filmed performance is itself an edited object.

WHAT THIS PASSAGE IS FOR

- A promptbook records cuts, cues, positions and timings.
 - Nineteenth-century productions often cut a third of the lines.
 - No notation exists for how a line was delivered.
-

Questions 135.1 to 135.10

on passage 135, What the Promptbook Records

135.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Hamlet was performed for a century in a shorter version
- B) The record establishes what was done and rarely how it felt
- C) Reviews and memoirs are reliable where promptbooks fail
- D) Recordings create no new problems for the record

135.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what do early theatrical photographs show?

- A) The timings of each act in pencil
- B) The positions of the furniture on stage
- C) The delivery of a particular line
- D) Poses rather than performances

135.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the printed play misstates what audiences actually saw?

- A) “Nineteenth-century productions of Shakespeare routinely removed a third of the lines, rearranged scenes and sometimes changed the ending”
- B) “A promptbook describes what was planned and revised in rehearsal”
- C) “The most useful document is the promptbook, meaning a working copy marked up by the stage manager of one production”
- D) “Reviews, letters and memoirs fill some of the space, and all three are unreliable in the ordinary and familiar ways”

135.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It does not record how a line was delivered, since no notation for that exists. A historian who wanted the sound of a performance given in the eighteen nineties would therefore

Which choice most logically completes the text?

- A) consult the promptbook of that production
- B) count the timings written in the margin
- C) be left with reviews, letters and memoirs
- D) study a photograph of the final scene

135.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “canonical” most nearly mean?

- A) approved by a church
- B) standard and received
- C) cut for performance
- D) written by hand

135.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about Hamlet and the hour?

- A) It fixes the size of the cutting in time
- B) It defines a promptbook for a reader
- C) It reports what reviews and memoirs add
- D) It denies that the cuts were ever restored

135.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 85 of this book. It treats the habits of Elizabethan playwriting as consequences of the building and says that cutting an aside, or lighting a soliloquy as private thought, changes the relationship the line was written for.

Text 1 reports that productions cut a third of the lines. Based on Text 2, which choice best explains what such a cut can cost?

- A) A scene had to end with an exit for lack of a curtain
- B) The discovery space let a sleeper be revealed
- C) Place had to be established in the dialogue
- D) Cutting an aside changes the relation the line was written for

135.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

A promptbook describes what was planned and revised in rehearsal rather than what happened on a particular night. ___ it records nothing of how a line was delivered.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) What is more,
- D) In other words,

135.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A printed play is a text ___ and a performance is an event.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) text, and
- B) text and
- C) text; and
- D) text and,

135.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A promptbook carries the cuts, the entrances, the cues and the furniture.
- It describes what was planned and revised in rehearsal.
- No notation exists for how a line was delivered.
- The record is good enough to establish what was done.

The student wants to explain the exact reach of the documentary record of performance. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A promptbook carries the cuts, the entrances, the cues and the furniture
- B) The record is good enough to establish what was done
- C) The documents fix the staging exactly and leave the delivery unrecorded
- D) A promptbook describes what was planned and revised in rehearsal

ملخص المقطع 135 بالعربية

خلاصة: المسرحية المطبوعة نص، أما العرض فحادثة، والسجل الوثائقي للحوادث أرق وأغرب. وأنفع وثيقة هو كتاب التلقين، أي نسخة عمل يعلم عليها مدير المسرح في عرض واحد، وتحفظ المجموعات الكبرى ألقاً منها.

المعنى: المعنى أن كتاب التلقين يحمل الحذوفات، والدخول والخروج كما أدي فعلًا، وإشارات الموسيقى والمؤثرات، ومواضع الأثاث، وأحياناً توقيت كل فصل بالقلم في الهامش. وأكثر ما يكشفه هو مدى الحذف.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: عروض القرن التاسع عشر لشكسبير كانت تحذف ثلث الأسطر وتعيد ترتيب المشاهد وتغير الخاتمة أحياناً، وكتب التلقين تُظهر بدقة ما حذف ومتى عاد. وقد مُثل هاملت قرناً في نسخة أقصر من المطبوع بساعة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصين المتقابلين. والفج المتوقع هنا أن تُحسب المراجعات والمذكرات موثوقة حيث يسكت كتاب التلقين، مع أن النص يسميها غير موثوقة. ويقترن المقطع بالمقطع الخامس والثمانين.

Tracing Where a Form Began

The claim that a genre began with a particular book is a bibliographic claim before it is a critical one, and bibliography, meaning a systematic list of everything published of a kind in a period, is what tests it. Catalogues of early English printing list tens of thousands of items with dates, printers and formats. Trade records survive. Circulating library catalogues from the eighteenth century show what was actually borrowed, which is a different question from what was printed.

Those sources support the usual account of the gothic novel reasonably well. The *Castle of Otranto* appeared in 1764, presented as a translation from an Italian manuscript, and the second edition admitted the fiction. A recognizable set of imitations follows within twenty years, and library records show them being borrowed in quantity. The pattern of a first instance, a gap, and then a rush of derivative work is what one would expect if a form were being established, and it can be seen in the dates.

The hazard throughout is survival bias, meaning the distortion caused by studying only what happened to be preserved. Cheap print survives very badly. Chapbooks, broadside ballads and the serial fiction of the eighteenth century were read to pieces, and much of what remains survives because a collector thought it respectable. Any claim that a device first appeared in a particular novel therefore means that it first appears in the novels we still have. Historians of popular forms treat the record as a sample with a known bias rather than as the thing itself. Newspaper digitization has moved several supposed first appearances earlier by decades. Each revision has come from material that existed all along in uncatalogued runs of periodicals. Any history of a popular form is therefore a history of its surviving instances, and the honest versions say so in the first chapter.

WHAT THIS PASSAGE IS FOR

- Library catalogues show what was borrowed, not only what was printed.
 - A first instance, a gap, then a rush of imitation is visible in the dates.
 - Cheap print survives very badly, which biases the whole record.
-

Questions 136.1 to 136.10

on passage 136, Tracing Where a Form Began

136.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Castle of Otranto appeared in 1764 as a translation
- B) Cheap print from the period survives very badly
- C) A history of a form is a history of what survived
- D) The printed record is the thing itself

136.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what do circulating library catalogues show?

- A) What was actually borrowed
- B) What printers charged for a format
- C) Which first appearances moved earlier
- D) Which collectors thought a work respectable

136.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the dates fit a form being established?

- A) “Catalogues of early English printing list tens of thousands of items with dates, printers and formats”
- B) “The pattern of a first instance, a gap, and then a rush of derivative work is what one would expect if a form were being established, and it can be seen in the dates”
- C) “much of what remains survives because a collector thought it respectable”
- D) “Newspaper digitization has moved several supposed first appearances earlier by decades”

136.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Chapbooks, broadside ballads and the serial fiction of the eighteenth century were read to pieces. A claim that a device first appeared in a particular novel therefore ____

Which choice most logically completes the text?

- A) rests on the whole of what was printed
- B) can be checked against trade records
- C) has been confirmed by digitization
- D) means it appears first in what survives

136.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “derivative” most nearly mean?

- A) able to be calculated
- B) poor in quality
- C) modeled on an earlier work
- D) original in its design

136.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence naming survival bias?

- A) It dates the first edition of the novel
- B) It names the hazard that qualifies the account
- C) It defines a circulating library catalogue
- D) It abandons the bibliographic method

136.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 86 of this book. It says a convention tells a reader how to read and creates the possibility of significant deviation, and that genres drift because every successful breach becomes the next convention.

Text 1 traces a rush of imitation after one book. Based on Text 2, which choice best explains what the imitations were building?

- A) A rule that a later work could break on purpose
- B) A list of rules drawn up by a London club
- C) A record of what was actually borrowed
- D) A set of items with dates, printers and formats

136.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Those sources support the usual account of the gothic novel reasonably well. ____ the hazard throughout is survival bias, meaning the distortion caused by studying only what happened to be preserved.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) In other words,
- D) Even so,

136.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Catalogues of early English printing list tens of thousands of items ____ and trade records survive.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) items and
- B) items, and
- C) items; and
- D) items and,

136.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Cheap print survives very badly.
- Much of what remains survives because a collector thought it respectable.
- Historians treat the record as a sample with a known bias.
- Digitization has moved several first appearances earlier by decades.

The student wants to explain why an honest history of a popular form says so at the start. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Cheap print from the period survives very badly
- B) Much of what remains survives because a collector thought it respectable
- C) Digitization has moved several first appearances earlier
- D) Because the surviving print is a biased sample, every first appearance is provisional

ملخص المقطع 136 بالعربية

خلاصة: دعوى أن نوعاً أدبياً بدأ بكتاب معيّن دعوى بيبليوغرافية قبل أن تكون نقدية، والبيبليوغرافيا، أي قائمة منهجية بكل ما نُشر من نوع في مدة، هي ما يفحصها. وفهارس الطبع الإنجليزي المبكر تُحصي عشرات الآلاف من المواد بتواريخها وطابعيها وأحجامها. المعنى: المعنى أن فهارس المكتبات المتجولة في القرن الثامن عشر تُظهر ما استُعير فعلاً، وهو سؤال آخر غير ما طُبع. وهذه المصادر تسند الرواية المعتادة عن الرواية القوطية سنداً حسناً: ظهر قصر أوترانتو سنة ألف وسبعمئة وأربع وستين معروفاً ترجمةً من مخطوط إيطالي. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: الخطر الدائم هو تحيز البقاء، أي التشويه الناشئ من دراسة ما بقي محفوظاً وحده. فالمطبوع الرخيص يبقى بقاءً سيئاً جداً، والكتيبات والأغاني المفردة والقصص المسلسلة فُرئت حتى تهللت. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُتخذ السجل نفس الشيء المدروس، مع أن النصّ يسمّيه عينة ذات تحيز معلوم. ويقترن المقطع بالمقطع السادس والثمانين.

Under the Varnish

A painting is a physical object as well as an image, and physical objects can be examined, so three laboratory techniques now do most of the work. X-radiography shows the denser pigments and the structure of the support, so a figure painted out fifty years later appears as a ghost. Infrared reflectography, meaning a method that sees through upper paint layers to the drawing underneath, reveals the artist's first thoughts, including changes of position that were never meant to be seen. Pigment analysis takes a sample smaller than a full stop and identifies the materials from which the paint was made.

Each supports a different kind of claim. Pigment analysis dates: Prussian blue was not manufactured before about 1706, so a picture containing it was not painted before then, and a great many attributions have been settled by that one fact. Dendrochronology, meaning the dating of a wooden panel by matching its ring pattern against a regional record, gives the earliest year the panel could have been painted on. Reflectography attributes, because underdrawing habits are personal and hard to imitate.

The methods cannot answer the questions people most want answered. They can show that a panel is of the right date and that the materials are consistent, and they cannot show that a particular hand made a particular brushstroke. A skilled forger who uses old panels and correct pigments defeats all three, and several have. The practice is therefore to combine physical evidence with documentary history and with connoisseurship, and to treat a reverent attribution unsupported by any of the three as a hypothesis. Several paintings have changed status twice in a century as the balance of evidence moved. Museums now publish technical reports alongside catalogue entries. The reports often contain the evidence that will be used to overturn their own conclusions later.

WHAT THIS PASSAGE IS FOR

- X-radiography shows figures painted out later as ghosts.
 - Prussian blue was not manufactured before about 1706.
 - The methods cannot show that a particular hand made a brushstroke.
-

Questions 137.1 to 137.10

on passage 137, Under the Varnish

137.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Prussian blue was manufactured only after about 1706
- B) Museums now publish technical reports with catalogue entries
- C) The laboratory can name the hand behind a brushstroke
- D) Three techniques settle date and material rather than authorship

137.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does dendrochronology give?

- A) The drawing underneath the upper paint
- B) The earliest year the panel could carry paint
- C) The materials from which the paint was made
- D) A ghost of a figure painted out later

137.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a single material fact can decide a long-standing question?

- A) “X-radiography shows the denser pigments and the structure of the support, so a figure painted out fifty years later appears as a ghost”
- B) “Reflectography attributes, because underdrawing habits are personal and hard to imitate”
- C) “Prussian blue was not manufactured before about 1706, so a picture containing it was not painted before then, and a great many attributions have been settled by that one fact”
- D) “Several paintings have changed status twice in a century as the balance of evidence moved”

137.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A skilled forger who uses old panels and correct pigments defeats all three, and several have. A laboratory report finding the right date and consistent materials therefore ____

Which choice most logically completes the text?

- A) leaves the attribution still open
- B) proves the picture authentic
- C) identifies the underdrawing habits
- D) overturns the documentary history

137.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “reverent” most nearly mean?

- A) carefully measured
- B) recently published
- C) widely disputed
- D) offered out of respect

137.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the skilled forger?

- A) It defines infrared reflectography for a reader
- B) It dates the manufacture of a pigment
- C) It shows the limit of the three techniques together
- D) It argues that forgery is easy to detect

137.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 87 of this book. It explains how tonal contrast, line and position set the order in which a picture is read, and says conservators can sometimes show that an artist moved a figure to improve that order.

Text 1 says radiography shows a figure painted out. Based on Text 2, which choice best describes what such a change can reveal?

- A) The pigments from which the paint was made
- B) A move made to improve the order of looking
- C) The earliest year the panel could be painted
- D) The habits of an artist in underdrawing

137.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

They can show that a panel is of the right date and that the materials are consistent. ____ they cannot show that a particular hand made a particular brushstroke.

Which choice completes the text with the most logical transition?

- A) All the same,
- B) As a result,
- C) In other words,
- D) For instance,

137.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A painting is a physical object as well as an image ____ and physical objects can be examined.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) image and
- B) image; and
- C) image, and
- D) image and,

137.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The methods show date and consistency of materials.
- They cannot show which hand made a brushstroke.
- Several paintings have changed status twice in a century.
- The reports often contain the evidence that will overturn their own conclusions.

The student wants to explain why a museum publishes a technical report with its attribution. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Publishing the physical evidence lets a later reader overturn the attribution built on it
- B) The methods show the date and the consistency of the materials
- C) Several paintings have changed status twice in a century
- D) The reports contain evidence that overturns their own conclusions

ملخص المقطع 137 بالعربية

خلاصة: اللوحة جسم مادي كما هي صورة، والأجسام المادية تُفحص، فثلاث تقنيات مخبرية تؤدي معظم العمل. فالتصوير بالأشعة السينية يُظهر الحُطب الأكتف وبنية الحامل، فتظهر صورة طُمست بعد خمسين سنة شيئاً.

المعنى: المعنى أن الانعكاسية بالأشعة تحت الحمراء، أي طريقة ترى عبر طبقات الطلاء العليا إلى الرسم تحتها، تكشف أفكار الفنان الأولى ومنها تغييرات في المواضيع لم يُقصد أن تُرى. وتحليل الحُطب يأخذ عينة أصغر من نقطة ويعين المواد التي صُنعت منها الطلاء.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: كل تقنية تسند نوعاً آخر من الدعاوى. فتحليل الحُطب يُورخ: الأزرق البروشي لم يُصنع قبل نحو سنة ألف وسبعمئة وست، فلوحة تحتويه لم تُرسم قبل ذلك، وقد حُسمت نسباً كثيرة بهذه الحقيقة وحدها.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصين المتقابلين. والفج المتوقع هنا أن تُنسب إلى المخبر قدرة على تعيين اليد التي رسمت ضربة فرشاة، مع أن النص ينفيها. ويقترن المقطع بالمقطع السابع والثمانين.

Eight Thousand Pages of Sketches

Beethoven kept his working papers, and about eight thousand pages of them survive. The sketchbooks, meaning his working notebooks of fragments and rejected versions, show melodies arriving in forms that are almost embarrassing beside the finished article, then being worked for months. The opening of the Fifth Symphony exists in several trials, none of which a listener would recognize as the figure everybody now knows. A theme from the Ninth Symphony appears in one of the notebooks fully twelve years before the work itself was written. The evidence contradicts the idea of inspiration arriving whole, and it does so in the handwriting of the person most often cited as proof of it.

Manuscripts also force decisions on everyone who performs the music. The autograph score, meaning the full score in the composer's hand, often differs from the first printed edition, and the composer sometimes corrected the proofs and sometimes did not. Where they disagree, an editor has to choose, and the choice is published as though it were the composer's wish. Beethoven's metronome marks survive for some works and have been thought impossibly fast for a century, and the argument over whether to obey them is unresolved.

The limits of the evidence are specific. A sketch shows what was tried and not why it was rejected. Dating depends on the paper, the watermarks and the ink, which is skilled work and not always decisive. And none of it records sound. A score is a set of instructions whose conventions of performance were partly unwritten and are now partly lost, which is why an elegiac tempo in one century becomes a brisk one in the next without a note being changed. Facsimiles of the main sketchbooks are now published and some are online. Several long-standing editorial readings have been revised since performers could consult them directly.

WHAT THIS PASSAGE IS FOR

- About eight thousand pages of working papers survive.
 - A theme from the Ninth appears twelve years early in a notebook.
 - A sketch shows what was tried, not why it was rejected.
-

Questions 138.1 to 138.10

on passage 138, Eight Thousand Pages of Sketches

138.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The papers document labor and leave much unrecorded
- B) About eight thousand pages of sketches survive
- C) The sketches record the sound the composer wanted
- D) Facsimiles of the main sketchbooks are now online

138.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how long before the work does a Ninth Symphony theme appear?

- A) A few months
- B) Twenty years
- C) Twelve years
- D) A century

138.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the papers tell against the idea of inspiration arriving whole?

- A) “Beethoven kept his working papers, and about eight thousand pages of them survive”
- B) “Dating depends on the paper, the watermarks and the ink, which is skilled work and not always decisive”
- C) “Where they disagree, an editor has to choose, and the choice is published as though it were the composer’s wish”
- D) “show melodies arriving in forms that are almost embarrassing beside the finished article, then being worked for months”

138.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A sketch shows what was tried and not why it was rejected. A scholar who wanted the reason behind one rejected trial would therefore ____

Which choice most logically completes the text?

- A) date the paper by its watermarks
- B) find the papers silent on the point
- C) consult the autograph score instead
- D) obey the surviving metronome marks

138.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “elegiac” most nearly mean?

- A) slow and mournful
- B) written in couplets
- C) quick and light
- D) free of a pulse

138.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the metronome marks?

- A) It defines the autograph score for a reader
- B) It reports the number of surviving pages
- C) It settles how fast the music should go
- D) It gives a decision the evidence leaves open

138.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 88 of this book. It describes music as the management of the distance and the delay between leaving a home note and returning to it, and says the question to ask is what a passage set up and whether it has paid.

Text 1 says a score is a set of instructions. Based on Text 2, which choice best describes what a performer has to deliver beyond the notes?

- A) A home note the listener can hum
- B) A cadence that signals an ending
- C) The timing of an expectation and its payment
- D) An unresolved chord held under dialogue

138.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The autograph score often differs from the first printed edition. ____ an editor has to choose where they disagree.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For example,

138.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Beethoven kept his working papers ____ and about eight thousand pages of them survive.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) papers and
- B) papers; and
- C) papers and,
- D) papers, and

138.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A score is a set of instructions.
- Its conventions of performance were partly unwritten.
- Those conventions are now partly lost.
- An elegiac tempo in one century becomes a brisk one in the next.

The student wants to explain why a tempo can change without the score changing. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A score is a set of instructions for a performer
- B) Conventions that were never written down have been lost, so the same notes are taken at a new pace
- C) An elegiac tempo in one century becomes brisk in the next
- D) The conventions of performance were only partly written

ملخص المقطع 138 بالعربية

خلاصة: حفظ بيتهوفن أوراق عمله، وبقي منها نحو ثمانية آلاف صفحة. ودفاتر المسودات، أي دفاتر عمله من الشُّدور والنسخ المرفوضة، تُظهر أحياناً تُرد في صور تكاد تُجمل إلى جانب المنتج التام، ثم تُعمل عليها شهوراً. المعنى: المعنى أن مطلع السيمفونية الخامسة موجود في تجارب عدة لا يتعرف السامع في واحدة منها على الشكل الذي يعرفه الناس اليوم، وأن لحناً من السيمفونية التاسعة يظهر في أحد الدفاتر قبل كتابة العمل باثنتي عشرة سنة. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: الدليل يناقض فكرة الإلهام الوارد تائماً، ويفعل ذلك بخط يد الشخص الذي يُستشهد به أكثر من غيره برهاناً عليها. والمخطوطات تفرض قرارات على كل من يعزف الموسيقى، فالنسخة بخط المؤلف تخالف الطبعة الأولى غالباً. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُنسب إلى الأوراق تسجيل الصوت، مع أن النص يقول إن شيئاً منها لا يسجله. ويقترن المقطع بالمقطع الثامن والثمانين.

Booth Walked Every Street

Between 1886 and 1903 Charles Booth and a team of investigators walked every street in London and recorded what they found. The result was a set of poverty maps, meaning street plans colored house by house, with seven classes from the wealthy to what Booth labeled the lowest class of occasional laborers and criminals. The maps were based on school board visitors' knowledge of individual families, on police walks, and on interviews, and they run to seventeen volumes of notes alongside the sheets.

They are the first systematic measurement of a city and they carry their period inside them. Booth's classifications mixed income with moral judgment, his categories were applied by middle-class observers walking through streets they did not live in, and the notebooks contain remarks that no modern survey would print. The maps are nonetheless accurate enough about rents, trades and overcrowding to be used by historians, and they can be compared street by street with modern deprivation figures.

Measurement today is cheaper, narrower and continuous. Footfall counts, meaning tallies of how many people pass a point, come from sensors and mobile telephone data. Transport cards record journeys. Satellite images give building footprints and tree cover. Each series is precise about one thing and silent about the rest, and none of them contains anything like Booth's notebooks, where an investigator records that a street is quiet, or respectable, or whimsical in its decoration. The modern city is measured better and described worse, and the two kinds of evidence answer different questions. Booth's maps have been digitized and can be laid over a modern map in a browser. A majority of the street classifications still predict present-day deprivation measures. Historians of the modern city therefore have better numbers and thinner description than Booth had, and have to read both kinds of record to say anything much about how a street actually worked.

WHAT THIS PASSAGE IS FOR

- Booth team walked every street in London and recorded what they found.
 - His classifications mixed income with moral judgment.
 - Each modern series is precise about one thing and silent about the rest.
-

Questions 139.1 to 139.10

on passage 139, Booth Walked Every Street

139.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Booth and his team walked every street in London
- B) The modern city is measured better and described worse
- C) The poverty maps have been digitized for a browser
- D) Modern sensors have replaced what the notebooks gave

139.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how many classes did the poverty maps use?

- A) A full seventeen
- B) Only three
- C) Twelve or so
- D) Seven in all

139.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the maps carry the assumptions of their period?

- A) “Booth's classifications mixed income with moral judgment, his categories were applied by middle-class observers walking through streets they did not live in”
- B) “Transport cards record journeys. Satellite images give building footprints and tree cover”
- C) “A majority of the street classifications still predict present-day deprivation measures”
- D) “The maps were based on school board visitors' knowledge of individual families, on police walks, and on interviews”

139.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Each series is precise about one thing and silent about the rest, and none of them contains anything like the notebooks. A historian who wanted to know whether a street felt respectable would therefore ____

Which choice most logically completes the text?

- A) read a footfall count for that point
- B) overlay the old map on a modern one
- C) have to go back to the notebooks
- D) consult the satellite record of tree cover

139.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “whimsical” most nearly mean?

- A) badly maintained
- B) oddly fanciful
- C) plainly built
- D) briefly surveyed

139.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about measurement today?

- A) It opens the comparison that closes the text
- B) It defines a poverty map for a reader
- C) It dates the start of the London survey
- D) It argues that the old maps are obsolete

139.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 89 of this book. It measures a street by active frontage, by the proportion of width to height and by permeability, and reports that doorways per hundred meters predicts street life better than architectural quality does.

Text 1 contrasts precise series with thin description. Based on Text 2, which choice best names a measure a modern count can supply well?

- A) Whether a street is respectable
- B) Whether a street is quiet in the evening
- C) How a street was decorated in 1890
- D) How many doorways open onto a hundred meters

139.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Measurement today is cheaper, narrower and continuous. ____ footfall counts come from sensors and mobile telephone data.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) For instance,
- D) In other words,

139.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

They are the first systematic measurement of a city ____ and they carry their period inside them.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) city, and
- B) city and
- C) city; and
- D) city and,

139.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Modern series are precise about one thing and silent about the rest.
- The notebooks record that a street is quiet or respectable.
- Historians have better numbers and thinner description than Booth had.
- The two kinds of evidence answer different questions.

The student wants to explain why a historian of the city reads two kinds of record. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Modern series are precise about one thing and silent about the rest
- B) Historians now have better numbers and thinner description
- C) Numbers answer one question and the notebooks another, so a street needs both
- D) The two kinds of evidence answer different questions entirely

ملخص المقطع 139 بالعربية

خلاصة: بين سنة ألف وثمانمئة وست وثمانين وسنة ألف وتسعمئة وثلاث مشى تشارلز بوث وفريق من الباحثين كل شارع في لندن وسجلوا ما وجدوا. وكانت الحصىلة خرائط فقر، أي مخططات شوارع ملونة دائراً دايراً، بسبع طبقات من الأثرياء إلى أدنى طبقة. المعنى: المعنى أن الخرائط قامت على معرفة زائري مجالس التعليم بالأسر، وعلى مرور الشرطة، وعلى مقابلات، وتبلغ سبعة عشر مجلداً من الملاحظات إلى جانب المحائف. وهي أول قياس منهجي لمدينة، وهي تحمل عصرها في داخلها. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: تصنيفات بوث خلطت الدخل بالحكم الأخلاقي، وطبقها مراقبون من الطبقة الوسطى يمشون في شوارع لا يسكنونها. ومع ذلك فالخرائط دقيقة بما يكفي في الأجور والجرف والتزام ليستعملها المؤرخون. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن التفصيل المذكور في النص وعن النصين المتقابلين. والفخ المتوقع هنا أن تُحسب المَجَسَّات بديلاً عن الدفاتر، مع أن النص يقول إنَّ القياس تحسَّن والوصف ضعف. ويقترن المقطع بالمقطع التاسع والثمانين.

Reputations That Moved

Critical judgments can be tested against the record of what happened to them, and the discipline that does this is reception history, meaning the record of how a work was read and valued over time. Its materials are reviews, sales figures, library borrowings, school syllabuses, editions in print, and the frequency with which a writer is quoted.

Two cases are standard. Herman Melville died in 1891 with his major novel out of print and his obituary in the *New York Times* misspelling his name. A deliberate campaign of rediscovery in the 1920s, driven by a few critics and a new edition, installed him within twenty years as a central American writer, and he has stayed there. John Donne was held in low regard for most of the eighteenth and nineteenth centuries and was raised by a polemic from T. S. Eliot and others after 1920. In both cases the texts had not changed. The criteria had.

This is evidence about criticism rather than about the works, and it has to be handled with care. That a judgment changed does not show that either version was wrong, and the fact that a reputation rose does not mean the critics who raised it were right. What the record does establish is that standards are historical objects with datable origins, which makes a certain kind of critical claim impossible to maintain, namely that a particular standard is simply self-evident. Anyone who wants to make that claim has to explain the record of its absence. Databases of library borrowings and school curricula now make such histories quantitative. They have confirmed several reputational stories and demolished others, including some about neglect that turned out to be overstated. The record of a standard's arrival is also a record of what it displaced, which is the part most often left out of the story.

WHAT THIS PASSAGE IS FOR

- Reception history uses reviews, sales, borrowings and syllabuses.
 - Melville was out of print at his death and central twenty years later.
 - A changed judgment does not show which version was wrong.
-

Questions 140.1 to 140.10on passage 140, *Reputations That Moved***140.1**

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Melville died in 1891 with his major novel out of print
- B) Databases have demolished several reputational stories
- C) The record shows standards to be datable rather than self-evident
- D) A risen reputation shows the critics who raised it were right

140.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what had changed in the two cases?

- A) The criteria rather than the texts
- B) The texts rather than the criteria
- C) The spelling of a name in an obituary
- D) The number of editions then in print

140.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a change of judgment settles nothing about the work?

- A) “Herman Melville died in 1891 with his major novel out of print and his obituary in the New York Times misspelling his name”
- B) “That a judgment changed does not show that either version was wrong, and the fact that a reputation rose does not mean the critics who raised it were right”
- C) “John Donne was held in low regard for most of the eighteenth and nineteenth centuries”
- D) “Anyone who wants to make that claim has to explain the record of its absence”

140.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What the record does establish is that standards are historical objects with datable origins. A critic who called a particular standard self-evident would therefore ____

Which choice most logically completes the text?

- A) be supported by the reception record
- B) have demolished a reputational story
- C) be quoting a polemic from after 1920
- D) owe an account of its long absence

140.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “polemic” most nearly mean?

- A) a neutral survey
- B) a sales figure
- C) a forceful argument
- D) a school syllabus

140.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the misspelled obituary?

- A) It defines reception history for a reader
- B) It measures how low the standing had fallen
- C) It reports the date of the rediscovery campaign
- D) It argues that the novel deserved neglect

140.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 90 of this book. It divides a critical judgment into a claim, evidence and a criterion, and calls the criterion the standard against which a work is being judged and the part most often left out.

Text 1 reports two reputations that moved while the texts stayed put. Based on Text 2, which choice best names what moved instead?

- A) The criterion against which the work was judged
- B) The evidence drawn from the work itself
- C) The claim that could be shown false
- D) The convention of academic criticism

140.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

In both cases the texts had not changed. ____ the criteria had.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) In other words,
- D) By contrast,

140.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Databases of library borrowings and school curricula now make such histories quantitative ____ and they have confirmed several reputational stories.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) quantitative and
- B) quantitative, and
- C) quantitative; and
- D) quantitative and,

140.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Reception history records how a work was read and valued over time.
- In both cases the texts had not changed and the criteria had.
- This is evidence about criticism rather than about the works.
- Standards are historical objects with datable origins.

The student wants to explain what a reputation study is evidence about. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Reception history records how a work was read and valued over time
- B) In the two cases the criteria changed and the texts stayed put
- C) The evidence is about criticism rather than about the works
- D) Since the criteria moved and the texts stayed put, the record dates the standards themselves

ملخص المقطع 140 بالعربية

خلاصة: يمكن فحص الأحكام النقدية بسجل ما جرى لها، والتخصّص الذي يفعل ذلك هو تاريخ التلقّي. أي سجلّ كيف قُرى العمل وكيف قُدّر عبر الزمن. ومادّته المراجعات وأرقام البيع واستعارات المكتبات والمناهج المدرسية والطبعات المتوقّرة وتواتر الاقتباس. المعنى: المعنى أنّ حالتين قياسيّتان: مات هرمان ملفل سنة ألف وثمانمئة وإحدى وتسعين وروايته الكبرى غير مطبوعة ونعيه يُخطئ هجاء اسمه، ثمّ نصّبته حملة إعادة اكتشاف مقصودة في العشرينيّات كاتباً أمريكياً مركزياً في عشرين سنة. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الدليل: في الحالتين لم تتغيّر النصوص، بل تغيّرت المعايير. وهذا دليل على النقد لا على الأعمال، ويجب التعامل معه بحذر: فتغيّر الحكم لا يُظهر أنّ إحدى النسختين كانت خاطئة، وارتفاع السمعة لا يعني أنّ رافعها كانوا على حقّ. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُستنتج من ارتفاع السمعة صواب النقاد، مع أنّ النصّ ينفي ذلك صريحاً. ويقترن المقطع بالمقطع التسعين.

How a Modern Poll Is Built

A serious poll is built in four stages, and a reader who knows the stages can judge the result. The first is the frame. Address-based sampling, used by Pew and by most serious firms, begins from a list of residential addresses, which covers almost every household, and letters are sent inviting people to answer online or by telephone. Telephone sampling generates numbers at random, including unlisted ones, which is why pollsters still ring mobile numbers at considerable expense.

The second stage is selection, and the aim is a probability sample, meaning one in which every member of the population has a known chance of being chosen. That known chance is what licenses the arithmetic afterward. The third stage is weighting, meaning the adjustment of answers so that the sample matches known population proportions for age, sex, region, education and sometimes past vote. Weighting is where judgment enters, because the pollster must decide which characteristics matter, and education turned out to matter a great deal more after 2016 than most firms had assumed.

The fourth stage is the reported margin, and it describes only the first two stages. A margin of error of three points on a thousand interviews is a statement about sampling variation under the assumption that the frame is right and the weights are right. It makes no allowance for a frame that misses people, for the ninety percent who did not answer, or for the wording of the questions. A methodical firm publishes all four stages and its weighting targets, which is the only way a reader can tell a careful poll from a confident one. Several national polling associations now require that disclosure as a condition of membership. Firms that decline to join are not thereby wrong, but they are harder to check.

WHAT THIS PASSAGE IS FOR

- A probability sample gives every member a known chance of selection.
 - Weighting is the stage at which the pollster judgment enters.
 - The reported margin describes only sampling variation.
-

Questions 141.1 to 141.10

on passage 141, How a Modern Poll Is Built

141.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Address-based sampling covers almost every household
- B) The reported margin describes only two of the four stages
- C) A margin of error allows for nonresponse and wording
- D) Firms that decline to join an association are wrong

141.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is a probability sample?

- A) One drawn from a list of addresses
- B) One adjusted to match population proportions
- C) One in which education is weighted heavily
- D) One in which every chance of selection is known

141.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that judgment enters the process at one identifiable stage?

- A) “Weighting is where judgment enters, because the pollster must decide which characteristics matter, and education turned out to matter a great deal more after 2016”
- B) “Telephone sampling generates numbers at random, including unlisted ones”
- C) “the aim is a probability sample, meaning one in which every member of the population has a known chance of being chosen”
- D) “Several national polling associations now require that disclosure as a condition of membership”

141.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A margin of error of three points on a thousand interviews is a statement about sampling variation under the assumption that the frame is right and the weights are right. A poll whose frame missed a group would therefore ____

Which choice most logically completes the text?

- A) report a larger margin of error
- B) have weighted for past vote
- C) be wrong by more than its margin
- D) need a probability sample as well

141.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “methodical” most nearly mean?

- A) slow and plodding
- B) open about its procedure
- C) confident in its figures
- D) modern in its equipment

141.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about education after 2016?

- A) It shows a judgment that turned out to matter
- B) It defines a probability sample for a reader
- C) It reports what the fourth stage describes
- D) It argues that weighting should be abandoned

141.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 91 of this book. It separates the sampling frame, nonresponse and the instrument as three ways a survey fails, and says weighting works only for characteristics that are known and measured.

Text 1 calls weighting the place where judgment enters. Based on Text 2, which choice best states the limit on what weighting can do?

- A) It cannot reach a frame that excludes a third of the country
- B) It cannot raise a response rate that has fallen
- C) It cannot be published alongside the figures
- D) It works only for characteristics already measured

141.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The fourth stage is the reported margin, and it describes only the first two stages. ____ it makes no allowance for a frame that misses people.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In particular,
- D) For all that,

141.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A serious poll is built in four stages ____ and a reader who knows the stages can judge the result.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) stages, and
- B) stages and
- C) stages; and
- D) stages and,

141.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A methodical firm publishes all four stages and its weighting targets.
- The reported margin describes only the first two stages.
- Several associations require that disclosure for membership.
- Firms that decline to join are harder to check.

The student wants to explain how a careful poll can be told from a confident one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A methodical firm publishes all four of its stages
- B) Several associations require that disclosure for membership
- C) Only a firm that publishes its stages and weights can be checked at all
- D) The reported margin describes only the first two stages

ملخص المقطع 141 بالعربية

خلاصة: المسح الجاد يُبنى على أربع مراحل، ومن عرف المراحل قدر على الحكم في النتيجة. أولاً الإطار: فالمعاينة بالعناوين تبدأ من قائمة عناوين سكنية تغطي كل بيت تقريباً، وترسل رسائل تدعو الناس إلى الإجابة على الشبكة أو بالهاتف. المعنى: المعنى أن المرحلة الثانية الاختيار، والغاية عينة احتمالية، أي عينة لكل فرد من السكان فيها احتمال معلوم أن يختار، وذلك الاحتمال المعلوم هو ما يُجيز الحساب بعدها. والثالثة الترجيح لتطابق العينة نسب السكان المعروفة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: الترجيح هو موضع دخول الاجتهاد، لأن على القائم بالمسح أن يقرر أي الخصائص بهم، وقد ظهر أن التعليم بهم أكثر كثيراً بعد سنة ألفين وست عشرة مما افترضت أكثر الشركات. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب هامش الخطأ شاملاً لعدم الاستجابة والصياغة، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع الحادي والتسعين.

Two Lotteries and a Preschool

In 2008 Oregon had money to extend health coverage to about ten thousand adults and roughly ninety thousand people applied. The state allocated the places by lottery, which created, without intending to, the cleanest comparison available anywhere: two large groups alike in every respect except coverage. Researchers followed both. Those who gained coverage used more health care, were much less likely to face catastrophic medical bills, and reported better mental health. Measured blood pressure and cholesterol after two years showed no statistically significant difference, which was not the result most people had expected and is the most argued-over part of the study.

The Perry Preschool study is older and smaller. In the 1960s a hundred and twenty-three poor children in Ypsilanti, Michigan, were assigned by lot to a high-quality preschool program or to nothing, and have been followed ever since. Differences in measured intelligence faded by the early school years, which was read at the time as failure. The follow-up period, meaning how long participants are tracked, turned out to be the crucial design choice. By age forty the treated group had higher earnings, more home ownership and fewer arrests, and the benefit-cost ratios computed from those outcomes have shaped policy for twenty years.

Both studies support causal claims because of the lottery. Both are limited by the same thing: each tells us about one program, in one place, at one time, for one population. The Perry sample is a hundred and twenty-three children in a single town in the 1960s, which is a slender base for a national argument, and the honest practice is to say so while using the result. Several later preschool trials have found smaller effects, and the differences are still being argued about. What is not in dispute is that the effects were measured after the children had grown up.

WHAT THIS PASSAGE IS FOR

- Oregon allocated coverage by lottery and created a clean comparison.
 - Perry effects on measured intelligence faded but adult outcomes differed.
 - Each study tells us about one program in one place at one time.
-

Questions 142.1 to 142.10

on passage 142, Two Lotteries and a Preschool

142.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Oregon allocated about ten thousand places by lottery
- B) Later preschool trials have found smaller effects
- C) The lottery licenses the claim and the setting limits it
- D) A single trial settles a national argument

142.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how many children entered the Perry study?

- A) A hundred and twenty-three
- B) About ten thousand
- C) About ninety thousand
- D) About forty of them

142.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the length of the follow-up changed the verdict?

- A) “The state allocated the places by lottery, which created, without intending to, the cleanest comparison available anywhere”
- B) “turned out to be the crucial design choice. By age forty the treated group had higher earnings, more home ownership and fewer arrests”
- C) “Several later preschool trials have found smaller effects, and the differences are still being argued about”
- D) “Differences in measured intelligence faded by the early school years, which was read at the time as failure”

142.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Each tells us about one program, in one place, at one time, for one population. A policy argued from the Perry result alone would therefore ____

Which choice most logically completes the text?

- A) rest on a randomized comparison
- B) be supported by later trials
- C) measure blood pressure at two years
- D) rest on a slender base

142.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “causal” most nearly mean?

- A) happening by chance
- B) relaxed in manner
- C) about what produced what
- D) about what moved together

142.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about blood pressure?

- A) It defines the follow-up period for a reader
- B) It names the finding that was not expected
- C) It reports the number of Oregon applicants
- D) It argues that coverage made no difference

142.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 92 of this book. It says a lottery makes two groups alike on every characteristic at once and then adds that randomization says nothing about whether the result transfers to another population, scale or decade.

Text 1 says each study describes one program in one place. Based on Text 2, which choice best names that limitation?

- A) A lottery says nothing about transfer to another setting
- B) Matching cannot equalize what nobody listed
- C) The streptomycin trial of 1948 came first
- D) Uneven dropout spoils a good design

142.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Differences in measured intelligence faded by the early school years, which was read at the time as failure. ___ the follow-up period turned out to be the crucial design choice.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) In other words,
- D) Even so,

142.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The Perry Preschool study is older and smaller ___ and the children have been followed ever since.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) smaller and
- B) smaller, and
- C) smaller; and
- D) smaller and,

142.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Both studies support causal claims because of the lottery.
- Each tells us about one program in one place at one time.
- The Perry sample is a slender base for a national argument.
- The honest practice is to say so while using the result.

The student wants to explain what honest practice does with a narrow result. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Both studies support causal claims because of the lottery
- B) The Perry sample is a slender base for a national argument
- C) Each study tells us about one program in one place
- D) Use the finding and state its narrowness in the same breath

ملخص المقطع 142 بالعربية

خلاصة: سنة ألفين وثمانٍ كان عند ولاية أوريغون مال يمدّ التغطية الصحية إلى نحو عشرة آلاف بالغ، وتقدّم نحو تسعين ألفاً. فوزعت الولاية الأماكن بالقرعة، فصنعت من غير قصد أنظف مقارنة متاحة: مجموعتان كبيرتان متماثلتان في كل شيء إلا التغطية. المعنى: المعنى أن من نال التغطية استعمل رعاية أكثر، وقلّ احتمال مواجهته فواتير طبّية ساحقة، وأبلغ عن صحّة نفسية أفضل. أمّا ضغط الدم والكولسترول المقيسان بعد سنتين فلم يظهر فيهما فرق معتبر إحصائياً، وهو أكثر أجزاء الدراسة جدالاً. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: ودراسة بيربي للحضانة أقدم وأصغر: في السّتينيات وُزّع مئة وثلاثة وعشرون طفلاً فقيراً في إيسلانت في بميشيغان بالقرعة على برنامج حضانة عالي الجودة أو على لا شيء، وتوبعوا منذ ذلك الحين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُحسب تجربة واحدة حاسمة لحجّة وطنية، مع أنّ النصّ يسمّي أساسها نحيلاً. ويقترن المقطع بالمقطع الثاني والتسعين.

When Chance Does the Assigning

Where a lottery cannot be run, researchers look for one that has already happened by accident. A natural experiment, meaning a situation in which something outside the researchers' control has allocated people almost at random, is now the main instrument of modern social science. Three kinds of situation account for most of the published work, and each carries a characteristic weakness that a careful reader can look for before accepting the result.

The first is a genuine lottery used for some other purpose. The military draft lotteries of the Vietnam era assigned young American men a number by date of birth. Because that number was random, comparing the later earnings of men with low and high numbers isolates the effect of service from everything that would otherwise confound it. The second is the discontinuity. Where a program has an arbitrary cutoff, such as a score of sixty for a scholarship, applicants who scored fifty-nine and sixty-one are indistinguishable in every respect except the award. Regression discontinuity, meaning the comparison of cases just above and just below such a line, exploits exactly that. The third kind is the border, since the two sides of a state line differ in law while remaining similar in almost every other respect.

Each rests on an assumption that has to be defended rather than assumed. The draft numbers were random, but service was not, since men could enlist or evade, so what the comparison measures is the effect of being more likely to serve. Discontinuities assume that nobody manipulated the score, which is sometimes false and can be tested by looking for a suspicious bunching of scores just above the line. Borders assume that people do not move across them in response to the policy, which they sometimes do. The spread of the method has produced a literature of cautionary cases in which the assumption failed quietly.

WHAT THIS PASSAGE IS FOR

- A natural experiment uses an allocation made by something outside the researcher.
 - Scores either side of an arbitrary cutoff are otherwise indistinguishable.
 - Each kind rests on an assumption that must be defended.
-

Questions 143.1 to 143.10

on passage 143, When Chance Does the Assigning

143.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Vietnam draft lotteries assigned numbers by date of birth
- B) Regression discontinuity compares cases near a cutoff
- C) A natural experiment needs no assumption at all
- D) Each kind rests on an assumption that must be defended

143.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, how is a manipulated cutoff detected?

- A) By comparing two sides of a state line
- B) By bunching of scores just above the line
- C) By the date of birth of each applicant
- D) By the number of applicants who moved

143.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the draft comparison measures something narrower than service?

- A) “Three kinds of situation account for most of the published work, and each carries a characteristic weakness that a careful reader can look for”
- B) “applicants who scored fifty-nine and sixty-one are indistinguishable in every respect except the award”
- C) “The draft numbers were random, but service was not, since men could enlist or evade, so what the comparison measures is the effect of being more likely to serve”
- D) “Borders assume that people do not move across them in response to the policy, which they sometimes do”

143.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Borders assume that people do not move across them in response to the policy, which they sometimes do. A border study of a tax that drove residents across the line would therefore ____

Which choice most logically completes the text?

- A) have lost the similarity it relied on
- B) be strengthened by the movement
- C) need a bunching test on the scores
- D) measure the effect of being likely to serve

143.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “confound” most nearly mean?

- A) defeat an enemy
- B) puzzle a reader
- C) confirm a finding
- D) mix up with the cause

143.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about scores of fifty-nine and sixty-one?

- A) It defines a natural experiment for a reader
- B) It reports the test for a manipulated cutoff
- C) It shows what makes the second kind work
- D) It argues that the cutoff was arbitrary

143.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 93 of this book. It sets out four relations two correlated measurements may stand in and says the strongest ordinary tool is a source of variation unrelated to everything else of interest.

Text 1 calls the natural experiment the main instrument of the field. Based on Text 2, which choice best explains why it is needed?

- A) Time order shows which event came first
- B) A correlation alone is a question, not a finding
- C) Hospitals with more staff have higher death rates
- D) Wald reasoned about the planes that never returned

143.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The military draft lotteries of the Vietnam era assigned young American men a number by date of birth. ___ comparing the later earnings of men with low and high numbers isolates the effect of service.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) By contrast,
- C) In other words,
- D) For instance,

143.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Where a lottery cannot be run, researchers look for one that has already happened by accident ___ and three kinds of situation account for most of the published work.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) accident and
- B) accident; and
- C) accident, and
- D) accident and,

143.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Each kind carries a characteristic weakness.
- The draft comparison measures the effect of being more likely to serve.
- A manipulated cutoff shows as bunching above the line.
- Borders fail where people move in response to the policy.

The student wants to explain what a careful reader looks for in such a study. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The assumption each design rests on, since each one fails in its own way
- B) Each kind of natural experiment carries a characteristic weakness
- C) A manipulated cutoff shows as bunching above the line
- D) Borders fail where people move in response to the policy

ملخص المقطع 143 بالعربية

خلاصة: حيث لا يمكن إجراء قرعة يبحث الباحثون عن قرعة وقعت بالعرض. والتجربة الطبيعية، أي حال وزع فيها شيء خارج سيطرة الباحثين الناس توزيعًا شبه عشوائيًا، هي اليوم الأداة الرئيسة في العلم الاجتماعي الحديث.

المعنى: المعنى أن ثلاثة أنواع من الأحوال تستأثر بمعظم ما يُنشر، ولكل منها ضعف مميز يستطيع القارئ المتنبه أن يبحث عنه. الأول قرعة حقيقية أجريت لغرض آخر: فقرعات التجنيد في عهد فيتنام أعطت الشبان الأمريكيين رقمًا بتاريخ الميلاد.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: والثاني الانقطاع: فحيث يكون للبرنامج حد فاصل تعسفي، كدرجة سئين لمنحة، يكون من نال تسعة وخمسين ومن نال واحدًا وستين سواء في كل شيء إلا المنحة. والثالث الحدود بين الولايات.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفتح المتوقع هنا أن تُحسب التجربة الطبيعية خالية من الافتراضات، مع أن النص يذكر لكل نوع افتراضًا يجب الدفاع عنه. ويقترن المقطع بالمقطع الثالث والتسعين.

What a Margin of Error Says

A confidence interval is a statement about a procedure rather than about a number. When a Gallup poll reports forty-eight percent with a margin of three points, the claim is narrower than it looks. The method used, repeated many times on fresh samples, would produce an interval containing the true value in about ninety-five cases out of a hundred. It does not say that there is a ninety-five percent chance that the truth lies between forty-five and fifty-one, although almost every newspaper sentence on the subject says exactly that.

Three misuses follow from the confusion. The first is treating two overlapping intervals as showing no difference, which does not follow, and treating two separated intervals as showing one, which requires its own test. The second is reading a result that is marginal as though significance were a property of the world. Statistical significance means the judgment that a result is unlikely to have arisen from sampling variation alone, and it depends on the sample size as much as on the effect. A trivial difference becomes significant in a large enough study, and an important one stays invisible in a small one.

The third misuse is the comparison nobody declared. If twenty subgroups are examined and one shows a significant difference, that is what twenty tests produce by chance about once in every set. Trials registered in advance, stating which comparison is the main one, exist to close that door. A reader who wants to judge a reported figure therefore needs the interval, the sample size, and the number of comparisons that were made before this one was chosen for the headline. Several journals now require that the pre-registered comparison be identified in the abstract. The requirement has made a visible difference to the proportion of positive findings reported.

WHAT THIS PASSAGE IS FOR

- A confidence interval describes a procedure, not a single number.
 - Significance depends on sample size as much as on the effect.
 - Twenty tests produce one chance result per set.
-

Questions 144.1 to 144.10

on passage 144, What a Margin of Error Says

144.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) An interval describes a procedure, and three misuses follow
- B) Journals now require the pre-registered comparison
- C) A difference is significant whatever the sample size
- D) Two overlapping intervals show no difference

144.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does examining twenty subgroups produce?

- A) A narrower confidence interval
- B) A pre-registered main comparison
- C) About one significant result by chance
- D) A margin of three points on a thousand

144.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that significance depends on the size of the study?

- A) “A confidence interval is a statement about a procedure rather than about a number”
- B) “Trials registered in advance, stating which comparison is the main one, exist to close that door”
- C) “The method used, repeated many times on fresh samples, would produce an interval containing the true value in about ninety-five cases out of a hundred”
- D) “A trivial difference becomes significant in a large enough study, and an important one stays invisible in a small one”

144.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

If twenty subgroups are examined and one shows a significant difference, that is what twenty tests produce by chance about once in every set. A headline built on that one subgroup would therefore ____

Which choice most logically completes the text?

- A) report a pre-registered comparison
- B) be reporting an expected accident
- C) need a narrower confidence interval
- D) show a difference in every subgroup

144.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “marginal” most nearly mean?

- A) barely over the line
- B) written in a margin
- C) of no importance
- D) far from the cutoff

144.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about newspaper sentences?

- A) It defines statistical significance for a reader
- B) It reports what journals now require
- C) It concedes that the common reading is right
- D) It names the misreading the text is correcting

144.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 94 of this book. It calls a single figure with no spread and no sample size the worst case and also the most common way a statistic arrives in public, and recommends a mean with a standard deviation instead.

Text 1 says a reader needs the interval and the sample size. Based on Text 2, which choice best describes the figure that omits them both?

- A) A histogram sorting the cases into bins
- B) A mean paired with a standard deviation
- C) The commonest way a statistic arrives in public
- D) A set of four data sets with identical means

144.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

It does not say that there is a ninety-five percent chance that the truth lies between forty-five and fifty-one. ___ almost every newspaper sentence on the subject says exactly that.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) Even so,
- C) In other words,
- D) For instance,

144.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A confidence interval is a statement about a procedure ___ and it is not a statement about a number.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) procedure and
- B) procedure; and
- C) procedure and,
- D) procedure, and

144.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A reader needs the interval.
- A reader needs the sample size.
- A reader needs the number of comparisons made before this one.
- Journals now require the pre-registered comparison to be identified.

The student wants to explain the three things a reader needs to judge a figure. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A reader needs the interval that was reported
- B) The interval, the sample size and how many comparisons came first
- C) Journals now require the pre-registered comparison to be named
- D) A reader needs the number of comparisons that were made

ملخص المقطع 144 بالعربية

خلاصة: فاصل الثقة قول عن إجراء لا عن رقم. فإذا أبلغ مسح عن ثمانية وأربعين في المئة بهامش ثلاث نقاط فالدعوى أضيق مما تبدو: الطريقة المستعملة، لو أعيدت مَرَّات كثيرة على عَيِّنَات جديدة، لَأُنتِجَت فاصلاً يحوي القيمة الحقيقية في نحو خمس وتسعين حالة من مئة. المعنى: المعنى أنها لا تقول إنَّ تمَّ احتمالاً بخمس وتسعين في المئة أنَّ الحقيقة بين خمس وأربعين وإحدى وخمسين، مع أنَّ كلَّ جملة محفية في الموضوع تقول ذلك تماماً. وثلاثة أخطاء تتبع هذا الالتباس.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: الأول أن يُحسب تداخل فاصلين انعداماً للفرق، ولا يلزم ذلك. والثاني أن تُقرأ نتيجة حدية كأنَّ المعنوية صفة في العالم، والمعنوية الإحصائية حكم بأنَّ النتيجة يُستبعد أن تكون من تغيّر المعاينة وحده، وهي تتعلّق بحجم العَيِّنة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُحسب تداخل الفاصلين دليلاً على انعدام الفرق، مع أنَّ النض ينفي اللزوم. ويقترن المقطع بالمقطع الرابع والتسعين.

SOC · S05 · evidence

Measuring What a Price Did

A city such as San Francisco that changes a price and then measures what happened has not measured the effect of the price. Something else always changed in the same period: the weather, the economy, a new office building, the price of fuel. The standard remedy is difference in differences, meaning the comparison of the change in a treated place with the change in an untreated one over the same period. If parking occupancy fell eight percent in the districts with new rates and two percent in otherwise similar districts without them, the estimate of the effect is six points, not eight.

The quantity usually reported is an elasticity, meaning the percentage change in quantity produced by a one percent change in price. Elasticities transfer between settings better than absolute figures do, and they are dangerous because they are not constants. The same good is more elastic over a year than over a week. It is more elastic for people with substitutes available, and more elastic at high prices.

The method depends on a condition that can be stated and tested: that the two areas would have moved in parallel had nothing been done. Analysts test it by checking whether the two series ran parallel in the years before the change, which is weak evidence and better than none. The design fails where the untreated area is affected by the treatment, as when drivers simply move to the next district, and that spillover will make a real effect look larger than it is. A latent change already under way in one area and not the other is the other standard way such a study goes wrong. Where several places adopt a policy at different times, the comparisons can be stacked, which strengthens the design.

WHAT THIS PASSAGE IS FOR

- Measuring before and after does not isolate the effect of a price.
 - An elasticity transfers between settings better than an absolute figure.
 - The design fails when drivers move to the untreated district.
-

Questions 145.1 to 145.10

on passage 145, Measuring What a Price Did

145.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) An elasticity transfers between settings better than an absolute figure
- B) A before-and-after figure needs a comparison area to mean anything
- C) A city that measures its own change has measured the effect
- D) Spillover makes a real effect look smaller than it is

145.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what is the estimated effect in the parking example?

- A) Eight points
- B) Two points
- C) Ten points
- D) Six points

145.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that an elasticity cannot be carried from one case to another unchanged?

- A) “Elasticities transfer between settings better than absolute figures do, and they are dangerous because they are not constants. The same good is more elastic over a year than over a week”
- B) “The standard remedy is difference in differences, meaning the comparison of the change in a treated place with the change in an untreated one”
- C) “Analysts test it by checking whether the two series ran parallel in the years before the change”
- D) “The design fails where the untreated area is affected by the treatment, as when drivers simply move to the next district”

145.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The design fails where the untreated area is affected by the treatment, as when drivers simply move to the next district, and that spillover will make a real effect look larger than it is. A study whose comparison district filled with displaced drivers would therefore ____

Which choice most logically completes the text?

- A) understate the effect of the price
- B) require an elasticity instead
- C) overstate the effect of the price
- D) show the two series running parallel

145.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “latent” most nearly mean?

- A) arriving after a delay
- B) already under way unseen
- C) measured in both areas
- D) recent and well known

145.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the weather and the economy?

- A) It explains why a single series proves nothing
- B) It defines an elasticity for a reader
- C) It reports the parking figures in the example
- D) It argues that prices have no effect

145.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 95 of this book. It says the effect of a price depends on what else is available, and that a charge on gasoline changes little in the short run because nobody can substitute for the journey to work.

Text 1 says the same good is more elastic for people with substitutes. Based on Text 2, which choice best explains that pattern?

- A) A cost at the moment of choosing is salient
- B) A deposit on a bottle is returned later
- C) The size of the sum is often least important
- D) A charge bites only where something can be switched to

145.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

Elasticities transfer between settings better than absolute figures do. ____ they are dangerous because they are not constants.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) Even so,
- D) In other words,

145.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Something else always changed in the same period ____ and the weather and the economy are the usual candidates.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) period, and
- B) period and
- C) period; and
- D) period and,

145.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The method depends on the two areas moving in parallel had nothing been done.
- Analysts check whether the series ran parallel before the change.
- That is weak evidence and better than none.
- Where several places adopt a policy at different times, comparisons can be stacked.

The student wants to explain what makes the comparison design testable. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The method depends on the two areas moving in parallel
- B) Analysts check the series for the years before the change
- C) The parallel assumption can be checked against the earlier years, weakly but really
- D) Comparisons can be stacked where adoption happens at different times

ملخص المقطع 145 بالعربية

خلاصة: مدينة كسان فرانسيسكو تغيّر سعرًا ثم تقيس ما جرى لم تقس أثر السعر. فشيء آخر يتغيّر دائمًا في المدة نفسها: الطقس، والاقتصاد، وبناء مكاتب جديد، وسعر الوقود.

المعنى: المعنى أن العلاج القياسي هو فرق الفروق، أي مقارنة التغيّر في موضع معالج بالتغيّر في موضع غير معالج في المدة نفسها. فإن هبط ركن السيارات ثمانية في المئة في أحياء الأسعار الجديدة واثنين في أحياء مشابهة بلا أسعار جديدة فالتقدير ست نقاط لا ثمانية.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: والكمية التي تُبلّغ عادةً هي المرونة، أي النسبة المئوية لتغيّر الكمية من تغيّر السعر بواحد في المئة. والمرونة تنتقل بين المواضيع أحسن من الأرقام المطلقة، وهي خطيرة لأنها ليست ثوابت.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب الهبوط الخام هو الأثر، مع أن النصّ يطرح منه تغيّر منطقة المقارنة. ويقترن المقطع بالمقطع الخامس والتسعين.

Three Lines on a Card

Solomon Asch asked young men to compare the length of lines, and the task he set them was as simple as it sounds. Each was shown a standard line and three others, one of which plainly matched, and was asked to say aloud which one it was. The task was easy to the point of being insulting. Seven other people in the room gave their answers first, and all seven were confederates, meaning people who appeared to be participants and were working for the researcher. On twelve of eighteen trials they gave the same wrong answer.

The figures are often reported loosely and are worth having exactly. About a third of the responses by real participants went along with the wrong majority. About a quarter of participants never conformed at all, and around three quarters conformed at least once. Asch also ran variations, and these are the most informative part of the work. Conformity collapsed when one confederate gave the correct answer, and fell sharply when participants could write their answers privately instead of speaking them.

Replication, meaning independent repetition, has qualified the finding in two directions. Studies in other countries have produced rates from near zero to above the original, and a British replication in 1980 found almost no conformity among science students, which its authors attributed to a change in how such a setting was understood. Later analysis found the effect larger in collectivist societies and smaller in later decades. What survives is not a constant but a mechanism: people will give a public answer they privately disbelieve when the normative cost of disagreeing is visible, and the size of the effect depends on who is in the room. The original work used only male college students, which was normal at the time and limits what it establishes. Several of the variations have never been repeated at all.

WHAT THIS PASSAGE IS FOR

- The confederates gave the same wrong answer on twelve of eighteen trials.
 - Conformity collapsed when one confederate answered correctly.
 - What survives is a mechanism rather than a constant.
-

Questions 146.1 to 146.10

on passage 146, Three Lines on a Card

146.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The confederates gave a wrong answer on twelve of eighteen trials
- B) A British replication in 1980 found almost no conformity
- C) What survives is a mechanism rather than a constant rate
- D) The rate of conformity is the same everywhere

146.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what share of participants never conformed?

- A) About a quarter
- B) About a third
- C) About three quarters
- D) About a tenth

146.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the pressure works through being heard rather than being believed?

- A) “Each was shown a standard line and three others, one of which plainly matched, and was asked to say aloud which one it was”
- B) “Conformity collapsed when one confederate gave the correct answer, and fell sharply when participants could write their answers privately instead of speaking them”
- C) “Later analysis found the effect larger in collectivist societies and smaller in later decades”
- D) “About a third of the responses by real participants went along with the wrong majority”

146.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Conformity collapsed when one confederate gave the correct answer. A participant who found one ally in the room would therefore ____

Which choice most logically completes the text?

- A) conform more often than before
- B) answer in writing instead of aloud
- C) face a larger normative cost
- D) find the pressure largely gone

146.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “normative” most nearly mean?

- A) average in size
- B) written into a rule
- C) arising from what others expect
- D) measured in a laboratory

146.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the figures worth having exactly?

- A) It defines a confederate for a reader
- B) It corrects a loose report before giving the numbers
- C) It reports the British replication of 1980
- D) It argues that the figures cannot be trusted

146.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 96 of this book. It says an unwritten rule needs observation, a sanction, some willingness to apply it and a known rule, and that the strength of a norm depends on visibility more than on agreement.

Text 1 reports conformity falling when answers were written privately. Based on Text 2, which choice best explains that fall?

- A) A breach nobody can see carries no penalty
- B) A sanction nobody bothers with is no sanction
- C) Tax compliance is higher where returns are public
- D) Each further breach is cheaper than the last

146.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The figures are often reported loosely and are worth having exactly. ____ about a third of the responses by real participants went along with the wrong majority.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) Specifically,

146.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Seven other people in the room gave their answers first ____ and all seven were confederates.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) first and
- B) first, and
- C) first; and
- D) first and,

146.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Rates have run from near zero to above the original.
- A British replication in 1980 found almost no conformity.
- What survives is not a constant but a mechanism.
- The size depends on who is in the room.

The student wants to explain what the replications left standing. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Rates have run from near zero to above the original
- B) A British replication in 1980 found almost no conformity
- C) What survives is not a constant but a mechanism
- D) The pressure is real, and its size is set by the company a person is in

ملخص المقطع 146 بالعربية

خلاصة: طلب سولومون آش من شبّان أن يقارنوا أطوال خطوط، والمهمة بسيطة كما تبدو: يُعرض على كلّ واحد خطّ قياشي وثلاثة غيره أحدها مطابق ظاهراً، ويُسأل أن يقول جهراً أيّها هو، وكانت المهمة من اليسر حدّاً يُهين.

المعنى: المعنى أنّ سبعة آخرين في الغرفة يجيبون أولاً وكلّهم متواطئون، أي أشخاص يظهرون مشاركين وهم يعملون للباحث، وقد أجابوا الجواب الخطأ نفسه في اثنتي عشرة محاولة من ثماني عشرة.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: والأرقام تُروى بتسامح وحقّها أن تُضبط: نحو ثلث أجوبة المشاركين الحقيقيين جرى مع الأغلبية المخطئة، ونحو ربع المشاركين لم يوافق قط، ونحو ثلاثة أرباعهم وافق مرّة على الأقل.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب معتل الموافقة ثابِتاً في كلّ مكان. مع أنّ الإعادات نقلته من قريب الصغر إلى فوق الأصل. ويقترن المقطع بالمقطع السادس والتسعين.

Reading a Census Carefully

A census of the kind run by the United States is the best social data that exists, and it is not simple to use. Three features complicate every comparison. The first is the undercount, meaning the people a census fails to record. The net figure for a large modern census is often about one percent, which sounds negligible until it is broken down, because the undercount is not spread evenly. Young men, renters, recent migrants and children in complex households are missed at several times the average rate, so the undercount changes the apparent composition of a place and not merely its size.

The second feature is the boundary change, meaning an alteration of the areas for which figures are reported. Tracts are split as they grow and merged as they shrink. A table that compares a neighborhood in two censuses may therefore be comparing two different pieces of ground. Statistical agencies publish conversion tables for this purpose, and the conversions they allow are approximate rather than exact.

The third complication is that the questions themselves change from one census to the next. Categories for race, ethnicity, occupation and household relationship have been rewritten repeatedly, usually for good reasons, with the consequence that a series apparently running for a century is in places a series of different questions. A heterogeneous category in one year may appear as three separate categories in the next, and the two tables cannot then be placed side by side. None of this makes the data unusable, and the agencies document all of it in detail. A comparison across decades is therefore a piece of work rather than a lookup. The commonest error is to treat a table as though the words at the top of its columns had always meant the same thing, which they have not.

WHAT THIS PASSAGE IS FOR

- The undercount is about one percent and is not spread evenly.
 - A neighborhood compared across censuses may be different ground.
 - A long series is in places a series of different questions.
-

Questions 147.1 to 147.10

on passage 147, Reading a Census Carefully

147.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The net undercount is often about one percent
- B) Agencies publish conversion tables for the boundaries
- C) The census data are unusable for comparison
- D) Three features make a comparison a piece of work

147.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, who is missed at several times the average rate?

- A) Households in merged tracts
- B) Young men, renters and recent migrants
- C) People in the same tract for a century
- D) Those answering a rewritten category

147.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a small undercount can still distort a picture?

- A) “Statistical agencies publish conversion tables for this purpose”
- B) “Tracts are split as they grow and merged as they shrink”
- C) “the undercount changes the apparent composition of a place and not merely its size”
- D) “A heterogeneous category in one year may appear as three separate categories in the next”

147.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A table that compares a neighborhood in two censuses may therefore be comparing two different pieces of ground. A researcher who used the two tables without a conversion would therefore ____

Which choice most logically completes the text?

- A) be measuring a change in the boundary
- B) have corrected for the undercount
- C) find the questions unchanged between them
- D) need a heterogeneous category instead

147.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “heterogeneous” most nearly mean?

- A) drawn from one source
- B) measured in detail
- C) standing for a boundary
- D) holding unlike things together

147.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about a century-long series?

- A) It defines an undercount for a reader
- B) It reports what the conversions allow
- C) It names the cost of rewriting a question
- D) It argues that the rewriting was unwise

147.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 97 of this book. It says bid rent falls as distance from the center rises, that the slope is set by the cost of travel, and that cheaper or faster travel flattens it and spreads the city outward.

Text 1 warns that tracts are split as they grow. Based on Text 2, which choice best explains why a tract would grow in the first place?

- A) Firms needing many workers cluster together
- B) Cheaper travel brings distant land into play
- C) Generalized cost adds time and money together
- D) Bid rent is highest at the center of a city

147.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The net figure for a large modern census is often about one percent, which sounds negligible until it is broken down. ___ the undercount is not spread evenly.

Which choice completes the text with the most logical transition?

- A) After all,
- B) By contrast,
- C) In other words,
- D) For instance,

147.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Tracts are split as they grow ___ and they are merged as they shrink.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) grow and
- B) grow; and
- C) grow, and
- D) grow and,

147.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The undercount changes the apparent composition of a place.
- Tracts are split and merged between censuses.
- Categories have been rewritten repeatedly.
- The commonest error is to treat the column headings as constant.

The student wants to explain the commonest error in using a census table. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Reading the column headings as though they had always meant one thing
- B) The undercount changes the apparent composition of a place
- C) Tracts are split and merged between one census and the next
- D) Categories in a census have been rewritten repeatedly

ملخص المقطع 147 بالعربية

خلاصة: إحصاء السكان على النحو الذي تُجرى الولايات المتحدة أفضل بيانات اجتماعية موجودة، وليس استعماله بسيطاً. وثلاث خصائص تُعقد كل مقارنة. أولاً، النقص في العد، أي من يفوت الإحصاء تسجيلهم، ومافيه في إحصاء حديث كبير نحو واحد في المئة. المعنى: المعنى أن هذا يبدو مهملاً حتى يُفصل، فالنقص غير موزع بانتظام: فالشباب والمستأجرون والمهاجرون الجدد والأطفال في بيوت مركبة يفوتهم التسجيل بأضعاف المعدل، فيغير النقص هيئة المكان الظاهرة لا حجمه فقط. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: والخصيصة الثانية تغير الحدود، أي تعديل المناطق التي تُبلغ عنها الأرقام: فالأحياء الإحصائية تُشق إذا نمت وتدمج إذا تقلصت، فقد يقارن جدول حياً في إحصاءين وهو يقارن قطعتي أرض مختلفتين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب البيانات غير قابلة للاستعمال، مع أن النص يسميها أفضل ما يوجد. ويقترن المقطع بالمقطع السابع والتسعين.

Two Sides of One State Line

New Jersey raised its minimum wage in April 1992. David Card and Alan Krueger saw a natural experiment in it, because eastern Pennsylvania sits across a state line with similar towns, similar labor markets and no change in its own minimum. They surveyed over four hundred fast food restaurants on both sides before and after the increase, asking the same questions each time, and found no fall in employment in New Jersey relative to Pennsylvania. The standard prediction from the textbook model is that employment should have fallen.

The response was immediate and technical. David Neumark and William Wascher obtained payroll records, meaning employment figures taken from the administrative accounts of firms, for a sample of the same restaurants, and found that employment had fallen. The two teams were therefore disagreeing about measurement rather than about theory. Survey data may suffer from respondents who misremember or who answer for a chain rather than a store. Payroll data covers only the firms that supply it, and the sample was assembled with help from a restaurant trade association, which the other side pointed out at length.

Neither paper settled the matter and both improved the field. The dispute drove a generation of work using administrative data, borders, and hundreds of separate minimum wage changes, and the current position is that modest increases have small employment effects whose sign depends on the local labor market. The reciprocal checking of methods that the exchange forced is now standard practice, and the two principals shared a Nobel prize in 2021 with a third economist for work of exactly that kind. Both data sets were eventually released, which is why the exchange could be adjudicated at all. Several later studies have replicated the comparison with much larger administrative samples.

WHAT THIS PASSAGE IS FOR

- Pennsylvania supplied a comparison across a state line.
 - The two teams disagreed about measurement rather than theory.
 - Each data source has its own characteristic weakness.
-

Questions 148.1 to 148.10

on passage 148, Two Sides of One State Line

148.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The two teams disagreed about measurement, not theory
- B) New Jersey raised its minimum wage in April 1992
- C) The survey data settled the question for good
- D) Payroll records are free of any weakness

148.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what did Neumark and Wascher use?

- A) A survey of four hundred restaurants
- B) A border between two labor markets
- C) Payroll records from the firms
- D) A register of minimum wage changes

148.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that each kind of data carries its own weakness?

- A) “The standard prediction from the textbook model is that employment should have fallen”
- B) “the two principals shared a Nobel prize in 2021 with a third economist”
- C) “Both data sets were eventually released, which is why the exchange could be adjudicated at all”
- D) “Survey data may suffer from respondents who misremember or who answer for a chain rather than a store. Payroll data covers only the firms that supply it”

148.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Payroll data covers only the firms that supply it, and the sample was assembled with help from a restaurant trade association, which the other side pointed out at length. A figure drawn from that sample would therefore ____

Which choice most logically completes the text?

- A) be free of any selection worry
- B) carry a question about who supplied it
- C) be a survey of four hundred stores
- D) settle the textbook prediction at last

148.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “reciprocal” most nearly mean?

- A) running in both directions
- B) given in return for payment
- C) performed by one side only
- D) written in a journal article

148.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the textbook model?

- A) It defines payroll records for a reader
- B) It reports when the Nobel prize was shared
- C) It argues that the model was wrong
- D) It sets the expectation the finding broke

148.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 98 of this book. It sets a wage between a ceiling and a reservation wage and says bargaining power, which depends on how many alternatives each side has, settles where in between the wage lands.

Text 1 says modest increases have small effects whose sign varies. Based on Text 2, which choice best explains why the local market matters?

- A) Adam Smith named the elements in 1776
- B) The first job a worker takes sets the next
- C) Bargaining power depends on the alternatives each side has
- D) A reservation wage is the lowest pay accepted

148.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The response was immediate and technical. ___ David Neumark and William Wascher obtained payroll records for a sample of the same restaurants.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In particular,
- C) In other words,
- D) Even so,

148.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Neither paper settled the matter ___ and both improved the field.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) matter and
- B) matter; and
- C) matter and,
- D) matter, and

148.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Neither paper settled the matter and both improved the field.
- The dispute drove work using administrative data and borders.
- The reciprocal checking of methods is now standard practice.
- Both data sets were eventually released.

The student wants to explain what the exchange left behind. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Neither paper settled the matter and both improved the field
- B) A method of mutual checking and a generation of work on administrative data
- C) Both of the data sets were eventually released
- D) The reciprocal checking of methods is now standard practice

ملخص المقطع 148 بالعربية

خلاصة: رفعت نيوجيرشي حدّها الأدنى للأجر في أبريل سنة ألف وتسعمئة واثنين وتسعين. ورأى ديفيد كارد وآلان كروغر في ذلك تجربة طبيعية، لأنّ شرق بنسلفانيا يقع عبر حدّ ولاية ببلدات مشابهة وأسواق عمل مشابهة ولا تغيير في حدّها الأدنى. المعنى: المعنى أنّهما مسحاً أكثر من أربعمئة مطعم للوجبات السريعة على الجانبين قبل الرفع وبعده بالأسئلة نفسها، فلم يجدوا هبوطاً في التشغيل في نيوجيرشي نسبةً إلى بنسلفانيا، مع أنّ التوقع القياسي من نموذج الكتاب أنّ التشغيل كان ينبغي أن يهبط. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: كان الردّ فوراً وفئاً: حصل ديفيد نيومارك ووليام واشر على سجلات الرواتب، أي أرقام التشغيل من حسابات الشركات الإدارية، لعينة من المطاعم نفسها، فوجدوا أنّ التشغيل هبط. فالفرقان يختلفان في القياس لا في النظرية. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفحّ المتوقّع هنا أن تُحسب إحدى الورقتين حاسمة، مع أنّ النص يقول إنّ أيّاً منهما لم يحسم. ويقترن المقطع بالمقطع الثامن والتسعين.

One Number for a Distribution

The standard measure of inequality begins with a graph. The Lorenz curve, meaning a plot of the cumulative share of income held by the poorest given share of the population, runs from the bottom left to the top right of a square. Perfect equality would be the diagonal of that square, where the poorest tenth hold exactly a tenth of the income, and every real distribution sags below it. The Gini coefficient, meaning a single figure summarizing how far a distribution departs from equality, is the area between the curve and the diagonal, scaled to run from zero to one.

The convenience of one number is also its defect. The same Gini value can be produced by very different distributions. A country where the top one percent hold a great deal and the rest are similar to one another can share a coefficient with a country where the gap runs through the middle, and policies that would reduce one disparity will not touch the other. The measure is also least sensitive at the two ends, which is where the political argument usually is.

Alternatives exist and are chosen for what they expose. A percentile ratio compares the income at the ninetieth percentile with the tenth, which is easy to interpret. The Palma ratio compares the top tenth with the bottom four tenths, on the argument that the middle half changes little. The Theil index can be decomposed into inequality within regions and inequality between them, which no single-number measure otherwise allows. Serious work reports more than one, and a report that gives a Gini alone is giving the least informative summary available. Comparisons across countries are harder still, because the underlying surveys differ in what they count as income. Whether housing, benefits in kind and capital gains are included moves a national figure by several points.

WHAT THIS PASSAGE IS FOR

- The Gini is the area between the Lorenz curve and the diagonal.
 - The same Gini value can come from very different distributions.
 - A Theil index can separate inequality within and between regions.
-

Questions 149.1 to 149.10

on passage 149, One Number for a Distribution

149.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The Lorenz curve runs from corner to corner of a square
- B) One figure is convenient and the least informative available
- C) The same Gini value always means the same distribution
- D) Comparisons across countries are easy to make

149.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does the Palma ratio compare?

- A) The ninetieth percentile with the tenth
- B) Inequality within regions with that between them
- C) The curve with the diagonal of the square
- D) The top tenth with the bottom four tenths

149.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that one value can hide two different problems?

- A) “A country where the top one percent hold a great deal and the rest are similar to one another can share a coefficient with a country where the gap runs through the middle”
- B) “Perfect equality would be the diagonal of that square, where the poorest tenth hold exactly a tenth of the income”
- C) “The measure is also least sensitive at the two ends, which is where the political argument usually is”
- D) “Serious work reports more than one, and a report that gives a Gini alone is giving the least informative summary available”

149.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The measure is also least sensitive at the two ends, which is where the political argument usually is. A reform aimed at the very top would therefore ____

Which choice most logically completes the text?

- A) move the coefficient sharply
- B) flatten the Lorenz curve entirely
- C) show up faintly in the Gini
- D) be captured by the Theil index alone

149.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “disparity” most nearly mean?

- A) a loss of hope
- B) a gap between shares
- C) a single summary figure
- D) a curve drawn on a square

149.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about serious work?

- A) It draws the practical rule from the comparison
- B) It defines the Lorenz curve for a reader
- C) It reports what the Theil index decomposes
- D) It argues that the Gini should be banned

149.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 99 of this book. It separates income, wealth and mobility and says any serious argument about inequality has to state which of the three quantities it is about, while a good many never do.

Text 1 says a single figure can hide the shape of a distribution. Based on Text 2, which choice best names a further thing it can hide?

- A) The Palma ratio of the top tenth
- B) The sensitivity of the measure at the ends
- C) The survey that the very rich did not answer
- D) Whether the figure is about income or wealth

149.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The convenience of one number is also its defect. ____ the same Gini value can be produced by very different distributions.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) After all,
- D) For instance,

149.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A percentile ratio compares the income at the ninetieth percentile with the tenth ____ and that is easy to interpret.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) tenth, and
- B) tenth and
- C) tenth; and
- D) tenth and,

149.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The same Gini value can come from very different distributions.
- The measure is least sensitive at the two ends.
- Alternatives are chosen for what they expose.
- Serious work reports more than one.

The student wants to explain why a single coefficient should never stand alone. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The same Gini value can come from very different distributions
- B) The measure is least sensitive at the two ends
- C) One figure hides the shape and the ends, so serious work reports several
- D) Serious work in the field reports more than one measure

ملخص المقطع 149 بالعربية

خلاصة: المقياس القياسي لعدم المساواة يبدأ برسم: منحني لورنز، أي رسم للحصة التراكمية من الدخل التي يحوزها الأفقر من حصة تراكمية من السكان، يجري من أسفل اليسار إلى أعلى اليمين في مربع. المعنى: المعنى أن المساواة التامة ستكون قُطر ذلك المربع، حيث يحوز العُشر الأفقر عُشر الدخل بالضبط، وكل توزيع واقعي يتهدل تحته. ومعامل جيني، أي رقم واحد يلخص بعد التوزيع عن المساواة، هو المساحة بين المنحنى والقطر، مقيسة من الصفر إلى الواحد. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: ويُسر الرقم الواحد هو عيبه أيضًا، فقيمة جيني نفسها قد تنتج من توزيعات شديدة الاختلاف: فبلد يحوز فيه الواحد في المئة الأعلى كثيرًا وبقيته متشابهة قد يشارك معاملاً بلداً تمر فيه الفجوة في الوسط. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب قيمة جيني الواحدة دالة على توزيع واحد، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع التاسع والتسعين.

Which Results Held Up

The judgment and decision literature was built from small studies, often on students, analyzed after the fact. Beginning around 2011 psychologists at Virginia and elsewhere organized systematic attempts to repeat the best-known findings, and the results separated the field into parts. Large coordinated replications confirmed the core effects with reduced magnitudes. Anchoring survived robustly, framing survived, and loss aversion survived with its size disputed. Several widely taught results did not survive at all, including some that had appeared in textbooks for twenty years.

Two mechanisms were identified as responsible. The first is publication bias, meaning the tendency for positive results to be published while null results stay in drawers, and it inflates the apparent size of every effect in a literature. The second is flexibility in analysis. A researcher who may choose when to stop collecting data, which outliers to exclude, and which of several outcomes to report can produce a significant result from noise without any dishonesty. The number of available choices was shown to be large enough to make the problem endemic.

The remedies that followed were procedural rather than theoretical. Preregistration, meaning the publication of a design and analysis plan before the data are collected, removes most of that flexibility at a stroke. Registered reports go further, since a journal accepts the study on its design before any results exist, which removes the incentive to produce a positive finding at all. Published effect sizes in preregistered work are smaller and more stable than in the older literature. The episode is often described as a crisis and is better understood as a measurement of the field, carried out by the field, whose main result is that the strongest effects are real and smaller than advertised. Economics, medicine and political science have since run versions of the same exercise with much the same result.

WHAT THIS PASSAGE IS FOR

- Large coordinated replications confirmed core effects with reduced magnitudes.
 - Analytic flexibility can produce significance from noise without dishonesty.
 - Preregistered effect sizes are smaller and more stable.
-

Questions 150.1 to 150.10

on passage 150, Which Results Held Up

150.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Systematic replication began around 2011
- B) Anchoring and framing both survived replication
- C) The strongest effects are real and smaller than advertised
- D) The episode showed the field to be worthless

150.2

DETAIL · EASY · INFORMATION AND IDEAS

According to the text, what does a registered report add?

- A) Acceptance on the design before any results
- B) A plan published before data collection
- C) A larger sample of student participants
- D) A ban on excluding any outliers

150.3

EVIDENCE · MEDIUM · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a significant result can come from noise without dishonesty?

- A) “Large coordinated replications confirmed the core effects with reduced magnitudes”
- B) “A researcher who may choose when to stop collecting data, which outliers to exclude, and which of several outcomes to report can produce a significant result from noise without any dishonesty”
- C) “Published effect sizes in preregistered work are smaller and more stable than in the older literature”
- D) “publication bias, meaning the tendency for positive results to be published while null results stay in drawers”

150.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Registered reports go further, since a journal accepts the study on its design before any results exist, which removes the incentive to produce a positive finding at all. A null result under that arrangement would therefore ____

Which choice most logically completes the text?

- A) stay in a drawer unpublished
- B) have to be reanalyzed first
- C) inflate the apparent effect size
- D) be published like any other

150.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “endemic” most nearly mean?

- A) spreading quickly
- B) confined to one place
- C) present throughout
- D) recently arrived

150.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the final sentence about other fields?

- A) It defines publication bias for a reader
- B) It widens the case beyond psychology
- C) It reports which effects survived the tests
- D) It denies that the exercise was useful

150.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 100 of this book. It defines anchoring as the pull of an irrelevant number on a later estimate and reports that the effect survives even when the subjects are told the number is random.

Text 1 reports that anchoring survived robustly. Based on Text 2, which choice best describes the effect that survived?

- A) An irrelevant number pulls a later estimate
- B) Examples that come to mind easily seem common
- C) The same choice framed two ways splits a decision
- D) A random error cancels over many judgments

150.8

TRANSITIONS · MEDIUM · EXPRESSION OF IDEAS

The remedies that followed were procedural rather than theoretical. ___ preregistration removes most of that flexibility at a stroke.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In other words,
- D) For instance,

150.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The judgment and decision literature was built from small studies ___ and those studies were often analyzed after the fact.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) studies and
- B) studies, and
- C) studies; and
- D) studies and,

150.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The attempts to repeat the findings were organized by psychologists.
- Core effects were confirmed with reduced magnitudes.
- Several widely taught results failed to survive.
- The main result is that the strongest effects are real and smaller.

The student wants to explain why the episode is better called a measurement than a crisis. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The attempts to repeat the findings were organized by psychologists
- B) Core effects were confirmed with reduced magnitudes
- C) Several widely taught results failed to survive the tests
- D) The field measured itself and found its best effects real and smaller

ملخص المقطع 150 بالعربية

خلاصة: بُنيت أدبيّات الحكم والقرار من دراسات صغيرة، كثيرًا على الطلاب، تُحلّل بعد الواقعة. ومن نحو سنة ألفين وإحدى عشرة نظم علماء نفس في فرجينيا وغيرها محاولات منهجية لإعادة أشهر النتائج، ففرزت النتائج المجال أقسامًا. المعنى: المعنى أن إعادات منسقة كبيرة أكّدت الآثار الجوهرية بمقادير أقل: فالتثبيات نجا نجا قوياً، والتأطير نجا، وثغور الخسارة نجا وحجمه متنازع فيه. وعدة نتائج مُدرّسة على نطاق واسع لم تنج البتة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الدليل: وعُيّن سببان: الأول تحيّر النشر، أي ميل النتائج الموجبة إلى النشر وبقاء النتائج الصفرية في الأدراج، وهو ينفخ حجم كل أثر في أدبيّة. والثاني المرونة في التحليل. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُقرأ الحادثة إسقاطًا للمجال، مع أن النص يسميها قياسًا للمجال أجراه المجال نفسه. ويقترن المقطع بالمقطع المئة.

LEVEL 4

Stretch

dispute

What is contested: two readings of one body of evidence, and the writer's stance.

Passage length — 288 to 312 words

Sentences — averaging 21 to 28 words

Vocabulary assumed — the top 40,000 most frequent word forms

Words above that — at most 6, explained or inferable

Clue to the reader — Read for the disagreement. One body of evidence, two readings of it. The writer takes a side, and the passage is built so that the side taken can be told apart from the evidence it rests on.

History and Civics

Passages 151 to 160

151

HIS · S01 · dispute

One Sentence, Two Readings

The sentence about equality has been read in two incompatible ways by people who agreed about the words, and the dispute matters because the whole subsequent argument about American citizenship ran through it. On the first reading the Declaration states a universal principle to which the nation is committed, whatever its practice, and the gap between the words and the conduct is a national failure to be remedied rather than evidence about what the words mean. That was Douglass's position in 1852 and Lincoln's position at Peoria two years later.

On the second reading the clause was written by men who held slaves, for an audience that held slaves, in a document whose purpose was separation from Britain, and it therefore cannot have meant what the first reading requires. Chief Justice Taney put that argument into law in 1857, holding that the framers had not included Black people in the word men and that no contemporary would have thought otherwise. That is the position called originalism, which is the view that a text means what its authors and first readers understood it to mean, and it is not a careless reading.

Each side has to qualify something. The first must explain why no signer acted on the principle at the time, and the honest version concedes that the words outran their authors. The second must explain the deletion of the slave trade passage, the immediate use of the sentence by abolitionists within a decade, and the fact that several signers freed people in their wills. The dispute cannot be settled from the text alone, which is why it was settled by an amendment that made the first reading law in 1868. Taney's reasoning was repudiated in the Fourteenth Amendment and has never been formally overruled by a court.

WHAT THIS PASSAGE IS FOR

- The two readings agree about the words and not about the meaning.
 - Taney argued that no contemporary would have included Black people.
 - The dispute was settled by amendment rather than by interpretation.
-

Questions 151.1 to 151.10

on passage 151, One Sentence, Two Readings

151.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Taney's reasoning has never been formally overruled by a court
- B) Two readings of one sentence each carry a cost, and the text alone cannot settle between them
- C) The second reading is a careless misuse of the historical record
- D) Several signers of the Declaration freed people in their wills

151.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what must the first reading explain?

- A) Why the slave trade passage was struck from the draft
- B) Why abolitionists used the sentence within a decade
- C) Why Taney put his argument into law in 1857
- D) Why no signer acted on the principle at the time

151.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the author treats both readings as serious?

- A) “which is the view that a text means what its authors and first readers understood it to mean, and it is not a careless reading”
- B) “That was Douglass's position in 1852 and Lincoln's position at Peoria two years later”
- C) “the whole subsequent argument about American citizenship ran through it”
- D) “which is why it was settled by an amendment that made the first reading law in 1868”

151.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The dispute cannot be settled from the text alone, which is why it was settled by an amendment that made the first reading law in 1868. A question of that kind is therefore

—

Which choice most logically completes the text?

- A) decided by whichever party controls the courts
- B) answered by reading the document more carefully
- C) resolved politically rather than by interpretation
- D) closed once a court has formally overruled the other side

151.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “qualify” most nearly mean?

- A) earn a formal credential
- B) limit a claim with a concession
- C) describe in greater detail
- D) dismiss as beside the point

151.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence defining originalism?

- A) It names the position the second reading rests on and declines to dismiss it
- B) It explains why the Fourteenth Amendment was needed in 1868
- C) It reports the holding Taney reached in the case of 1857
- D) It introduces the concessions each side is obliged to make

151.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 101 of this book. It examines the surviving versions of the Declaration and argues that the deleted passage on the slave trade establishes something narrow but firm, since a deletion shows that a sentence was removed and not why.

Text 1 says the second reading must explain the deletion. Based on Text 2, how strong is that obligation?

- A) Decisive, since the deletion proves the first reading correct
- B) Nonexistent, since no such passage was ever drafted
- C) Settled, since Jefferson recorded the reason at the time
- D) Limited, since the deletion shows a removal without showing a motive

151.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The first must explain why no signer acted on the principle at the time, and the honest version concedes that the words outran their authors. ____ the second must explain the deletion of the slave trade passage.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) In other words,
- C) For its part,
- D) For instance,

151.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Taney put that argument into law in 1857 ____ holding that the framers had not included Black people in the word men.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) 1857, holding
- B) 1857 holding
- C) 1857; holding
- D) 1857: holding,

151.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The dispute cannot be settled from the text alone.
- Each side has to qualify something.
- The Fourteenth Amendment made the first reading law in 1868.
- Taney's reasoning has never been formally overruled by a court.

The student wants to explain why an amendment was needed to settle the question. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Each side of the dispute has to qualify something it would rather not
- B) Taney's reasoning has never been formally overruled by any court
- C) Because neither reading could be defeated from the text, the question was closed in 1868 by amendment rather than by argument
- D) The Fourteenth Amendment made the first reading of the sentence law in 1868

ملخص المقطع 151 بالعربية

خلاصة: فُرئت جملة المساواة قراءتين متعارضتين من أناس اتفقوا على الكلمات. على القراءة الأولى يقرّر الإعلان مبدأً كونياً تلتزم به الأمة أيًا كانت ممارستها، والفجوة بين القول والفعل فشل وطني يُعالج لا دليل على معنى الكلمات، وهذا موقف دوغلاس عام ألف وثمانمئة واثنين وخمسين ولينكولن في بيوريا.

المعنى: المعنى أن القراءة الثانية ترى أن الجملة كذبها رجال يملكون عبيداً، لجمهور يملك عبيداً، في وثيقة غرضها الانفصال عن بريطانيا، فلا يمكن أن تكون قد عنت ما تقتضيه القراءة الأولى. وقد أدخل القاضي ثاني هذه الحجة في القانون عام ألف وثمانمئة وسبعة وخمسين، وهذا ما يُسمى الأصلانية.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: كل طرف عليه أن يتحقق في شيء. فالأولى يلزمها تفسير أن أحداً من الموقعين لم يعمل بالمبدأ وقتها، والثانية يلزمها تفسير حذف مقطع تجارة العبيد واستخدام الجملة فوراً من المناهضين.

الصلة بالاختبار: في اختبار سات تتكرر النصوص المتقابلة في مسألة واحدة، ويُسأل عن موقف الكاتب وعن الحجة المضادة. والفخ الشائع أن تُعامل الأصلانية قراءةً متهاونة، مع أن النص يقول صراحةً إنها ليست قراءةً متهاونة. ويقترن المقطع بالمقطع الحادي بعد المئة في أسئلة النصين المتقابلين.

Protection or Paralysis

Whether the American system of divided powers protects liberty or prevents government is the oldest live argument in American political science, and both sides are arguing from the same design. The defense is the one Madison made. Power divided among institutions with different electorates, different terms and different incentives cannot be captured at once, so a majority with a bad idea is checked at several points and a persistent majority with a good one eventually prevails. On this reading the delay is the protection, and the evidence offered is the number of occasions on which something unwise was stopped.

The criticism begins from the same veto points, meaning the places where one actor can block a decision, and counts them differently. A system with two chambers, a presidential veto, judicial review, a Senate requiring sixty votes for most business, and fifty state governments has a great many such points. Critics argue that the result is gridlock, meaning a condition in which the system cannot act although majorities exist, and that the consequence is not careful government but government by crisis, executive order and court ruling, since those are the routes that remain open.

The evidence is genuinely ambiguous, because the two sides count different things. Defenders point to measures blocked; critics point to problems unaddressed, and neither list can be compiled without a judgment about what should have happened. Comparative work is the strongest available evidence, and it shows that countries with fewer veto points legislate faster in both directions, passing both the reforms their critics feared and the ones their defenders wanted. That finding is uncomfortable for everyone and is about as far as the data reach. Political scientists have counted veto points across democracies since the 1990s and the measures broadly agree with one another.

WHAT THIS PASSAGE IS FOR

- Both sides argue from the same design.
 - On the defense, the delay is the protection.
 - Countries with fewer veto points legislate faster in both directions.
-

Questions 152.1 to 152.10

on passage 152, Protection or Paralysis

152.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Political scientists have counted veto points across democracies since the 1990s
- B) The American system was designed to prevent government from acting at all
- C) Two sides argue from one design and count different things, and the data reach only so far
- D) Gridlock is a condition in which the system cannot act although majorities exist

152.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does comparative work show?

- A) Countries with fewer veto points legislate faster in both directions
- B) Countries with more veto points produce better considered laws
- C) The number of veto points has no measurable effect at all
- D) Defenders and critics have each been counting correctly

152.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the evidence cannot settle the dispute?

- A) “Power divided among institutions with different electorates, different terms and different incentives”
- B) “neither list can be compiled without a judgment about what should have happened”
- C) “A system with two chambers, a presidential veto, judicial review”
- D) “That finding is uncomfortable for everyone and is about as far as the data reach”

152.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Defenders point to measures blocked; critics point to problems unaddressed, and neither list can be compiled without a judgment about what should have happened. The disagreement is therefore ____

Which choice most logically completes the text?

- A) a matter of arithmetic rather than of politics
- B) certain to be settled by better measurement
- C) confined to the field of American political science
- D) about values as much as about the evidence

152.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “checked” most nearly mean?

- A) verified against a record
- B) marked with a symbol
- C) stopped at several points
- D) left in temporary storage

152.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the comparative finding uncomfortable?

- A) It concedes that the comparative measures disagree with one another
- B) It marks the evidence as refusing to favor either side
- C) It explains why political scientists began counting in the 1990s
- D) It introduces the definition of a veto point

152.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 102 of this book. It argues that The Federalist is the most quoted and least representative source on the Constitution, and that each kind of surviving source carries a defect that can be named.

Text 1 says the defense is the one Madison made. Based on Text 2, how should that defense be weighed?

- A) As evidence of what an advocate wanted the design understood to do
- B) As the neutral account of the design that other sources confirm
- C) As the only surviving record of the Philadelphia convention
- D) As a dissent published by the Pennsylvania minority

152.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The criticism begins from the same veto points and counts them differently. ___ a system with two chambers, a presidential veto, judicial review and fifty state governments has a great many such points.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) In other words,
- C) By contrast,
- D) After all,

152.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Critics argue that the result is gridlock ___ a condition in which the system cannot act although majorities exist.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) gridlock a
- B) gridlock, a
- C) gridlock; a
- D) gridlock: a,

152.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Both sides are arguing from the same design.
- Defenders point to measures blocked.
- Critics point to problems unaddressed.
- Neither list can be compiled without a judgment about what should have happened.

The student wants to explain to a reader why the two sides cannot be reconciled by counting. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Both sides of the argument are reasoning from the very same design
- B) Defenders of the system point to the measures that were blocked by it
- C) Critics of the system point to the problems it has left unaddressed
- D) One side counts measures blocked and the other problems unaddressed, and neither list can be made without deciding first what ought to have happened

ملخص المقطع 152 بالعربية

خلاصة: هل يحمي نظام السلطات المقسمة الحرية أم يعطل الحكم؟ هذا أقدم جدل حي في العلوم السياسية الأميركية، والطرفان يحتجان بالتصميم نفسه. فالدفاع هو دفاع ماديسون: سلطة مقسمة على مؤسسات بناخين مختلفين ومدد مختلفة وحوافز مختلفة لا يمكن الاستيلاء عليها كلها في وقت واحد.

المعنى: أن النقد يبدأ من نقاط النقض نفسها ويعدها عدًا مختلفًا. فنظام فيه مجلسان وحق نقض رئاسي ومراجعة قضائية ومجلس شيوخ يطلب سئين صوتًا وخمسون حكومة ولاية فيه نقاط كثيرة جدًا، والنتيجة عند النقاد جمود، لا حكم مثلاً، والبديل حكم بالأزمة والأمر التنفيذي وحكم المحكمة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: الدليل ملتبس فعلاً لأن الطرفين يعذان أشياء مختلفة. فالمدافعون يشيرون إلى تدابير أوقفت، والنقاد يشيرون إلى مشكلات لم تُعالج، ولا تُجمع أي من القائمتين بلا حكم مسبق على ما كان ينبغي أن يحدث.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن حدود الدليل. والفخ الشائع أن يُفترض أن المقارنة الدولية تحسم لأحد الطرفين، مع أن النص يقول إن نتيجتها محرجة للجميع. ويقترن المقطع بالمقطع الثاني بعد المئة في أسئلة النصين المتقابلين.

The Movement Argued With Itself

The suffrage campaign divided over means rather than over ends, and the division ran deep enough to produce two rival national organizations that worked separately for twenty years. One wing held that the vote should be won state by state, meaning one legislature at a time, on the argument that a federal amendment required three quarters of the states and could be blocked by a minority of them. Wyoming, Colorado, Utah and Idaho did in fact enfranchise women decades before the federal amendment passed, which remains the strongest evidence for that view.

The other wing held that state campaigns were a trap, because each one had to be fought in full and could be reversed, and that only a constitutional amendment would settle the matter nationally. Within that wing a further split opened over tactics. Carrie Chapman Catt built a disciplined lobbying operation that worked through existing parties and declined to embarrass a wartime administration. Alice Paul and the younger militants picketed the White House during the war, were arrested, went on hunger strike, and were force-fed, and the publicity that followed was considerable.

Both strategies can claim the outcome, and the historians divide accordingly. The amendment passed in 1920 after Catt's lobbying had produced the congressional votes, which supports her account. It passed after the picketing had made the issue impossible to table any longer, which supports the other. The honest reading is that the two worked on different audiences at once, and that neither wing would have accepted that description at the time. This is the normal condition of a successful movement: the question of which part won is settled afterward, by whoever writes it down. Both organizations published their own histories, and each gives itself the leading part. Paul and Catt barely spoke for the rest of their long lives.

WHAT THIS PASSAGE IS FOR

- Western states enfranchised women decades before the amendment.
 - Militants picketed, were arrested and were force-fed.
 - Which part won is settled afterward by whoever writes it down.
-

Questions 153.1 to 153.10

on passage 153, The Movement Argued With Itself

153.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Paul and Catt barely spoke for the rest of their long lives
- B) Wyoming, Colorado, Utah and Idaho enfranchised women early
- C) The militant wing was responsible for the passage of the amendment
- D) Two strategies can each claim the outcome, and the honest reading gives each a part

153.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what was the argument for the state-by-state route?

- A) That a state campaign could not be reversed once won
- B) That a federal amendment could be blocked by a minority of states
- C) That the parties would not listen to a national campaign
- D) That wartime administrations should not be embarrassed

153.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the question of which wing won is decided outside the evidence?

- A) “Wyoming, Colorado, Utah and Idaho did in fact enfranchise women decades before the federal amendment passed”
- B) “Alice Paul and the younger militants picketed the White House during the war, were arrested, went on hunger strike”
- C) “the question of which part won is settled afterward, by whoever writes it down”
- D) “Both organizations published their own histories, and each gives itself the leading part”

153.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The amendment passed in 1920 after Catt's lobbying had produced the congressional votes, which supports her account. It passed after the picketing had made the issue impossible to table any longer, which supports the other. A sequence of that kind therefore ____

Which choice most logically completes the text?

- A) fits either account without choosing between them
- B) establishes that the militants were decisive
- C) shows that neither wing had any effect at all
- D) proves the state-by-state strategy correct

153.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “table” most nearly mean?

- A) set out for discussion
- B) arrange into columns
- C) provide with a surface
- D) put off indefinitely

153.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the normal condition of a successful movement?

- A) It reports that both organizations published their own histories
- B) It names the tactical split between Catt and Paul
- C) It generalizes the particular case into a pattern
- D) It concedes that the state campaigns were a trap

153.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 103 of this book. It describes four kinds of record behind the suffrage campaign, and says that signature counts measure organizing capacity rather than opinion and that newspaper coverage measures what editors thought readers would enjoy.

Text 1 reports that the picketing produced considerable publicity. Based on Text 2, what should be made of that publicity as evidence?

- A) It measures the opinion of the public on the amendment
- B) It measures the willingness of editors to print the story
- C) It measures the organizing capacity of the militant wing
- D) It measures how many legislators had changed their minds

153.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both strategies can claim the outcome. ___ the historians divide accordingly.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) Nevertheless,
- C) For instance,
- D) In other words,

153.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Carrie Chapman Catt built a disciplined lobbying operation ___ it worked through existing parties and declined to embarrass a wartime administration.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) operation it
- B) operation, it
- C) operation, and it
- D) operation; and it

153.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The amendment passed after Catt's lobbying produced the congressional votes.
- It passed after the picketing had made the issue impossible to table.
- The two wings worked on different audiences at once.
- Both organizations published histories giving themselves the leading part.

The student wants to explain why historians still disagree about which wing succeeded. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Both wings acted on different audiences at the same moment, and each left a history of its own in which it leads
- B) The amendment passed after Catt's lobbying had produced the congressional votes
- C) The picketing made the issue impossible to table any longer than it had been
- D) Both of the organizations involved published histories of their own work

ملخص المقطع 153 بالعربية

خلاصة: انقسمت حملة حق الانتخاب على الوسائل لا على الغايات، وبلغ الانقسام حدًا أنتج منظمتين وطنيتين متنافستين عملتا منفصلتين عشرين سنة. فجناح رأى أن الحق يُنتزع ولايةً ولايةً، بحجة أن تعديلًا فدراليًا يحتاج ثلاثة أرباع الولايات ويمكن أن تعطله أقلية منها.

المعنى: المعنى أن الجناح الآخر رأى أن حملات الولايات مضيعة، لأن كل حملة تُخاض كاملة ويمكن أن تُنقض، وأن التعديل الدستوري وحده يحسم المسألة وطنيًا. وفي داخل هذا الجناح انفتح انقسام على التكتيك: كاري تشابمن كات بنت عملية ضغط منظمة، وأليس بول والمناضلات الأصغر اعتصمن أمام البيت الأبيض وأضرين عن الطعام.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: كل استراتيجية تستطيع أن تدعي النتيجة، والمؤرخون ينقسمون تبعًا لذلك. والقراءة الأمينة أن الاثنتين عملتا على جمهورين مختلفين في الوقت نفسه، وأن أيًا من الجناحين ما كان ليُقبل هذا الوصف وقتها.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن الاستنتاج. والفخ الشائع أن يُنسب النصر إلى جناح واحد لأن النص يذكر دليله، مع أن النص يعطي كل جناح دليلًا ثم يرفض الحسم. ويقترن المقطع بالمقطع الثالث بعد المئة في أسئلة النصين المتقابلين.

Suasion or Politics

Abolitionists agreed about the end and fought bitterly about the means. William Lloyd Garrison held that slavery was a sin, that the Constitution gave it a sanction no reformer should accept, and that the duty of an abolitionist was moral suasion, meaning the persuading of individuals to renounce the practice rather than the seeking of laws against it. He burned a copy of the Constitution in public, refused to vote, and argued that a political party which compromised in order to win was simply slavery in another dress.

The opposing wing held that moral argument had been tried for thirty years in a country where the owners were not listening, and that the practical route ran through votes, parties and federal power over the territories. That wing built the Liberty Party, then the Free Soil Party, and much of it ended inside the Republican Party, which won the presidency in 1860 on a platform that proposed only to stop the extension of slavery rather than to end it.

The outcome does not decide the question, although it is often said to. Slavery ended through a war fought by a government that had promised not to abolish it, which is an argument neither wing made. The political wing can say that only state power could have done it and that they had built the state power. Garrison can say that the war came because thirty years of moral argument had made the North unwilling to compromise further, and that without the sin there would have been no crisis. The evidence is compatible with both, and each requires the other to be in the story. Garrison dissolved his own society in 1865 on the ground that its work was done, over the objections of colleagues.

WHAT THIS PASSAGE IS FOR

- Garrison burned a copy of the Constitution and refused to vote.
 - The Republican platform of 1860 proposed only to stop extension.
 - Slavery ended through a war fought by a government that promised not to abolish it.
-

Questions 154.1 to 154.10

on passage 154, Suasion or Politics

154.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Two wings agreed on the end, and the outcome decides between them less than is often said
- B) Garrison dissolved his own society in 1865 over the objections of colleagues
- C) The political wing was vindicated by the victory of 1860
- D) The Republican platform of 1860 proposed only to stop the extension of slavery

154.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Garrison hold about the Constitution?

- A) That it should be amended to prohibit slavery outright
- B) That it had been misread by the proslavery writers
- C) That it gave slavery a sanction no reformer should accept
- D) That it left the question to the territories to decide

154.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the war matched no account either wing had offered?

- A) “He burned a copy of the Constitution in public, refused to vote”
- B) “That wing built the Liberty Party, then the Free Soil Party”
- C) “much of it ended inside the Republican Party, which won the presidency in 1860”
- D) “Slavery ended through a war fought by a government that had promised not to abolish it, which is an argument neither wing made”

154.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The political wing can say that only state power could have done it and that they had built the state power. Garrison can say that the war came because thirty years of moral argument had made the North unwilling to compromise. The outcome therefore ____

Which choice most logically completes the text?

- A) vindicates the wing that built the party machinery
- B) leaves each account with a necessary part to play
- C) shows that moral argument had no effect on events
- D) was predicted by both wings in advance of the war

154.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “sanction” most nearly mean?

- A) official approval
- B) penalty for a breach
- C) ban on a trading partner
- D) ceremony of dedication

154.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the Republican platform?

- A) It explains why Garrison refused to vote in any election
- B) It reports the year in which the party won the presidency
- C) It introduces the thirty years of moral argument
- D) It qualifies the success the political wing can claim

154.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 104 of this book. It describes the four kinds of source for the history of slavery and says that plantation ledgers are precise and are testimony by an interested party, while published narratives were written to persuade.

Text 1 says Garrison relied on moral suasion. Based on Text 2, which source would that strategy have used most?

- A) The ships manifests assembled into a modern database
- B) The plantation ledgers kept by the owners themselves
- C) The published narratives of formerly enslaved people
- D) The interviews recorded with former children in the 1930s

154.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Moral argument had been tried for thirty years in a country where the owners were not listening. ___ the practical route ran through votes, parties and federal power over the territories.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) On that view,
- C) In other words,
- D) For instance,

154.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He burned a copy of the Constitution in public, refused to vote ___ argued that a compromising party was simply slavery in another dress.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) vote; and
- B) vote and
- C) vote, it
- D) vote, and

154.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Slavery ended through a war fought by a government that had promised not to abolish it.
- The political wing can say only state power could have done it.
- Garrison can say the war came because moral argument had hardened the North.
- The evidence is compatible with both accounts.

The student wants to explain to a reader why the outcome settles little. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The political wing can say that only state power could have ended slavery
- B) Slavery ended in a way neither wing had proposed, and each can claim a necessary share of the cause
- C) Garrison could say that moral argument had hardened the North against compromise
- D) The surviving evidence is compatible with both of the two accounts

ملخص المقطع 154 بالعربية

خلاصة: اتفق المناهضون للعبودية على الغاية واختلفوا بشدة على الوسيلة. فقد رأى ويليام لويد غاريسون أنَّ العبودية خطيئة، وأنَّ الدستور يمنحها إقرارًا لا ينبغي لمصلح أن يقبله، وأنَّ واجب المناهض هو الإقناع الأخلاقي، أي حمل الأفراد على نبذ الممارسة لا السعي إلى قوانين ضدها. وقد أحرقت نسخة من الدستور علنًا ورفض الاقتراح.

المعنى: المعنى أنَّ الجناح المقابل رأى أنَّ الحجَّة الأخلاقية جُزيت ثلاثين سنة في بلد لا يسمع فيه الملاك، وأنَّ الطريق العملي يمرُّ بالأصوات والأحزاب والسلطة الفدرالية على الأقاليم. فبنى حزب الحرية ثمَّ حزب الأرض الحرَّة، وانتهى معظمه داخل الحزب الجمهوري الذي فاز عام ألف وثمانمئة وستين ببرنامجه يقترح وقف التوسع فقط.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: النتيجة لا تحسم السؤال وإن قيل ذلك كثيرًا. فقد انتهت العبودية بحرب خاضتها حكومة وعدت بآلا تلغيها، وهذه حجة لم يقدمها أي من الجناحين.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن الحجَّة المضادة. والفخَّ الشائع أن تُقرأ النتيجة حكمًا لأحد الجناحين. مع أنَّ النص يقول إنَّ الدليل يتوافق مع الاثنين. ويقترن المقطع بالمقطع الرابع بعد المئة في أسئلة النصين المتقابلين.

Failed or Defeated

For fifty years the standard account held that Reconstruction failed because it was unworkable. That account is the Dunning school, meaning an interpretation that treats Reconstruction as a corrupt failure, and it is named after a Columbia professor whose students wrote the individual state studies. It held that the period was one of misrule imposed by outsiders on a prostrate South, and that its collapse was the natural end of an experiment which should never have been attempted at all. That account was in the textbooks and the films, and it was written from official sources, white newspapers and the papers of the men who had overthrown the governments.

W. E. B. Du Bois attacked it in 1935 in a book of eight hundred pages with a closing chapter titled as a propaganda of history. His argument was partly about evidence: that the sources had been read selectively, that the tax and school records showed real achievement, and that the testimony of Black participants had been ignored because Black witnesses were not treated as witnesses. It was also about the exact question being asked. Reconstruction did not fail, in his account. It was defeated, by organized violence and federal withdrawal, which is a different claim with different evidence behind it.

The modern consensus lies much nearer to Du Bois, and the reason for the shift is instructive rather than sentimental, since it is not that historians simply became more sympathetic to the people they were writing about. It is that the sources widened. Once the congressional testimony, the registration rolls, the Freedmen's Bureau records and the Black press were read alongside the planters' papers, the earlier account could not be sustained on the evidence. The dispute is therefore a case study in how a historiography changes, which is rarely by argument alone. The book is now the standard starting point for the period.

WHAT THIS PASSAGE IS FOR

- The Dunning school treated the period as misrule imposed by outsiders.
 - Du Bois argued the sources had been read selectively.
 - The consensus changed because the sources widened.
-

Questions 155.1 to 155.10

on passage 155, Failed or Defeated

155.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The book of 1935 ran to eight hundred pages with a closing chapter on propaganda
- B) An account was displaced because the sources widened, not because sympathies changed
- C) The Dunning school is named after a professor at Columbia University
- D) The tax and school records of the period showed real achievement

155.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, from what sources was the earlier account written?

- A) Congressional testimony and the registration rolls
- B) The records of the Freedmen Bureau and the Black press
- C) Interviews with surviving participants in the period
- D) Official sources, white newspapers and the papers of the overthrowers

155.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two accounts ask different questions rather than give different answers?

- A) “It was also about the exact question being asked”
- B) “a book of eight hundred pages with a closing chapter titled as a propaganda of history”
- C) “the testimony of Black participants had been ignored because Black witnesses were not treated as witnesses”
- D) “The book is now the standard starting point for the period”

155.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Reconstruction did not fail, in his account. It was defeated, by organized violence and federal withdrawal, which is a different claim with different evidence behind it. The change of word therefore ____

Which choice most logically completes the text?

- A) softens a judgment that had been too harsh
- B) restates the earlier account in gentler terms
- C) alters what a historian has to go and find
- D) settles the question without further research

155.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “exact” most nearly mean?

- A) demanding in its standards
- B) precise in its formulation
- C) extracted under pressure
- D) identical to another

155.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the reason for the shift is instructive rather than sentimental?

- A) It rules out one explanation for the change before giving another
- B) It concedes that modern historians are more sympathetic
- C) It reports the length of the book published in 1935
- D) It introduces the closing chapter on the propaganda of history

155.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 105 of this book. It describes thirteen volumes of sworn testimony taken in 1871 and the registration rolls, and says that testimony establishes events while a roll records an absence without a reason.

Text 1 says the account changed when the sources widened. Based on Text 2, which two sources did most of that widening?

- A) The white newspapers and the papers of the planters
- B) The state studies written by the students of one professor
- C) The official revenue records and the published state debates
- D) The sworn testimony of 1871 and the registration rolls

155.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

His argument was partly about evidence. ____ it was also about the exact question being asked.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) In short,
- C) Beyond that,
- D) Accordingly,

155.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That account was in the textbooks and the films ____ it was written from official sources, white newspapers and the papers of the men who had overthrown the governments.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) films, and it
- B) films and it
- C) films it
- D) films; and it

155.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The earlier account was written from official sources and white newspapers.
- Du Bois argued that the sources had been read selectively.
- Once the testimony, the rolls, the Bureau records and the Black press were read alongside the planters papers, the earlier account could not be sustained.
- The shift was not that historians became more sympathetic.

The student wants to explain to a reader how a standard account came to be replaced. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Du Bois argued in 1935 that the sources had been read selectively
- B) The earlier account was written from official sources and white newspapers
- C) The account fell when the evidence base widened to include testimony, rolls and the Black press, not because sympathies had changed
- D) Historians did not simply become more sympathetic to their subjects

ملخص المقطع 155 بالعربية

خلاصة: خمسين سنة ظلّ السرد المعتاد يقول إنّ إعادة الإعمار فشلت لأنها كانت غير قابلة للتطبيق. وهذا هو ما يُسمّى مدرسة دُينغ، أي تفسير يعامل إعادة الإعمار فسادًا وفشلًا، وسمّيت باسم أستاذ في كولومبيا كتب طلابه دراسات الولايات. وكتب هذا السرد من مصادر رسمية وصحف بيضاء وأوراق من أسقطوا تلك الحكومات.

المعنى: المعنى أنّ دو بويس هاجم ذلك عام ألف وتسعمئة وخمسة وثلاثين في كتاب من ثمانمئة صفحة. وكانت حجته جزئيًا عن الدليل: أنّ المصادر قُرئت انتقاءً، وأنّ سجلات الضرائب والمدارس تُظهر إنجازًا حقيقيًا، وأنّ شهادة المشاركين السود أهملت. وكانت أيضًا عن السؤال نفسه: لم تفشل إعادة الإعمار عنده، بل هُزمت.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: كيف يتغيّر علم التاريخ. والسبب في التحوّل مفيد لا عاطفي: ليس أنّ المؤرخين صاروا أكثر تعاطفًا، بل أنّ المصادر اتّسعت، فلم يصمد السرد الأقدم على الدليل.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن الفرق بين دعويين تبدوان متشابهتين. والفخّ الشائع أن يُقرأ التحوّل تعاطفًا، مع أنّ النصّ ينفي ذلك ويسمّي اتّساع المصادر. ويقترن المقطع بالمقطع الخامس بعد المئة في أسئلة النصّين المتقابلين.

Wages or Jobs

The effects of factory regulation in New York and in Britain are argued from the same series by people who reach opposite conclusions. The argument turns almost entirely on the counterfactual, meaning what would have happened without the measure. One reading holds that regulation raised wages and reduced deaths at a modest compliance cost, meaning the expense a firm incurs in meeting a rule. It points to the fall in industrial mortality after the laws, to the survival of the industries affected, and to the fact that employers who predicted ruin in 1911 were still trading in 1930.

The other reading accepts the fall in deaths and attributes much of it to rising capital intensity, better machinery and electric light, all of which were arriving anyway and all of which make a workplace safer without a statute. On this account the laws certified a change that was already under way and raised costs at the margin, with the burden falling on the smallest firms, which is where employment losses would appear and where records are worst. Both readings are consistent with the published figures.

What tempers the dispute is the comparative evidence. Regulation arrived at different dates in different states and countries, which allows the same event to be examined many times over. The weight of that work supports a modest version of the first reading, since deaths fell faster where the rules arrived earlier and employment effects are small and hard to find. Neither side is obliged to abandon its position on that evidence, because a modest effect leaves room for argument about whether it was worth its cost, which is a question about values and not about the series. The comparative studies also find that enforcement mattered more than the text of the statute.

WHAT THIS PASSAGE IS FOR

- The argument turns on the counterfactual.
 - The second reading credits machinery and electric light.
 - Deaths fell faster where rules arrived earlier.
-

Questions 156.1 to 156.10

on passage 156, Wages or Jobs

156.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Employers who predicted ruin in 1911 were still trading in 1930
- B) The comparative studies find that enforcement mattered more than the text
- C) Comparative evidence narrows the dispute without ending it, because the remainder is about values
- D) The laws certified a change that was already under way

156.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the whole argument turn on?

- A) The counterfactual, or what would have happened without the measure
- B) The compliance cost that a firm incurs in meeting a rule
- C) The quality of the employment records kept by small firms
- D) The arrival of electric light in the workplaces concerned

156.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the comparative evidence favors one reading without defeating the other?

- A) “Regulation arrived at different dates in different states and countries”
- B) “a modest effect leaves room for argument about whether it was worth its cost, which is a question about values and not about the series”
- C) “employers who predicted ruin in 1911 were still trading in 1930”
- D) “all of which were arriving anyway and all of which make a workplace safer without a statute”

156.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The weight of that work supports a modest version of the first reading, since deaths fell faster where the rules arrived earlier and employment effects are small and hard to find. Neither side is therefore ____

Which choice most logically completes the text?

- A) able to produce any evidence at all
- B) free to ignore the comparative studies
- C) arguing about the same series of figures
- D) obliged by the finding to give up its position

156.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “tempers” most nearly mean?

- A) hardens by heating
- B) loses patience with
- C) moderates the force of
- D) measures the extent of

156.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about capital intensity and electric light?

- A) It reports the compliance cost borne by the smallest firms
- B) It supplies an alternative cause for a fall both sides accept
- C) It explains why regulation arrived at different dates
- D) It introduces the comparative studies of enforcement

156.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 106 of this book. It argues that the statistics behind factory law carry three recurring defects, among them a reporting incentive, since accidents were reported by employers to inspectors who could prosecute them.

Text 1 reports that employment effects are small and hard to find. Based on Text 2, which defect best explains that difficulty?

- A) The poor employment records kept by the smallest firms
- B) The missing denominator in a count of deaths by trade
- C) The coding of cause of death in the civil registers
- D) The incentive of employers to report accidents selectively

156.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both readings are consistent with the published figures. ___ what tempers the dispute is the comparative evidence.

Which choice completes the text with the most logical transition?

- A) Consequently,
- B) For instance,
- C) In other words,
- D) Even so,

156.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

One reading holds that regulation raised wages and reduced deaths at a modest compliance cost ___ the expense a firm incurs in meeting a rule.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) cost the
- B) cost, the
- C) cost; the
- D) cost: the,

156.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Regulation arrived at different dates in different states and countries.
- Deaths fell faster where the rules arrived earlier.
- Employment effects are small and hard to find.
- A modest effect leaves room for argument about whether it was worth its cost.

The student wants to explain why the comparative studies do not end the argument. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Regulation arrived at different dates in different states and in different countries
- Deaths fell faster in the places where the rules had arrived earlier
- Employment effects turn out to be small and rather hard to find
- The studies find a real but modest effect, and a modest effect still leaves the question of whether it was worth its cost

ملخص المقطع 156 بالعربية

خلاصة: تُناقش آثار تنظيم المصانع في نيويورك وبريطانيا من السلسلة نفسها بأقلام تصل إلى نتائج متعكسة، والجدل يدور كله تقريباً على الغرض المضاد، أي ما كان سيحدث بلا التدبير. فقراءة ترى أنَّ التنظيم رفع الأجور وخفّض الوفيات بكلفة امتثال متواضعة، وتشير إلى هبوط الوفيات الصناعية بعد القوانين وإلى بقاء الصناعات المتأثرة.

المعنى: المعنى أنَّ القراءة الأخرى تقبل هبوط الوفيات وتنسب كثيراً منه إلى ارتفاع كثافة رأس المال وتحسن الآلات والضوء الكهربائي، وكلها كانت قادمة على أي حال وكلها تجعل مكان العمل أأمن بلا نص. وعلى هذا الحساب صدقت القوانين تغييراً جاريّاً ورفعت الكلفة على الحدّ، والعبء على أصغر الشركات.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: ما يهدئ النزاع هو الدليل المقارن. فقد وصل التنظيم في تواريخ مختلفة بولايات وبلدان مختلفة، فأمكن فحص الحادثة نفسها مرّات كثيرة، وترجح حميلة ذلك العمل نسخة متواضعة من القراءة الأولى.

الصلة بالاختبار: في اختبار سات يُسأل عن حدود الدليل وعن ما يفصل بين قراءتين. والفجّ الشائع أن يُفترض أن أثراً متواضعاً يحسم الجدل، مع أن النص يقول إنه يترك مجالاً لسؤال القيمة. ويقترن المقطع بالمقطع السادس بعد المئة في أسئلة النصّين المتقابلين.

Law or Pressure

The gains of the civil rights period are claimed by two accounts that both have strong evidence. The legal account points to a twenty-year litigation strategy, meaning the planned use of selected court cases to establish a principle, run by the organization legal fund and culminating in Brown. It points out that the statutes of 1964 and 1965 were drafted by lawyers, enacted by Congress and enforced by federal officials, and that the measurable changes in registration followed the Act rather than the marches.

The pressure account answers that the law moved when and only when the cost of not moving became intolerable, and that the cost was created by direct action, meaning protest designed to force negotiation. Birmingham in 1963 and the bridge at Selma in 1965 were followed within months by the two statutes, and the sequence is hard to dismiss. Martin Luther King made the argument explicitly from a jail cell, writing that the moderate who preferred order to justice was a greater obstacle than the intransigent opponent.

King also made the other case, which is why he is a useful witness. He worked with the lawyers, pressed for federal legislation, and spent much of his time in meetings at the Department of Justice. The two strategies were run by people who understood that neither was sufficient: a court ruling with no constituency behind it had been ignored for a decade after Brown, and a movement with no legal instrument had nothing to enforce. The dispute survives because each side can point to a period in which the other was visibly failing. The organizations involved disagreed sharply at the time about where money and attention should go. Those disagreements are documented in their own minutes, which makes the argument unusually well evidenced.

WHAT THIS PASSAGE IS FOR

- The legal account points to a twenty-year litigation strategy.
 - Birmingham and Selma were followed within months by the statutes.
 - A ruling with no constituency behind it had been ignored for a decade.
-

Questions 157.1 to 157.10

on passage 157, Law or Pressure

157.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The organizations disagreed at the time about where money should go
- B) Birmingham in 1963 and Selma in 1965 were followed within months by statutes
- C) The pressure account is the one the evidence finally supports
- D) Two accounts of the same gains each have strong evidence, and the people involved used both

157.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did King argue from a jail cell?

- A) That the litigation strategy had taken twenty years to prepare
- B) That the moderate who preferred order was the greater obstacle
- C) That registration figures followed the Act rather than the marches
- D) That the organizations should settle where their money went

157.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the author treats King as evidence for both accounts?

- A) “Birmingham in 1963 and the bridge at Selma in 1965 were followed within months by the two statutes”
- B) “Those disagreements are documented in their own minutes, which makes the argument unusually well evidenced”
- C) “King also made the other case, which is why he is a useful witness”
- D) “a court ruling with no constituency behind it had been ignored for a decade after Brown”

157.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A court ruling with no constituency behind it had been ignored for a decade after Brown, and a movement with no legal instrument had nothing to enforce. The two strategies were therefore ____

Which choice most logically completes the text?

- A) dependent on each other for any result at all
- B) run by people who refused to speak to one another
- C) alternatives between which a choice had to be made
- D) equally ineffective throughout the whole period

157.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “intransigent” most nearly mean?

- A) open to persuasion
- B) moving between positions
- C) concerned with order
- D) refusing to compromise

157.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about King working with the lawyers?

- A) It reports where the organizations spent their money
- B) It explains why Brown was ignored for a decade
- C) It shows the same person operating on both strategies
- D) It introduces the two statutes of 1964 and 1965

157.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 107 of this book. It describes the documentation of the period, including surveillance files, and says an informer report is evidence that something was said and no evidence that it was true.

Text 1 says the disagreements are documented in the minutes of the organizations. Based on Text 2, what makes that kind of source valuable?

- A) It was compiled by an agent who attended the meetings
- B) It is a record kept by the participants rather than by their watchers
- C) It became available only after the amendments of 1974
- D) It can be matched against the registration figures by county

157.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The legal account points out that the statutes were drafted by lawyers and enacted by Congress. ___ the measurable changes in registration followed the Act rather than the marches.

Which choice completes the text with the most logical transition?

- A) Moreover,
- B) Nevertheless,
- C) In other words,
- D) For example,

157.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The pressure account answers that the law moved when the cost of not moving became intolerable ___ that the cost was created by direct action.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) intolerable; and
- B) intolerable and
- C) intolerable, and
- D) intolerable, it

157.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The registration changes followed the Act rather than the marches.
- Birmingham and Selma were followed within months by the two statutes.
- A court ruling with no constituency was ignored for a decade after Brown.
- Each side can point to a period in which the other was visibly failing.

The student wants to explain to a reader why the two accounts have both survived. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Each account can point to a stretch of years in which the other strategy was plainly getting nowhere
- B) Registration changes followed the Act of 1965 rather than the marches
- C) Birmingham and Selma were followed within months by the two statutes
- D) A court ruling with no constituency was ignored for a decade after Brown

ملخص المقطع 157 بالعربية

خلاصة: مكاسب فترة الحقوق المدنية يطالب بها سردان لكليهما دليل قوي. فالسرد القانوني يشير إلى استراتيجية تقاض امتدت عشرين سنة، أي الاستخدام المخطط لقضايا منتقاة لتثبيت مبدأ، أدارها الصندوق القانوني للمنظمة وتوجها حكم براون. ويشير إلى أن قانوني أربعة وستين وخمسة وستين صاغهما محامون وأقرهما الكونغرس ونقدهما مؤلفون فدراليون.

المعنى: المعنى أن سرد الضغط يجيب بأن القانون تحرك حين صارت كلفة عدم التحرك لا تُحتمل، وأن هذه الكلفة منعهما العمل المباشر، أي الاحتجاج المصمم لفرض التفاوض. فبرمنغهام عام ثلاثة وستين وجسر سلمى عام خمسة وستين تلاهما القانونان في أشهر، والتسلسل صعب الإنكار.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: كينغ نفسه قدم الحجّتين، ولهذا هو شاهد مفيد. فقد عمل مع المحامين وضغط للتشريع الفدرالي وأمضى وقتًا طويلًا في وزارة العدل، وكان الطرفان يعرفان أن أيًا منهما لا يكفي وحده.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن استخدام شاهد يقدم الحجّتين. والفخّ الشائع أن يُقتبس كينغ لصالح سرد واحد، مع أن النص يقول إنه قدم السردين. ويقتزن المقطع بالمقطع السابع بعد المئة في أسئلة النصّين المتقابلين.

Granted or Taken

British official language called it a transfer of power, which is a phrase containing an argument. On that account independence was the intended conclusion of a long development: representative institutions were extended in stages from 1909, Indians entered the civil service and the officer corps, provincial self-government arrived in 1935, and the final step in 1947 was the completion of a program rather than a surrender. Clement Attlee presented it in those terms in the Commons, and the Indian Independence Act reads like administration rather than defeat.

The nationalist account treats that as a story told afterward by the side that lost. On this reading each constitutional advance was conceded under pressure and after refusal, the 1935 reforms were offered only once non-cooperation had made the provinces ungovernable, and the British did not capitulate gracefully but ran out of money, soldiers and policemen. Jawaharlal Nehru made exactly that argument, and the record of mass arrests supports it: a government confident in its program does not imprison sixty thousand people over a salt tax.

The timing is the best available test, and it favors the second account while complicating it. Every major concession followed a crisis rather than preceding one. But the British did leave by negotiation when they could have fought, as the French did in Indochina and Algeria at enormous cost, and that choice needs explaining too. The most defensible reading is that the movement made continued rule impossible and the government then chose the manner of its departure, which gives each side the half of the story it claims and neither side the whole. Both accounts also pass over the partition, which killed hundreds of thousands and displaced millions. Neither the program nor the triumph is easy to narrate alongside that.

WHAT THIS PASSAGE IS FOR

- The official phrase contains an argument.
 - A confident government does not imprison sixty thousand people over a salt tax.
 - Every major concession followed a crisis rather than preceding one.
-

Questions 158.1 to 158.10

on passage 158, Granted or Taken

158.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The movement made continued rule impossible and the government then chose how to leave
- B) Clement Attlee presented independence as a transfer of power in the Commons
- C) The partition killed hundreds of thousands and displaced millions
- D) The British ran out of money, soldiers and policemen by 1947

158.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the phrase transfer of power contain?

- A) A date on which the final step was taken
- B) A summary of the Indian Independence Act
- C) An argument about how independence came
- D) A reference to the partition that followed

158.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the timing of the concessions favors the nationalist account?

- A) “representative institutions were extended in stages from 1909”
- B) “the Indian Independence Act reads like administration rather than defeat”
- C) “Jawaharlal Nehru made exactly that argument, and the record of mass arrests supports it”
- D) “Every major concession followed a crisis rather than preceding one”

158.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The British did leave by negotiation when they could have fought, as the French did in Indochina and Algeria at enormous cost, and that choice needs explaining too. The nationalist account therefore ____

Which choice most logically completes the text?

- A) collapses under the comparison with France
- B) accounts for the departure without accounting for its manner
- C) is confirmed in every particular by the comparison
- D) applies only to the years before 1935

158.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “capitulate” most nearly mean?

- A) give way to a demand
- B) draw up a formal list
- C) summarize in a heading
- D) withdraw an accusation

158.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes what the closing sentences about the partition contribute?

- A) They report the terms Attlee used in the Commons
- B) They give the strongest evidence for the nationalist case
- C) They explain why the 1935 reforms were offered at all
- D) They name a cost that neither account accommodates

158.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 108 of this book. It argues that British Indian statistics were produced by the administration for administrative purposes, so a historian has much data and no independent check on it.

Text 1 reports that British language called the event a transfer of power. Based on Text 2, why would that language be expected?

- A) Because the Famine Commission of 1880 had recommended it
- B) Because private records kept by merchants contradicted it
- C) Because the record was generated by the administration describing itself
- D) Because later census data could be read backward for holes

158.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Each constitutional advance was conceded under pressure and after refusal. ____ the 1935 reforms were offered only once non-cooperation had made the provinces ungovernable.

Which choice completes the text with the most logical transition?

- A) Nevertheless,
- B) For instance,
- C) In short,
- D) By contrast,

158.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A government confident in its program does not imprison sixty thousand people ____ over a salt tax.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) people, over
- B) people; over
- C) people: over
- D) people over

158.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Representative institutions were extended in stages from 1909.
- Every major concession followed a crisis rather than preceding one.
- The British left by negotiation when they could have fought.
- The movement made continued rule impossible and the government chose the manner of its departure.

The student wants to explain to a reader what each account gets right. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Representative institutions in India were extended in stages from 1909
- B) The pressure made further rule impossible, and the departing government still chose how it would go
- C) Every major concession followed a crisis rather than coming before one
- D) The British left India by negotiation when they could have chosen to fight

ملخص المقطع 158 بالعربية

خلاصة: سمّته اللغة الرسمية البريطانية نقلاً للسلطة، وهي عبارة تحمل حجة داخلها. فعلى هذا الحساب كان الاستقلال خاتمة مقصودة لتطور طويل: مُدّت المؤسسات التمثيلية على مراحل من عام ألف وتسعمئة وتسعة، ودخل الهنود الخدمة المدنية وسلك الضباط، ووصل الحكم الذاتي الإقليمي عام خمسة وثلاثين، وكانت خطوة عام سبعة وأربعين إتماماً لبرنامج لا استسلاماً.

المعنى: المعنى أنّ السرد الوطني يعامل ذلك حكايةً رواها الطرف الخاسر بعد الحادثة. فعلى هذه القراءة كلّ تقدّم دستوري مُنح تحت الضغط وبعد رفض، وإصلاحات عام خمسة وثلاثين لم تُعرض إلا بعد أن جعل اللاتعاون الأقالي غير قابلة للحكم، ولم يستسلم البريطانيون بلطف بل نفذ منهم المال والجنود والشرطة.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: التوقيت أفضل اختبار متاح، وهو يرجّح السرد الثاني ويعقّده. فكلّ تنازل كبير تلا أزمة لا سبقها، لكنّ البريطانيين رحلوا بالتفاوض وقد كان بإمكانهم القتال كما فعل الفرنسيون في الهند الصينية والجزائر. الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن الاختبار الذي يفصل بين سردين. والفخّ الشائع أن يُقرأ ترجيح أحد السردين حسماً كاملاً، مع أنّ النصّ يعطي كلّ طرف نصف الحكاية. ويقتزن المقطع بالمقطع الثامن بعد المئة في أسئلة النصّين المتقابلين.

Three Dissents and a Vacated Case

The majority opinion in *Korematsu* is the strongest available statement of the case for suspension, and it is worth reading on its own terms. Justice Black held that the exclusion was not based on race but on military necessity in time of war, that courts are not equipped to second-guess a commander in the field, and that hardships are part of war. The reasoning rests on judicial deference, meaning the practice of accepting an executive judgment within its own field, and nobody has produced a rule for emergencies that dispenses with deference altogether.

The three dissents attack it from three directions. Justice Roberts said the case was not about curfew but about imprisonment for refusing to leave home. Justice Murphy wrote that the claim of necessity rested on misinformation and on assumptions about racial characteristics, and used the word racism, which was unusual in a judicial opinion in 1944. Justice Jackson made the most uncomfortable argument, which is that a court cannot in practice review a military order during a war, and that it should therefore refuse to validate one rather than writing the validation into the law where it will outlive the emergency.

Jackson's point is the one the subsequent history vindicated. The convictions were vacated in the 1980s when the suppressed reports appeared, Congress apologized and paid compensation, and the Court itself stated in 2018 that *Korematsu* was gravely wrong the day it was decided. What it did not do was replace deference with a workable alternative. Strict scrutiny, meaning the most demanding standard applied to racial classifications, was announced in the same opinion that upheld the exclusion, which is a conciliatory formula rather than a constraint. Jackson had prosecuted at Nuremberg by the time the compensation question arose, which several commentators have found pointed.

WHAT THIS PASSAGE IS FOR

- The majority rested on judicial deference to a military judgment.
 - Murphy used the word racism in a judicial opinion in 1944.
 - Jackson argued a court should refuse to validate rather than review.
-

Questions 159.1 to 159.10

on passage 159, Three Dissents and a Vacated Case

159.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Justice Murphy used the word racism, which was unusual in 1944
- B) The later history vindicated one dissent and still left deference in place
- C) Strict scrutiny was announced in the same opinion that upheld the exclusion
- D) Jackson had prosecuted at Nuremberg by the time compensation was discussed

159.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Justice Roberts say the case was about?

- A) Military necessity in a time of declared war
- B) Assumptions about racial characteristics
- C) The standard applied to racial classifications
- D) Imprisonment for refusing to leave home

159.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the later corrections left the constitutional problem unsolved?

- A) “What it did not do was replace deference with a workable alternative”
- B) “The convictions were vacated in the 1980s when the suppressed reports appeared”
- C) “the Court itself stated in 2018 that Korematsu was gravely wrong the day it was decided”
- D) “Justice Black held that the exclusion was not based on race but on military necessity”

159.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Strict scrutiny, meaning the most demanding standard applied to racial classifications, was announced in the same opinion that upheld the exclusion. A standard introduced in that way therefore ____

Which choice most logically completes the text?

- A) was the first rule for emergencies that dispensed with deference
- B) had been proposed by Justice Jackson in his dissent
- C) arrived with a demonstration that it would not bind
- D) applied only to classifications made during a war

159.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “conciliatory” most nearly mean?

- A) harsh in its demands
- B) offered to appease
- C) carefully reasoned
- D) left deliberately vague

159.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about nobody producing a rule for emergencies?

- A) It grants the majority reasoning a difficulty that remains unsolved
- B) It reports the standard that the same opinion announced
- C) It introduces the three dissents described next
- D) It explains why the convictions were vacated in the 1980s

159.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 109 of this book. It reports that two assessments against removal were in government hands and were never shown to the Court, and that Justice Murphy was right about misinformation without having any proof.

Text 1 says Jackson argued a court cannot review a military order in wartime. Based on Text 2, what supports that argument?

- A) The Court applied strict scrutiny to the classification
- B) Congress apologized and paid compensation in 1988
- C) Justice Roberts distinguished curfew from imprisonment
- D) The Court decided the case without the evidence against it

159.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The reasoning rests on judicial deference. ___ nobody has produced a rule for emergencies that dispenses with deference altogether.

Which choice completes the text with the most logical transition?

- A) Instead,
- B) In other words,
- C) Importantly,
- D) For instance,

159.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Justice Murphy wrote that the claim of necessity rested on misinformation ___ on assumptions about racial characteristics.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) misinformation and
- B) misinformation, and
- C) misinformation; and
- D) misinformation: and

159.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The convictions were vacated in the 1980s when the suppressed reports appeared.
- Congress apologized and paid compensation.
- The Court stated in 2018 that Korematsu was gravely wrong.
- Deference was never replaced with a workable alternative.

The student wants to explain to a reader what the later corrections did and did not achieve. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The convictions were vacated in the 1980s when the suppressed reports appeared
- B) The Court stated in 2018 that the decision was gravely wrong when it was made
- C) The convictions fell and the Court recanted, and yet no rule replaced the deference the case had relied on
- D) Congress apologized for the removal and paid compensation to survivors

ملخص المقطع 159 بالعربية

خلاصة: رأى الأغلبية في قضية كوريماتسو أقوى بيان متاح لحجة التعليق، ويستحق القراءة على شروطه. فقد رأى القاضي بلاك أن الاستبعاد لم يُبنَ على العرق بل على الضرورة العسكرية في زمن الحرب، وأن المحاكم غير مؤهلة لمراجعة حكم قائد في الميدان، وأن المشقات جزء من الحرب. المعنى: المعنى أن الاستدلال يقوم على التنازل القضائي، أي ممارسة قبول حكم السلطة التنفيذية في مجالها، ولم ينتج أحد قاعدة للطوارئ تستغني عن التنازل كلياً. والمخالفات الثلاث تهجم من ثلاث جهات، وأصعبها حجة القاضي جاكسون: أن محكمة لا تستطيع عملاً مراجعة أمر عسكري في حرب، فعليها أن ترفض تصديقه بدل كتابة التصديق في القانون.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: ما صدقه التاريخ اللاحق وما تركه مفتوحاً. فقد أبطلت الأحكام في الثمانينات واعتذر الكونغرس، وقالت المحكمة عام ألفين وثمانية عشر إن الحكم كان خطأ جسيماً يوم صدوره، لكنها لم تستبدل التنازل ببديل عملي.

الصلة بالاختبار: في اختبار سات يُسأل عن موقف الكاتب وعن ما لم يُحسم. والفخ الشائع أن يُقرأ الإبطال اللاحق حلاً للمسألة الدستورية، مع أن النص يقول إن البديل العملي لم يوجد. ويقتزن المقطع بالمقطع التاسع بعد المئة في أسئلة النصين المتقابلين.

Who Follows Whom

Whether the press forms opinion or reflects it has been argued since Benjamin Day sold his first penny paper, and the two accounts are easy to state and hard to separate. On the influence account, editors decide what is covered and in what terms, and the public takes its sense of what matters from that; the strongest version claims that coverage changes votes. On the market account, a newspaper that prints what its readers dislike loses them, so coverage tracks opinion rather than leading it, and an editor who tries to lead will shortly have to retrench.

Both are supported by correlations and neither is established by them, since coverage and opinion move together on either account. The research that distinguishes them looks for cases where coverage changed for reasons unrelated to opinion. Where a newspaper is introduced to some towns and not others, where a channel reaches some cable systems first by accident of contract, or where an owner changes an editorial line abruptly, the effect on readers can be isolated. Studies of that kind find real effects on turnout and on vote share, usually modest, and larger effects on agenda setting, meaning which issues people regard as important.

They also find the market mechanism operating. Outlets move toward their audiences over time, selective exposure means the persuadable are the least exposed, and the largest measured effects appear among people with weak prior views and no alternative sources. The defensible conclusion is that influence runs in both directions on different timescales: coverage shapes attention in weeks, audiences shape coverage in years. Neither of the two simple accounts survives the evidence, and both survive in argument. The research design that settled most of this was not available before cable and newspaper entry data were digitized.

WHAT THIS PASSAGE IS FOR

- Coverage and opinion move together on either account.
 - Research looks for coverage changes unrelated to opinion.
 - Influence runs both ways on different timescales.
-

Questions 160.1 to 160.10

on passage 160, Who Follows Whom

160.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Studies find larger effects on agenda setting than on vote share
- B) The market account is the one the research finally supports
- C) Influence runs both ways on different timescales, and neither simple account survives
- D) Selective exposure means the persuadable are the least exposed

160.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, why do correlations fail to settle the question?

- A) Because coverage and opinion move together on either account
- B) Because the effects on turnout are usually modest in size
- C) Because outlets move toward their audiences over time
- D) Because the persuadable are the least exposed to coverage

160.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the decisive research depends on coverage changing for reasons outside opinion?

- A) “an editor who tries to lead will shortly have to retrench”
- B) “where a channel reaches some cable systems first by accident of contract”
- C) “Outlets move toward their audiences over time”
- D) “the largest measured effects appear among people with weak prior views”

160.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Coverage and opinion move together on either account, so the research that distinguishes them looks for cases where coverage changed for reasons unrelated to opinion. Such a case therefore ____

Which choice most logically completes the text?

- A) measures the size of the audience rather than its views
- B) confirms the market account and rules out the other
- C) is available only where a newspaper has closed
- D) breaks the tie that a correlation cannot break

160.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “retrench” most nearly mean?

- A) dig in more deeply
- B) advertise more widely
- C) cut back and retreat
- D) start again from nothing

160.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence listing a newspaper introduction, a cable contract and an abrupt change of line?

- A) It reports the three findings of the research described
- B) It names three ways of getting coverage to vary independently
- C) It explains why selective exposure limits persuasion
- D) It introduces the two simple accounts of influence

160.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 110 of this book. It describes the Literary Digest poll of 1936, which failed through a frame error and nonresponse bias rather than through the size of its sample.

Text 1 says the persuadable are the ones coverage reaches worst. Based on Text 2, what kind of error is that?

- A) A frame error, since the instrument cannot reach them
- B) A nonresponse bias, since they decline to answer
- C) A quota failure, since the categories were filled wrongly
- D) A coding error, since their answers were misrecorded

160.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Studies of that kind find real effects on turnout and on vote share, usually modest. ____ they also find the market mechanism operating.

Which choice completes the text with the most logical transition?

- A) Therefore,
- B) In other words,
- C) For instance,
- D) At the same time,

160.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Neither of the two simple accounts survives the evidence ____ both survive in argument.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) evidence; and
- B) evidence, and
- C) evidence and
- D) evidence it

160.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Coverage shapes attention in weeks.
- Audiences shape coverage in years.
- Outlets move toward their audiences over time.
- Studies find real but modest effects on turnout and vote share.

The student wants to explain to a reader why both accounts have evidence behind them. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Outlets have been found to move toward their own audiences over time
- B) Studies find real but modest effects on turnout and on vote share
- C) Coverage has been shown to shape public attention within a few weeks
- D) Coverage shapes attention within weeks while audiences shape coverage over years, so each account is right on its own timescale

ملخص المقطع 160 بالعربية

خلاصة: هل تصنع الصحافة الرأي أم تعكسه؟ الجدل قائم منذ باع بنجامين داي أول صحيفة بسنت، والسردان سهلان في القول صعبان في الفصل. فعلى سرد التأثير يقرّر المحرّرون ما يُغطّى وبأي عبارات، ويأخذ الجمهور إحساسه بما يهمّ من هناك. وعلى سرد السوق تخسر الصحيفة قراءها إن طبعت ما يكرهونه، فتتبع التغطية الرأي لا تقوده.

المعنى: المعنى أنّ الارتباطات تدعم السردين ولا تثبت أيًا منهما، لأنّ التغطية والرأي يتحرّكان معًا على أي من الحسابين. والبحث الذي يفصل بينهما يبحث عن حالات تغيّرت فيها التغطية لأسباب لا صلة لها بالرأي: إدخال صحيفة إلى بعض البلدات دون غيرها، أو وصول قناة إلى بعض الشبكات بمحض عقد، أو تغيير مالك خطأً تحريريًا بغتةً.

الأهمية في المجال: في مجال التاريخ والنظام المدني هذه المادة في مستوى الخلاف: الخلاصة المدفوع عنها أنّ التأثير يسير في الاتجاهين على مقاييس زمنية مختلفة، فالتغطية تشكّل الانتباه في أسابيع، والجمهور تشكّل التغطية في سنوات.

الصلة بالاختبار: في اختبار سات يُسأل عن تصميم البحث الذي يفصل بين فرضيتين وعن موقف الكاتب. والفخ الشائع أن يُقرأ الارتباط دليلًا على الاتجاه، مع أنّ النص يقول إنّ الارتباط يوافق السردين. ويقترن المقطع بالمقطع العاشر بعد المئة في أسئلة النصّين المتقابلين.

Biology and Earth Science

BIO · S01 · dispute

Selection or Drift

For a century after Darwin the working assumption was that any widespread feature of an organism had been favored by selection, and the research program consisted of finding out what for. In 1968 Motoo Kimura proposed something that sounded like heresy. Most change at the molecular level, he argued, is neutral, meaning that it neither helps nor harms, and its spread through a population is governed by genetic drift, which is change in the frequency of a variant by chance alone. His evidence was arithmetical: the rate at which protein sequences were found to differ between species was far too high to be explained by selection operating on each change.

The argument that followed was long and is worth understanding as a dispute about defaults rather than about mechanisms. Nobody denied that drift happens or that selection happens. The question was which should be assumed in the absence of evidence. Selectionists held that an apparently useless difference usually has a use that has not been found. Neutralists held that the burden of proof runs the other way, and that a novel feature should be presumed accidental until a selective advantage is demonstrated.

Sequencing data eventually settled much of it, and the settlement went mostly to the neutralists at the molecular level and mostly to the selectionists at the level of visible traits. Changes that do not alter a protein accumulate at a steady rate, as drift predicts, and that steadiness is now used as a clock. Changes that alter a protein show the signature of selection. The practical consequence is a test rather than a doctrine: a researcher comparing the two classes of change in a gene can say whether selection has acted on it. Kimura had to argue the case in English in a field dominated by English-speaking laboratories, which he said cost him years.

WHAT THIS PASSAGE IS FOR

- Kimura argued that most molecular change is neutral.
 - The dispute was about defaults rather than mechanisms.
 - Sequence data settled it differently at the two levels.
-

Questions 161.1 to 161.10

on passage 161, Selection or Drift

161.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Kimura had to argue his case in English
- B) The dispute was about which assumption to make, not about mechanisms
- C) Nobody accepted that drift happens at all
- D) Protein sequences differ between species

161.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, how did the settlement divide between the two camps?

- A) It went to the selectionists at every level
- B) It went to the neutralists at every level
- C) It left both positions entirely undecided
- D) Molecular change to one camp, visible traits to the other

161.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the dispute has left a working procedure rather than a winner?

- A) “The practical consequence is a test rather than a doctrine: a researcher comparing the two classes of change in a gene can say whether selection has acted on it”
- B) “His evidence was arithmetical: the rate at which protein sequences were found to differ between species was far too high to be explained by selection operating on each change”
- C) “Selectionists held that an apparently useless difference usually has a use that has not been found”
- D) “Changes that do not alter a protein accumulate at a steady rate, as drift predicts”

161.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Changes that do not alter a protein accumulate at a steady rate, as drift predicts, and that steadiness is now used as a clock. A clock of that kind therefore ____

Which choice most logically completes the text?

- A) depends on selection acting on each change
- B) measures the strength of an advantage
- C) works because nothing is pushing those changes
- D) runs faster in species with larger populations

161.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “novel” most nearly mean?

- A) written as fiction
- B) newly appeared
- C) strange and useless
- D) already explained

161.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling this a dispute about defaults?

- A) It reframes the argument so that both sides can be stated
- B) It introduces the molecular clock for the first time
- C) It concedes that neither process really occurs
- D) It reports the year in which Kimura published

161.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 111 of this book. It reports forty years of banding on Daphne Major, a drought in 1977 that killed about eighty-five percent of the medium ground finches, and a measured rise in mean beak depth with the selective agent identified.

Text 1 asks which process should be assumed. Based on Text 2, what would be added to that question?

- A) Changes that alter a protein show the signature of selection
- B) Drift governs the spread of a neutral change
- C) Beak depth is governed by chance rather than by seeds
- D) A case in which the selective agent was actually named

161.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Nobody denied that drift happens or that selection happens. ____ the question was which should be assumed in the absence of evidence.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) For instance,
- C) Instead,
- D) As a result,

161.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

His evidence was arithmetical ____ the rate at which protein sequences differ between species was far too high to be explained by selection.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) arithmetical: the
- B) arithmetical, the
- C) arithmetical the
- D) arithmetical; the,

161.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Changes that do not alter a protein accumulate at a steady rate, as drift predicts.
- Changes that alter a protein show the signature of selection.
- The settlement went mostly to the neutralists at the molecular level.
- A researcher comparing the two classes of change can say whether selection has acted.

The student wants to explain why sequencing could settle a dispute about defaults. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Changes that alter a protein show the signature of selection
- B) The settlement went mostly to the neutralists at the molecular level
- C) The two classes of change behave differently, so a gene can be compared against both and no default has to be assumed
- D) Kimura argued from the rate at which protein sequences differ

ملخص المقطع 161 بالعربية

خلاصة: كان الافتراض العامل قرناً بعد داروين أن كل صفة شائعة في كائن قد فضلها الانتقاء، وأن العمل هو البحث عن وجه النفع. ثم اقترح موتو كيمورا سنة ألف وتسعمئة وثمان وستين أن معظم التغير على المستوى الجزيئي محايد، لا ينفع ولا يضر، وأن انتشاره يخضع للانزياح العشوائي. المعنى: المعنى أن دليله حسابي: معدل اختلاف تنابعات البروتين بين الأنواع أعلى بكثير من أن يفسره انتقاء يعمل على كل تغير. والجدال الذي تلا ذلك خلاف في الأمل المفترض لا في الآليات، فلم ينكر أحد وقوع الانزياح ولا وقوع الانتقاء، وإنما السؤال أيهما يفترض عند غياب الدليل. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: حسمت بيانات التتابع معظمه، فمال الحكم إلى المحايديين على المستوى الجزيئي وإلى الانتقائيين على مستوى الصفات الظاهرة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسند دعوى وعن وظيفة الجملة التي تعيد صياغة الخلاف. والفخ المتوقع هنا أن يحسب الخلاف إنكاراً لإحدى العمليتين، مع أن النص ينص على أن أحداً لم ينكر. ويقترن المقطع بالمقطع المئة والحادي عشر في أسئلة النصين المتقابلين.

What Heritability Does Not Mean

Heritability is the most misunderstood number in biology, and the misunderstanding is specific. The term means the proportion of the variation in a trait, within one particular population at one time, that is associated with genetic variation in that population. It is not a statement about an individual, and it is not a statement about how much a trait can be changed. Height is highly heritable and also rose by several inches in many countries within two generations, which is not a contradiction but a demonstration that the number says nothing about the effect of changing the environment.

Twin studies of the kind run in Minnesota produce these estimates by comparing identical and non-identical pairs, and they have been attacked most seriously on the ground that identical twins are treated more alike. The genome era then produced a surprise. When the variants associated with a trait were identified directly and added up, they explained far less of the variation than the twin studies had implied, and the gap was named missing heritability, meaning the difference between the heritability estimated from twins and the variation that identified variants can explain. That gap has narrowed with larger samples and better methods and has not closed.

Two readings persist. One holds that the twin estimates were inflated by shared environment and that the direct measurements are nearer the truth. The other holds that the variation is spread across many thousands of variants of very small effect, most still undetected, and that the estimates will converge as samples grow. Both predict testable things and both have been partly borne out. What neither supports is the inference that a heritable trait is fixed, since a highly plastic trait can be heritable and a trait with low heritability can be impossible to shift. The policy misuse of these numbers has a long and ugly history.

WHAT THIS PASSAGE IS FOR

- Heritability describes variation in a population, not an individual.
 - Height is highly heritable and rose several inches in two generations.
 - A heritable trait is not thereby a fixed one.
-

Questions 162.1 to 162.10

on passage 162, What Heritability Does Not Mean

162.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Twin studies were run in Minnesota
- B) A heritable trait cannot be changed by the environment
- C) A number about variation in a population says nothing about an individual
- D) The policy misuse of these numbers has a long history

162.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the height example demonstrate?

- A) That the number says nothing about changing the environment
- B) That twin studies overstate shared environment
- C) That height is not in fact heritable
- D) That identified variants explain most of the variation

162.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two readings of the gap are not idle positions?

- A) “they have been attacked most seriously on the ground that identical twins are treated more alike”
- B) “Both predict testable things and both have been partly borne out”
- C) “That gap has narrowed with larger samples and better methods and has not closed”
- D) “the variation is spread across many thousands of variants of very small effect, most still undetected”

162.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What neither supports is the inference that a heritable trait is fixed, since a highly plastic trait can be heritable and a trait with low heritability can be impossible to shift. Heritability and changeability are therefore ____

Which choice most logically completes the text?

- A) the same quantity under two names
- B) both measured by the same twin studies
- C) opposites, so that one rules out the other
- D) two different things that may vary apart

162.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “plastic” most nearly mean?

- A) made of synthetic material
- B) fixed in its final form
- C) readily changed by conditions
- D) measured with a twin study

162.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the two readings set out near the end?

- A) They introduce the definition of missing heritability
- B) They show an open question still being worked on
- C) They withdraw heritability as a useless number
- D) They report the attack on the twin method

162.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 112 of this book. It traces linkage maps, physical mapping and sequencing, and says that a sequence gives the letters and not their function, so a correlation between a variant and a trait is not an explanation of it.

Text 1 describes a gap between two kinds of estimate. Based on Text 2, what would be added to that description?

- A) A reason that identified variants explain less than they seem to
- B) Heritability is a proportion of variation within one population
- C) Twin studies compare identical and non-identical pairs
- D) Sequencing has now closed the gap completely

162.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

That gap has narrowed with larger samples and better methods and has not closed. ____ two readings persist.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For instance,
- C) In other words,
- D) Accordingly,

162.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

It is not a statement about an individual ____ and it is not a statement about how much a trait can be changed.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) individual and
- B) individual, and
- C) individual; and
- D) individual and,

162.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Heritability is the proportion of variation within one population associated with genetic variation.
- Height is highly heritable and rose several inches in two generations.
- A highly plastic trait can be heritable.
- A trait with low heritability can be impossible to shift.

The student wants to explain why a high heritability does not mean a trait is fixed. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Heritability is a proportion of variation within one population
- B) A trait with low heritability can still be impossible to shift at all
- C) A trait that conditions change readily can nevertheless be heritable
- D) The number describes variation in a population, which is why height can be highly heritable and still rise several inches in two generations

ملخص المقطع 162 بالعربية

خلاصة: نسبة التوريث أكثر رقم يُساء فهمه في الأحياء، وسوء الفهم محدّد: فالمصطلح يعني حصة التباين في صفة ما، داخل جماعة واحدة بعينها في زمن واحد، المرتبطة بالتباين الوراثي في تلك الجماعة. وهو ليس حكمًا على فرد، ولا حكمًا على مقدار ما يمكن تغييره من الصفة.

المعنى: المعنى أن الطول عالي التوريث وقد ارتفع مع ذلك عدّة إنشآت في بلدان كثيرة في جيلين، وليس هذا تناقضًا بل بيانًا أن الرقم لا يقول شيئًا عن أثر تغيير البيئة. ثم جاء عصر الجينوم بمفاجأة: المتغيرات المعروفة مجموعة تُفسّر أقل بكثير مما أوحى دراسات التوائم.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: قراءتان باقيتان لتلك الفجوة، إحداهما أن تقديرات التوائم انتفخت بالبيئة المشتركة، والأخرى أن التباين موزّع على آلاف المتغيرات الضئيلة الأثر، وكلتاهما تتنبأ بما يُختبر.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُستنتج أن الصفة الموروثة ثابتة لا تتغيّر، مع أن النصّ ينفي ذلك صراحة. ويقترن المقطع بالمقطع المئة والثاني عشر في أسئلة النصّين المتقابلين.

Machine or Colony

The textbook picture of a cell is a factory, with compartments that have jobs, assembly lines running between them, a control room in the nucleus and an energy plant in the mitochondria. It is a useful picture and it is historically false in a way that turns out to matter. Lynn Margulis argued from the 1960s that mitochondria and chloroplasts are not compartments at all but descendants of free-living bacteria that were engulfed and never digested, a proposal called endosymbiosis. Her first paper on it was rejected by fifteen journals.

The evidence that persuaded the field is of a kind that admits little argument. Both organelles have their own circular DNA, of the bacterial type rather than the type in the nucleus. Both are enclosed in a double membrane, as an engulfed cell would be. Both make their own ribosomes, which resemble bacterial ribosomes closely enough to be shut down by antibiotics that act on bacteria and leave the rest of the cell alone. Both divide on a schedule of their own rather than with the cell that contains them. Sequence comparison places mitochondria firmly within one group of bacteria.

What remains disputed is how far the colonial picture should be pushed. Margulis argued late in her life for further cases, including the origin of cilia, which the evidence does not flag as strongly, and most of those claims have not been accepted. The question of how much of cell behavior should be described as cooperation among once-independent parts rather than as mechanism is still open, and it matters practically, because mitochondrial diseases are inherited only from the mother and behave unlike anything else in medical genetics. Margulis was also a vocal opponent of several well-supported positions in other fields, which complicates the usual story about vindicated outsiders.

WHAT THIS PASSAGE IS FOR

- The factory picture is useful and historically false.
 - Both organelles carry circular DNA of the bacterial type.
 - How far the colonial picture should be pushed remains disputed.
-

Questions 163.1 to 163.10

on passage 163, Machine or Colony

163.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Margulis opposed well-supported positions in other fields
- B) The factory picture of the cell is historically accurate
- C) Her first paper was rejected by fifteen journals
- D) The colonial account is settled for two organelles and open beyond them

163.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the action of certain antibiotics show?

- A) That the organelles divide with the cell around them
- B) That organelle ribosomes closely resemble bacterial ones
- C) That the nucleus carries circular bacterial DNA
- D) That cilia also descend from engulfed bacteria

163.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the evidence that convinced the field left little room for argument?

- A) “Lynn Margulis argued from the 1960s that mitochondria and chloroplasts are not compartments at all but descendants of free-living bacteria”
- B) “Margulis argued late in her life for further cases, including the origin of cilia, which the evidence does not flag as strongly”
- C) “Both make their own ribosomes, which resemble bacterial ribosomes closely enough to be shut down by antibiotics that act on bacteria and leave the rest of the cell alone”
- D) “The textbook picture of a cell is a factory, with compartments that have jobs”

163.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Both divide on a schedule of their own rather than with the cell that contains them. A structure built by the cell for a job would therefore ____

Which choice most logically completes the text?

- A) divide when the cell divides, not when it chooses
- B) carry its own circular DNA as well
- C) be shut down by antibiotics that act on bacteria
- D) be enclosed in a double membrane too

163.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “flag” most nearly mean?

- A) grow weaker over time
- B) mark with a banner
- C) hail from a distance
- D) point out clearly

163.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the list of five shared features?

- A) It introduces the dispute about cilia for the first time
- B) It concedes that the factory picture is useful after all
- C) It sets out the evidence that closed the first question
- D) It reports the number of journals that rejected her paper

163.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 113 of this book. It explains that the respiratory pathway was established by inhibitors, isotope labels and the spinning of broken cells, and that each of those three tactics has a weakness the others do not share.

Text 1 argues about what an organelle is. Based on Text 2, what would be added to that argument?

- A) Mitochondria carry circular DNA of the bacterial type
- B) How the work inside the organelle was traced in the first place
- C) Both organelles divide on a schedule of their own
- D) The spinning experiments established the bacterial origin

163.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

It is a useful picture and it is historically false in a way that turns out to matter. ____ Lynn Margulis argued from the 1960s that mitochondria and chloroplasts are not compartments at all.

Which choice completes the text with the most logical transition?

- A) In fact,
- B) Even so,
- C) By contrast,
- D) As a result,

163.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Her first paper on it was rejected by fifteen journals ____ the evidence that persuaded the field is of a kind that admits little argument.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) journals, the
- B) journals the
- C) journals. The
- D) journals, and, the

163.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Mitochondria and chloroplasts descend from engulfed bacteria.
- How far the colonial picture should be pushed is still disputed.
- Mitochondrial diseases are inherited only from the mother.
- Those diseases behave unlike anything else in medical genetics.

The student wants to explain why the dispute still matters outside the laboratory. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Because the organelle is a former bacterium with its own line of descent, the diseases it carries pass only from the mother
- Mitochondria and chloroplasts descend from engulfed bacteria
- How far the colonial picture should be pushed is still disputed
- Mitochondrial diseases behave unlike anything else in medical genetics

ملخص المقطع 163 بالعربية

خلاصة: الصورة المدرسية للخلية مصنع: حُجِرَ لكلٍّ منها عمل، وخطوط نقل بينها، وغرفة تحكم في النواة، ومحطة طاقة في الميتوكوندريا. وهي صورة نافعة وهي خاطئة تاريخياً خطأً يترتب عليه أثر، فقد حجّت لين مارغوليس من الستينيّات بأن الميتوكوندريا والبلاستيدات ليست حُجَرًا بل أحفاد بكتيريا حرّة ابتلعت ولم تُهضم.

المعنى: المعنى أنّ الدليل الذي أقنع الميدان من جنس لا يحتمل جدلاً كبيراً: فللغضيتين حمض نوويّ دائريّ من النوع البكتيريّ، وكلتاها محفوفة بغشاء مزدوج كما يكون الكائن المبتلع، وكلتاها تصنع ريبوسوماتها التي تشبه البكتيرية حتى تُسكّتها مضادات البكتيريا، وكلتاها تنقسم بجدولها. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: الباقي متنازعاً فيه هو إلى أيّ حدّ تُدفع الصورة الاستعمارية، فقد حجّت مارغوليس آخر عمرها لحالات أخرى منها أصل الأسواط، ولم يُقبل معظم تلك الدعاوى.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن وظيفة قائمة الأدلة وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُعمّم الدعوى على كلّ عُضِيّة، مع أنّ النض يحصر ما ثبت في اثنتين. ويقترن المقطع بالمقطع المئة والثالث عشر في أسئلة النصّين المتقابلين.

Did the Wolves Do It

The Yellowstone story is told as a clean case of a trophic cascade, meaning a chain of effects running down a food web from a predator to the plants, and a good deal of the telling has outrun the evidence. Wolves returned in 1995, elk numbers fell, willows and aspen recovered along the creeks, beaver returned, and streambanks stabilized. Each link in that chain has been measured. The difficulty is that other things changed over the same twenty years, which makes the design confounded in the strict sense.

The objections are specific and come from ecologists who work in the park. Elk numbers fell for several reasons at once, including a severe drought, heavy human hunting outside the park boundary, and a growing bear and cougar population. Willow recovery was patchy rather than general, and the strongest recovery occurred where the water table was high enough to support it, which suggests that hydrology may stem the effect as much as browsing does. Exclosure studies showed willows growing where elk were fenced out and water was available, and not where water was absent.

The defensible position is narrower than the popular one and still substantial. Wolves are one cause among several of a real change, their effect is strongest where water allows it, and the claim that they rewrote the rivers is not supported. The episode is now used in teaching as a lesson about causal inference rather than about wolves, and the lesson is that a spectacular natural experiment without a control area will produce a spectacular story that cannot be checked. Several of the most widely shared accounts of the reintroduction came from a short film that compressed the chain into a minute. Its narrator has since said that the script overstated the case.

WHAT THIS PASSAGE IS FOR

- Other things changed over the same twenty years.
 - Willow recovery was strongest where the water table allowed it.
 - A natural experiment without a control cannot be checked.
-

Questions 164.1 to 164.10

on passage 164, Did the Wolves Do It

164.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A real change has several causes, and the clean story outran the evidence
- B) Wolves had no measurable effect on the park at all
- C) Willow recovery was general across the whole park
- D) A short film compressed the chain into a minute

164.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, where was willow recovery strongest?

- A) Where human hunting outside the park was heaviest
- B) Where bear and cougar numbers were growing
- C) Where the water table was high enough
- D) Where elk were fenced out and water was absent

164.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the design cannot separate two causes that moved together?

- A) “Wolves returned in 1995, elk numbers fell, willows and aspen recovered along the creeks, beaver returned, and streambanks stabilized”
- B) “The Yellowstone story is told as a clean case of a trophic cascade”
- C) “Exclosure studies showed willows growing where elk were fenced out and water was available”
- D) “other things changed over the same twenty years, which makes the design confounded in the strict sense”

164.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Exclosure studies showed willows growing where elk were fenced out and water was available, and not where water was absent. Fencing out the elk alone is therefore ____

Which choice most logically completes the text?

- A) enough to produce recovery anywhere in the park
- B) not enough without water in the ground
- C) the only cause of the recovery observed
- D) a test of the fear that wolves produce

164.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “stem” most nearly mean?

- A) hold back
- B) arise from
- C) grow upward
- D) measure out

164.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the paragraph beginning with the defensible position?

- A) It introduces the exclosure studies for the first time
- B) It restates the popular story without changing it
- C) It reports the three reasons elk numbers fell
- D) It states what survives the objections just raised

164.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 114 of this book. It describes the exclosure and the stable isotope ratio, says an exclosure tests browsing but cannot test fear, and reports that the reintroduction itself was the experiment and was run without a control.

Text 1 narrows the claim about the wolves. Based on Text 2, what would be added to that narrowing?

- A) Willow recovery was patchy rather than general
- B) Several causes of the fall in elk numbers acted at once
- C) Why no available method could have settled the question
- D) An isotope ratio can distinguish fear from browsing

164.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Each link in that chain has been measured. ____ other things changed over the same twenty years, which makes the design confounded in the strict sense.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) All the same,
- C) As a result,
- D) For instance,

164.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Willow recovery was patchy rather than general ____ and the strongest recovery occurred where the water table was high enough.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) general; and
- B) general and
- C) general: and
- D) general, and

164.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Each link in the chain has been measured.
- Other things changed over the same twenty years, which makes the design confounded.
- A spectacular natural experiment without a control area produces a story that cannot be checked.
- The defensible position keeps the wolves as one cause among several.

The student wants to explain why the episode is now taught as a lesson about inference. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Each link in the chain of effects in the park has been measured
- Every link was measured and the story still cannot be checked, because several causes moved together with no control area
- The defensible position keeps the wolves as one cause among several
- Other things changed over the same twenty years in the park

ملخص المقطع 164 بالعربية

خلاصة: تُروى قصة يلوستون نموذجًا نقيًا للشلال الغذائي، أي سلسلة آثار تنزل في شبكة الغذاء من المفترس إلى النبات، وقد سبقت الرواية الدليل في كثير منها. عادت الذئاب سنة ألف وتسعمئة وخمس وتسعين، وهبطت أعداد الأيائل، وتعافى الصفصاف والخور على الجداول، وعاد القندس، واستقرت الضفاف.

المعنى: المعنى أن كل حلقة في تلك السلسلة قد قيست، والصعوبة أن أشياء أخرى تغيرت في العشرين سنة نفسها، فصار التصميم مشوبًا بالمعنى الدقيق: هبطت الأيائل لأسباب مجتمعة منها جفاف شديد وصيد بشري كثيف خارج الحدود وتكاثر الدببة وأسود الجبال.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: الموقف الذي يُدافع عنه أضيق من الشائع وما زال معتبرًا: الذئاب سبب من أسباب تغير حقيقي، وأثرها أقوى حيث يسمح الماء، ودعوى أنها أعادت كتابة الأنهار غير مسندة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسند دعوى وعن التحول الذي يقدم اعتراضًا. والفخ المتوقع هنا أن يُنفي أثر الذئاب كله، مع أن النص يبقيها سببًا من عدة أسباب. ويقترن المقطع بالمقطع المئة والرابع عشر في أسئلة النصين المتقابلين.

Food, Predators, or Both

The ten-year hare cycle generated two rival explanations that held the field for fifty years. One said food: hares eat the shrubs down, the shrubs respond with chemical defenses and take years to recover, and the hare population crashes for want of edible plants. The other said predators: lynx, coyote and owl numbers build up behind the hares, overtake them, and drive the crash. Both accounts fit the fur return series, which is the usual situation when a correlation is all anyone has.

Charles Krebs and colleagues settled it by experiment in the Yukon between 1986 and 1996, using a factorial design, meaning one in which treatments are applied separately and together. On blocks of a square kilometer each they added food, excluded predators with electric fencing, did both, and did neither. The result was that food alone roughly doubled hare density, predator exclusion alone roughly doubled it, and the two together increased it by about eleven times, which is far more than the two effects added.

That interaction is the finding, and neither camp had predicted it. A hare with enough food can afford to be vigilant and a hare in cover can afford to forage carelessly, so the two pressures are not independent, and a fecund season under both conditions produces an explosion. The result also explains why the fur records could never settle the question: a correlation cannot reveal an interaction, and the two single-cause theories were both correct and both insufficient. The experiment cost a decade and about a hundred kilometers of fence. The enclosures had to be electrified against bears as well as against the predators of interest. Several blocks were lost to fire and weather over the ten years and the design had to be rebuilt.

WHAT THIS PASSAGE IS FOR

- Both accounts fit the fur return series.
 - Food and predator exclusion together gave about eleven times the density.
 - A correlation cannot reveal an interaction.
-

Questions 165.1 to 165.10

on passage 165, Food, Predators, or Both

165.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The enclosures had to be electrified against bears
- B) An interaction neither camp predicted settled a fifty-year question
- C) Food alone produced the elevenfold increase
- D) The experiment ran in the Yukon for ten years

165.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did predator exclusion alone do to hare density?

- A) It raised density about elevenfold
- B) It left density where it had been
- C) It raised density by about a half
- D) It roughly doubled density on its own

165.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a correlation could not have settled the question?

- A) “a correlation cannot reveal an interaction, and the two single-cause theories were both correct and both insufficient”
- B) “Both accounts fit the fur return series, which is the usual situation when a correlation is all anyone has”
- C) “The experiment cost a decade and about a hundred kilometers of fence”
- D) “Several blocks were lost to fire and weather over the ten years and the design had to be rebuilt”

165.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A hare with enough food can afford to be vigilant and a hare in cover can afford to forage carelessly, so the two pressures are not independent. Measuring one pressure with the other held constant is therefore ____

Which choice most logically completes the text?

- A) the only design that could have worked
- B) enough to predict the joint result
- C) bound to understate what the pair can do
- D) a way of removing the interaction entirely

165.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “fecund” most nearly mean?

- A) unusually mild
- B) rich in offspring
- C) short and crowded
- D) poor in food

165.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the two rival explanations at the start?

- A) They set up the question the experiment was built to decide
- B) They report the result of the factorial design
- C) They show that neither pressure affects the hares
- D) They introduce the electric fencing for the first time

165.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 115 of this book. It reports a century of annual fur returns for lynx and hare, says a fur return is a proxy for several things at once, and names tree ring records of browsing as an independent check on the cycle.

Text 1 reports an experiment on the hare cycle. Based on Text 2, what would be added to that report?

- A) Both single-cause accounts fit the fur return series
- B) The two treatments together raised density elevenfold
- C) The fur returns were a direct count of the animals
- D) What had to be corrected before the cycle could be trusted

165.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both accounts fit the fur return series, which is the usual situation when a correlation is all anyone has. ___ Charles Krebs and colleagues settled it by experiment in the Yukon between 1986 and 1996.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) In other words,
- C) In the end,
- D) For instance,

165.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That interaction is the finding ___ and neither camp had predicted it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) finding, and
- B) finding and
- C) finding; and
- D) finding and,

165.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Food alone roughly doubled hare density.
- Predator exclusion alone roughly doubled it.
- The two together increased it about elevenfold.
- A hare with enough food can afford to be vigilant, so the pressures are not independent.

The student wants to explain why both old theories were correct and insufficient. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Food alone roughly doubled the density of the hares in the blocks
- B) The two treatments together increased density about elevenfold
- C) Each pressure doubled density on its own, so each theory was right, and the elevenfold joint result shows neither was enough
- D) The two pressures are not independent of one another at all

ملخص المقطع 165 بالعربية

خلاصة: دورة الأرنب العشرية ولدت تفسيرين متنافسين حكما الميدان خمسين سنة. أحدهما الغذاء: الأرانب تأكل الشجيرات حتى تنهكها، فتزداد الشجيرات بدفاعات كيميائية وتحتاج سنين لتعود، فينهار عددها لقلّة ما يُؤكل. والآخر المفترسات: الوشق والذئب واليوم تتكاثر وراءها ثمّ تجاوزها فتُسقطها.

المعنى: المعنى أنّ الروايين تطابقان سلسلة مردودات الفراء، وهذا هو الحال المعتاد إذا لم يكن في اليد إلا ملازمة. فحسمها تشارلز كريبس وزملاؤه بالتجربة في يوكون بين عام ألف وتسعمئة وست وثمانين وعام ألف وتسعمئة وست وتسعين، بتصميم عاملي تُطبّق فيه المعالجات منفردة ومجمعة. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: الغذاء وحده ضاعف الكثافة، وإقصاء المفترسات وحده ضاعفها، وهما معاً رفاعها نحو أحد عشر ضعفاً، وهو أكثر بكثير من مجموع الأثرين، وذلك التفاعل هو الكشف الذي لم يتوقعه أيّ من الفريقين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل وعن إكمال النصّ إكمالاً منطقياً. والفجّ المتوقع هنا أن تُنسب النتيجة المشتركة إلى معالجة واحدة، مع أنّ النصّ يفرّق بينها وبين المجتمعين. ويقترن المقطع بالمقطع المئة والخامس عشر في أسئلة النصّين المتقابلين.

The Germ or the Ground

Max von Pettenkofer agreed with Robert Koch that the cholera organism existed, and he denied that its presence was sufficient to produce an epidemic. His formula was that an epidemic required the germ and the ground, meaning the state of the soil, the water table and the local conditions, and he argued that the organism alone would not produce disease in a healthy population with good drainage. In 1892 he drank a culture of cholera in front of witnesses to prove it, developed only mild symptoms, and considered himself vindicated.

The germ theorists won the century, and they were right about the question they were answering. Identify the organism, interrupt the route, and the epidemic stops, which is what the pump handle and the water filter did. But the twentieth century also produced the figures Pettenkofer would have wanted. Most people who harbor the tuberculosis bacterium never develop the disease at all, and cholera mortality within a single outbreak varies by a large factor with nutrition and with access to clean fluids. The organism is necessary, and the condition of the person largely decides who dies of it.

The modern form of the dispute is about where to spend money, and it is sharp. One side argues for the specific intervention: the vaccine, the drug, the filter, each of which can be tested and shown to work. The other argues that housing, income and sanitation produce larger effects across more diseases at once, and points out that mortality from tuberculosis in Europe had already fallen by most of its total before any effective treatment existed. Both claims are supported. The practical question of allocation is not settled by the biology, which is why it is still an argument. His experiment proved less than he claimed, and the point he was making was not thereby wrong.

WHAT THIS PASSAGE IS FOR

- Pettenkofer required the germ and the ground together.
 - Most people carrying the tuberculosis bacterium never become ill.
 - Tuberculosis mortality fell before any effective treatment existed.
-

Questions 166.1 to 166.10

on passage 166, The Germ or the Ground

166.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Pettenkofer drank a cholera culture in front of witnesses
- B) The germ theorists were wrong about the question they answered
- C) The organism is necessary and the condition of the person decides much
- D) Tuberculosis mortality fell before effective treatment existed

166.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Pettenkofer mean by the ground?

- A) The soil, the water table and local conditions
- B) The nutrition and fluids available to the sick
- C) The route by which the organism travels
- D) The vaccine, the drug and the filter

166.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the modern dispute is about spending rather than about biology?

- A) “Most people who harbor the tuberculosis bacterium never develop the disease at all”
- B) “The practical question of allocation is not settled by the biology, which is why it is still an argument”
- C) “Identify the organism, interrupt the route, and the epidemic stops”
- D) “His experiment proved less than he claimed, and the point he was making was not thereby wrong”

166.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The organism is necessary, and the condition of the person largely decides who dies of it. A program that attends only to the organism is therefore ____

Which choice most logically completes the text?

- A) certain to end every epidemic at once
- B) proof that the ground plays no part
- C) identical to one that attends to housing
- D) leaving out much of what decides the outcome

166.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “harbor” most nearly mean?

- A) shelter a ship
- B) hide from view
- C) carry inside the body
- D) die of an infection

166.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence granting the germ theorists their victory?

- A) It introduces the figures about tuberculosis mortality
- B) It concedes a point so that the remaining question stands out
- C) It withdraws the formula about the germ and the ground
- D) It reports the year of the cholera demonstration

166.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 116 of this book. It sets out the conditions Koch laid down for naming the cause of a disease and shows each one failing, on the asymptomatic carrier, on organisms that cannot be cultured, and on diseases that occur only in humans.

Text 1 reports a dispute about what produces an epidemic. Based on Text 2, what would be added to that report?

- A) A standard that already allows for carriers who stay well
- B) The organism alone need not produce disease in a healthy population
- C) Pettenkofer drank a culture in front of witnesses
- D) Koch denied that the cholera organism existed at all

166.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The germ theorists won the century, and they were right about the question they were answering. ___ the twentieth century also produced the figures Pettenkofer would have wanted.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) Accordingly,
- C) In other words,
- D) All the same,

166.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The organism is necessary ___ and the condition of the person largely decides who dies of it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) necessary and
- B) necessary, and
- C) necessary; and
- D) necessary and,

166.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Identify the organism, interrupt the route, and the epidemic stops.
- Most people who harbor the tuberculosis bacterium never develop the disease.
- Housing, income and sanitation produce larger effects across more diseases at once.
- Both claims are supported.

The student wants to explain why the biology cannot settle the question of allocation. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Interrupting the route of an organism will stop an epidemic
- B) Most carriers of the tuberculosis bacterium never fall ill at all
- C) Housing, income and sanitation act across more diseases at once
- D) Both the specific intervention and the broad one are supported by the evidence, so the choice between them is about money rather than biology

ملخص المقطع 166 بالعربية

خلاصة: وافق ماكس فون بتنكوفر وروبرت كوخ على وجود كائن الكوليرا، وأنكر أن يكون وجوده كافياً لإحداث وباء. وكانت مبيغته أن الوباء يحتاج الجرثومة والأرض، أي حال التراب ومنسوب الماء والأحوال المحلية، وحجج بأن الكائن وحده لا يحدث مرضاً في جماعة سليمة حسنة الصرف. المعنى: المعنى أن أنصار نظرية الجرثومة ربحوا القرن، وكانوا على حق في السؤال الذي كانوا يجيبونه: سم الكائن، واقطع الطريق، يتوقف الوباء، وهذا ما فعله مقبض المضخة ومرشح الماء. لكن القرن العشرين أنتج أيضاً الأرقام التي كان بتنكوفر يريدتها. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: معظم من يحمل عصية السل لا يمرض قط، ووفيات الكوليرا في الوباء الواحد تتفاوت تفاوتاً كبيراً بالتغذية وتتوافر السوائل النظيفة، فالكائن لازم وحال الشخص هي التي تحدد أكثر من يموت. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسند دعوى وعن وظيفة جملة التسليم. والفج المتوقع هنا أن يُحسب الخلاف إنكاراً لنظرية الجرثومة، مع أن النص يسلم لها بالنصر. ويقتزن المقطع بالمقطع المئة والسادس عشر في أسئلة النصين المتقابلين.

The Bargain of Fixed Nitrogen

Something close to half the nitrogen in the body of a person alive today was fixed industrially, which means that roughly half the world population is fed by a chemical process invented in 1909. No serious account of twentieth-century population growth can leave that process out of the explanation. Cereal yields in countries that adopted the package of fertilizer, irrigation and selected varieties rose by factors of two to four in a generation, and famine in Asia, which had been a regular event, became rare.

The costs are also measurable, which is what makes this a real argument rather than a slogan. Perhaps half the nitrogen applied to a field never reaches the crop. It leaves in water and air, and in the water it produces eutrophication, meaning enrichment that strips the water of oxygen, which has created dead zones at the mouths of major rivers, the largest of them in the Gulf of Mexico. Fixing nitrogen industrially consumes one or two percent of all the energy used in the world, and nitrous oxide released from fertilized soil is a greenhouse gas of considerable strength.

The two positions that follow are not symmetrical and both are serious. One holds that the bargain was obviously worth making, that the alternative was mass starvation, and that the losses are an engineering problem to be reduced by better timing and placement. The other holds that a system which must husband its soil is more stable than one which buys fertility by the ton, and points to the long-term plots where manure outperforms mineral nitrogen on soil structure. Neither position disputes the figures. They disagree about what to do with a technology that cannot be given up and cannot be continued unchanged. Precision application has cut losses substantially in a few wealthy countries. Global fertilizer use has gone on rising throughout the same period.

WHAT THIS PASSAGE IS FOR

- Roughly half the world population is fed by a process invented in 1909.
 - Perhaps half the nitrogen applied never reaches the crop.
 - Neither position disputes the figures; they disagree about what to do.
-

Questions 167.1 to 167.10

on passage 167, The Bargain of Fixed Nitrogen

167.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Precision application has cut losses in a few wealthy countries
- B) Neither position accepts the figures about losses
- C) Global fertilizer use has fallen throughout the period
- D) A technology that cannot be dropped or kept unchanged divides two serious positions

167.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what share of applied nitrogen never reaches the crop?

- A) About one or two percent of it
- B) Perhaps half of what is applied
- C) Nearly all of what is applied
- D) None of it once timing is improved

167.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two positions are a disagreement about action rather than fact?

- A) “Cereal yields in countries that adopted the package of fertilizer, irrigation and selected varieties rose by factors of two to four in a generation”
- B) “in the water it produces eutrophication, meaning enrichment that strips the water of oxygen”
- C) “Neither position disputes the figures. They disagree about what to do with a technology that cannot be given up and cannot be continued unchanged”
- D) “Precision application has cut losses substantially in a few wealthy countries”

167.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Perhaps half the nitrogen applied to a field never reaches the crop. It leaves in water and air. A gain in placement and timing would therefore ____

Which choice most logically completes the text?

- A) cut the losses without cutting the harvest
- B) raise the share that leaves in water
- C) end the argument about what to do
- D) reduce the energy used in fixation to nothing

167.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “husband” most nearly mean?

- A) take as a spouse
- B) buy by the ton
- C) break up and plow
- D) use sparingly

167.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the costs measurable?

- A) It introduces the dead zone in the Gulf of Mexico
- B) It concedes that the gains were never real
- C) It marks the turn from the gains to what they cost
- D) It reports the year the process was invented

167.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 117 of this book. It describes a field at Rothamsted under fixed treatments since 1843, where one strip has received nothing and another farmyard manure every year, and reports what a series of that length makes visible.

Text 1 weighs the bargain of industrial nitrogen. Based on Text 2, what would be added to that weighing?

- A) Half the nitrogen applied never reaches the crop
- B) A place where the two kinds of fertility can be compared
- C) Eutrophication strips oxygen from the water it enriches
- D) Rothamsted abandoned mineral nitrogen in the 1950s

167.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

No serious account of twentieth-century population growth can leave that process out of the explanation. ___ cereal yields in countries that adopted the package rose by factors of two to four in a generation.

Which choice completes the text with the most logical transition?

- A) After all,
- B) By contrast,
- C) Even so,
- D) In conclusion,

167.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The costs are also measurable ___ is what makes the argument a real one rather than a slogan.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) measurable, this
- B) measurable this
- C) measurable, which
- D) measurable; which,

167.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- About half the nitrogen in a living human body was fixed industrially.
- Perhaps half the nitrogen applied to a field never reaches the crop.
- Fixing nitrogen industrially consumes one or two percent of world energy.
- Neither position disputes the figures.

The student wants to explain why the technology must be kept and must also be changed. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Half the nitrogen in a person was fixed industrially, and half of what is applied is lost, so the process feeds the world and wastes as it goes
- B) About half the nitrogen in a living human body was fixed industrially
- C) Perhaps half the nitrogen applied to a field never reaches the crop
- D) Fixing nitrogen industrially consumes one or two percent of world energy

ملخص المقطع 167 بالعربية

خلاصة: نحو نصف النيتروجين في جسم إنسان حيّ اليوم تُثبّت صناعياً، ومعنى ذلك أنّ نحو نصف سكان الأرض يُطعمهم تفاعل كيميائي اخترع سنة ألف وتسعمئة وتسع. ولا يستقيم تفسير نموّ السكان في القرن العشرين بإسقاط ذلك التفاعل من الحساب. المعنى: المعنى أنّ محاصيل الحبوب في البلدان التي أخذت حزمة السماد والسقي والأصناف المنتخبة ارتفعت ضعفين إلى أربعة في جيل واحد، وأنّ المجاعة في آسيا صارت نادرة بعد أن كانت حادثة منتظماً. والتكاليف مقيسة أيضاً، وهذا ما يجعل المسألة خلافاً حقيقياً لا شعاعاً. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: لعلّ نصف النيتروجين المضاف إلى الحقل لا يبلغ المحصول قط، بل يخرج في الماء والهواء، فيحدث في الماء إغناء يسلبه الأكسجين، وقد خلق مناطق ميتة عند مصاب الأنهار الكبرى. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يفرّق بين خلاف في الوقائع وخلاف في العمل. والفجّ المتوقّع هنا أن يُحسب أحد الفريقين منكرًا للأرقام، مع أنّ النصّ يقول إنّ أحداً منهما لا ينكرها. ويقترن المقطع بالمقطع المئة والسابع عشر في أسئلة النصّين المتقابلين.

Separating a Signal From Noise

Nobody in the argument disputes that the climate of the Earth has changed before, and the question that actually matters is attribution, meaning the establishing of how much of an observed change is caused by a particular factor. The objection that the climate has always varied is therefore not a trivial one, and the answer to it is not a louder assertion. It is a method, and the method is fingerprinting: looking for a pattern of change that one cause produces and the alternatives do not.

Several such patterns exist. Greenhouse warming predicts that the lower atmosphere warms while the upper stratosphere cools, which is what is measured, and no increase in solar output can produce that combination. Greenhouse warming predicts that nights warm faster than days, which is observed. Solar warming predicts the opposite in both cases. The isotopic composition of the carbon now in the atmosphere has shifted toward the characteristic signature of fossil carbon, which is not a quiescent coincidence but a direct trace of its origin. Each of these is an independent test of a kind that could have failed and did not.

The serious objections are about magnitude rather than attribution, and they are inside the science rather than outside it. How strongly clouds respond to warming remains the largest uncertainty in every model, and it moves the projected warming for a doubling of carbon dioxide across a range of several degrees. How much heat the deep ocean takes up, and for how long it holds it, has been measured only since the profiling floats were deployed, and those two uncertainties are the live scientific arguments. A reader who encounters a dispute about whether the mechanism exists has been handed the wrong argument, and one about how large the response is has been handed the real one.

WHAT THIS PASSAGE IS FOR

- Attribution is a method, not an assertion.
 - The troposphere warms while the stratosphere cools.
 - The live argument is about magnitude, not mechanism.
-

Questions 168.1 to 168.10

on passage 168, Separating a Signal From Noise

168.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Fingerprinting answers the attribution question, and the live disputes are about size
- B) The objection that climate has always varied is a trivial one
- C) Profiling floats have measured deep ocean heat uptake
- D) Solar warming predicts nights warming faster than days

168.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, which pattern no increase in solar output can produce?

- A) A lower atmosphere that cools with the stratosphere
- B) A shift in the isotopic composition of carbon
- C) A warming lower atmosphere with a cooling stratosphere
- D) Days that warm faster than nights do

168.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the method could have failed and that is what makes it a test?

- A) “the question that actually matters is attribution, meaning the establishing of how much of an observed change is caused by a particular factor”
- B) “How strongly clouds respond to warming remains the largest uncertainty in every model”
- C) “Greenhouse warming predicts that nights warm faster than days, which is observed. Solar warming predicts the opposite in both cases”
- D) “Each of these is an independent test of a kind that could have failed and did not”

168.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A reader who encounters a dispute about whether the mechanism exists has been handed the wrong argument, and one about how large the response is has been handed the real one. A reader deciding which to attend to should therefore ____

Which choice most logically completes the text?

- A) treat both disputes as equally open
- B) ask whether the question is existence or size
- C) conclude that the models cannot be trusted
- D) look first at the isotopic composition of carbon

168.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “quiescent” most nearly mean?

- A) inactive and without cause
- B) quietly measured
- C) open to dispute
- D) recently discovered

168.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence introducing fingerprinting?

- A) It introduces the uncertainty about cloud response
- B) It concedes that attribution cannot be established
- C) It reports the shift in the isotopic composition
- D) It supplies the method that answers the objection raised

168.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 118 of this book. It describes ice cores, tree rings and corals as three proxies with unrelated weaknesses, and says that their agreement, reported with widening error bars, is the real argument.

Text 1 defends the attribution of the change. Based on Text 2, what would be added to that defense?

- A) Greenhouse warming predicts that nights warm faster than days
- B) Each pattern is an independent test that could have failed
- C) How the record being attributed was assembled in the first place
- D) Ice cores measure the response of clouds to warming

168.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The objection that the climate has always varied is therefore not a trivial one, and the answer to it is not a louder assertion. ___ it is a method, and the method is fingerprinting.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) Rather,
- C) As a result,
- D) For instance,

168.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

It is a method ___ and the method is fingerprinting.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) method; and
- B) method and
- C) method: and
- D) method, and

168.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Attribution means establishing how much of a change a particular factor caused.
- Greenhouse warming predicts a warming lower atmosphere with a cooling stratosphere, which is measured.
- Cloud response remains the largest uncertainty in every model.
- It moves the projected warming across a range of several degrees.

The student wants to explain which dispute about the climate is the real one. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Attribution means establishing how much of a change a factor caused
- B) The fingerprints settle whether the mechanism is at work, so the live argument is over the size of the response to it
- C) Greenhouse warming predicts a cooling stratosphere, which is measured
- D) Cloud response is the largest uncertainty in every model built

ملخص المقطع 168 بالعربية

خلاصة: لا يُنكر أحد في هذا الجدل أنَّ مناخ الأرض قد تغيّر من قبل، والسؤال الذي يهمّ فعلاً هو الإسناد، أي إثبات كم من تغيّر مرصود سببه عامل بعينه. فاعتراض أنَّ المناخ كان دائماً متغيّراً ليس اعتراضاً تافهًا، وجوابه ليس توكيداً أعلى صوتاً بل منهج. المعنى: المعنى أنَّ المنهج هو بضم الأثر: البحث عن نمط تغيّر يُحدثه سبب واحد ولا تُحدثه البدائل. فالتسخين الدفيئي يتنبأ بأنّ الجو الأدنى يسخن والستراتوسفير الأعلى يبرد، وهذا هو المقيس، ولا يقدر أيّ ازدياد في خرج الشمس على إحداث هذا الاقتران. الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: الاعتراضات الجديّة في المقدار لا في الإسناد، وهي داخل العلم لا خارجه، فاستجابة السحاب أكبر مصدر للارتياح في كل نموذج، وهي تحرّك التسخين المتوقّع على مدى عدّة درجات. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسند دعوى وعن التحوّل الذي يستبدل مقولة بأخرى. والفجّ المتوقّع هنا أن يُقدّم النزاع في وجود الآلية نزاعاً حقيقياً، مع أنَّ النصّ يسمّيه الحجّة الخطأ. ويقترن المقطع بالمقطع المئة والثامن عشر في أسئلة النصّين المتقابلين.

The Floods That Were Not Allowed

Geology was founded on a methodological rule. Uniformitarianism, the principle that the processes acting now are the ones that shaped the past, was the instrument that defeated an earlier tradition of explaining landscapes by single catastrophes, and it worked. Slow erosion, slow deposition and slow uplift account for most of the surface of the Earth, and the rule gave geologists a disciplined way to read the history written in a cliff face.

J Harlen Bretz then found a landscape it could not explain. The scablands of eastern Washington are channels cut hundreds of feet into solid basalt, boulders the size of houses carried fifty miles, gravel bars the height of small hills, and ripple marks fifty feet from crest to crest. Bretz argued from 1923 that this had been made by a flood of almost unimaginable size. His colleagues rejected it, not because they had a better account, but because a single enormous flood was exactly the kind of explanation the discipline had spent a century getting rid of.

He turned out to be right, and the evidence that settled it came from somewhere else entirely. A lake dammed by ice in Montana was identified, with shorelines showing a volume comparable to Lake Ontario, and a mechanism for the dam failing repeatedly was worked out. Bretz lived to receive the discipline's highest medal in 1979 at the age of ninety-six. The episode is not an argument against uniformitarianism, which remains the correct default. It is an argument about what a default is for: the rule told geologists where to look and then told them not to believe what they found. Comparable flood channels have since been identified on Mars and are interpreted using the scablands. The rule that blocked the conclusion has become one of the tools for extending it.

WHAT THIS PASSAGE IS FOR

- Uniformitarianism defeated an earlier tradition and worked.
 - His colleagues rejected it without a better account.
 - A default told them where to look and then not to believe it.
-

Questions 169.1 to 169.10

on passage 169, The Floods That Were Not Allowed

169.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Bretz received the highest medal of his discipline in 1979
- B) A rule that found the anomaly also stopped the field believing it
- C) Uniformitarianism has been abandoned as a false default
- D) The scablands are channels cut into solid basalt

169.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, on what ground did other geologists reject his account?

- A) Because they had measured the channels themselves
- B) Because a better explanation was already available
- C) Because the boulders had moved only a short way
- D) Because a single enormous flood was the kind of account the field had discarded

169.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the case was settled by something other than the landscape itself?

- A) “the evidence that settled it came from somewhere else entirely. A lake dammed by ice in Montana was identified”
- B) “boulders the size of houses carried fifty miles, gravel bars the height of small hills, and ripple marks fifty feet from crest to crest”
- C) “Slow erosion, slow deposition and slow uplift account for most of the surface of the Earth”
- D) “Comparable flood channels have since been identified on Mars and are interpreted using the scablands”

169.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It is an argument about what a default is for: the rule told geologists where to look and then told them not to believe what they found. A default used that way is therefore ____

Which choice most logically completes the text?

- A) the wrong instrument for reading a cliff face
- B) a guarantee against mistaken conclusions
- C) useful for finding an anomaly and no more
- D) the reason flood channels were found on Mars

169.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “spent” most nearly mean?

- A) used up entirely
- B) passed in doing
- C) paid out in money
- D) worn out by effort

169.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the opening paragraph about the rule?

- A) It establishes the standard that the later case strains
- B) It introduces the ice-dammed lake in Montana
- C) It argues that single catastrophes explain most landscapes
- D) It reports the medal Bretz received in 1979

169.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 119 of this book. It explains how the age of the Earth was fixed by radiometric dating, why meteorites had to be used because the surface is recycled, and how a disagreement between two methods is itself evidence.

Text 1 reports a rule that blocked a conclusion. Based on Text 2, what would be added to that report?

- A) Uniformitarianism remains the correct default for geology
- B) Slow processes account for most of the surface of the Earth
- C) Radiometric dating confirmed the flood that cut the scablands
- D) A case in which a disagreement was treated as evidence

169.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

His colleagues rejected it, not because they had a better account, but because a single enormous flood was exactly the kind of explanation the discipline had spent a century getting rid of. ___ he turned out to be right.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) Likewise,
- C) As it happens,
- D) In other words,

169.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

It is an argument about what a default is for ___ the rule told geologists where to look and then told them not to believe what they found.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) for: the
- B) for, the
- C) for the
- D) for; the,

169.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Uniformitarianism defeated an earlier tradition of explaining landscapes by single catastrophes.
- Slow erosion, deposition and uplift account for most of the surface of the Earth.
- The rule told geologists where to look and then told them not to believe what they found.
- It remains the correct default.

The student wants to explain how a good rule can produce a bad judgment. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Uniformitarianism defeated an earlier tradition of single catastrophes
- B) Slow processes account for most of the surface of the Earth
- C) The rule is right about most of the Earth, which is why it both found the anomaly and refused to accept it
- D) Uniformitarianism remains the correct default for the discipline

ملخص المقطع 169 بالعربية

خلاصة: قامت الجيولوجيا على قاعدة منهجية: أن العمليات العاملة الآن هي التي شكلت الماضي. وكانت هذه القاعدة هي الأداة التي هزمت تقليدًا أقدم يفسر المناظر بكوارث مفردة، وقد نجحت: فالتعرية البطيئة والترسيب البطيء والرفع البطيء تفسر معظم سطح الأرض.

المعنى: المعنى أن هارلن بريتر وجد منظورًا لا تفسره تلك القاعدة: أخاديد شقّت مئات الأقدام في البازلت الصلب، وصخور بحجم البيوت نُقلت خمسين ميلًا، وحواجز حصى بعلو تلال صغيرة، وتجاويز بين قمة وقمة خمسون قدمًا. فجّح من سنة ألف وتسعمئة وثلاث وعشرين بأن سيلًا هائلًا صنع ذلك.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: ردّ عليه زملاؤه لا لأنّ عندهم تفسيرًا أحسن، بل لأنّ السيل المفرد الهائل هو بالضبط نوع التفسير الذي أمضى الميدان قرنًا في التخلص منه، ثمّ تبين أنه كان على حقّ.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي حسمه وعن وظيفة الفقرة الافتتاحية. والفجّح المتوقع هنا أن تُقرأ الواقعة إبطالًا للقاعدة، مع أن النصّ يقول إنها تبقى الأصل الصحيح. ويقترن المقطع بالمقطع المئة والتاسع عشر في أسئلة النصّين المتقابلين.

Whether It Can Be Stopped

Two claims about Thwaites are often run together and should be separated. The first is marine ice sheet instability, meaning the self-sustaining retreat of a glacier grounded below sea level on a slope that deepens inland. The physics is straightforward and widely accepted: as the grounding line moves back into deeper water, thicker ice is exposed, more ice flows out, and the retreat continues without any further warming. Whether that process has already begun at Thwaites is debated, and the measurements of grounding line retreat are the evidence being argued over.

The second claim is ice cliff failure, meaning the structural collapse of an exposed face too tall to hold itself up. Ice cannot support a cliff above roughly ninety meters, and if the floating shelves go, Thwaites would present a face far taller than that. A pair of modelers added this mechanism to an ice sheet model in 2016 and obtained sea level rise of a meter or more this century, which was several times the previous projections and was reported very widely.

The objections to the second claim are serious and not political. The mechanism has never been observed at the relevant scale. The model required parameters chosen to reproduce ancient sea levels that are themselves uncertain. Later work found that the same ancient levels could be reproduced without it. The honest summary is that the first claim is physics that is probably under way, and the second is a possibility that cannot be excluded and has not been demonstrated. A planner facing a distribution with a long inimical tail has a decision problem rather than a scientific one. The two claims are often reported as one, which makes the science look less settled than it is on the first and more settled than it is on the second.

WHAT THIS PASSAGE IS FOR

- Retreat on a reverse slope continues without further warming.
 - Ice cannot support a cliff above roughly ninety meters.
 - The cliff mechanism has never been observed at the relevant scale.
-

Questions 170.1 to 170.10

on passage 170, Whether It Can Be Stopped

170.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) A 2016 model produced sea level rise of a meter or more
- B) Both claims about Thwaites rest on the same physics
- C) Two claims are run together, and only one of them is settled physics
- D) Ice cannot support a cliff above roughly ninety meters

170.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does marine ice sheet instability describe?

- A) Retreat that sustains itself on a bed deepening inland
- B) The collapse of a face too tall to hold itself up
- C) A model result obtained in 2016
- D) Warming that must continue for the retreat to go on

170.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the objections to the second claim come from inside the science?

- A) “Whether that process has already begun at Thwaites is debated”
- B) “The model required parameters chosen to reproduce ancient sea levels that are themselves uncertain”
- C) “Ice cannot support a cliff above roughly ninety meters”
- D) “which was several times the previous projections and was reported very widely”

170.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The mechanism has never been observed at the relevant scale. Later work found that the same ancient levels could be reproduced without it. The second claim is therefore

—

Which choice most logically completes the text?

- A) ruled out by the evidence available
- B) the settled physics of the two claims
- C) the reason the first claim is debated
- D) neither demonstrated nor excluded as yet

170.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “inimical” most nearly mean?

- A) very unlikely
- B) poorly measured
- C) damaging in its effects
- D) easy to plan against

170.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the first sentence of the text?

- A) It introduces the model result obtained in 2016
- B) It announces the separation the rest of the text performs
- C) It concedes that the two claims cannot be told apart
- D) It reports the height a cliff of ice can reach

170.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 120 of this book. It describes gravimetry from a satellite pair, the much older tide gauge and satellite altimetry, and says the first two methods fail in opposite directions, which is why they are used together.

Text 1 separates two claims about one glacier. Based on Text 2, what would be added to that separation?

- A) The measurements that the first claim is argued over
- B) Ice cannot support a cliff above about ninety meters
- C) The first claim is physics that is probably under way
- D) Gravimetry has observed an ice cliff failing at scale

170.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The physics is straightforward and widely accepted: as the grounding line moves back into deeper water, thicker ice is exposed, more ice flows out, and the retreat continues without any further warming. ___ whether that process has already begun at Thwaites is debated.

Which choice completes the text with the most logical transition?

- A) Accordingly,
- B) Likewise,
- C) In other words,
- D) Even so,

170.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The physics is straightforward and widely accepted ___ thicker ice is exposed as the grounding line moves into deeper water.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) accepted, thicker
- B) accepted: thicker
- C) accepted thicker
- D) accepted; thicker,

170.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The physics of the first claim is straightforward and widely accepted.
- Whether that process has begun at Thwaites is debated.
- The mechanism of the second claim has never been observed at the relevant scale.
- The first is probably under way and the second has not been demonstrated.

The student wants to explain why reporting the two claims as one misleads in both directions. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The physics of the first claim is widely accepted among workers
- B) The mechanism of the second has never been observed at that scale
- C) Whether the process has begun at Thwaites is still being debated
- D) Joined together, the accepted physics looks less certain than it is and the untested mechanism looks more certain than it is

ملخص المقطع 170 بالعربية

خلاصة: دعويان في ثوابتس تُجمعان كثيرًا وحقهما الفصل. الأولى عدم استقرار الصفيحة الجليدية البحرية، أي التراجع الذي يُعيل نفسه في نهر جليدي مركّز تحت مستوى البحر على ميل يزداد عمقًا نحو الداخل. والفيزياء فيها مباشرة ومقبولة على نطاق واسع.

المعنى: المعنى أن خط التآريض إذا رجع إلى ماء أعمق انكشف جليد أسمك، فخرج جليد أكثر، واستمرّ التراجع دون مزيد من التسخين. وهل بدأت هذه العملية في ثوابتس فعلاً؟ ذلك متنازع فيه، وقياسات تراجع خط التآريض هي الدليل الذي يُتجادل فيه.

الأهمية في المجال: في مجال الأحياء وعلوم الأرض هذه المادة في مستوى الخلاف: الدعوى الثانية هي انهيار جرف الجليد، أي تهاوي وجه مكشوف أعلى من أن يحمل نفسه، والاعتراضات عليها جدية وليست سياسية: فالآلية لم تُرصد في المقياس المعنى، والنموذج احتاج معاملات اختبرت لنحّاكي مستويات بحر قديمة مرتابة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسند دعوى وعن وظيفة الجملة الافتتاحية. والفخ المتوقّع هنا أن تُقرأ الدعويان دعوى واحدة، فتبدو الأولى أقلّ ثبوتًا مما هي والثانية أكثر. ويفترن المقطع بالمقطع المئة والعشرين في أسئلة النصّين المتقابلين.

Physical Science

PHY · S01 · dispute

No Measurement Without a Theory

A thermometer reading looks like a fact about the world and is not quite one. To treat the number as a temperature requires accepting that the liquid expands in proportion to temperature, that the glass does not expand in a way that matters, and that the instrument has reached equilibrium with what it is measuring. Each of those is an auxiliary assumption, meaning a background claim that must hold for the measurement to mean what it is taken to mean, and each comes from a theory.

Philosophers from Pierre Duhem onward have called this theory-ladenness, which is the claim that what counts as a measurement depends on the framework being used, and the strong version goes further: two scientists with different theories are not measuring the same quantity when they appear to disagree. The weak version is uncontroversial and useful. The strong version has a problem, which is that measurements regularly overturn the theories that licensed them. The cosmic microwave background was found by two engineers looking for noise in an antenna, and it destroyed the model most cosmologists then held.

The working resolution is to appreciate the point without accepting the conclusion. Scientists manage theory-ladenness by making the assumptions explicit and testing them separately, which is exactly what a calibration chain does. Where two instruments resting on different theories agree, the agreement is evidence that neither theory is distorting the result, and the history of physics contains many such convergences. The objection remains live wherever only one method exists, which is why single-method results are treated with caution in every field that has learned the lesson the hard way. The dispute has practical consequences in fields where one instrument defines the quantity it measures. Several psychological constructs are in that position and the comparison is often drawn.

WHAT THIS PASSAGE IS FOR

- Each auxiliary assumption comes from a theory.
- Measurements regularly overturn the theories that licensed them.
- Agreement between methods resting on different theories is evidence.

Questions 171.1 to 171.10

on passage 171, No Measurement Without a Theory

171.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Several psychological constructs are in that position
- B) The weak form of the claim is useful and the strong form fails
- C) A thermometer reading is a plain fact about the world
- D) The microwave background was found by two engineers

171.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, how do scientists manage theory-ladenness?

- A) By refusing to use more than one instrument
- B) By treating two theories as the same framework
- C) By accepting the strong version of the claim
- D) By making the assumptions explicit and testing them

171.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the strong version is refuted by the history of the subject?

- A) “The cosmic microwave background was found by two engineers looking for noise in an antenna, and it destroyed the model most cosmologists then held”
- B) “Each of those is an auxiliary assumption, meaning a background claim that must hold for the measurement to mean what it is taken to mean”
- C) “two scientists with different theories are not measuring the same quantity when they appear to disagree”
- D) “single-method results are treated with caution in every field that has learned the lesson the hard way”

171.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Where two instruments resting on different theories agree, the agreement is evidence that neither theory is distorting the result. A quantity measured by one instrument alone is therefore ____

Which choice most logically completes the text?

- A) free of any theoretical assumption
- B) measured twice over by definition
- C) open to the objection the text names
- D) the same quantity under two theories

171.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “appreciate” most nearly mean?

- A) rise in value
- B) take the force of
- C) be grateful for
- D) reject outright

171.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the working resolution?

- A) It separates what is kept from what is dropped
- B) It introduces the auxiliary assumptions for the first time
- C) It concedes the strong version of the claim
- D) It reports the discovery of the microwave background

171.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 121 of this book. It describes traceability as an unbroken chain of comparisons back to a national standard, reports the drift of the official kilogram against its copies, and says the unit is now fixed by a constant of nature.

Text 1 argues about what a measurement presupposes. Based on Text 2, what would be added to that argument?

- A) A reading rests on assumptions drawn from a theory
- B) Agreement between two instruments is the evidence sought
- C) A calibration chain removes every theoretical assumption
- D) What a calibration chain looks like in practice

171.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The weak version is uncontroversial and useful. ____ the strong version has a problem, which is that measurements regularly overturn the theories that licensed them.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) For instance,
- C) By contrast,
- D) In other words,

171.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A thermometer reading looks like a fact about the world ____ and it is not quite one.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) world, and
- B) world and
- C) world; and
- D) world and,

171.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Each reading rests on auxiliary assumptions drawn from a theory.
- Scientists make the assumptions explicit and test them separately.
- Where two instruments resting on different theories agree, neither theory is distorting the result.
- The objection remains live wherever only one method exists.

The student wants to explain why agreement between two instruments is worth having. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- Each reading rests on assumptions drawn from some theory
- Scientists make their assumptions explicit and test them apart
- Two instruments built on different theories cannot both be distorted in the same way, so their agreement answers the objection
- The objection remains live wherever only one method exists

ملخص المقطع 171 بالعربية

خلاصة: قراءة المحرار تبدو واقعة عن العالم وليست كذلك تمامًا، فمعاملتها حرارة تقتضي التسليم بأن السائل يتوسّع تناسبًا مع الحرارة، وأن الزجاج لا يتوسّع توسّعًا يهيم، وأن الآلة بلغت التوازن مع ما تقيسه، وكل ذلك افتراض خلفي لا بدّ منه، وكلّه مأخوذ من نظرية.

المعنى: المعنى أن الفلاسفة من بيير دوهيم سمّوا هذا تحمّل القياس بالنظرية، أي أن ما يُعدّ قياسًا متعلّق بالإطار المستعمل؛ وصورتَه القويّة تمضي أبعد: أن عالمين مختلفي النظرية لا يقيسان الكميّة نفسها حين يبدو أنهما يختلفان.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: الصورة الضعيفة لا خلاف فيها ونافعة، والقويّة فيها مشكلة، وهي أن القياسات تقلّب النظريات التي أذنت بها كثيرًا، فقد وجد مهندسان خلفيّة الموجات الدقيقة وهما يبحثان عن ضجيج هوائي فهدمت النموذج السائد.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُحسب قراءة المحرار واقعة ساذجة، مع أن النصّ ينفي ذلك في أوّل جملة. ويقترن المقطع بالمقطع المئة والحادي والعشرين في أسئلة النصّين المتقابلين.

Wrong or Incomplete

Newton's law of gravity was the most successful theory in the history of science and it is wrong. It is also still used to fly spacecraft. Both statements are true, and holding them together requires a distinction that students are rarely given: between a theory that has been refuted and a theory that has been placed inside a larger one as a limiting case, meaning a situation in which the newer theory reduces to the older.

The evidence that forced the change was small. The perihelion of Mercury, meaning the point in its orbit closest to the Sun, advances by a tiny amount each century, and after every known gravitational influence had been accounted for there remained a discrepancy of about forty-three seconds of arc per century. Astronomers tried to resolve it for sixty years by proposing an unseen planet, a flattened Sun, and a modification of the exponent in the inverse square law. General relativity predicted the figure exactly, from a theory built for quite different reasons, and that is why it was accepted rather than merely admired.

The philosophical question is whether Newton was mistaken. On one account yes: the theory says that gravity is a force acting instantaneously at a distance, and that is simply not the case. On the other account the equations remain correct within a stated domain, which is the ordinary condition of every physical law, and relativity itself is expected to fail where quantum effects matter. The second account is the one working physicists use, and it carries a discipline: a theory is not refuted by being shown to have a boundary, and is not safe for being useful inside it. Spacecraft navigation uses Newtonian calculations with relativistic corrections applied where they matter.

WHAT THIS PASSAGE IS FOR

- Newtonian gravity is wrong and is still used to fly spacecraft.
 - The discrepancy was forty-three seconds of arc per century.
 - A theory is not refuted by being shown to have a boundary.
-

Questions 172.1 to 172.10

on passage 172, Wrong or Incomplete

172.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Spacecraft navigation uses relativistic corrections
- B) A theory shown to have a boundary has been refuted
- C) A refuted theory and a bounded theory are different things
- D) Mercury advances by forty-three seconds of arc a century

172.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, why was general relativity accepted rather than admired?

- A) It gave the figure exactly from a theory built elsewhere
- B) It proposed an unseen planet near the Sun
- C) It modified the exponent in the inverse square law
- D) It abandoned the Newtonian equations altogether

172.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the newer theory is expected to have a boundary of its own?

- A) “the theory says that gravity is a force acting instantaneously at a distance, and that is simply not the case”
- B) “the equations remain correct within a stated domain, which is the ordinary condition of every physical law, and relativity itself is expected to fail where quantum effects matter”
- C) “Astronomers tried to resolve it for sixty years by proposing an unseen planet, a flattened Sun, and a modification of the exponent”
- D) “Spacecraft navigation uses Newtonian calculations with relativistic corrections applied where they matter”

172.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A theory is not refuted by being shown to have a boundary, and is not safe for being useful inside it. A theory that works perfectly in its own domain is therefore ____

Which choice most logically completes the text?

- A) proved correct outside that domain as well
- B) refuted by the existence of the domain
- C) exempt from any further testing at all
- D) still open to a question about its reach

172.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “resolve” most nearly mean?

- A) make a firm decision
- B) break into parts
- C) account for and remove
- D) see in fine detail

172.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the two accounts set out near the end?

- A) They introduce the perihelion of Mercury by name
- B) They give the two answers to the question just posed
- C) They concede that relativity failed the test
- D) They report the figure of forty-three seconds

172.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 122 of this book. It reports the torsion balance of 1798, the controls Cavendish used against air currents and bias, and says published values of the constant still disagree by more than their stated uncertainties.

Text 1 asks whether a bounded theory is wrong. Based on Text 2, what would be added to that question?

- A) How hard the quantity in the law is to measure
- B) The theory remains correct within a stated domain
- C) Mercury leaves a residual of forty-three seconds
- D) The torsion balance refuted the inverse square law

172.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

On one account yes: the theory says that gravity is a force acting instantaneously at a distance, and that is simply not the case. ___ the equations remain correct within a stated domain.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) As a result,
- C) In short,
- D) On the other hand,

172.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Newton wrote the most successful theory in the history of science ___ and it is still used to fly spacecraft.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) science and
- B) science, and
- C) science; and
- D) science and,

172.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The residual was about forty-three seconds of arc per century.
- Astronomers tried for sixty years to explain it away.
- General relativity predicted the figure exactly from a theory built for other reasons.
- That is why it was accepted rather than merely admired.

The student wants to explain why a small discrepancy could overturn a great theory. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The residual was about forty-three seconds of arc per century
- B) Astronomers tried for sixty years to explain the residual away
- C) General relativity was accepted rather than merely admired
- D) A figure that resisted sixty years of patching was then given exactly by a theory built for other reasons

ملخص المقطع 172 بالعربية

خلاصة: كان قانون نيوتن في الجاذبية أنجح نظرية في تاريخ العلم وهو خاطئ، وهو مع ذلك ما يزال يُستعمل لتسيير المركبات الفضائية. والجملتان صادقتان، والجمع بينهما يحتاج تمييزاً قَلَّ أن يُعطاه الطالب: بين نظرية تُقضى ونظرية وُضعت داخل أوسع منها حالةً حديثة. المعنى: المعنى أن الدليل الذي أوجب التغيير كان صغيراً: فالخضيض في مدار عطارد، أي أقرب نقطة من الشمس، يتقدّم مقداراً ضئيلاً كل قرن، وبعد حساب كل مؤثر جاذبيّ معروف بقي فارق نحو ثلاث وأربعين ثانية قوسية في القرن. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: حاول الفلكيون ستين سنة أن يحلّوه بكونك غير مرئي وبشمس مغلطحة وبتعديل الأس، ثم تنبأت النسبية العامة بالرقم بالضبط من نظرية بُنيت لأسباب أخرى تماماً، ولهذا قُبِلت ولم يُكتَفَ بالإعجاب بها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن التحوّل بين وجهين. والفجّ المتوقع هنا أن يُحسب بيان الحدّ نقضاً للنظرية، مع أن النصّ ينفي ذلك. ويقترن المقطع بالمقطع المئة والثاني والعشرين في أسئلة النصّين المتقابلين.

Whether Efficiency Saves Anything

Lighting a room in Britain is about seven hundred times cheaper in real terms than it was two centuries ago, and the share of income that households spend on lighting has barely changed. The reason is that people bought more light. That observation is the basis of the rebound effect, meaning the increase in use of a service that follows from making it cheaper to provide, and it is the strongest argument against treating efficiency as a straightforward route to lower energy use.

The argument has a weak form that nobody disputes and a strong form that is contested. In the weak form, some of the saving is taken back: a household with a more efficient boiler keeps the house warmer, and a firm with cheaper freight ships more often. Measured direct rebound for household energy services in rich countries is usually put between ten and thirty percent, which leaves most of the saving intact. In the strong form, advanced by a few economists, rebound across a whole economy can exceed the saving entirely, because cheaper energy services raise output and output requires energy.

The evidence does not support the strong form as a general rule and does not exclude it in particular cases. Historical examples of complete rebound exist, lighting among them, and they share a feature: the service was far from saturated, so demand had room to grow. Where a service is already saturated, as domestic refrigeration is in a rich country, rebound is small. The policy conclusion is therefore commensurate with the detail rather than with the slogan. Efficiency standards save energy where demand is near its limit and save much less where it is not. The lighting figure comes from a study that reconstructed the real price of light since the candle.

WHAT THIS PASSAGE IS FOR

- Light is seven hundred times cheaper and the spending share barely changed.
 - Measured direct rebound is usually ten to thirty percent.
 - Complete rebound cases share an unsaturated service.
-

Questions 173.1 to 173.10

on passage 173, Whether Efficiency Saves Anything

173.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The lighting figure comes from a study of the price of light
- B) Rebound is large where a service is already saturated
- C) Direct rebound is usually put between ten and thirty percent
- D) The weak form of the effect holds and the strong form does not

173.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what do the historical cases of complete rebound share?

- A) A service already saturated in a rich country
- B) A service far from saturated, with room to grow
- C) A measured figure between ten and thirty percent
- D) An economy whose output did not require energy

173.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the lighting case does not settle the question in general?

- A) "Lighting a room in Britain is about seven hundred times cheaper in real terms than it was two centuries ago"
- B) "rebound across a whole economy can exceed the saving entirely, because cheaper energy services raise output and output requires energy"
- C) "Where a service is already saturated, as domestic refrigeration is in a rich country, rebound is small"
- D) "The lighting figure comes from a study that reconstructed the real price of light since the candle"

173.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Historical examples of complete rebound exist, lighting among them, and they share a feature: the service was far from saturated, so demand had room to grow. A standard applied to a saturated service would therefore ____

Which choice most logically completes the text?

- A) keep most of the saving it produces
- B) lose the whole saving to extra demand
- C) raise output across the whole economy
- D) be the clearest case of complete rebound

173.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word "commensurate" most nearly mean?

- A) measured in the same units
- B) announced in public
- C) agreed by both sides
- D) matched in scale to

173.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the refrigeration example?

- A) It introduces the rebound effect for the first time
- B) It concedes that efficiency standards save nothing
- C) It marks the condition under which rebound is small
- D) It reports the price of light since the candle

173.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 123 of this book. It explains that an efficiency figure depends on where the system boundary is drawn, describes life cycle analysis, and says its results turn on assumptions that cannot be measured.

Text 1 disputes what efficiency saves. Based on Text 2, what would be added to that dispute?

- A) Rebound is the take-back of part of a saving
- B) A second reason the same saving can be counted twice over
- C) Measured direct rebound usually falls below a third
- D) A boundary drawn wider makes rebound disappear

173.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The argument has a weak form that nobody disputes and a strong form that is contested. ___ in the weak form, some of the saving is taken back.

Which choice completes the text with the most logical transition?

- A) To begin with,
- B) By contrast,
- C) Even so,
- D) In conclusion,

173.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Lighting is far cheaper in real terms than it was two centuries ago ___ the share of income spent on it has barely changed.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) ago, the
- B) ago the
- C) ago, and the
- D) ago; and, the

173.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Rebound is the increase in use that follows from making a service cheaper.
- Historical cases of complete rebound share a service far from saturated.
- Where a service is saturated, rebound is small.
- Measured direct rebound in rich countries is ten to thirty percent.

The student wants to explain why the policy answer depends on the service. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A saving survives where demand is near its limit and is taken back where the service has room to grow
- B) Rebound is the increase in use that follows from a cheaper service
- C) Measured direct rebound in rich countries is ten to thirty percent
- D) Where a service is already saturated the rebound is small

ملخص المقطع 173 بالعربية

خلاصة: إضاءة غرفة في بريطانيا أرخص بالقيمة الحقيقية نحو سبعة مئة مما كانت قبل قرن، ومع ذلك لم تكد حصة الدخل التي تصرفها الأسر على الإضاءة تتغير، والسبب أن الناس اشتروا ضوءاً أكثر. وتلك الملاحظة أساس أثر الارتداد. المعنى: المعنى أن أثر الارتداد هو زيادة استعمال خدمة تتبع رخص تقديمها، وهو أقوى حجة على عدم اتخاذ الكفاءة طريقاً مباشراً إلى خفض استهلاك الطاقة. وللحجة صورة ضعيفة لا ينازع فيها أحد وصورة قوية متنازع فيها. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: في الصورة الضعيفة يُستردّ بعض الوفرة، والارتداد المباشر المقيس في البلدان الغنية يُقدّر بين عشرة وثلاثين في المئة فيبقى معظم الوفرة؛ وفي الصورة القوية قد يفوق الارتداد الوفرة كلّها في اقتصاد كامل. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يحدّ التعميم وعن معنى كلمة في سياقها. والفجّ المتوقع هنا أن تُعمّم حالة الإضاءة على كلّ خدمة، مع أن النصّ يشترط عدم التشبع. ويقترن المقطع بالمقطع المئة والثالث والعشرين في أسئلة النصّين المتقابلين.

A Law of Nature or of Counting

Heat flows from hot to cold, gases mix and do not unmix, and a broken cup does not reassemble. The second law of thermodynamics states this as the claim that entropy, meaning a measure of the number of microscopic arrangements consistent with a given state, does not decrease in an isolated system. The regularity is as reliable as anything in physics. What kind of law it is has been argued since Boltzmann, and the argument is not idle.

On one account it is a law of nature in the ordinary sense, a constraint on what can happen. On the other it is a statistical law, meaning a regularity that holds because the exceptions are overwhelmingly improbable rather than impossible. The second account follows from the mechanics: the molecular equations work equally well run backward, so nothing in them forbids a gas collecting in one corner. The reason it never happens is that the number of arrangements in which the gas is spread out exceeds the number in which it is collected by a factor with more zeros than there are atoms in the galaxy.

The statistical reading is now standard and it has a consequence that is still argued over. If the law is statistical, it says nothing about an individual molecule and nothing in principle about a sufficiently small system, and experiments on single molecules and tiny beads have measured brief, genuine decreases in entropy of exactly the kind the strict reading forbids. The inexorable character of the law is therefore a property of large numbers. That matters for anyone designing a machine at the scale of a cell, where the fluctuations are the same size as the effects being engineered. The relations governing those fluctuations were derived in the 1990s and have been confirmed repeatedly.

WHAT THIS PASSAGE IS FOR

- The molecular equations work equally well run backward.
 - Spread-out arrangements outnumber collected ones enormously.
 - The inexorable character is a property of large numbers.
-

Questions 174.1 to 174.10

on passage 174, A Law of Nature or of Counting

174.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The law holds because exceptions are improbable, not impossible
- B) Nothing in the molecular equations allows a gas to spread out
- C) The relations governing fluctuations were derived in the 1990s
- D) Entropy counts the arrangements consistent with a state

174.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, why does a gas never collect in one corner?

- A) Because the molecular equations forbid it outright
- B) Because entropy cannot decrease in any system at all
- C) Because the spread arrangements vastly outnumber the collected
- D) Because single molecules have been measured directly

174.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the strict reading of the law has been contradicted by measurement?

- A) “Heat flows from hot to cold, gases mix and do not unmix, and a broken cup does not reassemble”
- B) “the molecular equations work equally well run backward, so nothing in them forbids a gas collecting in one corner”
- C) “The regularity is as reliable as anything in physics. What kind of law it is has been argued since Boltzmann”
- D) “experiments on single molecules and tiny beads have measured brief, genuine decreases in entropy of exactly the kind the strict reading forbids”

174.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

If the law is statistical, it says nothing about an individual molecule and nothing in principle about a sufficiently small system. A machine built at the scale of a cell is therefore ____

Which choice most logically completes the text?

- A) governed by the strict reading of the law
- B) exposed to fluctuations the law does not forbid
- C) free of the second law in every respect
- D) as reliable as anything else in physics

174.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “inexorable” most nearly mean?

- A) impossible to resist
- B) cruel in its effects
- C) slow but steady
- D) open to exception

174.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the galaxy of zeros?

- A) It introduces the definition of entropy for the first time
- B) It concedes that the law may fail at any moment
- C) It reports the measurements made on tiny beads
- D) It explains why an allowed event is never seen

174.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 124 of this book. It reports the paddle wheel measurement of the mechanical equivalent of heat, the precision it required, and the way it left one quantity, energy, where there had been two.

Text 1 asks what kind of law the second law is. Based on Text 2, what would be added to that question?

- A) Entropy counts the arrangements consistent with a state
- B) The molecular equations work equally well run backward
- C) The measurement that fixed the quantity the law governs
- D) The paddle wheel measured a decrease in entropy

174.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

On one account it is a law of nature in the ordinary sense, a constraint on what can happen. ___ it is a statistical law, meaning a regularity that holds because the exceptions are overwhelmingly improbable rather than impossible.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) On the other,
- C) As a result,
- D) In short,

174.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The regularity is as reliable as anything in physics ___ and what kind of law it is has been argued since Boltzmann.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) physics; and
- B) physics and
- C) physics: and
- D) physics, and

174.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A statistical law holds because the exceptions are improbable rather than impossible.
- It says nothing in principle about a sufficiently small system.
- Brief decreases in entropy have been measured in single molecules and tiny beads.
- At the scale of a cell the fluctuations are the same size as the effects being engineered.

The student wants to explain why the statistical reading matters to an engineer. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A statistical law holds because exceptions are improbable rather than impossible
- B) Because the law leaves small systems unconstrained, a machine the size of a cell meets fluctuations as large as its own effects
- C) Brief decreases in entropy have been measured in tiny beads
- D) The law says nothing in principle about a very small system

ملخص المقطع 174 بالعربية

خلاصة: الحرارة تسري من الحار إلى البارد، والغازات تمتزج ولا تنفصل، والكوب المكسور لا يعود. والقانون الثاني في الديناميكا الحرارية يقول ذلك دعوى أن الإنتروبيا، أي مقياس عدد الترتيب الميكروية الموافقة لحال معلومة، لا تنقص في نظام معزول، وهذه الانتظامية موثوقة كأى شيء في الفيزياء.

المعنى: المعنى أن أى نوع من القوانين هي مسألة متنازعة منذ بولتزمان: فعلى حساب هي قانون طبيعة بالمعنى المعتاد، قيد على ما يمكن أن يحدث؛ وعلى حساب آخر هي قانون إحصائي، أي انتظامية تصح لأن الاستثناءات بالغة الاستبعاد لا لأنها ممتنعة.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: الحساب الثاني يتبع الميكانيكا، فمعادلات الجزيئات تعمل عملها عكسياً، فلا شيء فيها يمنع تجمع الغاز في زاوية، والذي يمنع وقوعه أن عدد ترتيب الانتشار يفوق عدد ترتيب التجمع بعامل أصغاره أكثر من ذرات المجرة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُقال إن المعادلات تمنع الاستثناء، مع أن النص ينفي ذلك. ويقترن المقطع بالمقطع المئة والرابع والعشرين في أسئلة النصين المتقابلين.

Big Grid or Small

In August 2003 a line in Ohio sagged into a tree, protective equipment disconnected it, the power it had carried transferred to neighboring lines, and those disconnected in turn. Within about eight minutes fifty-five million people in the United States and Canada had no electricity. Each piece of equipment did what it was designed to do, which is the defining feature of a cascading failure, meaning a sequence in which each component protects itself and thereby overloads the next.

Two lessons were drawn from the same event. The first is that the grid was too weakly connected and too weakly coordinated: operators could not see conditions beyond their own territory, the alarm software in the control room had failed and nobody noticed, and stronger interconnection with better shared monitoring would have allowed the disturbance to be absorbed. That argument produced the modern reliability standards and a marked increase in transmission investment.

The second lesson is the opposite. A tightly connected network transmits trouble as efficiently as it transmits power, and a continent-wide machine in which a tree in Ohio can darken New York is fragile by construction. The remedy proposed is islanding, meaning the deliberate separation of parts of a network so that each can run alone, together with local generation and storage. Both arguments are supported by engineering and by subsequent events, and they are not fully reconcilable, because the same connection that shares reserves also shares faults. Grid planning is therefore a choice about which failure mode to prefer, and it is usually presented as a technical question when it is a judgment about risk. Standards written after 2003 are mandatory and enforced with penalties, which was not previously the case. Large blackouts have become less frequent in North America and have not stopped.

WHAT THIS PASSAGE IS FOR

- Each piece of equipment did what it was designed to do.
 - A tightly connected network transmits trouble as efficiently as power.
 - The same connection that shares reserves also shares faults.
-

Questions 175.1 to 175.10

on passage 175, Big Grid or Small

175.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Standards written after 2003 are mandatory and enforced
- B) The same connection that shares reserves also shares faults
- C) Each piece of equipment failed to do what it was designed to do
- D) Fifty-five million people lost power within about eight minutes

175.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what is islanding?

- A) The transfer of power to neighboring lines
- B) The sharing of monitoring between operators
- C) The failure of alarm software in a control room
- D) The deliberate separation of parts of a network

175.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two lessons cannot both be acted on fully?

- A) “they are not fully reconcilable, because the same connection that shares reserves also shares faults”
- B) “operators could not see conditions beyond their own territory, the alarm software in the control room had failed and nobody noticed”
- C) “Standards written after 2003 are mandatory and enforced with penalties, which was not previously the case”
- D) “Large blackouts have become less frequent in North America and have not stopped”

175.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A tightly connected network transmits trouble as efficiently as it transmits power, and a continent-wide machine in which a tree in Ohio can darken New York is fragile by construction. Stronger interconnection therefore ____

Which choice most logically completes the text?

- A) removes both failure modes at once
- B) makes a cascade impossible to start
- C) buys one kind of safety with another
- D) has no effect on either failure mode

175.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “marked” most nearly mean?

- A) written down plainly
- B) large and noticeable
- C) graded for quality
- D) set aside for later

175.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about each piece of equipment?

- A) It names the feature that defines the kind of failure
- B) It introduces the islanding remedy for the first time
- C) It concedes that the equipment was badly designed
- D) It reports the number of people left without power

175.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 125 of this book. It reports that grid frequency is a continuous readout of the balance between generation and demand, and that stored rotational energy governs how fast the frequency can move.

Text 1 weighs two remedies for one failure. Based on Text 2, what would be added to that weighing?

- A) A tightly connected network shares faults as well as power
- B) Each piece of equipment did what it was designed to do
- C) Frequency measures the strength of a connection between regions
- D) The signal that tells an operator a cascade has begun

175.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

That argument produced the modern reliability standards and a marked increase in transmission investment. ___ the second lesson is the opposite.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) As a result,
- C) For its part,
- D) In short,

175.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Each piece of equipment did what it was designed to do ___ and that is the defining feature of a cascading failure.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) do, and
- B) do and
- C) do; and
- D) do and,

175.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Stronger interconnection would have let the disturbance be absorbed.
- A tightly connected network transmits trouble as efficiently as power.
- Both arguments are supported by engineering and by later events.
- The same connection that shares reserves also shares faults.

The student wants to explain why grid planning is a judgment rather than a calculation. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Stronger interconnection would have let the disturbance be absorbed
- B) A tightly connected network transmits trouble as well as power
- C) Both remedies are supported, and the connection that shares reserves shares faults, so the choice is between failure modes
- D) Both arguments are supported by engineering and by later events

ملخص المقطع 175 بالعربية

خلاصة: في آب سنة ألفين وثلاثة تهذّل خطّ في أوهايو على شجرة، ففصلته أجهزة الحماية، فانتقلت قدرته إلى خطوط مجاورة فانفصلت هي الأخرى، وفي نحو ثماني دقائق بقي خمسة وخمسون مليون نسمة في الولايات المتحدة وكندا بلا كهرباء، وكلّ جهاز فعل ما صُمّم له. المعنى: المعنى أنّ هذه هي السمة المميّزة للانهيار المتسلسل، أي تتابع يحمي فيه كلّ عنصر نفسه فيُحمّل التالي فوق طاقته. واستُخرج من الواقعة نفسها درسان: الأول أنّ الشبكة كانت ضعيفة الربط ضعيفة التنسيق، فلم يرَ المشغّلون ما خارج نطاقهم، وتعطل برنامج الإنذار فلم يلاحظ أحد. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: والدرس الثاني نقيض الأول، فالشبكة شديدة الربط تنقل البلاء بكفاءة نقلها القدرة، والدواء المقترح هو التجزير، أي فصل أجزاء الشبكة قصداً ليعمل كلّ جزء وحده، مع توليد وخزن محليين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن وظيفة الجملة المعرّفة. والفجّ المتوقع هنا أن يُقال إنّ الأجهزة أخلّت بما صُمّمت له، مع أنّ النصّ يقول عكسه. ويقترن المقطع بالمقطع المئة والخامس والعشرين في أسئلة النصّين المتقابلين.

What the Two Slits Settled

Light passing through two narrow slits produces a pattern of bright and dark bands on a screen behind them. Thomas Young demonstrated it in 1801, and for a century it was taken as proof that light is a wave, because particles arriving at a screen could not cancel one another out. Then the photoelectric effect showed light delivering its energy in discrete lumps, which waves do not do, and the two bodies of evidence compounded the difficulty rather than resolving it.

The experiment that forced the modern account sends the light through one particle at a time. Each arrival is a single point on the detector, which is particle behavior. After enough arrivals the points have built up the interference pattern, which is wave behavior, and the pattern is there even though no two particles were ever present together to interfere with each other. Put a detector at the slits to find out which one each particle went through and the pattern disappears. The same result has been obtained with electrons, neutrons, whole atoms and molecules of several thousand atoms.

What this settled is narrower than it is usually said to be. It did not show that light is both a wave and a particle, which is a sentence rather than a claim. It showed that neither picture, both of which come from the behavior of ordinary objects, applies to the thing being described, and that the mathematics predicts every observed result without needing either. The remaining argument concerns what the mathematics is about, and it has run for a century without a decisive experiment, which is a different situation from the one in which the physics is unsettled. Several interpretations make identical predictions for every experiment performed so far.

WHAT THIS PASSAGE IS FOR

- One particle at a time still builds the interference pattern.
 - Detecting which slit destroys the pattern.
 - Neither ordinary picture applies to the thing being described.
-

Questions 176.1 to 176.10

on passage 176, What the Two Slits Settled

176.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Several interpretations make identical predictions
- B) The experiment showed that light is both a wave and a particle
- C) Neither picture applies, and the mathematics needs neither
- D) Young demonstrated the pattern of bands in 1801

176.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what happens if a detector is placed at the slits?

- A) The interference pattern disappears
- B) Each arrival becomes a band rather than a point
- C) The particles arrive two at a time
- D) The pattern builds up more quickly

176.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the pattern cannot be explained by particles meeting one another?

- A) “Thomas Young demonstrated it in 1801, and for a century it was taken as proof that light is a wave”
- B) “the pattern is there even though no two particles were ever present together to interfere with each other”
- C) “The same result has been obtained with electrons, neutrons, whole atoms and molecules of several thousand atoms”
- D) “Several interpretations make identical predictions for every experiment performed so far”

176.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

It did not show that light is both a wave and a particle, which is a sentence rather than a claim. A reader who repeats that formula is therefore ____

Which choice most logically completes the text?

- A) stating what the experiment established
- B) denying that the pattern was observed
- C) describing the detector placed at the slits
- D) saying less than it sounds like

176.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “compounded” most nearly mean?

- A) mixed into one substance
- B) paid with added interest
- C) made worse than before
- D) settled by agreement

176.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about what was settled?

- A) It introduces the photoelectric effect for the first time
- B) It narrows the claim before the text restates it
- C) It concedes that the experiment settled nothing
- D) It reports the molecules of several thousand atoms

176.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 126 of this book. It traces the measurement of the speed of light from Romer through Fizeau to the redefinition of the meter in 1983, which made the speed exact by definition.

Text 1 argues about what light is. Based on Text 2, what would be added to that argument?

- A) A property of light that neither picture is needed for
- B) Light delivers its energy in discrete lumps
- C) Each arrival is a single point on the detector
- D) The two-slit pattern fixed the speed of light

176.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Each arrival is a single point on the detector, which is particle behavior. ___ after enough arrivals the points have built up the interference pattern, which is wave behavior.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) As a result,
- C) In short,
- D) And yet,

176.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Each arrival is a single point on the detector ___ after enough arrivals the points have built up the interference pattern.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) detector, after
- B) detector. After
- C) detector after
- D) detector, and, after

176.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Each arrival is a single point on the detector.
- After enough arrivals the points build up the interference pattern.
- No two particles were ever present together to interfere with each other.
- Putting a detector at the slits destroys the pattern.

The student wants to explain why sending one particle at a time was decisive. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Each arrival is a single point on the detector screen itself
- B) After enough arrivals the points build up the pattern
- C) Putting a detector at the slits destroys the pattern entirely
- D) The pattern appeared although no two particles were ever present together, so nothing could have interfered with anything

ملخص المقطع 176 بالعربية

خلاصة: الضوء إذا مرّ في شقين ضيقين أحدث على شاشة خلفهما نمطاً من أهداب مضيئة ومعتمة، وقد أراه توماس يونغ سنة ألف وثمانمئة وواحد، وعُدّ قرناً كاملاً دليلاً على أنّ الضوء موجة، لأنّ جسيمات تصل إلى شاشة لا يلغي بعضها بعضاً. المعنى: المعنى أنّ الأثر الكهروضوئي أظهر بعد ذلك أنّ الضوء يسلم طاقته كُتلاً منفصلة، وذلك ما لا تفعله الأمواج، فزادت الحجتان الإشكاليّ ولم تحلّاه. والتجربة التي أوجبت الحساب الحديث ترسل الضوء جسيماً واحداً في المرة: فكلّ وصول نقطة واحدة، وهذا سلوك جسيم. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: بعد وصولات كافية تكون النقاط قد بنت نمط التداخل، وهذا سلوك موجة، والنمط موجود مع أنّ جسيمين لم يحضرا معاً قطّ ليتداخلوا، وإنّ وضع كاشف عند الشقين اختفى النمط. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفجّ المتوقع هنا أن يُقال إنّ التجربة أثبتت أنّ الضوء موجة وجسيم معاً، مع أنّ النصّ يسمّي ذلك جملةً لا دعوى. ويقترن المقطع بالمقطع المئة والسادس والعشرين في أسئلة النصّين المتقابلين.

Whether Chemistry Is Physics

The strong claim about chemistry is reduction, meaning the proposition that one science is in principle derivable from another, and in this case that chemistry follows from the quantum mechanics worked out by Erwin Schrodinger and others. The claim is not idle, because the derivation has been carried out for small systems. The energy levels of a hydrogen molecule can be computed from first principles to an accuracy better than measurement. Degenerate orbitals, meaning states that share the same energy, fall out of the mathematics without being put in.

The difficulty is scale, and it is not a difficulty of principle in the usual sense. The computational cost of an exact solution grows so fast with the number of electrons that a molecule of forty atoms is already beyond any possible computer, and every practical method is an approximation whose errors are controlled empirically, by comparison with measurement. A chemist therefore uses rules, such as the ones about acids, bonds and reaction rates, that are not derived from the underlying theory and could not be.

Two readings of that situation are current. The reductionist says the limit is practical, that the equations are correct, and that better algorithms have been steadily moving the boundary for fifty years. The opposing position is emergence, meaning the appearance at one scale of regularities that are not stated at the scale below. Its advocates hold that a science whose working concepts are not derivable in practice is not reducible in any sense that matters, and that regularities at the molecular scale are genuine features of the world rather than conveniences. The disagreement is partly about the word reducible, and it has a practical edge: funding goes to the people who claim their level of description is the fundamental one. The boundary has moved from three atoms to several dozen in half a century.

WHAT THIS PASSAGE IS FOR

- Hydrogen molecule energy levels are computed better than measurement.
 - A molecule of forty atoms is already beyond any possible computer.
 - The disagreement is partly about the word reducible.
-

Questions 177.1 to 177.10

on passage 177, Whether Chemistry Is Physics

177.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The boundary has moved from three atoms to several dozen
- B) The derivation has never been carried out for any system
- C) Funding goes to those who claim their level is fundamental
- D) The two sides disagree about what reducible should mean

177.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what happens to the cost of an exact solution?

- A) It falls as the number of electrons rises
- B) It grows so fast that forty atoms is out of reach
- C) It is controlled by comparison with measurement
- D) It has not changed in fifty years of work

177.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the derivation does succeed where it can be carried out?

- A) “A chemist therefore uses rules, such as the ones about acids, bonds and reaction rates, that are not derived from the underlying theory”
- B) “every practical method is an approximation whose errors are controlled empirically, by comparison with measurement”
- C) “The energy levels of a hydrogen molecule can be computed from first principles to an accuracy better than measurement”
- D) “The boundary has moved from three atoms to several dozen in half a century”

177.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A chemist therefore uses rules, such as the ones about acids, bonds and reaction rates, that are not derived from the underlying theory and could not be. Those rules are therefore ____

Which choice most logically completes the text?

- A) held in place by measurement rather than derivation
- B) derived from the equations after all
- C) the exact solutions for forty atoms
- D) of no use to a working chemist

177.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “Degenerate” most nearly mean?

- A) fallen into decay
- B) simplified for use
- C) without any energy
- D) sharing one energy level

177.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the difficulty of scale?

- A) It introduces the degenerate orbitals by name
- B) It concedes that the equations are incorrect
- C) It marks the turn from the success to the limit
- D) It reports the funding that goes to each side

177.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 127 of this book. It reports that Mendeleev left gaps in his table and predicted the properties of the missing elements, and that the reason the columns exist, discrete electron shells, arrived half a century later.

Text 1 argues about whether chemistry reduces to physics. Based on Text 2, what would be added to that argument?

- A) Degenerate orbitals fall out of the mathematics unbidden
- B) A case where the pattern came long before the theory
- C) Exact solutions are impossible for a molecule of forty atoms
- D) The periodic table was derived from the equations in 1869

177.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The claim is not idle, because the derivation has been carried out for small systems. ____ the energy levels of a hydrogen molecule can be computed from first principles to an accuracy better than measurement.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) By contrast,
- C) Even so,
- D) In conclusion,

177.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The difficulty is scale ____ it is not a difficulty of principle in the usual sense.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) scale, it
- B) scale it
- C) scale, and it
- D) scale; and, it

177.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The energy levels of a hydrogen molecule can be computed from first principles.
- Exact solutions are impossible for a molecule of forty atoms.
- Every practical method is an approximation checked against measurement.
- The disagreement is partly about the word reducible.

The student wants to explain why both positions can cite the same facts. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- The equations work for small molecules and not for larger ones, so each side reads the same limit differently
- The energy levels of a hydrogen molecule can be computed exactly
- Exact solutions are impossible for a molecule of forty atoms
- The disagreement is partly about the word reducible itself

ملخص المقطع 177 بالعربية

خلاصة: الدعوى القويّة في الكيمياء هي الاختزال، أي أنّ علماً يُستخرج من علم آخر في الأصل، وهنا أنّ الكيمياء تتبع ميكانيكا الكمّ التي وضعها إرفين شرودنغر وغيره. والدعوى ليست فارغة، لأنّ الاستخراج قد أُجري في أنظمة صغيرة. المعنى: المعنى أنّ مستويات الطاقة في جزيء الهيدروجين تُحسب من المبادئ الأولى بدقّة تفوق القياس، وأنّ المدارات المتساوية الطاقة تخرج من الرياضيات دون أن تُدسّ فيها. والصعوبة في المقياس، وليست صعوبة في الأصل بالمعنى المعتاد. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: كلفة الحلّ المضبوط تنمو بعدد الإلكترونات نموّاً يجعل جزيئاً من أربعين ذرّة خارج قدرة أيّ حاسوب، وكلّ طريقة عملية تقريب تُضبط أخطاؤه بالمقاييس بالقياس، فيستعمل الكيميائي قواعد لا تُستخرج من النظرية. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفجّ المتوقع هنا أن يُقال إنّ الاستخراج لم يُجرَ قط، مع أنّ النصّ يذكر إجراءه في الأنظمة الصغيرة. ويقترن المقطع بالمقطع المئة والسابع والعشرين في أسئلة النصّين المتقابلين.

Two Inquiries, One Bridge

Inquiries into engineering failures reliably produce two kinds of explanation, and the choice between them is not a matter of evidence alone. The technical account names a component and a mechanism: cast iron columns with cast bolt holes, no wind load in the calculation, a seal that stiffens below a certain temperature. The organizational account names a decision process: reports that went no further than a foreman, a schedule that made a delay expensive, an engineer whose objection was overruled by people who had heard objections before.

Both accounts are usually correct and they answer different questions. The technical account identifies what broke. The organizational account explains why the thing that broke was allowed to be in that condition, and it is generally the more useful of the two for preventing the next failure, because the specific component will not recur and the decision process will. Diane Vaughan's analysis of the first shuttle loss gave this the name normalization of deviance, meaning the process by which a repeated warning sign comes to be treated as acceptable because nothing had yet gone wrong.

The dispute matters because the two accounts imply different remedies and different liabilities. A technical finding produces a design change, which is cheap and verifiable. An organizational finding implies that the management structure was unsafe, which is expensive, contestable in court, and refractory to engineering solutions. Inquiries with a narrow remit tend to produce technical findings, and the second shuttle inquiry was unusual in saying so explicitly: it found that the organizational causes identified seventeen years earlier had not been addressed. Both shuttle inquiry reports are public and are read together in engineering ethics courses. The second quotes the first at length on exactly this point.

WHAT THIS PASSAGE IS FOR

- The technical account names what broke.
 - The organizational cause recurs where the component will not.
 - Narrow inquiries tend to produce technical findings.
-

Questions 178.1 to 178.10

on passage 178, Two Inquiries, One Bridge

178.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Two correct accounts of a failure imply different remedies
- B) Only one of the two accounts of a failure is ever correct
- C) Both shuttle reports are read in engineering ethics courses
- D) A technical finding produces a design change

178.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, which account is the more useful for preventing the next failure?

- A) The technical account, because it names the component
- B) Neither, because both answer the same question
- C) The organizational account, because the process recurs
- D) The account with the narrower remit behind it

178.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the choice between the accounts is not driven by evidence alone?

- A) “The technical account names a component and a mechanism: cast iron columns with cast bolt holes, no wind load in the calculation”
- B) “Both accounts are usually correct and they answer different questions”
- C) “it found that the organizational causes identified seventeen years earlier had not been addressed”
- D) “An organizational finding implies that the management structure was unsafe, which is expensive, contestable in court, and refractory to engineering solutions”

178.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Inquiries with a narrow remit tend to produce technical findings, and the second shuttle inquiry was unusual in saying so explicitly. A reader of an inquiry report should therefore ____

Which choice most logically completes the text?

- A) accept the technical finding as the whole account
- B) ask what the inquiry was allowed to examine
- C) prefer the report with the narrowest remit
- D) treat the two accounts as answering one question

178.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “refractory” most nearly mean?

- A) not yielding to treatment
- B) able to resist great heat
- C) arranged in a sequence
- D) open to a cheap remedy

178.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the two sentences about what each account does?

- A) They introduce the normalization of deviance by name
- B) They concede that neither account can be established
- C) They report the findings of the second shuttle inquiry
- D) They assign each account the question it answers

178.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 128 of this book. It explains how a characteristic strength and a safety factor are chosen, and says the method handles only the hazards that have been listed, so codes are revised after failures.

Text 1 distinguishes two accounts of a failure. Based on Text 2, what would be added to that distinction?

- A) A technical finding produces a cheap design change
- B) The organizational account explains why the condition was allowed
- C) Where in the technical account the missing item sits
- D) A safety factor covers the decisions a manager makes

178.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both accounts are usually correct and they answer different questions. ____ the technical account identifies what broke.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) In the first place,
- C) By contrast,
- D) In conclusion,

178.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The technical account identifies what broke ____ and the organizational account explains why it was allowed to be in that condition.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) broke; and
- B) broke and
- C) broke: and
- D) broke, and

178.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A technical finding produces a design change, which is cheap and verifiable.
- An organizational finding implies that the management structure was unsafe.
- That is expensive, contestable in court and refractory to engineering solutions.
- Inquiries with a narrow remit tend to produce technical findings.

The student wants to explain why the organizational account is resisted. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A technical finding produces a change that is cheap and verifiable
- B) The organizational finding costs more, can be fought in court and resists an engineering fix, so a narrow remit is preferred
- C) An organizational finding implies that the management was unsafe
- D) Inquiries with a narrow remit tend to produce technical findings

ملخص المقطع 178 بالعربية

خلاصة: التحقيقات في انهيارات الهندسة تنتج نوعين من التفسير دائمًا، والاختيار بينهما ليس مسألة دليل وحده. فالحساب الفني يسمي قطعة وآلية: أعمدة حديد زهر بثقوب براغي مصبوبة، وحمل ريح غائب عن الحساب، وحشوة تتصلب تحت درجة معلومة.

المعنى: المعنى أن الحساب التنظيمي يسمي مسار قرار: تقارير لم تجاوز رئيس عمل، وجدولًا يجعل التأخير مكلفًا، ومهندسا رُذ اعترضه ممن سمعوا اعتراضات قبله. وكلا الحسابين صحيح عادةً، وهما يجيبان سؤالين مختلفين: الأول يحدد ما انكسر، والثاني يفسر لماذا سُمح له أن يكون على تلك الحال.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: النزاع يهتم لأن الحسابين يستلزمان علاجين مختلفين ومسؤوليتين مختلفتين، فالنتيجة الفنية تُنتج تغييرًا في التصميم رخيماً قابلاً للتحقق، والنتيجة التنظيمية تستلزم أن بنية الإدارة كانت غير آمنة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفج المتوقع هنا أن يُقال إن أحد الحسابين وحده صحيح، مع أن النص يقول إن كليهما صحيح عادةً. ويقترن المقطع بالمقطع المئة والثامن والعشرين في أسئلة النصين المتقابلين.

Whether Small Doses Matter

At high doses the effects of radiation on tissue are not in dispute. The survivor studies from Hiroshima and Nagasaki are the basis of every regulation in force. The argument is entirely about the shape of the curve at the bottom, where the effects are too small to detect in any feasible study, and the practical stakes are large, because almost all regulation concerns that region.

The standard assumption is linear no-threshold, meaning that risk falls in proportion to dose all the way down with no safe level. Its support comes from extrapolating the survivor data, from the mechanism, since a single track through a cell can damage DNA, and from the convenience of a rule that allows doses to be added across a population. The alternative position holds that repair mechanisms handle low doses completely, so that a threshold exists below which there is no effect, and some argue for hormesis, which is the proposal that very small doses are protective by stimulating repair.

The honest position is that the question is not currently decidable. To distinguish the curves at the doses in question would require a study of millions of people with exposure measured individually, and the confounding factors are larger than the effect. Both sides therefore argue from mechanism and from the shape of data collected elsewhere. The policy consequence is asymmetric, which is what keeps the dispute alive: assuming no threshold makes cleanup and shielding extremely expensive, while assuming a threshold risks harm that would never be sensible to detect afterward. Regulators have mostly kept the linear assumption on the ground that it errs in the safer direction, and the cost of that choice is a real argument rather than a settled one. The largest worker study is consistent with the linear assumption and does not exclude a small threshold.

WHAT THIS PASSAGE IS FOR

- The dispute concerns the bottom of the curve only.
 - Distinguishing the curves would require millions of individually measured people.
 - The policy consequence is asymmetric, which keeps the dispute alive.
-

Questions 179.1 to 179.10

on passage 179, Whether Small Doses Matter

179.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The largest worker study excludes a small threshold
- B) The question at low dose is not currently decidable
- C) The effects of radiation at high dose are disputed
- D) Hormesis proposes that small doses are protective

179.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what would it take to distinguish the curves?

- A) A single track through one cell
- B) A study of the Hiroshima survivors
- C) A regulation written in the safer direction
- D) Millions of people with exposure measured individually

179.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the dispute survives because the two choices cost different things?

- A) “assuming no threshold makes cleanup and shielding extremely expensive, while assuming a threshold risks harm that would never be sensible to detect afterward”
- B) “The survivor studies from Hiroshima and Nagasaki are the basis of every regulation in force”
- C) “Its support comes from extrapolating the survivor data, from the mechanism, since a single track through a cell can damage DNA”
- D) “The largest worker study is consistent with the linear assumption and does not exclude a small threshold”

179.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

To distinguish the curves at the doses in question would require a study of millions of people with exposure measured individually, and the confounding factors are larger than the effect. Both sides therefore ____

Which choice most logically completes the text?

- A) have the study they would need already
- B) agree that the linear assumption is proved
- C) argue from mechanism and from other data
- D) measure the effect at the doses in question

179.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “sensible” most nearly mean?

- A) showing good judgment
- B) able to be perceived
- C) aware of a feeling
- D) large in its effect

179.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the opening two sentences of the text?

- A) They mark off what is settled from what is argued
- B) They introduce the proposal called hormesis by name
- C) They concede that high dose effects are unknown
- D) They report the size of the study that would settle it

179.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 129 of this book. It lists the four conditions a radiocarbon date needs, including a calibration curve that doubles back, and says a date reported without its range is not a date.

Text 1 argues about the shape of a curve at low dose. Based on Text 2, what would be added to that argument?

- A) The survivor studies underlie every regulation in force
- B) Confounding factors are larger than the effect being sought
- C) A calibration curve would settle the shape of the dose curve
- D) A case where a curve is reported with its range

179.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The honest position is that the question is not currently decidable. ____ to distinguish the curves at the doses in question would require a study of millions of people with exposure measured individually.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) After all,
- D) In conclusion,

179.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

At high doses the effects of radiation on tissue are not in dispute ____ and the survivor studies are the basis of every regulation in force.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) dispute, and
- B) dispute and
- C) dispute; and
- D) dispute and,

179.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The question at low dose is not currently decidable.
- Assuming no threshold makes cleanup and shielding extremely expensive.
- Assuming a threshold risks harm that could never be detected afterward.
- Regulators have kept the assumption on the ground that it errs in the safer direction.

The student wants to explain why regulators keep the linear assumption. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The question at low dose is not currently decidable either way
- B) Assuming no threshold makes cleanup and shielding expensive
- C) With the question undecidable, the rule that risks cost rather than undetectable harm is the safer error to make
- D) Regulators have kept the linear assumption for many years

ملخص المقطع 179 بالعربية

خلاصة: في الجرعات العالية لا خلاف في آثار الإشعاع على النسيج، ودراسات الناجين من هيروشيما وناغازاكي أساس كل تنظيم ساري. والخلاف كله في شكل المنحنى عند أسفله، حيث تصغر الآثار عن أن تُكشف في أي دراسة ممكنة، والمصالح العملية كبيرة لأن التنظيم كله يكاد يكون في ذلك الحيز.

المعنى: المعنى أن الافتراض المعياري هو الخطية بلا عتبة، أي أن الخطر يهبط تناسباً مع الجرعة إلى الأسفل بلا حد آمن، وسنده الاستقراء من بيانات الناجين، والآلية، إذ قد يُتلف مسار واحد في خلية الحمض النووي، وملاءمة قاعدة تسمح بجمع الجرعات على جماعة.

الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: والموقف الآخر يرى أن آليات الإصلاح تعالج الجرعات الصغيرة كلها، فتوجد عتبة لا أثر دونها، ويذهب بعضهم إلى أن الجرعات الضئيلة وافية لأنها تنبّه الإصلاح.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الخلاف في الجرعات العالية، مع أن النص ينفي ذلك في أول جملة. ويقترن المقطع بالمقطع المئة والتاسع والعشرين في أسئلة النصين المتقابلين.

Two Good Numbers That Disagree

Two methods measure the Hubble constant, which is the present rate at which the universe is expanding, and they have been disagreeing with each other for more than a decade. The first works outward along the distance ladder, using pulsating stars and exploding stars to measure distances to galaxies whose recession speeds are known. The second works from the pattern in the cosmic microwave background, fitting a model of the early universe and calculating what the present rate must be. Both have been refined by large teams with every known error accounted for. Both have been checked by rival teams using the same data.

The figures are about seventy-three kilometers per second per megaparsec from the ladder and about sixty-seven from the background. The gross agreement between two completely independent methods is itself remarkable and conceals a disagreement of about five sigma, meaning five times the combined uncertainty, which in most of physics is the threshold for taking a discrepancy seriously rather than waiting for better data.

Three resolutions are possible and each has advocates. There is an unidentified systematic error in the ladder, most likely in the calibration of the pulsating stars, and new instruments have been deployed to look for it. There is an error in the model fitted to the background, which would require a component of the early universe that nobody has established. Or the standard cosmological model is incomplete, in which case the disagreement is the first measurement of something new. Most working cosmologists have been betting on the first for a decade, and the disagreement has survived every improvement in both methods, which is roughly what a real effect does. Independent methods not using either route have begun to report, with values between the two. Their uncertainties are still too large to decide the question either way.

WHAT THIS PASSAGE IS FOR

- Two independent methods disagree by about five sigma.
 - The figures are about seventy-three and about sixty-seven.
 - The disagreement has survived every improvement in both methods.
-

Questions 180.1 to 180.10

on passage 180, Two Good Numbers That Disagree

180.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Independent methods have begun to report values between the two
- B) The two methods have agreed with each other for a decade
- C) Two careful methods disagree by five times their uncertainty
- D) The background method gives about sixty-seven

180.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, where is the error in the ladder most likely to be?

- A) In the calibration of the pulsating stars
- B) In the model fitted to the background
- C) In the recession speeds of the galaxies
- D) In the standard cosmological model itself

180.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the disagreement has the character of a real effect?

- A) “Both have been refined by large teams with every known error accounted for”
- B) “the disagreement has survived every improvement in both methods, which is roughly what a real effect does”
- C) “Independent methods not using either route have begun to report, with values between the two”
- D) “Their uncertainties are still too large to decide the question either way”

180.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Most working cosmologists have been betting on the first for a decade, and the disagreement has survived every improvement in both methods. The bet is therefore ____

Which choice most logically completes the text?

- A) confirmed by the survival of the gap
- B) the only resolution anyone has proposed
- C) an error in the model of the early universe
- D) looking worse than it did at the start

180.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “gross” most nearly mean?

- A) offensive to the senses
- B) before any deduction
- C) broad rather than exact
- D) a dozen dozen in number

180.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the three resolutions in the text?

- A) They introduce the Hubble constant by name
- B) They sort the possible explanations before weighing them
- C) They concede that neither figure can be measured
- D) They report the figures the two methods give

180.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 130 of this book. It reports how Henrietta Leavitt found the relation between the period and the brightness of pulsating stars, and why the common distance of one cloud made the pattern visible.

Text 1 reports two figures that disagree. Based on Text 2, what would be added to that report?

- A) Where the suspected error in the ladder would have to sit
- B) The ladder uses pulsating stars to reach distant galaxies
- C) The disagreement amounts to about five sigma in size
- D) The relation was calibrated from the microwave background

180.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both have been refined by large teams with every known error accounted for. Both have been checked by rival teams using the same data. ___ the figures are about seventy-three kilometers per second per megaparsec from the ladder and about sixty-seven from the background.

Which choice completes the text with the most logical transition?

- A) Likewise,
- B) For instance,
- C) In short,
- D) And yet,

180.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Both have been refined by large teams ___ and both have been checked by rival teams using the same data.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) teams and
- B) teams, and
- C) teams; and
- D) teams and,

180.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Both methods have been refined with every known error accounted for.
- Both have been checked by rival teams using the same data.
- The gap is about five times the combined uncertainty.
- In most of physics five sigma is the threshold for taking a discrepancy seriously.

The student wants to explain why the disagreement is taken seriously. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Both methods have been refined with every known error accounted for
- B) Both have been checked by rival teams using the same data
- C) The gap is about five times the combined uncertainty of the two
- D) Two carefully checked methods are apart by five times their own uncertainty, which is the usual threshold for a real discrepancy

ملخص المقطع 180 بالعربية

خلاصة: طريقتان تقيسان ثابت هابل، أي المعدل الحاضر لتوسع الكون، وهما مختلفتان إحداهما عن الأخرى أكثر من عقد. الأولى تعمل بالخروج على سُلّم المسافات بنجوم نابضة ونجوم متفجرة لقياس أبعاد مجرات معلومة سرعة تراجعها، والثانية تعمل من نمط خلفية الموجات الدقيقة. المعنى: المعنى أن كلتيهما تُفَحَّت بفرق كبيرة حسب فيها كل خطأ معروف، وكلتاهام مُحصت بفرق منافسة على البيانات نفسها. والرقمان نحو ثلاثة وسبعين من الطريقة الأولى ونحو سبعة وستين من الثانية، والاتفاق الإجمالي بين منهجين مستقلين تمامًا لافت ويخفي خلافاً نحو خمس وحدات. الأهمية في المجال: في مجال العلوم الفيزيائية هذه المادة في مستوى الخلاف: ثلاثة حلول ممكنة ولكل منها قائلون: خطأ منهجي غير مكشوف في السُلّم، أو خطأ في النموذج المركب على الخلفية، أو أن النموذج الكوني المعياري ناقص، فيكون الخلاف أول قياس لشيء جديد. الصلة بالاختبار: في اختبار سات يكثر السؤال عن موضع النزاع وعن الدليل الذي يسنده وعن معنى كلمة في سياقها. والفحّ المتوقّع هنا أن يُقال إن الطريقتين متفقتان، مع أن النض يقول إنهما مختلفتان أكثر من عقد. ويقترن المقطع بالمقطع المئة والثلاثين في أسئلة النصّين المتقابلين.

Whose Judgment Is It

When a narrator makes a judgment, three candidates exist for whose judgment it is. It may be the narrator alone, which is the case whenever a reader can see the narrator being wrong. It may be the implied author, meaning the sensibility a reader reconstructs from the whole text, which is neither the narrator nor the person who wrote it. Or it may be the writer, who had opinions and a biography, and whose letters may say the opposite.

The distinction matters because it decides what an arch or ironic sentence commits anybody to. A narrator who praises a slave owner in an abolitionist novel is not the novel praising him, and a reader who collapses the three levels will read the book as its own opposite. Wayne Booth made the implied author the standard tool for handling this in 1961, and its usefulness is that it can be derived from the text alone, by asking what set of values would make the whole arrangement coherent.

The objection is that this licenses almost any reading. If a sentence that appears to endorse something can be read as ironic, and irony is established by what the reader takes the implied author to think, the argument is circular, and critics have used the move to rescue admired writers from positions the writers plainly held. The discipline that controls it is textual: irony has to be marked somewhere, by exaggeration, by a detail that will not fit, or by a pattern across the book. Where nothing in the text marks it, the sentence stands, and some admired writers believed unpleasant things. The dispute is sharpest in teaching, where a class has to decide what a text is doing before it can discuss it.

WHAT THIS PASSAGE IS FOR

- Three candidates exist for whose judgment a narrator makes.
 - The implied author can be derived from the text alone.
 - Where nothing marks irony, the sentence stands.
-

Questions 181.1 to 181.10on passage 181, *Whose Judgment Is It***181.1**

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Wayne Booth introduced the implied author in 1961
- B) The three levels must be kept apart, and the text marks the irony
- C) An ironic reading can always be defended from the text
- D) A narrator who praises a slave owner speaks for the novel

181.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what is the usefulness of the implied author?

- A) That it reports the opinions in a writer's letters
- B) That it settles what a class should discuss first
- C) That it marks irony by exaggeration
- D) That it can be derived from the text alone

181.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the implied author can be used to excuse a writer?

- A) “the argument is circular, and critics have used the move to rescue admired writers from positions the writers plainly held”
- B) “it can be derived from the text alone, by asking what set of values would make the whole arrangement coherent”
- C) “irony has to be marked somewhere, by exaggeration, by a detail that will not fit, or by a pattern across the book”
- D) “The dispute is sharpest in teaching, where a class has to decide what a text is doing”

181.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Where nothing in the text marks it, the sentence stands, and some admired writers believed unpleasant things. A critic who called such a sentence ironic would therefore

—
Which choice most logically completes the text?

- A) be following the textual discipline
- B) have found a detail that will not fit
- C) be supplying the irony rather than reading it
- D) be quoting the writer's own letters

181.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “arch” most nearly mean?

- A) curved overhead
- B) knowingly sly
- C) chief among many
- D) plainly sincere

181.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the abolitionist novel?

- A) It shows the cost of collapsing the three levels
- B) It defines the implied author for a reader
- C) It reports when Booth introduced the tool
- D) It concedes that the novel endorses the praise

181.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 131 of this book. It ranks three kinds of evidence for calling a narrator unreliable, from tone at the weakest to a discrepancy between what the narrator reports and how other characters respond at the strongest.

Text 1 requires that irony be marked in the text. Based on Text 2, which choice best describes the strongest mark available?

- A) A voice the reader finds self-serving
- B) A date in the narration that cannot be right
- C) A critic who has changed his mind twice
- D) A gap between a report and how the room responds

181.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Its usefulness is that it can be derived from the text alone. ____ the objection is that this licenses almost any reading.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For example,
- C) On the other hand,
- D) In other words,

181.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

It may be the narrator alone ____ and a reader can see the narrator being wrong.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) alone, and
- B) alone and
- C) alone; and
- D) alone and,

181.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The implied author can be derived from the text alone.
- The objection is that this licenses almost any reading.
- Irony has to be marked by exaggeration, a detail that will not fit, or a pattern.
- Where nothing marks it, the sentence stands.

The student wants to explain what keeps an ironic reading honest. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The implied author can be derived from the text alone
- B) The objection is that the tool licenses almost any reading
- C) A reading counts only where exaggeration, a misfitting detail or a pattern marks the irony
- D) Where nothing marks the irony, the sentence stands as written

ملخص المقطع 181 بالعربية

خلاصة: إذا أصدر الراوي حكمًا فثلاثة مرشحين لصاحبه: الراوي وحده، وذلك حيث يرى القارئ الراوي مخطئًا؛ والمؤلف المضمّر، أي الحس الذي يبينه القارئ من النصّ كله وهو ليس الراوي ولا الكاتب؛ أو الكاتب نفسه، وله آراء وسيرة ورسائل قد تقول العكس.

المعنى: المعنى أنّ التمييز مهمّ لأنّه يقرّر ما نلزمه الجملة الساخرة أحدًا. فإِذا يُثني على مالك عبيد في رواية تدعو إلى إلغاء العبودية ليس الرواية تُثني عليه، ومن طوى المستويات الثلاثة قرأ الكتاب نقيض نفسه.

الأهمية في المجال: في مجال الإنسانية هذه المادة في مستوى الخلاف: والاعتراض أنّ هذه الأداة تُجيز أيّ قراءة تقريبًا، فالحجّة دائرية، وقد استعمل نقاد هذه الحركة لتخليص كتاب معجّب بهم من مواقف قالوا بها صريحًا. والضابط نصّي: يجب أن تُعلّم السخرية في موضع ما.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصّين المتقابلين. والفخ المتوقّع هنا أن تُجاز السخرية بلا علامة في النصّ، مع أنّ النصّ يشترط العلامة. ويقترن المقطع بالمقطع الحادي والثلاثين بعد المئة.

Psychology or Function

Vladimir Propp analyzed a hundred Russian folk tales and found that the characters could be reduced to seven roles: the villain, the donor, the helper, the princess, the dispatcher, the hero and the false hero. The tales differ in who fills each role and in almost nothing else. That is formalism, meaning the study of a work as a structure of parts, and on this account a character is a character function, meaning the role a figure performs in a plot, with personality as decoration.

The humanist reply is that this works for folk tales and fails for novels. Readers argue about whether a character would really have done something, which is a psychological question, and novelists revise in order to make motive consistent, which is a psychological labor. A critic who says that Dorothea Brooke is the dispatcher has described a function and left out everything the book spends eight hundred pages on. Readers also form attachments that no account of function predicts.

The sharpest version of the dispute concerns what a reader is doing when making inferences about a character's inner life. The formalist says the reader is constructing from textual cues and that the construction is an effect the author arranged, so talk of a character's psychology is a convenient shorthand for a pattern on the page. The humanist says the shorthand is the point, that fiction is an instrument for modeling other minds, and that an account which cannot say why anyone would be affected by a novel has explained the wrong thing. Both positions are held by serious people and the disagreement is about what literary study is for. Cognitive approaches have given the humanist side experimental support about mind-reading in readers. The formalist side points out that the same experiments work on tales with no psychology in them at all.

WHAT THIS PASSAGE IS FOR

- Propp reduced a hundred tales to seven character roles.
 - Novelists revise in order to make motive consistent.
 - The disagreement is about what literary study is for.
-

Questions 182.1 to 182.10

on passage 182, Psychology or Function

182.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Propp reduced the characters to seven roles
- B) Cognitive experiments settle the dispute for one side
- C) The two sides disagree about what literary study is for
- D) A character is nothing but a function in a plot

182.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, how many roles did Propp identify?

- A) Seven in all
- B) A hundred of them
- C) Three or four
- D) Eight hundred

182.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the formalist account leaves out what a novel spends its length on?

- A) “The tales differ in who fills each role and in almost nothing else”
- B) “A critic who says that Dorothea Brooke is the dispatcher has described a function and left out everything the book spends eight hundred pages on”
- C) “Readers also form attachments that no account of function predicts”
- D) “The formalist side points out that the same experiments work on tales with no psychology in them at all”

182.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Novelists revise in order to make motive consistent, which is a psychological labor. A critic who treated personality as decoration would therefore ____

Which choice most logically completes the text?

- A) explain why readers form attachments
- B) have described a hundred folk tales
- C) be following the humanist account
- D) have no account of that revision

182.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “affected” most nearly mean?

- A) pretended for show
- B) troubled by illness
- C) moved in feeling
- D) left unchanged by

182.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the two sentences about readers arguing and novelists revising?

- A) They define character function for a reader
- B) They give the grounds of the humanist reply
- C) They list the seven roles Propp identified
- D) They concede that the novel is a structure

182.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 132 of this book. It reports two canceled chapters of Persuasion in which a reconciliation is handled through an arranged interview, replaced in the published version by a scene in which a letter is written and overheard.

Text 1 says novelists revise to make motive consistent. Based on Text 2, which choice best supplies a documented instance of that labor?

- A) A reconciliation rewritten from an interview into an overheard scene
- B) A manuscript that is undated and inferred from the paper
- C) A novelist who died a few months after finishing
- D) A family that edited what survived of the papers

182.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The tales differ in who fills each role and in almost nothing else. ____ the humanist reply is that this works for folk tales and fails for novels.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) In other words,
- D) Even so,

182.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Readers argue about whether a character would really have done something ____ and novelists revise in order to make motive consistent.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) something and
- B) something, and
- C) something; and
- D) something and,

182.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Cognitive approaches have given the humanist side experimental support.
- The support concerns mind-reading in readers.
- The same experiments work on tales with no psychology in them.
- The disagreement is about what literary study is for.

The student wants to explain why the experiments leave the dispute open. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Cognitive approaches have given the humanist side experimental support
- B) The support concerns the mind-reading that readers do
- C) The disagreement is about what literary study is for
- D) A result that holds for tales without psychology decides nothing between the two accounts

ملخص المقطع 182 بالعربية

خلاصة: حلل فلاديمير بروب مئة حكاية شعبية روسية فوجد أن الشخصيات تُردّ إلى سبعة أدوار: الشرير والمانح والمساعد والأميرة والمرسل والبطل والبطل الزائف، وأنّ الحكايات تختلف في من يملأ كل دور ولا تكاد تختلف في شيء غيره. المعنى: المعنى أنّ تلك هي الشكلائية، أي دراسة العمل بنية من أجزاء، وعلى هذا الحساب الشخصية وظيفته في حبكة والطبع زينة. والردّ الإنساني أنّ هذا يصلح للحكايات الشعبية ويفشل في الروايات، فالقراء يتجادلون أكان الشخص ليفعل ذلك فعلاً، وهو سؤال نفسي. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: أحد صور الخلاف تتعلّق بما يفعله القارئ حين يستنتج عن باطن شخصية. فالشكلائي يقول إنه يبني من قرائن نصية وإنّ البناء أثر رتبته المؤلف، والإنساني يقول إنّ الأدب آلة لنمذجة عقول الآخرين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُحسب التجارب حاسمة لأحد الطرفين، مع أنّ النص يذكر ردّاً يُفقد حسمها. ويقترن المقطع بالمقطع الثاني والثلاثين بعد المئة.

Meaning or Mood

The strong claim about imagery is that images are symbols, meaning that they stand for something beyond themselves in a way that can be stated: the river is time, the garden is innocence, the fog is moral confusion. The claim licenses a whole genre of criticism and a whole genre of examination answer, and it has an obvious problem, which is that the equations are supplied by the critic and cannot be checked against anything.

The deflationary alternative holds that most images work on mood rather than on meaning. Fog in a novel makes a reader uneasy, which is an effect in the reader and requires no translation. On this account an involved symbolic reading is a way of converting an experience into a proposition, and something is lost rather than gained in the conversion. Writers have often said so bluntly when asked what their images mean, and the usual critical answer is that an author's statement does not settle the question, a position known as the intentional fallacy.

That answer is good as far as it goes and does not resolve the dispute, since it removes one constraint without supplying another. What constrains a symbolic reading in practice is pattern and consistency: an image that recurs, that is placed at the turns of the plot, and that other elements of the text treat as significant is doing more work than one that appears once. The best current position is that the two accounts are about different images rather than rival accounts of all of them, and that the critical skill lies in telling which kind is on the page. Cleanth Brooks and his successors made the stronger case and the weaker one has worn better. Examination boards have quietly moved toward requiring evidence of pattern rather than assertion of symbolism. That shift is visible in published mark schemes over twenty years.

WHAT THIS PASSAGE IS FOR

- Symbolic equations are supplied by the critic.
 - Fog makes a reader uneasy without needing translation.
 - Pattern and consistency constrain a symbolic reading.
-

Questions 183.1 to 183.10

on passage 183, Meaning or Mood

183.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The intentional fallacy removes one constraint
- B) Examination boards now require evidence of pattern
- C) Every image in a text is a symbol to be translated
- D) The two accounts fit different images, and the skill is telling which

183.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what constrains a symbolic reading in practice?

- A) A statement of purpose from the author
- B) Recurrence and placement at the turns
- C) The mood an image produces in a reader
- D) The genre of examination answer it serves

183.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the deflationary account treats an image as an effect rather than a message?

- A) “the equations are supplied by the critic and cannot be checked against anything”
- B) “Cleanth Brooks and his successors made the stronger case and the weaker one has worn better”
- C) “Fog in a novel makes a reader uneasy, which is an effect in the reader and requires no translation”
- D) “Examination boards have quietly moved toward requiring evidence of pattern rather than assertion of symbolism”

183.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What constrains a symbolic reading in practice is pattern and consistency: an image that recurs, that is placed at the turns of the plot, and that other elements of the text treat as significant. An image that appears once in passing is therefore ____

Which choice most logically completes the text?

- A) a poor candidate for a symbolic reading
- B) the strongest evidence a critic can cite
- C) excluded from the deflationary account
- D) settled by a statement from the author

183.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “involved” most nearly mean?

- A) taking part in
- B) emotionally caught up
- C) plainly stated
- D) elaborately worked out

183.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the intentional fallacy?

- A) It defines a symbol for the first time
- B) It reports what mark schemes now require
- C) It names the standard reply and limits it
- D) It settles the dispute in favor of the critic

183.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 133 of this book. It describes the concordance as an index of every occurrence of every word with its context, and says counting establishes presence, distribution and comparison while leaving aesthetic effect untouched.

Text 1 makes pattern the constraint on a symbolic reading. Based on Text 2, which choice best describes how such a pattern is established?

- A) By asking a writer what the images mean
- B) By indexing every occurrence and comparing counts
- C) By showing that an image works on a reader
- D) By publishing a revised examination mark scheme

183.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

That answer is good as far as it goes. ___ it removes one constraint without supplying another.

Which choice completes the text with the most logical transition?

- A) Even so,
- B) As a result,
- C) In other words,
- D) For instance,

183.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Fog in a novel makes a reader uneasy ___ and that is an effect in the reader.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) uneasy and
- B) uneasy; and
- C) uneasy, and
- D) uneasy and,

183.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The strong claim is that an image stands for something statable.
- The deflationary account says most images work on mood.
- The two accounts are about different images.
- The critical skill lies in telling which kind is on the page.

The student wants to explain what a reader of images actually has to decide. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Since some images translate and others only color the mood, the decision is which is on the page
- B) The strong claim is that an image stands for something statable
- C) The deflationary account says most images work on mood
- D) The two accounts are about different images entirely

ملخص المقطع 183 بالعربية

خلاصة: الدعوى القويّة في الصور أنّها رموز، أي أنّها تنوب عن شيء وراءها نيابةً يمكن النطق بها: النهر هو الزمن، والحديقة هي البراءة، والضباب هو التشوّش الأخلاقيّ. وهذه الدعوى تُجيز جنسًا كاملاً من النقد ومن أجوبة الامتحان.

المعنى: المعنى أنّ لها مشكلة ظاهرة: المعادلات يأتي بها الناقد ولا يمكن فحصها بشيء. والبديل المُخفّض يقول إنّ معظم الصور تعمل في المزاج لا في المعنى: فالضباب في رواية يُقلق القارئ، وذلك أثر فيه لا يحتاج إلى ترجمة.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: والذي يضبط القراءة الرمزية عمليًا هو النمط والاتساق: صورة تتكرّر، وتوضع في منعطفات الحبكة، وتعاملها عناصر النص الأخرى على أنّها دالّة، تعمل أكثر ممّا تعمل صورة تظهر مرّة واحدة.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُعمّم الدعوى القويّة على كلّ صورة، مع أنّ النص يجعل الحسابين عن صور مختلفة. ويقترن المقطع بالمقطع الثالث والثلاثين بعد المئة.

Does Free Verse Have Form

Walt Whitman published verse with no regular meter and no rhyme in 1855, and the objection was immediate: without a counted pattern there is nothing to depart from, so the line breaks are arbitrary and the result is prose with ragged edges. The objection is not frivolous. If the reader has no expectation, the devices that depend on expectation cannot work, and a line ending that suspends a word cannot suspend anything.

The defense has two parts. The first is that free verse substitutes other patterns for meter: the length of the breath, the repetition of a grammatical shape, parallel clauses that accumulate, and cadence, meaning the rhythmic shape of a phrase independent of a counted meter. Whitman's catalogues are built on grammatical repetition as strictly as a sonnet is built on a rhyme scheme. The second part is empirical: readers do hear the line breaks, and rearranging the lines of a good free verse poem damages it in ways that can be demonstrated to a class.

The strongest version of the criticism concedes both points and narrows the claim. Free verse has form, it says, but the form is established inside each poem rather than inherited, which means that a reader must learn the pattern from the poem itself and cannot bring one to it. That makes the poet's task harder and the reader's task less reliable, and it explains why the worst free verse is worse than the worst metrical verse. Both sides now accept something like that, and the argument has moved to whether a studied irregularity in metrical verse achieves the same thing more economically. Eliot wrote that no verse is free for the poet who wants to do a good job, which both sides quote.

WHAT THIS PASSAGE IS FOR

- Without expectation the devices that depend on it cannot work.
 - Free verse substitutes grammatical repetition and cadence for meter.
 - The form is established inside each poem rather than inherited.
-

Questions 184.1 to 184.10

on passage 184, Does Free Verse Have Form

184.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Free verse has form, established inside each poem
- B) Whitman published verse without meter in 1855
- C) Free verse is prose with ragged edges
- D) Eliot wrote that no verse is free for a serious poet

184.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does free verse put in place of meter?

- A) A rhyme scheme borrowed from the sonnet
- B) A pattern a reader brings to the poem
- C) Breath length, grammatical repetition and cadence
- D) A line ending that suspends a word

184.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the line breaks of a good free verse poem do work?

- A) “without a counted pattern there is nothing to depart from, so the line breaks are arbitrary”
- B) “the length of the breath, the repetition of a grammatical shape, parallel clauses that accumulate”
- C) “Eliot wrote that no verse is free for the poet who wants to do a good job”
- D) “readers do hear the line breaks, and rearranging the lines of a good free verse poem damages it in ways that can be demonstrated to a class”

184.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The form is established inside each poem rather than inherited, which means that a reader must learn the pattern from the poem itself. A reader who brought an expectation from elsewhere would therefore ____

Which choice most logically completes the text?

- A) hear the line breaks more reliably
- B) be measuring against the wrong pattern
- C) be reading a sonnet rather than free verse
- D) find the poem damaged by rearrangement

184.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “studied” most nearly mean?

- A) carefully deliberate
- B) examined by scholars
- C) learned by heart
- D) entirely accidental

184.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence conceding both points?

- A) It defines cadence for a reader
- B) It dates the first free verse publication
- C) It withdraws the objection altogether
- D) It narrows the objection into a claim both sides accept

184.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 134 of this book. It reports that three measurable metrical features change steadily across a career and that counting them against plays of known date gives a curve on which an undated play can be placed.

Text 1 says metrical verse inherits its pattern. Based on Text 2, which choice best shows that an inherited pattern can still be measured?

- A) An understated late style differs without being better
- B) The method leaves collaboration and development apart
- C) Counted features shift steadily across a career
- D) A play revised late looks late to the counting

184.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The objection is not frivolous. ____ if the reader has no expectation, the devices that depend on expectation cannot work.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) After all,
- C) In other words,
- D) All the same,

184.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The defense has two parts ____ and the first is that free verse substitutes other patterns for meter.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) parts and
- B) parts; and
- C) parts and,
- D) parts, and

184.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The form is established inside each poem rather than inherited.
- A reader must learn the pattern from the poem itself.
- That makes the task of the poet harder and the reader less reliable.
- Readers do hear the line breaks in a good poem.

The student wants to explain why bad free verse is worse than bad metrical verse. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The form of a free verse poem is established inside it
- B) A poet who must build the pattern from nothing can fail where an inherited one would carry
- C) A reader has to learn the pattern from the poem itself
- D) Readers do hear the line breaks in a good poem

ملخص المقطع 184 بالعربية

خلاصة: نشر والت ويتمن شعراً بلا وزن منتظم ولا قافية سنة ألف وثمانمئة وخمس وخمسين، وكان الاعتراض فوراً: بلا نمط معدود لا يوجد ما يُنحرف عنه، فتكون فواصل الأسطر تعسفية والحصيلة نثر بحواشٍ مهلهلة.

المعنى: المعنى أن الاعتراض ليس سخيلاً، فإن لم يكن للقارئ توقع لم تعمل الأدوات التي تعتمد على التوقع. والدفاع شقّان: الأول أن الشعر الحرّ يُبدل أنماطاً أخرى من الوزن: طول النّفس، وتكرار الميعة النحوية، والجمل المتوازية المتراكمة، والنغمة.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: والشقّة الثانية تجريبية: القراء يسمعون فواصل الأسطر فعلاً، وإعادة ترتيب أسطر قصيدة حرة جيّدة يُفسدها إفساداً يمكن إظهاره لصفّ دراشي. وأقوى صور النقد تُسلم بالأمرين وتضيّق الدعوى.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النصّين المتقابلين. والفخ المتوقّع هنا أن يُقنّع بالاعتراض الأول وحده، مع أن النصّ يردّ عليه في شقّتين. ويقترن المقطع بالمقطع الرابع والثلاثين بعد المئة.

The Play or the Production

A play exists in two states and the question of which one is the work has produced a century of argument. On the text-centered account the play is what the author wrote, productions are interpretations of it, and a production that contradicts the text has failed in the way a translation that reverses a sentence has failed. On the stage-centered account a play is a score for performance, incomplete until performed, and what a reader holds is not the work but the instructions.

Directors' theater, meaning a tradition in which the director's interpretation is the primary creative act, pushed the second account hard from the middle of the twentieth century. Productions set the plays in asylums and boardrooms, cut and reordered freely, cast against the text, and in several celebrated cases produced something that could arrest an audience that had seen the play twenty times. Defenders argued that this is what the plays had always received, since the Victorians cut a third and nobody now calls that fidelity.

The text-centered reply has a narrow and strong version. It concedes that staging is creative and insists that a production which reverses the meaning of the text is making a different work and should say so, because the alternative is a situation in which a student who has seen the play has not encountered it. That seems to be roughly where practice has landed. Programs now routinely describe what has been done, adaptations are labeled as such, and the serious disagreements have moved to specific cases rather than to the principle. Copyright gives living playwrights a veto that dead ones do not have, which shapes the argument in practice. Several estates have withdrawn permission from productions they considered unfaithful. The principle is now largely agreed and the cases are fought one at a time.

WHAT THIS PASSAGE IS FOR

- A play exists in two states.
 - The Victorians cut a third and nobody calls that fidelity.
 - A production that reverses the text is making a different work.
-

Questions 185.1 to 185.10

on passage 185, The Play or the Production

185.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Victorian productions commonly cut a third of the text
- B) Practice has settled on labeling what a production has done
- C) A production that reverses the text has always failed
- D) Copyright gives living playwrights a veto

185.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the stage-centered account call a play?

- A) A translation of the written text
- B) The primary creative act of a director
- C) A work completed by the author alone
- D) A score for performance, incomplete until performed

185.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the narrow text-centered reply concedes a great deal?

- A) “It concedes that staging is creative and insists that a production which reverses the meaning of the text is making a different work and should say so”
- B) “Programs now routinely describe what has been done, adaptations are labeled as such”
- C) “Copyright gives living playwrights a veto that dead ones do not have”
- D) “Several estates have withdrawn permission from productions they considered unfaithful”

185.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A production which reverses the meaning of the text is making a different work and should say so, because the alternative is a situation in which a student who has seen the play has not encountered it. A program that labels an adaptation therefore ____

Which choice most logically completes the text?

- A) rules out any reordering of the scenes
- B) returns the production to the written text
- C) removes the objection the reply raises
- D) gives a living playwright a veto

185.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “arrest” most nearly mean?

- A) take into custody
- B) seize the attention of
- C) bring to a halt
- D) leave unmoved

185.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the reference to the Victorians?

- A) It answers a charge of infidelity with a precedent
- B) It defines a performance text for a reader
- C) It reports which estates withdrew permission
- D) It argues that cutting is always wrong

185.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 135 of this book. It describes the promptbook as a working copy marked up for one production, and says such books show precisely what nineteenth-century productions removed and when it came back.

Text 1 cites the Victorians as a precedent for free staging. Based on Text 2, which choice best describes how that precedent is known?

- A) From photographs that show poses rather than performances
- B) From reviews, letters and memoirs of the period
- C) From recordings made after the middle of the century
- D) From marked-up copies that record every cut

185.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Defenders argued that this is what the plays had always received. ____ the text-centered reply has a narrow and strong version.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) Even so,
- D) In other words,

185.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A play exists in two states ____ and the question of which one is the work has produced a century of argument.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) states, and
- B) states and
- C) states; and
- D) states and,

185.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A production can reverse the meaning of the text.
- A student who has seen the play may have failed to encounter it.
- Programs now routinely describe what has been done.
- Adaptations are labeled as such.

The student wants to explain what the labeling of adaptations is meant to prevent. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A production is able to reverse the meaning of the text
- B) Programs now routinely describe what has been done
- C) A label keeps a reversed staging from passing for the play a student came to see
- D) Adaptations in the theater are now labeled as such

ملخص المقطع 185 بالعربية

خلاصة: المسرحية موجودة في حالين، وسؤال أيهما هو العمل أنتج قرناً من الجدال. فعلى الحساب المتمركز حول النص المسرحية هي ما كتبه المؤلف، والعروض تأويلات له، والعرض الذي يناقض النص فشل كما تفشل ترجمة تقلب جملة. المعنى: المعنى أنه على الحساب المتمركز حول خشبة المسرحية نوتة للتمثيل، ناقصة حتى تُتمثل، وما يحمله القارئ ليس العمل بل التعليمات. ومسرح المخرجين، أي تقليد يكون فيه تأويل المخرج هو الفعل الخلاق الأول، دفع الحساب الثاني دفعا قويا. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: للرد المتمركز حول النص صورة ضيقة قوية: يُسلم بأن الإخراج خلاق، ويلزم العرض الذي يقلب معنى النص بأن يقول إنه يصنع عملاً آخر، وإلا أوجد طالب رأى المسرحية ولم يلقها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسم الخلاف لأحد الطرفين، مع أن النص يقول إن الممارسة استقرت على التصريح بما فعل. ويقترن المقطع بالمقطع الخامس والثلاثين بعد المئة.

Limit or Licence

The case against genre, put most sharply by Edmund Wilson, is that it is a marketing category masquerading as a kind, that it rewards repetition, and that a writer working inside it is solving a puzzle rather than making something. The literary hierarchy, meaning the ranking of kinds of writing by assumed seriousness, has placed detective fiction, romance, science fiction and the western near the bottom for a century, and the reasons given usually amount to the observation that such books resemble one another.

The case for genre begins by pointing out that the observation is true of everything. Sonnets resemble one another, tragedies resemble one another, and nobody holds that against them. A form that a reader knows is a form a writer can use: the expectation is a resource, and the most admired works in several genres are the ones that bend a known rule at a known point. Pastiche, meaning open imitation of a style without deceit or mockery, is only legible where the style is familiar enough to be recognized.

What makes this a real dispute rather than a misunderstanding is that both sides can point to the same books. A detective novel that keeps every rule is competent and forgettable, which supports the critics. A detective novel that breaks one rule precisely is remarkable, which supports the defenders and depends on the rules the critics complain about. The position that survives both is unexciting: a genre is a set of constraints, constraints are what make significant choices possible, and the quality of the writing is a separate question from the kind of book it is. Prize juries have moved substantially on this in thirty years, and several genre writers now appear on literary lists. The hierarchy has not disappeared and the arguments for it have become quieter.

WHAT THIS PASSAGE IS FOR

- Sonnets resemble one another and nobody holds it against them.
 - Pastiche is legible only where the style is familiar.
 - Constraints are what make a significant choice possible at all.
-

Questions 186.1 to 186.10

on passage 186, Limit or Licence

186.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Prize juries have moved substantially in thirty years
- B) Sonnets and tragedies resemble one another
- C) Constraints make choices possible, and quality is a separate question
- D) Resemblance between books settles their worth

186.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, on what does pastiche depend?

- A) A style familiar enough to be recognized
- B) A reader who has studied the hierarchy
- C) A rule broken at a known point
- D) Deceit about the source of the style

186.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the same evidence serves both sides of the dispute?

- A) “Sonnets resemble one another, tragedies resemble one another, and nobody holds that against them”
- B) “A detective novel that keeps every rule is competent and forgettable, which supports the critics. A detective novel that breaks one rule precisely is remarkable, which supports the defenders”
- C) “Prize juries have moved substantially on this in thirty years, and several genre writers now appear on literary lists”
- D) “the reasons given usually amount to the observation that such books resemble one another”

186.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A form that a reader knows is a form a writer can use: the expectation is a resource, and the most admired works in several genres are the ones that bend a known rule at a known point. A writer in a form nobody recognized would therefore ____

Which choice most logically completes the text?

- A) be free of the literary hierarchy
- B) have broken a rule precisely
- C) be writing competent and forgettable work
- D) have no expectation to work against

186.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “Pastiche” most nearly mean?

- A) a mocking parody
- B) a hidden forgery
- C) open imitation of a style
- D) a mixture of materials

186.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentences about sonnets and tragedies?

- A) They define the literary hierarchy for a reader
- B) They turn the charge of resemblance against itself
- C) They report how prize juries have changed
- D) They concede that genre rewards repetition

186.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 136 of this book. It tests the usual account of the gothic novel against bibliography and names the pattern of a first instance, a gap, and then a rush of derivative work as what one would expect if a form were being established.

Text 1 says a known form is a resource for a writer. Based on Text 2, which choice best describes how such a form becomes known?

- A) A first instance is followed by a rush of imitation
- B) Cheap print of the period survives very badly
- C) A collector thought the surviving items respectable
- D) Catalogues list items with dates and printers

186.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The case for genre begins by pointing out that the observation is true of everything. ____ sonnets resemble one another, and nobody holds that against them.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For instance,

186.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A detective novel that keeps every rule is competent and forgettable ____ and that supports the critics.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) forgettable and
- B) forgettable, and
- C) forgettable; and
- D) forgettable and,

186.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A genre is a set of constraints.
- Constraints are what make significant choices possible.
- The quality of the writing is a separate question from the kind of book.
- Both sides can point to the same books.

The student wants to explain the position that survives both sides. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A genre is a set of constraints on a writer
- B) Both sides of the dispute can point to the same books
- C) Constraints are what make significant choices possible
- D) Constraints make choices possible, and the quality of a book is a separate question

ملخص المقطع 186 بالعربية

خلاصة: الدعوى على النوع الشعبي أنه فئة تسويق تتركز بجزء جنس أدبي، وأنه يجزى التكرار، وأن الكاتب داخله يحل لغزاً لا يصنع شيئاً. والتراتب الأدبي، أي ترتيب أنواع الكتابة بجدية مفترضة، وضع البوليسية والرومانسية والخيال العلمي قريباً من الأسفل قرناً. المعنى: المعنى أن الدعوى للنوع تبدأ بأن تلك الملاحظة صحيحة في كل شيء: فالسونيئات تتشابه، والتراجيديا تتشابه، ولا يأخذ أحد ذلك عليها. والشكل الذي يعرفه القارئ شكل يستطيع الكاتب أن يستعمله، فالتوقع مورد. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: ما يجعل هذا خلافاً حقيقياً أن الطرفين يشران إلى الكتب نفسها. فرواية بوليسية تحفظ كل قاعدة متقنة منسية، وهذا يسند النقاد؛ ورواية تنقض قاعدة واحدة بدقة لافتة، وهذا يسند المدافعين. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُجسم الحكم بالتشابه وحده، مع أن النص يفصل جودة الكتابة عن نوع الكتاب. ويقتزن المقطع بالمقطع السادس والثلاثين بعد المئة.

Reading With Period Eyes

A seventeenth-century Dutch painting of a woman at a window may be a scene, or it may be a warning about vanity, and the choice between those readings is the oldest methodological dispute in art history. Iconography, meaning the study of the conventional meanings attached to images in a period, holds that such pictures used a shared code: the mirror, the dog, the open window and the extinguished candle all carried meanings that a contemporary viewer read without effort. The evidence is emblem books, sermons and household inventories, of which thousands survive from the seventeenth century.

The objection is not that the code did not exist but that it is being applied too freely. A dog in a painting may signify fidelity and may also be a dog, and the available emblem books supply several meanings for most objects, which allows a determined scholar to find a recondite reading for anything. The formal alternative attends to how a picture is made and to what it does to the eye, and treats meaning as arising from arrangement rather than from vocabulary.

Michael Baxandall proposed the useful middle term with the period eye, meaning the habits of seeing that a viewer of the time brought to a work, including skills unrelated to art such as gauging volumes in a trade that required it. That reframes the question as empirical: what did this audience know how to do. Answering it requires evidence about schooling, commerce and devotion rather than about symbols, and it has produced the most durable work in the field. The dispute survives because a picture whose audience left no record cannot be read that way at all. Both camps use the same conservation reports and the same inventories. Where they differ is in what counts as a legitimate inference from them.

WHAT THIS PASSAGE IS FOR

- A dog may signify fidelity and may also be a dog.
 - Emblem books supply several meanings for most objects.
 - The period eye reframes the question as empirical.
-

Questions 187.1 to 187.10

on passage 187, Reading With Period Eyes

187.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Thousands of emblem books survive from the century
- B) Both camps use the same conservation reports
- C) The shared code of images was a later invention
- D) The dispute is over what inference the evidence allows

187.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does the period eye include?

- A) The conventional meanings attached to images
- B) Skills unrelated to art, such as gauging volumes
- C) The arrangement of shapes within the frame
- D) A code read by a contemporary without effort

187.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the emblem books let a scholar prove too much?

- A) “The evidence is emblem books, sermons and household inventories, of which thousands survive from the seventeenth century”
- B) “the mirror, the dog, the open window and the extinguished candle all carried meanings that a contemporary viewer read without effort”
- C) “the available emblem books supply several meanings for most objects, which allows a determined scholar to find a recondite reading for anything”
- D) “Both camps use the same conservation reports and the same inventories”

187.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The dispute survives because a picture whose audience left no record cannot be read that way at all. A scholar facing such a picture would therefore ____

Which choice most logically completes the text?

- A) be unable to reconstruct the period eye
- B) find several meanings in the emblem books
- C) have evidence about schooling and commerce
- D) read the mirror as a warning about vanity

187.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “recondite” most nearly mean?

- A) frequently repeated
- B) carefully measured
- C) open to a beginner
- D) obscure and far-fetched

187.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the dog?

- A) It defines iconography for a reader
- B) It reports what the emblem books contain
- C) It states the objection in one example
- D) It denies that the dog could signify anything

187.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 137 of this book. It describes radiography, reflectography and pigment analysis, and says they can show that a panel is of the right date and that the materials are consistent while leaving the hand unsettled.

Text 1 says both camps use the same conservation reports. Based on Text 2, which choice best describes what those reports can settle?

- A) Which hand made a particular brushstroke
- B) The date of a panel and the materials in it
- C) The conventional meaning of an extinguished candle
- D) The habits of seeing an audience brought

187.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The objection is not that the code did not exist. ____ it is that the code is being applied too freely.

Which choice completes the text with the most logical transition?

- A) Rather,
- B) As a result,
- C) For instance,
- D) In addition,

187.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A dog in a painting may signify fidelity ____ and it may also be a dog.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) fidelity and
- B) fidelity; and
- C) fidelity, and
- D) fidelity and,

187.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The period eye means the habits of seeing a viewer of the time brought.
- It includes skills unrelated to art, such as gauging volumes.
- That makes the question empirical: what this audience knew how to do.
- Answering it requires evidence about schooling, commerce and devotion.

The student wants to explain why the period eye reframes the question. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Asking what an audience knew how to do turns interpretation into a question about schooling and trade
- B) The period eye means the habits of seeing a viewer brought
- C) It includes skills unrelated to art, such as gauging volumes
- D) The question becomes empirical rather than symbolic

ملخص المقطع 187 بالعربية

خلاصة: لوحة هولندية من القرن السابع عشر لامرأة عند نافذة قد تكون مشهداً وقد تكون تحذيراً من الغرور، والاختيار بين القراءتين أقدم خلاف منهجي في تاريخ الفن. والأيقونوغرافيا، أي دراسة المعاني الاصطلاحية الملتصقة بالصورة في عصر، ترى أن هذه اللوحات استعملت شفرة مشتركة. المعنى: المعنى أن دليلها كتب الرموز والخطب وقوائم جرد البيوت، وقد بقي منها آلاف من القرن السابع عشر. والاعتراض ليس على وجود الشفرة بل على إطلاق تطبيقها: فالكلب في لوحة قد يدل على الوفاء وقد يكون كلباً. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: اقترح مايكل باكسندول حذاً وسطاً نافعاً هو عين العصر، أي عادات النظر التي حملها مشاهد ذلك الزمن إلى العمل، ومنها مهارات لا صلة لها بالفن كتقدير الأحجام في حرفة تقتضيه، فيصير السؤال تجريبياً. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الاعتراض نفيًا للشفرة، مع أن النص يقصره على إطلاق تطبيقها. ويقتزن المقطع بالمقطع السابع والثلاثين بعد المئة.

The Score or the Sound

From the 1960s a movement associated with Nikolaus Harnoncourt and others argued for historically informed performance, meaning the playing of old music on the instruments and in the manner of its own period. That meant instruments of the period, the pitch of the period, the numbers the composer actually had, and the ornaments and tempos that contemporary treatises describe. Historically informed performance produced recordings that sounded startlingly unlike the orchestral tradition, with smaller forces, faster tempos, less vibrato and a different economy of sound altogether. It also produced urtext editions, meaning editions that present what the composer wrote without later editorial additions.

The objections came quickly and some have held up. There is no recording of anything before 1877, so the claim rests on written sources which are incomplete and often disagree. A modern audience is not a period audience, so reproducing the acoustic conditions does not reproduce the experience. Composers frequently wrote for forces they considered inadequate, and several said so in letters, which makes the appeal to original practice an appeal to a compromise rather than to an intention.

The movement's answer has largely been to drop the strongest claim. Few practitioners now argue that period performance is authentic in the sense of recovering a lost original. What they argue instead is that the instruments and the treatises are evidence about choices the music assumes, and that a performer who knows them has more options rather than fewer. That is a defensible position and it has changed mainstream practice, which now uses smaller forces and faster tempos than it did, without anybody conceding the original argument. The two traditions have converged in the concert hall more than in the published polemics. Several conductors move between them without comment, which would have been unthinkable in 1975.

WHAT THIS PASSAGE IS FOR

- There is no recording of anything before 1877.
 - Composers often wrote for forces they considered inadequate.
 - The strongest claim was dropped and the practice changed anyway.
-

Questions 188.1 to 188.10on passage 188, *The Score or the Sound***188.1**

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The movement dropped its strongest claim and kept its evidence
- B) No recording of anything exists before 1877
- C) Period performance recovers a lost original
- D) Several conductors move between the two traditions

188.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did composers often say in letters?

- A) That the treatises disagreed with one another
- B) That the pitch of the period was too low
- C) That the forces they wrote for were inadequate
- D) That urtext editions removed later additions

188.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the appeal to original practice may appeal to a compromise?

- A) “There is no recording of anything before 1877, so the claim rests on written sources which are incomplete and often disagree”
- B) “A modern audience is not a period audience, so reproducing the acoustic conditions does not reproduce the experience”
- C) “It also produced urtext editions, meaning editions that present what the composer wrote without later editorial additions”
- D) “Composers frequently wrote for forces they considered inadequate, and several said so in letters, which makes the appeal to original practice an appeal to a compromise rather than to an intention”

188.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

What they argue instead is that the instruments and the treatises are evidence about choices the music assumes, and that a performer who knows them has more options rather than fewer. A performer who ignored those sources would therefore ____

Which choice most logically completes the text?

- A) be recovering a lost original
- B) be choosing from a shorter list
- C) reproduce the period acoustic exactly
- D) have dropped the strongest claim

188.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “economy” most nearly mean?

- A) a way of distributing resources
- B) a saving of money
- C) a system of trade
- D) a brevity of statement

188.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the movement dropping a claim?

- A) It defines an urtext edition for a reader
- B) It dates the start of the movement
- C) It concedes that the objections all failed
- D) It turns the account from objection to reply

188.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 138 of this book. It reports that the autograph score often differs from the first printed edition, that an editor has to choose where they disagree, and that the choice is published as though it were a wish of the composer.

Text 1 says the claim rests on written sources. Based on Text 2, which choice best describes a written source that still leaves a choice open?

- A) A sketch that shows what was tried
- B) A facsimile published for performers
- C) A score that disagrees with the first edition
- D) A watermark used to date a page

188.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The objections came quickly and some have held up. ___ there is no recording of anything before 1877, so the claim rests on written sources.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) For one thing,
- C) In other words,
- D) All the same,

188.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

A modern audience is not a period audience ___ and reproducing the acoustic conditions leaves the experience unreproduced.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) audience and
- B) audience; and
- C) audience and,
- D) audience, and

188.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Few practitioners now argue that period performance is authentic.
- They argue that the sources are evidence about choices the music assumes.
- A performer who knows them has more options rather than fewer.
- Mainstream practice now uses smaller forces and faster tempos.

The student wants to explain how a weakened claim can still change practice. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Few practitioners now argue that period performance is authentic
- B) Treating the sources as evidence about options won the practice without winning the argument
- C) A performer who knows the sources has more options
- D) Mainstream practice now uses smaller forces and faster tempos

ملخص المقطع 188 بالعربية

خلاصة: من ستينيات القرن العشرين دعت حركة إلى الأداء المستنير تاريخياً، أي عزف الموسيقى القديمة على آلات عصرها وعلى طريقتها: آلات العصر، ودرجة صوته، والأعداد التي كانت بين يدي المؤلف، والزخارف والسرعات التي تصفها الرسائل المعاصرة. المعنى: المعنى أن هذا أنتج تسجيلات تخالف التقليد الأوركستراي مخالفة مذهلة: أعداد أصغر، وسرعات أعلى، واهتزاز أقل، وتوزيع صوت مختلف تماماً. وأنتج أيضاً طبعات أصلية تعرض ما كتبه المؤلف بلا إضافات محررين لاحقين. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: جاءت الاعتراضات سريعاً وبعضها صمد: فلا تسجيل لشيء قبل سنة ألف وثمانمئة وسبع وسبعين، والدعوى تستند إلى مصادر مكتوبة ناقصة ومتخالفة، والجمهور الحديث غير جمهور العصر، والمؤلفون كتبوا لأعداد رأوها غير كافية. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن تُحسب الحركة مُصرة على استعادة أصل مفقود، مع أن النص يقول إنها تركت أقوى دعوها. ويقترن المقطع بالمقطع الثامن والثلاثين بعد المئة.

The Block or the Tower

Le Corbusier proposed replacing the dense city with towers in parkland, and the argument was not foolish. Nineteenth-century slums were dark, overcrowded and lethal, and a tower on a small footprint can house the same people with light, air, trees and no traffic at the door. The superblock, meaning a large site planned as a single unit with towers set in open ground, was built in that spirit across Europe, Asia and America for forty years.

Jane Jacobs attacked it in 1961 from observation rather than from doctrine. Her claim was that the things that make a street safe and useful, which are short blocks, many doorways, mixed uses and people on the pavement at different hours, are destroyed by the design, and that the open ground is not a park but a space nobody is responsible for. Her book is laconic about architecture and specific about behavior, and most of its observations have since been measured and confirmed.

The honest verdict has to be split, because both doctrines produced disasters and successes. Superblocks in Vienna and Singapore work, with the same form and different management, maintenance and tenure. Dense traditional streets produce gentrification that prices out exactly the populations Jacobs defended. The variable that best predicts success in the studies is not the form but whether the residents have security, maintenance and some control, which is a conclusion that pleases neither party and has been available in the evidence for thirty years. Several demolished American projects had maintenance budgets cut to a fraction of what their designs required. Comparable buildings elsewhere with funded maintenance are still standing and sought after. That conclusion also explains the pattern of demolitions, which fell heavily on projects whose management had been cut and lightly on identical buildings that were maintained.

WHAT THIS PASSAGE IS FOR

- A tower on a small footprint can house people with light and air.
 - Jacobs attacked from observation rather than doctrine.
 - Form predicts success less well than security and maintenance.
-

Questions 189.1 to 189.10on passage 189, *The Block or the Tower***189.1**

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Le Corbusier proposed towers set in parkland
- B) Security, maintenance and control predict success better than form
- C) Jane Jacobs published her critique in 1961
- D) The form of a project decides whether it works

189.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Jacobs say destroys a useful street?

- A) A maintenance budget cut to a fraction
- B) Gentrification that prices out residents
- C) A tower on a small footprint with trees
- D) A design that removes short blocks and doorways

189.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the same built form can work or fail?

- A) “Superblocks in Vienna and Singapore work, with the same form and different management, maintenance and tenure”
- B) “Nineteenth-century slums were dark, overcrowded and lethal”
- C) “Dense traditional streets produce gentrification that prices out exactly the populations Jacobs defended”
- D) “Her book is laconic about architecture and specific about behavior”

189.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Several demolished American projects had maintenance budgets cut to a fraction of what their designs required. Comparable buildings elsewhere with funded maintenance are still standing and sought after. The pattern of demolitions therefore ____

Which choice most logically completes the text?

- A) follows the form of the buildings
- B) shows that Jacobs was wrong about streets
- C) tracks the money spent on upkeep
- D) proves the superblock was always doomed

189.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “laconic” most nearly mean?

- A) relaxed in manner
- B) sparing of words
- C) full of detail
- D) severe in judgment

189.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence saying the verdict has to be split?

- A) It refuses to decide between the two doctrines
- B) It defines a superblock for a reader
- C) It reports what Jacobs attacked in 1961
- D) It awards the argument to Le Corbusier

189.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 139 of this book. It contrasts a survey that walked every street in London with modern measurement that is cheaper, narrower and continuous, naming footfall counts from sensors and journeys from transport cards.

Text 1 says most of the observations have since been measured. Based on Text 2, which choice best describes how such measuring is now done?

- A) By walking every street and recording what is found
- B) By coloring a street plan house by house
- C) By printing seventeen volumes of notes
- D) By continuous counts from sensors and transport cards

189.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Le Corbusier proposed replacing the dense city with towers in parkland. ____ nineteenth-century slums were dark, overcrowded and lethal.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) In other words,
- C) After all,
- D) All the same,

189.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Her book is laconic about architecture ____ and it is specific about behavior.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) architecture, and
- B) architecture and
- C) architecture; and
- D) architecture and,

189.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Both doctrines produced disasters and successes.
- Superblocks in Vienna and Singapore work with the same form.
- Dense traditional streets produce gentrification.
- The best predictor is security, maintenance and some control.

The student wants to explain why the evidence disappoints both parties. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Both doctrines have produced disasters and successes
- B) Superblocks in Vienna and Singapore work with the same form
- C) The best predictor is upkeep and tenure, which belongs to neither doctrine
- D) Dense traditional streets produce gentrification as well

ملخص المقطع 189 بالعربية

خلاصة: اقترح لو كوربوزيه إبدال المدينة الكثيفة بأبراج في حدائق، ولم تكن الحجّة سخيّة: فأحياء القرن التاسع عشر الفقيرة كانت مظلمة مزدحمة قاتلة، وبرج على بصمة صغيرة يُسكن العدد نفسه مع ضوء وهواء وشجر وبلا مرور عند الباب.

المعنى: المعنى أن المربع الكبير، أي موقع واسع يُخطّط وحدة واحدة بأبراج قائمة في أرض مكشوفة، بُني بهذه الروح في أوروبا وآسيا وأمريكا أربعين سنة، ثم هاجمته جين جيكوبس سنة ألف وتسعمئة وإحدى وستين من المشاهدة لا من المذهب.

الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: الحكم الأمين لا بد أن يكون مقسوماً، فالمذهبان أنتجا كوارث ونجاحات. فمُربعات فيينا وسنغافورة تعمل بالشكل نفسه وبإدارة وصيانة وحيارة مختلفة، والشوارع التقليدية الكثيفة تُنتج غلاء يُخرج من دافعت عنهم جيكوبس.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُحسب الشكل هو المتغيّر الحاسم، مع أن الدراسات ترجّح الأمن والصيانة وبعض التحكم. ويقترن المقطع بالمقطع التاسع والثلاثين بعد المئة.

Can a Judgment Be True

The question of whether a judgment of art can be true is not an idle one, since the whole practice of criticism assumes an answer. Relativism, meaning the position that such a judgment can be true only relative to a standard, has the virtue of explaining the historical record: standards demonstrably change, as the earlier passages in this strand showed, and a claim that one period simply saw correctly looks hard to defend.

The opposing tradition tries to anchor judgment in agreement rather than in the work. David Hume observed that the verdicts of people with wide experience of an art form converge more than the verdicts of beginners, and proposed the ideal critic, meaning a hypothetical judge with full knowledge and no prejudice, as the standard against which a verdict is correct. The argument is not that experts cannot be wrong but that convergence under those conditions is the only thing that could make a judgment true, and that it does.

Each position has a hard case. The relativist has to explain why the convergence happens at all, and why disagreements about technique and coherence are settled so routinely in practice. The Humean has to explain away the cases where informed opinion converged and later reversed, which are numerous enough to be embarrassing and are the subject of a sardonic literature of its own. The most defensible position concedes that judgments about craft can be argued to a conclusion, that judgments about value cannot be settled in the same way, and that criticism is worth doing anyway. Both positions have been defended in detail by philosophers who agree about almost every particular verdict. The practical consequence of the choice is smaller than the heat of the argument suggests.

WHAT THIS PASSAGE IS FOR

- Standards demonstrably change over periods, which relativism explains.
 - Hume observed that informed verdicts converge.
 - The Humean must explain reversals of informed opinion.
-

Questions 190.1 to 190.10

on passage 190, Can a Judgment Be True

190.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Hume proposed the ideal critic as a standard
- B) The practical consequence is smaller than the heat suggests
- C) Craft can be argued to a conclusion and value cannot
- D) Convergence among experts settles every question of value

190.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Hume observe about experienced judges?

- A) That their verdicts converge more than beginners
- B) That they have full knowledge and no prejudice
- C) That they cannot be wrong about a work
- D) That standards demonstrably change over time

190.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the Humean position has a case it must explain away?

- A) “standards demonstrably change, as the earlier passages in this strand showed”
- B) “The Humean has to explain away the cases where informed opinion converged and later reversed, which are numerous enough to be embarrassing”
- C) “The relativist has to explain why the convergence happens at all”
- D) “Both positions have been defended in detail by philosophers who agree about almost every particular verdict”

190.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

The relativist has to explain why the convergence happens at all, and why disagreements about technique and coherence are settled so routinely in practice. A relativist who treated every verdict as equally groundless would therefore ____

Which choice most logically completes the text?

- A) be following the ideal critic standard
- B) have explained away the reversals
- C) be defending the historical record
- D) leave the routine settlements unexplained

190.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “sardonic” most nearly mean?

- A) carefully impartial
- B) densely technical
- C) mockingly dry
- D) openly admiring

190.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about each position having a hard case?

- A) It defines relativism for a reader
- B) It opens the burdens placed on both sides
- C) It reports what Hume proposed as a standard
- D) It concludes that both positions fail

190.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 140 of this book. It reports two writers whose standing moved sharply while the texts stayed the same, and says what changed was the criteria, which makes standards historical objects with datable origins.

Text 1 says relativism explains the historical record. Based on Text 2, which choice best describes the record it explains?

- A) Reputations that moved while the texts stayed the same
- B) Verdicts of experienced judges that converge
- C) Databases of borrowings and school curricula
- D) A hypothetical judge with full knowledge

190.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The relativist has to explain why the convergence happens at all. ____ the Humean has to explain away the cases where informed opinion converged and later reversed.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) In other words,
- C) For instance,
- D) Equally,

190.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Standards demonstrably change ____ and a claim that one period simply saw correctly looks hard to defend.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) change and
- B) change, and
- C) change; and
- D) change and,

190.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Judgments about craft can be argued to a conclusion.
- Judgments about value resist settlement in the same way.
- Criticism is worth doing anyway.
- The practical consequence of the choice is smaller than the argument suggests.

The student wants to explain why criticism is worth doing on the most defensible position. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Judgments about craft can be argued to a conclusion
- B) Judgments about value resist settlement in the same way
- C) The practical consequence of the choice is small
- D) Craft arguments reach conclusions, so the work remains worth doing where value stays open

ملخص المقطع 190 بالعربية

خلاصة: سؤال هل يمكن أن يكون الحكم على الفن صادقاً ليس سؤالاً فارغاً، فممارسة النقد كلها تفترض جواباً. والنسبية، أي القول بأن مثل هذا الحكم لا يصدق إلا نسبةً إلى معيار، لها فضل تفسير السجل التاريخي: فالمعايير تتغير تغيراً يمكن إظهاره. المعنى: المعنى أن التقليد المقابل يحاول تثبيت الحكم في الاتفاق لا في العمل. فقد لاحظ ديفيد هيوام أن أحكام ذوي الخبرة الواسعة بغن تتقارب أكثر من أحكام المبتدئين، واقترح الناقد المثال، أي قاضياً مفترضاً تام المعرفة بلا هوأ، معياراً لمصواب الحكم. الأهمية في المجال: في مجال الإنسانيات هذه المادة في مستوى الخلاف: ولكل موقف حالة عسيرة: فالنسبي عليه أن يفسر لماذا يحدث التقارب أصلاً، ولماذا تُحسم الخلافات في التقنية والاتساق حسماً روتينياً؛ والهيومي عليه أن يتخلص من حالات تقارب فيها الرأي المستنير ثم انقلب. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب التقارب حاسماً لكل سؤال قيمة، مع أن النص يفصل أحكام المنة من أحكام القيمة. ويقترن المقطع بالمقطع الأربعين بعد المئة.

Whether Polling Can Be Repaired

National polls in the United States were close to the popular vote in 2016 and badly wrong in several states, and in 2020 the error was larger and ran in the same direction again. Two diagnoses were offered. The first diagnosis is technical and fixable. It holds that polls had underweighted voters without college degrees, who were numerous and disproportionately supporting one candidate, and the remedy was to weight on education, which most firms promptly did. That correction was not enough in 2020, and the error in several states ran the same way again.

The second diagnosis is differential nonresponse, meaning that one group answers surveys at a different rate from another, in a way that correlates with how they vote. If people who distrust institutions are both less likely to answer a pollster and more likely to support a particular candidate, then no weighting on demographics can repair the sample, because the people missing are not missing at random within their categories. That is a structural problem rather than a technical one, and it cannot be fixed by obtaining more interviews.

Several remedies are under test. Weighting on recalled past vote helps and introduces its own error, because recall is unreliable and drifts toward the winner. Registration-based sampling allows respondents to be verified against the voter files, at the cost of excluding anyone not registered. The most honest position available is that polls remain the best instrument for measuring opinion between elections and have a known and currently unrepaired weakness in forecasting close ones, and that the appropriate response is to widen the stated uncertainty rather than to pretend the problem has been solved. Several national associations published post-mortems after each election with largely consistent findings, and the 2020 report concluded that the cause could not be identified from the data available to it.

WHAT THIS PASSAGE IS FOR

- Weighting on education was adopted and was not enough.
 - The people missing are not missing at random within their categories.
 - The appropriate response is to widen the stated uncertainty.
-

Questions 191.1 to 191.10

on passage 191, Whether Polling Can Be Repaired

191.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Weighting on education was widely adopted after 2016
- B) The weakness is structural, so the stated uncertainty should widen
- C) More interviews would repair the sample
- D) Polls have been shown to be useless between elections

191.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does recalled past vote introduce?

- A) A verified voter file
- B) A weighting on education
- C) An exclusion of the unregistered
- D) An error that drifts toward the winner

191.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the trouble lies outside the reach of demographic weighting?

- A) “no weighting on demographics can repair the sample, because the people missing are not missing at random within their categories”
- B) “polls had underweighted voters without college degrees, who were numerous and disproportionately supporting one candidate”
- C) “Registration-based sampling allows respondents to be verified against the voter files”
- D) “the 2020 report concluded that the cause could not be identified from the data available to it”

191.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

If people who distrust institutions are both less likely to answer a pollster and more likely to support a particular candidate, then no weighting on demographics can repair the sample. A poll that added thousands of interviews would therefore ____

Which choice most logically completes the text?

- A) remove the error from its estimate
- B) verify respondents against the files
- C) repeat the same gap on a larger scale
- D) drift toward the winner in recall

191.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “obtaining” most nearly mean?

- A) holding good as a rule
- B) getting hold of
- C) giving away freely
- D) asking politely for

191.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the 2020 correction?

- A) It shows the first diagnosis falling short
- B) It defines differential nonresponse for a reader
- C) It reports what the associations published
- D) It argues that education never mattered

191.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 141 of this book. It sets out the four stages of a serious poll and says the reported margin is a statement about sampling variation under the assumption that the frame is right and the weights are right.

Text 1 recommends widening the stated uncertainty. Based on Text 2, which choice best explains why the usual figure is too narrow?

- A) A probability sample licenses the arithmetic
- B) Address-based sampling covers almost every household
- C) A methodical firm publishes its weighting targets
- D) The margin assumes the frame and the weights are right

191.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The first diagnosis is technical and fixable. ____ it holds that polls had underweighted voters without college degrees.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) Specifically,
- D) For all that,

191.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

That correction was not enough in 2020 ____ and the error in several states ran the same way again.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) 2020, and
- B) 2020 and
- C) 2020; and
- D) 2020 and,

191.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Polls remain the best instrument for measuring opinion between elections.
- The weakness in forecasting close elections is known and unrepaired.
- The appropriate response is to widen the stated uncertainty.
- The 2020 report could not identify the cause from its data.

The student wants to explain the most honest position available. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Polls remain the best instrument for measuring opinion
- B) The 2020 report could not identify the cause from its data
- C) Keep the instrument, name the unrepaired weakness, and widen the uncertainty
- D) The weakness in forecasting close elections is unrepaired

ملخص المقطع 191 بالعربية

خلاصة: كانت المسوح الوطنية في الولايات المتحدة قريبة من التصويت الشعبي سنة ألفين وست عشرة ومخطئة خطأً بالغاً في عدة ولايات، وسنة ألفين وعشرين كان الخطأ أكبر وفي الجهة نفسها. وقُدِّم تشخيصان. المعنى: المعنى أنَّ التشخيص الأول فنيّ قابل للإصلاح: أنَّ المسوح رُجِّحت بأقلِّ ممَّا ينبغي الناخبين بلا شهادات جامعية، وهم كثيرون ويميلون إلى مرشَّح بعينه، والعلاج الترجيح على التعليم، وقد فعلته أكثر الشركات سريعاً، ولم يكف سنة عشرين. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: والثاني عدم الاستجابة التفاضليَّة، أي أن تجيب جماعة عن المسوح بنسبة تخالف نسبة غيرها على نحو يقترن بكيفية تصويتها، فلا ترجيح على الخصائص يُصلح العينة، لأنَّ الغائبين ليسوا غائبين عشوائياً داخل فئاتهم. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن النضين المتقابلين. والفخ المتوقَّع هنا أن يُحسب مزيد المقابلات علاجاً، مع أنَّ النض ينفي ذلك. ويقترن المقطع بالمقطع الحادي والأربعين بعد المئة.

Gold Standard or Narrow Tool

A randomized trial establishes that a treatment worked in the place it was run, with the people who took part, under the conditions that prevailed. The claim that it is the gold standard asserts something more: that this design sits above others in a hierarchy of evidence regardless of the question being asked. Angus Deaton and Nancy Cartwright have pressed the objection hardest, and it concerns external validity, meaning whether a result obtained in one setting holds in another.

Their argument is that transferring a trial result requires knowledge the trial does not supply. A deworming program that raised school attendance in one Kenyan district may do nothing in a district with different worm species, different schools or different distances to a clinic, and knowing which features matter requires a mechanism rather than another trial. Without that, the basis for applying the finding anywhere else is tenuous, and a hierarchy that ranks trials above the mechanistic evidence needed to use them has the order wrong.

The defense concedes the point about transfer and denies the conclusion. Trials settle the one thing other designs cannot, which is whether the effect exists at all in a known population, and the history of medicine is a long record of treatments that mechanism and observation endorsed and trials destroyed. The position most practitioners now hold is that a trial is the best available instrument for a narrow question and that the hierarchy was always a slogan. Replication across settings, with the mechanism investigated in each, is what makes a finding usable, and that program is slower and less quotable than a single result. Multi-site trials with pre-specified comparisons across sites are one response to the objection. They are expensive and the number of them remains small.

WHAT THIS PASSAGE IS FOR

- A trial establishes that a treatment worked where it was run.
 - Transferring a result requires knowledge the trial does not supply.
 - Trials settle whether the effect exists at all in a known population.
-

Questions 192.1 to 192.10

on passage 192, Gold Standard or Narrow Tool

192.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Multi-site trials are expensive and few
- B) A trial establishes that a treatment worked where it was run
- C) A trial answers a narrow question and the hierarchy was a slogan
- D) Mechanism and observation are the more reliable guides

192.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does transferring a trial result require?

- A) Knowledge of which features matter
- B) Another trial in the same district
- C) A hierarchy that ranks the designs
- D) A pre-specified comparison across sites

192.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the defense grants the objection and still keeps the trial?

- A) “A deworming program that raised school attendance in one Kenyan district may do nothing in a district with different worm species”
- B) “The defense concedes the point about transfer and denies the conclusion. Trials settle the one thing other designs cannot, which is whether the effect exists at all in a known population”
- C) “Multi-site trials with pre-specified comparisons across sites are one response to the objection”
- D) “Replication across settings, with the mechanism investigated in each, is what makes a finding usable”

192.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A deworming program that raised school attendance in one Kenyan district may do nothing in a district with different worm species, different schools or different distances to a clinic. A planner who applied the result elsewhere without that knowledge would therefore ____

Which choice most logically completes the text?

- A) be following the mechanism closely
- B) have run a multi-site trial
- C) have settled whether the effect exists
- D) be resting the claim on very little

192.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “tenuous” most nearly mean?

- A) held for a long time
- B) stretched over many sites
- C) resting on very little
- D) supported beyond doubt

192.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the history of medicine?

- A) It defines external validity for a reader
- B) It gives the defense its strongest ground
- C) It reports the cost of multi-site trials
- D) It concedes that the hierarchy was right

192.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 142 of this book. It reports an Oregon coverage lottery and a preschool trial of a hundred and twenty-three children in one town, and calls the second a slender base for a national argument.

Text 1 presses the objection about transfer. Based on Text 2, which choice best shows a study with exactly that limitation?

- A) A preschool trial of a hundred and twenty-three children in one town
- B) A lottery among ninety thousand applicants for coverage
- C) A blood pressure result with no significant difference
- D) A follow-up that ran to the age of forty

192.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Their argument is that transferring a trial result requires knowledge the trial does not supply. ___ a deworming program that raised school attendance in one Kenyan district may do nothing elsewhere.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) For instance,

192.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Multi-site trials are one response to the objection ___ and they are expensive.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) objection and
- B) objection, and
- C) objection; and
- D) objection and,

192.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- A trial establishes that a treatment worked where it was run.
- Transferring it requires knowing which features matter.
- Replication across settings, with the mechanism investigated in each, makes a finding usable.
- That program is slower and less quotable than a single result.

The student wants to explain what makes a finding usable in a new place. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) A trial establishes that a treatment worked where it was run
- B) Transferring a result requires knowing which features matter
- C) The program is slower and less quotable than one result
- D) Repetition in new settings with the mechanism studied each time

ملخص المقطع 192 بالعربية

خلاصة: التجربة العشوائية تُثبت أن العلاج عمل في الموضوع الذي أُجريت فيه، مع من شاركوا، في الظروف السائدة. أما دعوى أنها المعيار الذهبي فتزعم أكثر: أن هذا التصميم يعلو غيره في مراتب الدليل أيًا كان السؤال.

المعنى: المعنى أن أنغوس ديتون ونانسي كارتر ايت ضغطا الاعتراض أشد الضغط، وهو يتعلّق بالملاحية الخارجية، أي هل تثبت نتيجة نُيلت في موضع في موضع آخر. وحجّتهما أن نقل نتيجة التجربة يقتضي معرفة لا تقدّمها التجربة.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: فبرنامج لمكافحة الدود رفع الحضور المدرشي في منطقة كينية قد لا يفعل شيئًا في منطقة فيها أنواع دود أخرى ومدارس أخرى ومسافات أخرى إلى العيادة، ومعرفة الملامح المهمة تقتضي آلية لا تجربة أخرى.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُقدّم الآلية والملاحظة على التجربة، مع أن النص يذكر سجلّ العلاجات التي أقرّتهما وهدمتها التجارب. ويقترن المقطع بالمقطع الثاني والأربعين بعد المئة.

Fisher, Hill and the Cigarette

Ronald Fisher, the greatest statistician of his generation, argued until his death in 1962 that the link between smoking and lung cancer had not been shown to be causal. His objection was not foolish and is still taught in courses on causal inference. He proposed the constitutional hypothesis, meaning that a third factor, in this case an inherited disposition, might cause both the taste for tobacco and the susceptibility to the disease, which would produce the observed association with no causal arrow between the two. He also pointed out, entirely correctly, that nobody could run the experiment that would settle the question directly.

Austin Bradford Hill answered not with a single study but with a list. Bradford Hill's considerations, meaning the features that strengthen a causal reading, include the size of the association, its consistency across populations and designs, a dose response, the right time order, a plausible mechanism, and what happens when the exposure is removed. Smoking satisfied all of them, and the agreement was unusually complete. Heavy smokers had about twenty times the risk, the finding appeared in every country examined, risk rose with consumption and fell after quitting, and lung tissue from smokers showed the damage directly.

Fisher's objection was answered rather than dismissed, and the answer took fifteen years. Twin studies addressed the constitutional hypothesis directly, animal experiments supplied the mechanism, and the removal of exposure in people who quit supplied something close to an experiment. What the episode establishes is that observational evidence can carry a causal claim, that doing so requires many independent lines rather than one strong correlation, and that a sound objection from a serious opponent is the most useful thing a field can be given. Fisher had been a paid consultant to the tobacco industry, which is often mentioned and does not dispose of his argument.

WHAT THIS PASSAGE IS FOR

- Fisher proposed an inherited disposition causing both.
 - Hill answered with a list of considerations rather than one study.
 - The answer required many independent lines of evidence.
-

Questions 193.1 to 193.10

on passage 193, Fisher, Hill and the Cigarette

193.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Fisher had been a paid consultant to the industry
- B) Heavy smokers had about twenty times the risk
- C) Nobody could run the experiment that would settle it
- D) Observational evidence can carry a causal claim

193.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did Fisher propose as an alternative?

- A) A dose response across populations
- B) An inherited disposition behind both
- C) A twin study of smoking habits
- D) A list of strengthening considerations

193.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the agreement between the lines of evidence was unusually complete?

- A) “He also pointed out, entirely correctly, that nobody could run the experiment that would settle the question directly”
- B) “Fisher had been a paid consultant to the tobacco industry, which is often mentioned and does not dispose of his argument”
- C) “Heavy smokers had about twenty times the risk, the finding appeared in every country examined, risk rose with consumption and fell after quitting, and lung tissue from smokers showed the damage directly”
- D) “Twin studies addressed the constitutional hypothesis directly, animal experiments supplied the mechanism”

193.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Risk rose with consumption and fell after quitting. A reader who asked which of the considerations those two facts satisfy would therefore ____

Which choice most logically completes the text?

- A) name the dose response and the reversibility
- B) name the time order and the mechanism
- C) find the constitutional hypothesis confirmed
- D) need an experiment nobody could run

193.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “sound” most nearly mean?

- A) audible to a listener
- B) measured by a device
- C) easily refuted
- D) free of a flaw

193.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the fifteen years?

- A) It defines the constitutional hypothesis
- B) It reports what Fisher was paid to do
- C) It marks the objection as met rather than waved away
- D) It argues that Fisher was never answered

193.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 143 of this book. It defines a natural experiment as a situation in which something outside the researchers has allocated people almost at random, and calls it the main instrument of modern social science.

Text 1 says nobody could run the experiment that would settle the question. Based on Text 2, which choice best describes the usual substitute?

- A) A list of considerations drawn up by a statistician
- B) A situation that allocated people almost at random
- C) A twin study of an inherited disposition
- D) An animal experiment supplying a mechanism

193.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Smoking satisfied all of them, and the agreement was unusually complete. ____ heavy smokers had about twenty times the risk.

Which choice completes the text with the most logical transition?

- A) Indeed,
- B) By contrast,
- C) As a result,
- D) In other words,

193.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

His objection was not foolish ____ and it is still taught in courses on causal inference.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) foolish and
- B) foolish; and
- C) foolish, and
- D) foolish and,

193.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Fisher proposed that an inherited disposition caused both.
- Twin studies addressed that hypothesis directly.
- Animal experiments supplied the mechanism.
- A sound objection from a serious opponent is the most useful thing a field can be given.

The student wants to explain what a serious objection did for the field. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) It named the alternative that twin studies and animals then had to rule out
- B) Fisher proposed that an inherited disposition caused both
- C) Twin studies addressed that hypothesis directly
- D) A sound objection is the most useful thing a field can get

ملخص المقطع 193 بالعربية

خلاصة: حاج رونالد فيشر، أعظم إحصائي جيله، حتى وفاته سنة ألف وتسعمئة واثنين وستين بأن الصلة بين التدخين وسرطان الرئة لم تثبت أنها سببية. ولم يكن اعتراضه سخيًا، وهو ما زال يُدرّس في مقررات الاستدلال السببي.

المعنى: المعنى أنه اقترح الفرضية البنيوية، أي أن عاملًا ثالثًا، وهو هنا استعداد موروث، قد يحدث ميل الذوق إلى التبغ والقابلية للمرض كليهما، فُيُنْتَجِ الاقتران الملحوظ بلا سهم سببي بينهما.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: أجاب أوستن برادفورد هيل لا بدراسة واحدة بل بقائمة: حجم الاقتران، وثباته عبر السكان والتصاميم، واستجابة الجرعة، وترتيب الزمن الصحيح، وآلية معقولة، وما يجري عند إزالة التعرض.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفتح المتوقع هنا أن يُحسب الاعتراض باقياً بلا جواب، مع أن النص يقول إنه أجيب في خمس عشرة سنة. ويقترن المقطع بالمقطع الثالث والأربعين بعد المئة.

The Average Patient

In 1982 Stephen Jay Gould was told he had a cancer with a median survival, meaning the time by which half of patients have died, of eight months. He was a statistician by training and read the sentence correctly: a median is a location, the distribution had a long right tail, he was young and well treated and otherwise healthy, and he had reason to think he belonged in that tail. He lived twenty years. His essay on the subject is the clearest statement of the case against taking an average as a description of a person.

The general problem is the heterogeneous treatment effect, meaning a situation in which a treatment helps some people and harms others while the average looks small. A drug that saves one patient in ten and kills one in twenty reports a modest net benefit, and the figure is correct and useless for the decision in front of a doctor. Trials are powered to detect averages, and the subgroups that would reveal the structure are exactly the comparisons that produce false positives if examined without discipline.

The defense of the average is practical and strong. It is the only quantity that can be estimated reliably from a feasible sample, subgroup claims have a poor record, and personalized predictions from small data perform badly in tests. The position that has emerged is not a choice but a sequence: estimate the average first, pre-specify a small number of subgroups on mechanistic grounds, and treat anything else as a hypothesis. The want of good individual-level evidence is a real limitation and not an argument for guessing. Modern trial protocols register the subgroup analyzes in advance for exactly this reason. Where they are registered, the proportion of positive subgroup findings falls sharply.

WHAT THIS PASSAGE IS FOR

- A median is a location, not a prediction about a person.
 - A treatment can help some and harm others while the average is small.
 - The position is a sequence rather than a choice.
-

Questions 194.1 to 194.10

on passage 194, The Average Patient

194.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The answer is a sequence rather than a choice
- B) Gould lived twenty years after an eight-month median
- C) A personalized prediction beats an average
- D) Subgroup analysis should never be registered

194.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what is a median survival?

- A) The longest time any patient survived
- B) The average of all the survival times
- C) The time by which half have died
- D) The share of patients in the right tail

194.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that a correct average can be useless for one decision?

- A) “His essay on the subject is the clearest statement of the case against taking an average as a description of a person”
- B) “It is the only quantity that can be estimated reliably from a feasible sample”
- C) “subgroup claims have a poor record, and personalized predictions from small data perform badly in tests”
- D) “A drug that saves one patient in ten and kills one in twenty reports a modest net benefit, and the figure is correct and useless for the decision in front of a doctor”

194.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A drug that saves one patient in ten and kills one in twenty reports a modest net benefit. A doctor reading only that net figure would therefore ____

Which choice most logically completes the text?

- A) know which patients it would save
- B) miss the two effects behind it
- C) have a registered subgroup analysis
- D) be predicting from small data

194.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “want” most nearly mean?

- A) lack of a thing needed
- B) a wish for something
- C) a search for a fugitive
- D) an excess of a thing

194.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about Gould reading correctly?

- A) It defines a heterogeneous treatment effect
- B) It reports how long he actually lived
- C) It argues that his doctors were careless
- D) It shows what the figure left open for him

194.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 144 of this book. It explains what a confidence interval states and warns that if twenty subgroups are examined, one significant difference is what twenty tests produce by chance about once in every set.

Text 1 says subgroups produce false positives without discipline. Based on Text 2, which choice best explains that danger?

- A) A trivial difference becomes significant in a large study
- B) Two overlapping intervals need their own test
- C) One result in twenty is what chance alone produces
- D) A journal now names the main comparison in the abstract

194.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The defense of the average is practical and strong. ____ it is the only quantity that can be estimated reliably from a feasible sample.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) After all,
- C) In other words,
- D) Even so,

194.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

He was a statistician by training ____ and he read the sentence correctly.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) training and
- B) training; and
- C) training and,
- D) training, and

194.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Estimate the average first.
- Pre-specify a small number of subgroups on mechanistic grounds.
- Treat anything else as a hypothesis.
- Protocols register the subgroup analyses in advance.

The student wants to explain the sequence the field has settled on. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Estimate the average before anything else is done
- B) Average first, a few subgroups named in advance, and the rest only a hypothesis
- C) Protocols register the subgroup analyses in advance
- D) Treat anything beyond those subgroups as a hypothesis

ملخص المقطع 194 بالعربية

خلاصة: سنة ألف وتسعمئة واثنين وثمانين قيل لستيفن جاي غولد إن به سرطانًا بقاءه الوسيط، أي الزمن الذي يموت بحلوله نصف المرضى، ثمانية أشهر. وكان إحصائيًا بتدريبه فقرأ الجملة قراءة صحيحة.

المعنى: المعنى أن الوسيط موضع، وأن للتوزيع ذيلًا أيمن طويلًا، وأنه كان شابًا حسن المعالجة سليمًا من غير ذلك، وله سبب أن يظل نفسه في ذلك الذيل. وقد عاش عشرين سنة، ومقالته في الموضوع أصرح بيان لحجة ضد اتخاذ المعدل وصفًا لشخص.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: والمشكلة العامة هي الأثر العلاجي غير المتجانس، أي حال ينفع فيها العلاج قوّمًا ويضرّ آخرين والمعدل يبدو صغيرًا. فدواء بنجي مريضًا من عشرة ويقتل واحدًا من عشرين يُبلغ عن نفع صافٍ متواضع، والرقم صحيح وعديم النفع للقرار.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُقدّم التنبؤات الشخصية على المعدل، مع أن النص يقول إنها تؤدّي أداءً سيئًا في الاختبارات. ويقترن المقطع بالمقطع الرابع والأربعين بعد المئة.

When Paying Makes Things Worse

Richard Titmuss argued in 1970 that paying for blood produces less blood and worse blood than asking for it. His reasoning was that payment changes the meaning of the act, driving out donors who gave from duty while attracting those with most reason to conceal an infection. Kenneth Arrow replied that the argument confused two claims and that a market and a gift system could coexist. The data at the time were not good enough to settle it, and the dispute became the standard case for crowding out, meaning the displacement of an internal motive by an external reward.

The experiment usually cited against incentives is smaller and cleaner. Ten Israeli day care centers introduced a fine for parents who collected their children late, and lateness increased, substantially and permanently, and did not fall back when the fine was removed. The explanation offered is that the fine converted a social obligation into a price, and once a parent could buy an extra twenty minutes the obligation was gone and did not return.

The honest reading of the literature is narrower than either slogan. Crowding out is real, is documented in a modest number of settings, and depends on what the payment signals: a payment that reads as recognition does not displace the motive, while one that reads as a transaction does. Most incentives in most places work in the ordinary direction. The pernicious cases share a feature worth remembering, which is that the activity being paid for already carried a meaning that the payment replaced, and that meanings are harder to restore than prices. Blood systems in most rich countries are unpaid, which is consistent with Titmuss and does not demonstrate him. Plasma collection, which is paid in several countries, has a different safety record and a different donor population.

WHAT THIS PASSAGE IS FOR

- Titmuss argued that payment changes the meaning of the act.
 - Lateness increased when a fine was introduced and did not fall back.
 - Crowding out depends on what the payment signals.
-

Questions 195.1 to 195.10

on passage 195, When Paying Makes Things Worse

195.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Titmuss argued in 1970 that paying for blood produces less
- B) Crowding out is real, limited, and depends on what a payment signals
- C) Most incentives in most places fail to work
- D) Blood systems in rich countries demonstrate Titmuss

195.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what happened when the day care fine was removed?

- A) Lateness fell back to its old level
- B) The centers introduced a larger fine
- C) Parents began arriving early instead
- D) Lateness stayed where the fine had put it

195.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the fine changed what the lateness meant?

- A) “the fine converted a social obligation into a price, and once a parent could buy an extra twenty minutes the obligation was gone and did not return”
- B) “Ten Israeli day care centers introduced a fine for parents who collected their children late”
- C) “Kenneth Arrow replied that the argument confused two claims and that a market and a gift system could coexist”
- D) “Blood systems in most rich countries are unpaid, which is consistent with Titmuss and does not demonstrate him”

195.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A payment that reads as recognition does not displace the motive, while one that reads as a transaction does. A scheme designed to avoid crowding out would therefore ____

Which choice most logically completes the text?

- A) set the largest sum it can afford
- B) convert the obligation into a price
- C) make the payment read as thanks
- D) remove the payment after a month

195.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “pernicious” most nearly mean?

- A) persistent over time
- B) quietly damaging
- C) widely documented
- D) plainly beneficial

195.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the reply from Arrow?

- A) It puts a second position against the first
- B) It defines crowding out for a reader
- C) It reports the day care finding
- D) It settles the dispute about blood

195.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 145 of this book. It says the standard remedy for a before-and-after figure is difference in differences, comparing the change in a treated place with the change in an untreated one over the same period.

Text 1 reports lateness rising after a fine. Based on Text 2, which choice best describes what the study of ten centers still needs?

- A) An elasticity of lateness with respect to price
- B) A record of the weather in the same period
- C) A spillover of parents to other centers
- D) Centers without a fine measured over the same weeks

195.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Crowding out is real, is documented in a modest number of settings, and depends on what the payment signals. ___ most incentives in most places work in the ordinary direction.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) All the same,
- D) In other words,

195.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The data at the time were not good enough to settle it ___ and the dispute became the standard case for crowding out.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) it, and
- B) it and
- C) it; and
- D) it and,

195.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The pernicious cases share a feature worth remembering.
- The activity already carried a meaning that the payment replaced.
- Meanings are harder to restore than prices.
- Lateness did not fall back when the fine was removed.

The student wants to explain what the damaging cases have in common. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The pernicious cases share one feature worth remembering
- B) Lateness did not fall back when the fine was removed
- C) A payment replaced a meaning, and a meaning is harder to put back than a price
- D) Meanings are harder to restore than prices are

ملخص المقطع 195 بالعربية

خلاصة: حاج ريتشارد تيتيموس سنة ألف وتسعمئة وسبعين بأن الدفع مقابل الدم يُنتج دمًا أقلّ وأسوأ من طلبه هبةً. وحجّته أن الدفع يغيّر معنى الفعل، فيُخرج المتبرّعين الذين يعطون عن واجب ويجذب من لهم أكبر سبب في إخفاء عدوى. المعنى: المعنى أن كينيث آرو ردّ بأن الحجّة تخلط دعويين وأن السوق ونظام الهبة يمكن أن يتعايشا. ولم تكن البيانات في ذلك الوقت كافية للحسم، وصار الخلاف الحالة القياسية للإزاحة، أي إزاحة دافع داخليّ بمكافأة خارجية. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: والتجربة التي تُذكر عادةً ضدّ المُخفّرات أصغر وأنقى: أدخلت عشر حضانات إسرائيلية غرامة على الآباء الذين يتأخرون في أخذ أطفالهم، فزاد التأخر زيادة معتبرة دائمة ولم يعد إلى ما كان حين أزيلت الغرامة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن تُحسب المُخفّرات فاشلة في عمومها، مع أن النص يقول إنّ أكثرها يعمل في الجهة المعتادة. ويقترن المقطع بالمقطع الخامس والأربعين بعد المئة.

Chosen or Inherited

Two accounts of norms are current, one from game theory and one from anthropology, and they make different predictions. The equilibrium account holds that a norm persists because it is in each person's interest to follow it once others do: driving on one side of the road is the clear case, and the content of the rule is arbitrary while the coordination is not. On this view norms are chosen, in the weak sense that anyone would choose them given what everyone else is doing, and they change rapidly when the incentives change.

The transmission account, meaning the view that norms are learned in childhood and reproduced largely unexamined, holds that they are carried by people who could not say why they hold them. On this view a norm is inherited rather than chosen, and the evidence is that norms survive the conditions that produced them. Rules about food, cleanliness and family obligation persist for generations after migration, and differences between neighboring and insular communities with identical economic conditions can be large and stable.

The distinguishing prediction concerns speed. Equilibrium norms should change fast when the payoffs do, and several have: smoking indoors became unacceptable in many countries within about fifteen years, and so did seat belt use. Transmitted norms should change at the speed of generations, and several have done that instead, including attitudes to marriage and to authority, which track birth cohort more closely than they track current conditions. The useful conclusion is that both mechanisms exist and that the observed speed of change is the evidence that identifies which one is operating, which also means that a policy working on one of them will not work on the other. Studies of migrant communities in Toronto and elsewhere are the standard testing ground for the second account. They are confounded by selection, since migrants are not a random sample.

WHAT THIS PASSAGE IS FOR

- The equilibrium account makes the content arbitrary and coordination essential.
 - Norms survive the conditions that produced them.
 - The observed speed of change tells you which mechanism is at work.
-

Questions 196.1 to 196.10

on passage 196, Chosen or Inherited

196.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Driving on one side of the road is a coordination norm
- B) Attitudes to marriage track birth cohort closely
- C) The speed of change identifies which mechanism is at work
- D) Only one of the two accounts can be correct

196.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, how fast did indoor smoking become unacceptable?

- A) Within about fifteen years
- B) At the speed of generations
- C) Within about fifty years
- D) Only after migration

196.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that some norms outlast the conditions that produced them?

- A) “driving on one side of the road is the clear case, and the content of the rule is arbitrary while the coordination is not”
- B) “Rules about food, cleanliness and family obligation persist for generations after migration, and differences between neighboring and insular communities with identical economic conditions can be large and stable”
- C) “Studies of migrant communities in Toronto and elsewhere are the standard testing ground for the second account”
- D) “Equilibrium norms should change fast when the payoffs do, and several have: smoking indoors became unacceptable in many countries within about fifteen years”

196.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Equilibrium norms should change fast when the payoffs do, and transmitted norms should change at the speed of generations. A norm that moved sharply within a decade would therefore ____

Which choice most logically completes the text?

- A) be carried by people who could not say why
- B) track birth cohort rather than conditions
- C) require a study of migrant communities
- D) look like the first kind rather than the second

196.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “insular” most nearly mean?

- A) built on an island
- B) wealthy and settled
- C) closed to outsiders
- D) open to every comer

196.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the distinguishing prediction?

- A) It defines the equilibrium account for a reader
- B) It names the test that separates the two accounts
- C) It reports the Toronto studies and their flaw
- D) It argues that the accounts make the same forecast

196.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 146 of this book. It reports that conformity collapsed when one confederate gave the correct answer and concludes that what survives is a mechanism whose size depends on who is in the room.

Text 1 sets a transmitted norm against an equilibrium one. Based on Text 2, which choice best describes an effect that tracks the room?

- A) Conformity collapsing when one ally speaks up
- B) A rate that stayed the same in every country
- C) Rules about food persisting after migration
- D) A task easy to the point of being insulting

196.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Transmitted norms should change at the speed of generations. ____ several have done that instead, including attitudes to marriage and to authority.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) As a result,
- C) In other words,
- D) Indeed,

196.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Two accounts of norms are current ____ and they make different predictions.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) current and
- B) current, and
- C) current; and
- D) current and,

196.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Equilibrium norms change fast when the payoffs change.
- Transmitted norms change at the speed of generations.
- The speed of change identifies which mechanism is operating.
- A policy working on one of them will not work on the other.

The student wants to explain why the choice of account matters for policy. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Equilibrium norms change fast when the payoffs change
- B) Transmitted norms change at the speed of generations
- C) The speed of change identifies the mechanism at work
- D) A lever that moves payoffs does nothing to a norm carried unexamined

ملخص المقطع 196 بالعربية

خلاصة: حسابان للأعراف شائعان، أحدهما من نظرية الألعاب والآخر من الأنثروبولوجيا، وهما يتنبآن تنبؤين مختلفين. فحساب التوازن يقول إنَّ العُرف يبقى لأنَّ اتِّباعه في مصلحة كلِّ شخص متى اتَّبِعَهُ غَيْرُهُ، والسير على جهة من الطريق هو الحالة الواضحة. المعنى: المعنى أنَّ مضمون القاعدة تعسَّفي والتناسق ليس كذلك، وعلى هذا الرأي تُختار الأعراف بمعنى ضعيف، إذ يختارها كلُّ أحد بالنظر إلى ما يفعله غيره، وتتغيَّر سريعاً متى تغيَّرت الحوافز. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: وحساب النقل، أي الرأي بأنَّ الأعراف تُتعلَّم في الطفولة وتُعاد بلا تمحيص، يقول إنَّ من يحملها لا يستطيع أن يقول لماذا يحملها، فالعُرف مُورَّث لا مُختار، ودليله أنَّ الأعراف تنجو من الظروف التي أنشأتها. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقَّع هنا أن يُطلَّب اختبار أحد الحسابين، مع أنَّ النص يقول إنَّ الآليتين موجودتان. ويقترن المقطع بالمقطع السادس والأربعين بعد المئة.

Does Building Lower Rents

The textbook position is that rents are high where housing is scarce, so building more housing reduces rents. The skeptical reply, common among tenant organizations in expensive cities, is that new buildings are luxury buildings, that they arrive with cafes and rising rents around them, and that supply in practice produces induced demand, meaning that new units attract additional people and the price does not fall.

Both claims have evidence and the evidence operates at different scales. Studies of individual new buildings in San Francisco, Helsinki and New York find that rents in the immediately surrounding blocks rise, which supports the skeptics on the thing residents actually observe. Studies of metropolitan areas find that places which built more have lower rent growth, which supports the textbook. The reconciling mechanism is filtering, meaning the process by which new expensive housing frees older cheaper housing for others, and tracking individual moves shows chains of six or seven vacancies following one new building, reaching down the income distribution within a few years.

The dispute that remains is about who bears the costs and over what period. A tenant displaced this year is not compensated by lower regional rents in five years, and the chains work through a market in which the first beneficiaries are better off than the last. The defensible position is that supply does reduce rents at the scale of a region, that it does not protect the people nearest the construction, and that these two facts are not in conflict, which is why the policy argument is about compensation and timing rather than about economics. Both literatures have grown quickly since administrative rent data became available. The local and regional findings have each been replicated in several countries.

WHAT THIS PASSAGE IS FOR

- Rents rise in the blocks immediately around a new building.
 - Areas that built more have lower rent growth.
 - The two facts are not in conflict.
-

Questions 197.1 to 197.10

on passage 197, Does Building Lower Rents

197.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Studies find rents rise in the blocks around new buildings
- B) Tracking moves shows chains of six or seven vacancies
- C) Supply and the local rise are in direct conflict
- D) Supply works at the regional scale and leaves neighbors exposed

197.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what does filtering describe?

- A) New units attracting additional people
- B) New expensive housing freeing older cheaper housing
- C) Cafes arriving with the new buildings
- D) Rents rising in the surrounding blocks

197.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the two bodies of evidence answer at different scales?

- A) “new buildings are luxury buildings, that they arrive with cafes and rising rents around them”
- B) “Both literatures have grown quickly since administrative rent data became available”
- C) “which supports the skeptics on the thing residents actually observe. Studies of metropolitan areas find that places which built more have lower rent growth”
- D) “A tenant displaced this year is not compensated by lower regional rents in five years”

197.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

A tenant displaced this year is not compensated by lower regional rents in five years, and the chains work through a market in which the first beneficiaries are better off than the last. A policy resting on filtering alone would therefore ____

Which choice most logically completes the text?

- A) leave the nearest tenants unhelped
- B) raise rents across the whole region
- C) stop the chains of vacancies forming
- D) need administrative rent data first

197.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “bears” most nearly mean?

- A) carries in the arms
- B) gives birth to
- C) turns toward
- D) is left paying

197.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about the reconciling mechanism?

- A) It defines induced demand for a reader
- B) It reports the cities where rents were studied
- C) It shows how both findings can hold at once
- D) It denies that the local rents ever rise

197.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 147 of this book. It warns that census tracts are split as they grow and merged as they shrink, so a table comparing a neighborhood in two censuses may be comparing two different pieces of ground.

Text 1 compares findings at the block and the metropolitan scale. Based on Text 2, which choice best describes a hazard in that comparison?

- A) A category rewritten between two censuses
- B) Tracts split and merged between the two dates
- C) An undercount of about one percent in total
- D) A conversion table published by an agency

197.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

Both claims have evidence and the evidence operates at different scales. ___ studies of individual new buildings find that rents in the immediately surrounding blocks rise.

Which choice completes the text with the most logical transition?

- A) For instance,
- B) By contrast,
- C) As a result,
- D) In other words,

197.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Both claims have evidence ___ and the evidence operates at different scales.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) evidence and
- B) evidence; and
- C) evidence, and
- D) evidence and,

197.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Supply reduces rents at the scale of a region.
- It does not protect the people nearest the construction.
- A tenant displaced this year is not compensated by a later fall.
- The first beneficiaries of the chains are better off than the last.

The student wants to explain why the argument is about compensation rather than economics. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The regional gain is real and arrives too late for the tenant nearest the site
- B) Supply reduces rents at the scale of a whole region
- C) It fails to protect the people nearest the construction
- D) The first beneficiaries are better off than the last

ملخص المقطع 197 بالعربية

خلاصة: الموقف المدرسي أن الأجر السكنية عالية حيث يشخ الإسكان، فبناء إسكان أكثر يخفض الأجر. والرد المتشكك، وهو شائع في منظمات المستأجرين في المدن الغالية، أن الأبنية الجديدة أبنية فارمة تأتي بمقاو وأجر صاعدة حولها.

المعنى: المعنى أن العرض يُنتج عملياً طلباً مُستحثاً، أي أن الوحدات الجديدة تجذب ناساً إضافيين فلا يهبط السعر. وللدعويين دليل، والدليل يعمل في مقياسين مختلفين: فدراسات الأبنية الفردية في سان فرانسيسكو وهلسنكي ونيويورك تجد أن الأجر في المربعات المجاورة ترتفع.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: ودراسات المناطق الحضرية تجد أن المواضع التي بنت أكثر فيها نمو أجر أقل. والآلية الموقفة هي الترشيح، أي أن الإسكان الجديد الغالي يُفرج إسكاناً أقدم أرخص لغيرهم، وتتبع الانتقالات يُظهر سلاسل من ستة أو سبعة إخلاءات.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الدليلان متناقضين، مع أن النص يقول إنهما لا يتعارضان. ويقترن المقطع بالمقطع السابع والأربعين بعد المئة.

Thirty Years of Estimates

The minimum wage literature now contains hundreds of estimates and the central finding is that modest increases have small employment effects. That sentence conceals thirty years of argument, and the argument is instructive about how a contested empirical question gets settled or fails to. Few empirical questions in economics have been fought over for as long or with as much data.

Three things changed the field. The first was data: administrative employment records replaced surveys, and the number of separate minimum wage changes available for study rose into the hundreds as states and cities set their own rates. The second was method: comparisons began to use only nearby areas, or only the same industry, or the distribution of wages rather than total employment, which can discriminate between a job lost and a job that simply pays more. The third was meta-analysis, meaning the statistical combination of many studies, which revealed that the literature had a funnel plot consistent with small null results going unpublished.

What remains disputed is the boundary. Everyone agrees that a very high minimum would cost jobs and that a very low one would not bind at all, and the argument is about where the turn comes, which depends on the local wage distribution and cannot be answered in general. Monopsony provides the theory for why small increases may not cost jobs, since an employer with wage-setting power is already paying below the competitive level. The honest summary is that the simple textbook prediction was wrong about the range of increases actually legislated, that nobody has established the upper boundary, and that recent increases in some American cities are the largest natural experiment yet run. Several cities have raised minimum wages above half the local median wage, which is beyond the range previously studied. Results from those cases are being published now and are not yet consistent.

WHAT THIS PASSAGE IS FOR

- Administrative records replaced surveys and the number of cases rose.
 - Meta-analysis found evidence that null results went unpublished.
 - The disputed question is where the turn comes.
-

Questions 198.1 to 198.10

on passage 198, Thirty Years of Estimates

198.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The simple prediction failed and the boundary stays unknown
- B) The literature now contains hundreds of estimates
- C) A very high minimum would cost no jobs
- D) Meta-analysis found no publication bias

198.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what did meta-analysis reveal?

- A) That administrative records replaced surveys
- B) That comparisons used only nearby areas
- C) A funnel plot consistent with missing nulls
- D) That monopsony explains the small effects

198.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the open question is where the turn comes?

- A) “administrative employment records replaced surveys, and the number of separate minimum wage changes available for study rose into the hundreds”
- B) “Monopsony provides the theory for why small increases may not cost jobs”
- C) “Several cities have raised minimum wages above half the local median wage, which is beyond the range previously studied”
- D) “the argument is about where the turn comes, which depends on the local wage distribution and cannot be answered in general”

198.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Everyone agrees that a very high minimum would cost jobs and that a very low one would not bind at all. A dispute about a minimum in between would therefore ____

Which choice most logically completes the text?

- A) be settled by the textbook model
- B) turn on the local wage distribution
- C) need no empirical evidence at all
- D) be answered in general by theory

198.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “discriminate” most nearly mean?

- A) tell two things apart
- B) treat a group unfairly
- C) combine many studies
- D) select the best estimate

198.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence about monopsony?

- A) It defines meta-analysis for a reader
- B) It reports the number of estimates now available
- C) It argues that employers pay above the market
- D) It supplies the theory the findings had lacked

198.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 148 of this book. It reports a survey and a payroll study of the same restaurants reaching opposite conclusions, and says the exchange drove a generation of work using administrative data and borders.

Text 1 says administrative records replaced surveys. Based on Text 2, which choice best explains what prompted that change?

- A) A Nobel prize shared in 2021
- B) A restaurant trade association helping with a sample
- C) A dispute in which two data sources disagreed
- D) A textbook model predicting a fall in employment

198.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

That sentence conceals thirty years of argument. ___ few empirical questions in economics have been fought over for as long or with as much data.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Indeed,
- C) In other words,
- D) For instance,

198.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The minimum wage literature now contains hundreds of estimates ___ and the central finding is that modest increases have small employment effects.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) estimates and
- B) estimates; and
- C) estimates and,
- D) estimates, and

198.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- The simple textbook prediction was wrong about the legislated range.
- Nobody has established the upper boundary.
- Recent increases in some cities are the largest natural experiment yet.
- Results from those cases are not yet consistent.

The student wants to explain the exact standing of the question after thirty years. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) The simple textbook prediction was wrong about the legislated range
- B) The low range is settled, the boundary is open, and the new cases are still arriving
- C) Nobody has yet established the upper boundary
- D) Results from the recent cases are not yet consistent

ملخص المقطع 198 بالعربية

خلاصة: تحوى أدبيات الحد الأدنى للأجر اليوم مئات التقديرات، والنتيجة المركزية أن الفروع المتواضعة لها آثار تشغيل صغيرة. وتلك الجملة تُخفي ثلاثين سنة من الجدل، والجدال مُعلّم في كيف تُحسَم مسألة تجريبية متنازعة أو تُعجز. المعنى: المعنى أن ثلاثة أمور غيّرت المجال: الأول البيانات، فسجلات التشغيل الإدارية حلّت محلّ المسوح، وارتفع عدد تغييرات الحد الأدنى المتاحة للدرس إلى المئات مع تحديد الولايات والمدن أسعارها. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: والثاني المنهج، فصارت المقارنات تستعمل المناطق المجاورة وحدها، أو الصناعة نفسها وحدها، أو توزيع الأجور بدل التشغيل الكلي. والثالث التحليل البعدي، الذي كشف رسمًا قميًا يتفق مع بقاء نتائج صفرية صغيرة غير منشورة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقع هنا أن يُحسب الحد الأعلى معلومًا، مع أن النص يقول إن أحدًا لم يُثبتته. ويقترن المقطع بالمقطع الثامن والأربعين بعد المئة.

Inequality or Poverty

Two targets are available to anyone who wants to act on the distribution of income, and they are not the same target. One is absolute poverty, meaning a standard fixed at a level of goods and services rather than relative to others. On that measure the world has improved enormously in forty years, with the share of people below the international line falling from something near four in ten to under one in ten. The other is inequality, measured as the gap between the top and the rest, and on that measure many rich countries have moved sharply the other way.

The priority dispute follows directly. One side holds that poverty is what matters, that a gap is only bad if it makes someone worse off, and that the ostensible concern about inequality is often envy with a theory attached. The other side holds that inequality does make people worse off, through mechanisms that can be specified. Political influence buys rules, and high inequality raises the price of positional goods such as housing near good schools. Relative standing has also been shown to affect health and trust in ways that can be measured across populations.

The empirical question is whether those mechanisms are large, and the evidence is mixed in a way that does not favor either side decisively. Correlations between inequality and poor health across countries are real and shrink substantially when income levels are controlled for. The political mechanism is the best supported of the three and is hard to quantify. What can be said is that the two targets sometimes conflict in policy, since growth has reduced poverty in several countries while increasing inequality, and anyone who declines to choose between them is not facing the arithmetic. Both measures depend on choices about price indices and household size, as the World Bank has documented, that move the headline figures.

WHAT THIS PASSAGE IS FOR

- Absolute poverty has fallen enormously in forty years.
 - The two targets sometimes conflict in policy.
 - Health correlations shrink substantially when income is controlled for.
-

Questions 199.1 to 199.10

on passage 199, Inequality or Poverty

199.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) The share below the international line fell sharply
- B) The two targets differ and sometimes conflict in policy
- C) The evidence favors one side of the dispute decisively
- D) Inequality has no mechanism that can be specified

199.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, what happens to the health correlations under control?

- A) They disappear entirely
- B) They grow much larger
- C) They stay exactly as they were
- D) They shrink substantially

199.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the mechanisms can be named rather than merely asserted?

- A) “Political influence buys rules, and high inequality raises the price of positional goods such as housing near good schools”
- B) “On that measure the world has improved enormously in forty years”
- C) “The political mechanism is the best supported of the three and is hard to quantify”
- D) “Both measures depend on choices about price indices and household size”

199.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Growth has reduced poverty in several countries while increasing inequality. Anyone who declines to choose between the two targets would therefore ____

Which choice most logically completes the text?

- A) have both measures moving together
- B) be controlling for income levels
- C) be avoiding the arithmetic
- D) have specified a mechanism first

199.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “ostensible” most nearly mean?

- A) openly measured
- B) professed rather than real
- C) widely shared
- D) proved beyond doubt

199.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence calling the evidence mixed?

- A) It refuses to award the dispute to either side
- B) It defines a positional good for a reader
- C) It reports the fall in absolute poverty
- D) It argues that inequality does no harm

199.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 149 of this book. It describes the Lorenz curve and the Gini coefficient and names the Palma ratio, which compares the top tenth with the bottom four tenths, among the alternatives chosen for what they expose.

Text 1 measures inequality as the gap between the top and the rest. Based on Text 2, which choice best names a figure built for that gap?

- A) The Lorenz curve of cumulative shares
- B) The area between the curve and the diagonal
- C) The Theil index decomposed by region
- D) The Palma ratio of the top tenth

199.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

One side holds that poverty is what matters. ____ the other side holds that inequality does make people worse off.

Which choice completes the text with the most logical transition?

- A) As a result,
- B) For instance,
- C) By contrast,
- D) In other words,

199.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

Two targets are available to anyone who wants to act on the distribution of income ____ and they are not the same target.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) income, and
- B) income and
- C) income; and
- D) income and,

199.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Absolute poverty is fixed at a level of goods and services.
- Inequality is the gap between the top and the rest.
- Growth has reduced poverty while increasing inequality.
- Anyone who declines to choose is not facing the arithmetic.

The student wants to explain why the two targets force a choice. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Absolute poverty is fixed at a level of goods and services
- B) Inequality is measured as the gap between the top and the rest
- C) Growth has moved the two measures in opposite directions at once
- D) Anyone who declines to choose is not facing the arithmetic

ملخص المقطع 199 بالعربية

خلاصة: هدفان متاحان لمن يريد أن يعمل في توزيع الدخل، وليس الهدف نفسه. أحدهما الفقر المطلق، أي معيار مثبت على مستوى من السلع والخدمات لا نسبة إلى غيرك، وعلى هذا المقياس تحسّن العالم تحسّناً هائلاً في أربعين سنة.

المعنى: المعنى أن حصّة من هم تحت الخطّ الدوليّ هبطت من قريب أربعة من عشرة إلى أقلّ من واحد من عشرة، وأنّ الآخر هو عدم المساواة مقيساً بالفجوة بين القمّة والبقية، وعلى هذا المقياس تحرّكت بلدان غنيّة كثيرة في الجهة الأخرى بحدّة.

الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: فيقول أحد الطرفين إنّ الفقر هو المهمّ، وإنّ الفجوة لا تسوّء إلاّ إن أسوأّت حال أحد، وإنّ القلق المعلن على عدم المساواة حسد بنظرية ملحقّة. ويقول الآخر إنّ عدم المساواة يسيء بآليات يمكن تعيينها.

الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخّ المتوقّع هنا أن يُحسم الخلاف لأحد الطرفين، مع أنّ النصّ يقول إنّ الدليل مختلط. ويقترن المقطع بالمقطع التاسع والأربعين بعد المئة.

Irrational or Economical

The heuristics literature can be read in two ways, and the reading chosen decides what follows from it. The first reading treats each documented departure from a formal model as a bias, meaning an error, and it concludes that human judgment is systematically defective and in need of correction by institutions and by experts. The second holds that the rules people use are adapted to the environments in which they normally operate, a position called ecological rationality, and that performance in an artificial problem is not evidence about performance in life.

The second reading has experimental support that is easy to state. Several famous errors shrink or vanish when the same problem is posed in frequencies rather than in single-event probabilities, which is how information arrives in experience. Doctors who fail the base rate problem in percentages mostly succeed when it is posed as counts out of a thousand. Simple rules that ignore most of the available information outperform complex models in some forecasting tasks, which is not what a defect account predicts.

Neither reading explains everything. Anchoring is robust across formats and is hard to call adaptive. Framing effects persist in frequency presentations. Against that, the practical lesson from the second reading has proved more useful than the practical lesson from the first: redesigning the presentation of information works better and more reliably than training people out of errors. The most telling evidence is therefore about remedies rather than about theory, and the two camps have converged on practice while continuing to disagree about what the practice shows. Gigerenzer and Kahneman debated the question in print for two decades, and both endorsed the frequency presentation of medical risk. That convergence on practice is probably the most useful thing the whole argument has produced, and it arrived without either side conceding the theoretical point at issue.

WHAT THIS PASSAGE IS FOR

- One reading treats each departure as an error in need of correction.
 - Doctors succeed with counts out of a thousand where they fail with percentages.
 - The camps converged on practice while disagreeing about theory.
-

Questions 200.1 to 200.10

on passage 200, Irrational or Economical

200.1

CENTRAL IDEA · MEDIUM · INFORMATION AND IDEAS

Which choice best states the main idea of the text?

- A) Anchoring is robust across presentation formats
- B) Gigerenzer and Kahneman debated for two decades
- C) The camps converged on practice without settling the theory
- D) Training people out of errors works better than redesign

200.2

DETAIL · MEDIUM · INFORMATION AND IDEAS

According to the text, when do doctors mostly succeed?

- A) When the problem is posed as counts
- B) When the problem is posed in percentages
- C) When they are trained out of the error
- D) When the problem is framed two ways

200.3

EVIDENCE · HARD · INFORMATION AND IDEAS

Which quotation from the text most strongly supports the claim that the second reading has results a defect account would not predict?

- A) “Neither reading explains everything. Anchoring is robust across formats and is hard to call adaptive”
- B) “Simple rules that ignore most of the available information outperform complex models in some forecasting tasks, which is not what a defect account predicts”
- C) “Gigerenzer and Kahneman debated the question in print for two decades”
- D) “redesigning the presentation of information works better and more reliably than training people out of errors”

200.4

INFERENCE · MEDIUM · INFORMATION AND IDEAS

Several famous errors shrink or vanish when the same problem is posed in frequencies rather than in single-event probabilities, which is how information arrives in experience. A test posed only in percentages would therefore ____

Which choice most logically completes the text?

- A) measure performance in ordinary life
- B) remove the anchoring effect as well
- C) show simple rules beating complex ones
- D) report a failure the format produced

200.5

WORDS IN CONTEXT · MEDIUM · CRAFT AND STRUCTURE

As used in the text, what does the word “telling” most nearly mean?

- A) speaking at length
- B) counting one by one
- C) carrying real weight
- D) easy to overlook

200.6

STRUCTURE · HARD · CRAFT AND STRUCTURE

Which choice best describes the function of the sentence that limits both readings?

- A) It defines ecological rationality for a reader
- B) It opens the case against each side in turn
- C) It reports what the two men endorsed
- D) It awards the argument to the second reading

200.7

CROSS TEXT · HARD · CRAFT AND STRUCTURE

Text 2 is passage 150 of this book. It reports the systematic replications begun around 2011 and says anchoring survived robustly, framing survived, and loss aversion survived with its size disputed.

Text 1 calls anchoring hard to describe as adaptive. Based on Text 2, which choice best describes how firm that effect is?

- A) It survived the systematic replications robustly
- B) It was among the results that did not survive
- C) It was confirmed with its size disputed
- D) It was removed by preregistration

200.8

TRANSITIONS · HARD · EXPRESSION OF IDEAS

The second reading has experimental support that is easy to state. ___ several famous errors shrink or vanish when the same problem is posed in frequencies.

Which choice completes the text with the most logical transition?

- A) By contrast,
- B) Even so,
- C) In other words,
- D) For instance,

200.9

BOUNDARIES · EASY · STANDARD ENGLISH CONVENTIONS

The heuristics literature can be read in two ways ___ and the reading chosen decides what follows from it.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) ways and
- B) ways, and
- C) ways; and
- D) ways and,

200.10

SYNTHESIS · HARD · EXPRESSION OF IDEAS

While researching a topic, a student has taken the following notes.

- Redesigning the presentation works better than training people out of errors.
- The two camps converged on practice while disagreeing about theory.
- Both men endorsed the frequency presentation of medical risk.
- The convergence arrived without either side conceding the point at issue.

The student wants to explain what the argument actually produced. Which choice most effectively uses relevant information from the notes to accomplish that goal?

- A) Redesigning the presentation beats training people out of errors
- B) Both men endorsed the frequency presentation of medical risk
- C) The two camps converged on practice while disagreeing on theory
- D) A shared way of presenting risk, reached with the theory still unsettled

ملخص المقطع 200 بالعربية

خلاصة: يمكن قراءة أدبيات الاستدلالات المختصرة قراءتين، والقراءة المختارة تقرّر ما يلزم عنها. فالأولى تعدّ كلّ انحراف موثّق عن نموذج صوريّ تحيّرًا، أي خطأ، وتخلص إلى أنّ الحكم البشريّ معيب بانتظام ويحتاج إلى تصحيح من المؤسسات والخبراء. المعنى: المعنى أنّ الثانية ترى أنّ القواعد التي يستعملها الناس متكيفة مع البيئات التي يعملون فيها عادةً، وهو موقف يُسمّى العقلانية البيئية، وأنّ الأداء في مسألة مصطنعة ليس دليلًا على الأداء في الحياة. الأهمية في المجال: في مجال العلوم الاجتماعية هذه المادة في مستوى الخلاف: وللقراءة الثانية سند تجريبيّ سهل بيانه: فعده أخطاء مشهورة تنقلّص أو تزول إذا وُضعت المسألة نفسها في تكرارات لا في احتمالات حدث واحد، وهكذا تُردّ المعلومات في الخبرة. الصلة بالاختبار: في اختبار سات يكثر السؤال عن الفكرة الرئيسة وعن الدليل الذي يسند دعوى وعن معنى كلمة في سياقها. والفخ المتوقّع هنا أن يُقدّم تدريب الناس على تجاوز الأخطاء على إعادة تصميم العرض، مع أنّ النض يقول عكسه. ويقترن المقطع بالمقطع الخمسين بعد المئة.

Appendix A

Strand index

The four numbers are the passages for that strand, in level order.

History and Civics

S01 The Declaration and the claim of natural rights	1 · 51 · 101 · 151

Appendix B

The field terms explained

Every term this book defines, with the passage in which it is defined.

- abolitionist** campaigning for the ending of slavery (3)
- absolute poverty** a standard fixed at a level of goods and services rather than relative to others (199)
- absolute temperature** temperature counted from the coldest possible point rather than from the freezing point of water (74)
- activation energy** the push a reaction needs before it will start, even when it releases energy overall (77)
- active frontage** frontage with doors and windows that people use (89)
- agenda setting** influencing which issues people regard as important rather than what they think about them (160)
- all-white primaries** party contests from which Black voters were excluded (55)
- allele** one of the alternative versions of a gene (62)
- anchoring** the pull of an irrelevant number on a later estimate (100)
- appropriation** a vote that releases funds (2)
- aside** a line spoken to the audience and not to the other characters (85)
- asymptomatic carrier** a person who harbors an organism without becoming ill (116)
- atomic weight** the mass of an atom of an element relative to a standard (127)
- ATP** the molecule a cell uses as its working currency of energy (63)
- attribution** establishing how much of an observed change is caused by a particular factor (168)
- autograph score** the full score written out in the composer's own hand (138)
- auxiliary assumption** a background claim that has to hold for a measurement to mean what it is taken to mean (171)
- availability** judging how common a thing is by how easily examples come to mind (100)
- balance** an instrument that compares an unknown weight against a known one (21)
- basalt** rock that was once liquid (19)
- base rate** the rate at which a condition occurs before any test is run (50)
- beadles** uniformed officers employed to keep order (39)
- beat** an assigned area such as the courts, the city hall or the police (60)
- bias** a departure from the answer a formal model prescribes (200)
- bibliography** a systematic list of everything published of a particular kind in a particular period (136)
- bid rent** the amount a household or firm will pay for land at a given distance from the center (97)
- biomass** the total weight of living material (64)
- boundary change** an alteration of the areas for which figures are reported (147)

boycott an organized refusal to ride (7)

Bradford Hill's considerations a set of features that strengthen a causal reading of an association (193)

bred true that tall plants from those lines always gave tall offspring (12)

cadence a closing formula that signals an ending (88)

caesura a strong break inside a line (84)

calibration curve a chart converting measured radiocarbon into calendar years, built from samples of known age (129)

calibration period the overlap in which a proxy can be checked against direct measurement (118)

canceled chapter a draft section that the author replaced before publication (132)

carpools shared cars run from church basements (7)

carrying capacity the number the habitat can support indefinitely (65)

cascading failure a sequence in which each component protects itself and thereby overloads the next (175)

cast iron a material that is strong when squeezed and weak when pulled (28)

casual hiring taking men on by the half day with no contract (48)

catalyst a substance that lowers the barrier without being consumed (77)

cause of death coding the system by which a death is assigned to a single cause (106)

cavity the space under the floating ice (20)

cesspit a pit for household waste (16)

character function the role a figure performs in a plot, independent of personality (182)

characteristic strength a value below which only a small stated fraction of test specimens fail (128)

cholera a disease that killed quickly, often within a day (16)

circuit breaker a device that opens the circuit when too much current flows through it (25)

classification the withholding of the government's own evidence from examination (59)

closed system a sample from which nothing relevant has entered or escaped since it formed (119)

clover a low plant of the pea family grown for hay (17)

commission a body set up to investigate and report (6)

compliance cost the expense a firm incurs in meeting a regulation (156)

composition the arrangement of shapes and spaces within the frame (87)

concordance an index listing every occurrence of every word in a text with its context (133)

confederate a person in an experiment who appears to be a participant but is working for the researcher (146)

confidence interval a range calculated so that the procedure captures the true value in a stated share of repetitions (144)

- confounded design** a study in which two possible causes changed at the same time (164)
- confounder** a difference between groups that affects the outcome as well (92)
- conservation of energy** the rule that energy is never created or destroyed, only moved or converted (73)
- constitutional hypothesis** the proposal that a third factor causes both the exposure and the disease (193)
- control group** the group that does not receive the treatment (92)
- convention** a rule a kind of story is expected to follow (86)
- coram nobis** a rare procedure for reopening a conviction on the ground that the court was misled (109)
- corpus** a body of texts assembled so that it can be searched as a whole (133)
- counterfactual** what would have happened in the absence of the measure being assessed (156)
- covenants** clauses in deeds restricting who could buy a house (49)
- criterion** the standard against which a work is being judged (90)
- crowding out** the displacement of an internal motive by an external reward or penalty (195)
- crust** the outer rock layer of the Earth (19)
- defined constant** a quantity assigned an exact value, so that it is no longer measured (126)
- delegation** a grant of broad authority from a legislature to an executive (59)
- dendrochronology** dating a wooden panel by matching its ring pattern to a regional record (137)
- denominator** the figure a count must be divided by before it means anything (106)
- descriptive norm** what people actually do, as distinct from what they say should be done (96)
- difference in differences** comparing the change in a treated place with the change in an untreated one over the same period (145)
- differential nonresponse** a situation in which one group answers surveys at a different rate from another (191)
- diffraction** the spreading of a wave after it passes an edge or a narrow gap (76)
- direct action** protest intended to create a crisis that forces negotiation (157)
- direct rebound** the extra consumption of the same service by the same user (173)
- directors' theater** a tradition in which the director's interpretation is the primary creative act (185)
- discovery space** a curtained opening at the back of the stage (85)
- dominant** the version that shows whenever it is present (62)
- dose** the energy absorbed per unit of body mass (79)
- Dunning school** an early twentieth-century interpretation treating Reconstruction as a corrupt failure (155)
- earthenware** baked clay, unglazed or roughly glazed (37)

- ecological rationality** the view that a rule is rational if it performs well in the environment where it is used (200)
- efficiency** the fraction of the energy put in that comes out in the useful form (73)
- elasticity** the percentage change in quantity produced by a one percent change in price (145)
- elk** the large deer that wolves hunt there (14)
- endosymbiosis** the proposal that some organelles descend from bacteria taken up by another cell (163)
- enjambment** running a sentence past the end of a line without a pause (84)
- entropy** a measure of the number of microscopic arrangements consistent with a given state (174)
- equilibrium account** the view that a norm persists because it is in each person's interest once others follow it (196)
- eutrophication** the enrichment of water by nutrients, which strips it of oxygen (167)
- excess mortality** deaths above the number that would have been expected without the event (108)
- exclosure** a fenced plot that keeps a particular animal out while leaving everything else the same (114)
- executive order** a written instruction from a president that carries the force of law (9)
- exponential growth** growth in which the increase is proportional to the number already present (65)
- exposition** direct statement of background by the narrator (82)
- external validity** whether a result obtained in one setting holds in another (192)
- faction** a group united by a common interest that is adverse to the rights of others (52)
- factorial experiment** a design in which two or more treatments are applied separately and together (165)
- fair play** the rule that every clue is shown to the reader before the solution (86)
- false positive** a positive result in a person who does not have the condition (50)
- federal examiners** officials sent to register voters where local registrars refused (57)
- feminine ending** a line that finishes on an unstressed extra syllable (134)
- fermentation** the short cut the cell takes when no oxygen is available (13)
- field experiment** a trial run in a real setting rather than a laboratory (46)
- filtering** the process by which new expensive housing frees older cheaper housing for others (197)
- fingerprint** a pattern of change that a particular cause produces and others do not (168)
- fixation** the conversion of nitrogen gas into a form that living things can use (67)
- follow-up period** the length of time over which participants are tracked after the trial (142)
- foot warmer** a small wooden box for hot coals (37)
- footfall count** a tally of how many people pass a point in a given period (139)

- formalism** the study of a work as a structure of parts rather than as a representation of people (182)
- franchise** the right to vote (3)
- free indirect style** a third-person voice that slides into a character's way of thinking (81)
- free verse** poetry without a regular meter or rhyme scheme (184)
- Freedmen's Bureau** a federal agency that set up schools and ran courts (5)
- freedom of information** a statutory right to demand government documents (107)
- friction** the force between the tires and the road surface (72)
- frontage** the length of building face that meets the pavement (89)
- funnel plot** a chart used to detect whether small studies with null results are missing from a literature (198)
- fur return** the number of pelts a trading company bought in a season (115)
- generalized cost** travel time and money added together as one figure (97)
- genetic drift** change in the frequency of a variant by chance alone, without any advantage (161)
- Gini coefficient** a single figure summarizing how far a distribution departs from complete equality (149)
- glycolysis** the first stage, which splits the sugar in half (63)
- gravimetry** measuring mass by its gravitational pull on a satellite (120)
- grid frequency** the rate at which alternating current reverses, which falls when demand exceeds supply (125)
- gridlock** a condition in which the system cannot act although majorities exist (152)
- grievances** formal complaints (1)
- grounding line** the line where the ice lifts off the sea bed (20)
- half-life** the time in which half of a quantity of a radioactive element decays (79)
- heritability** the share of the variation in a trait that is passed to offspring (111)
- heritable** passed from parent to offspring through the genes (61)
- heterogeneous treatment effect** a situation in which a treatment helps some people and harms others (194)
- historically informed performance** playing music on the instruments and in the manner of its own period (188)
- historiography** the study of how history has been written, as distinct from what happened (155)
- hormesis** the proposal that very small doses are harmless or beneficial (179)
- Hubble constant** the present rate at which the universe is expanding (180)
- iambic pentameter** ten syllables with the stress falling on every second one (34)
- ice cliff failure** the structural collapse of an exposed ice face too tall to support itself (170)
- ice core** a cylinder of ice drilled from a glacier, with annual layers and trapped air (118)

- iconography** the study of the conventional meanings attached to images in a particular period (187)
- ideal critic** a hypothetical judge with full knowledge and no prejudice, used to define a correct verdict (190)
- implied author** the sensibility a reader reconstructs from the whole text, distinct from both narrator and writer (181)
- incubation period** the gap between infection and the first symptom (66)
- induced demand** new supply attracting additional people and so sustaining the price (197)
- inertia** the stored rotational energy of large generators, which slows any change in frequency (125)
- infrared** the long wavelengths at which a warm surface radiates (68)
- infrared reflectography** a method that sees through paint layers to the drawing underneath (137)
- inhibitor** a substance that blocks one particular step in a pathway (113)
- intelligence assessment** a report evaluating a supposed threat for the government (109)
- intentional fallacy** the claim that an author's stated purpose does not settle what a work means (183)
- interaction** an effect of two treatments together that is larger than their effects added (165)
- interference pattern** the pattern of bright and dark bands produced when two waves overlap (176)
- intergenerational mobility** how much a child's position depends on the parents' position (99)
- interiority** direct access to what a character is thinking (82)
- internal contradiction** a place where a text disagrees with itself (131)
- iron oxide** which is rust (27)
- irony** saying something while giving the reader grounds to take the opposite (181)
- islanding** deliberately separating part of a network so that it can run on its own (175)
- isotope label** an atom of unusual weight used to trace a substance through a sequence of reactions (113)
- judicial deference** the practice of courts accepting an executive judgment in its own field (159)
- judicial review** the power to refuse to apply a law that conflicts with the Constitution (2)
- kinetic energy** the energy an object has because it is moving (72)
- land revenue** the tax on agricultural land that funded most of the administration (58)
- latent heat** the energy absorbed when ice turns to water without changing temperature (70)
- laureate** a person awarded the prize (43)
- leaching** the washing of dissolved nitrogen down below the roots (67)
- liability** legal responsibility for the cost of an injury (56)

- lichen** the low crusty growth that reindeer eat (15)
- lichens** the crusty growths that cover healthy bark (11)
- life cycle analysis** an accounting that follows the energy used from extraction through manufacture to disposal (123)
- life expectancy** the average number of years a person born now is expected to live (49)
- limiting case** a situation in which a newer theory reduces to an older one (172)
- linear no-threshold** the assumption that risk falls in proportion to dose all the way down with no safe level (179)
- linkage map** a chart of gene order built from how often inherited traits are separated (112)
- literary hierarchy** the ranking of kinds of writing by assumed seriousness (186)
- litigation strategy** the planned use of selected court cases to establish a legal principle (157)
- long-term experiment** a trial continued for decades so that slow effects become visible (117)
- Lorenz curve** a graph of the cumulative share of income held by the poorest given share of the population (149)
- magma** molten rock below the surface (69)
- manifest** the list of people and goods carried on a particular voyage (104)
- marine ice sheet instability** self-sustaining retreat of a glacier grounded below sea level on a reverse slope (170)
- mark and recapture** the practice of tagging individuals so that the same animal can be identified again (111)
- mechanical equivalent of heat** the amount of work that produces a given quantity of heat (124)
- mechanism** the account of how a treatment produces its effect, which may differ between settings (192)
- median** the middle value when the cases are put in order (44)
- median survival** the time by which half of a group of patients has died (194)
- meta-analysis** a statistical combination of the results of many separate studies (198)
- metonymy** naming a thing by something associated with it (83)
- missing heritability** the gap between heritability estimated from twins and the variation explained by identified variants (162)
- mixed use** buildings and streets that combine housing, work and shops in the same area (189)
- monopoly** the sole right to produce and sell (8)
- monopsony** a market with one buyer, or few, for a particular kind of labor (98)
- moral suasion** persuading individuals to renounce a practice rather than seeking to outlaw it (154)
- nationalist historiography** accounts written from the standpoint of the independence movements (158)

natural experiment a situation in which something outside the researchers' control has allocated people almost at random (143)

neutral theory the proposal that most molecular change has no effect on survival (161)

nodules small swellings on the roots of clover (17)

nonresponse the failure of selected people to answer at all (91)

normalization of deviance the process by which a repeated warning sign comes to be treated as acceptable (178)

omnibus a large horse-drawn carriage running a fixed route (47)

omniscient a narrator with access to every mind in the book (81)

organelle a structure inside a cell that performs a particular function (163)

originalism the view that a text means what its authors and first readers understood it to mean (151)

pamphlet a short work sold cheaply (4)

parallax the shift in a star's position as the Earth moves from one side of its orbit to the other (80)

parts per million the unit in which the measurement is reported (18)

payroll records employment figures taken from the administrative accounts of firms (148)

performance text the version of a play that a particular production actually realizes (185)

perihelion the point in an orbit closest to the Sun (172)

period the time a pulsating star takes to complete one cycle of brightening and dimming (130)

period eye the habits of seeing that a viewer of the time would have brought to a work (187)

periodic table an arrangement of the elements in which chemically similar ones fall in the same column (127)

photographic plate a glass plate coated with emulsion, used to record an image before film or sensors (130)

political abolitionism pursuing the end of slavery through parties, votes and legislation (154)

poll book the register of who actually voted in a given election (103)

poll tax a charge that had to be paid before a person could vote (53)

poll taxes charges that had to be paid before a person could vote (5)

positional good something whose value depends on how much of it others have (199)

postulate a condition laid down in advance that a claim must satisfy (116)

poverty map a street plan colored to show the economic condition of each house (139)

power the rate at which energy is delivered or lost (75)

preamble the opening section that states a purpose (1)

premises statements offered without proof because the writer expects agreement (51)

preregistration publishing the design and analysis plan before the data are collected (150)

probability sample a sample in which every member of the population has a known chance of selection (141)

promptbook a working copy of a play marked up by the stage manager for one production (135)

proxy a measurement used to stand in for a quantity that cannot be observed directly (115)

publication bias the tendency for positive results to be published and null results not (150)

quota sampling choosing respondents to match known proportions in the population (110)

radiocarbon a heavy form of carbon produced in the atmosphere and taken up by living things (129)

radiometric dating dating a rock by the proportion of a radioactive element that has decayed (119)

radium an element discovered by Marie and Pierre Curie in 1898 (29)

random error scatter that falls on both sides of the true value (71)

randomized trial a study in which the groups are formed by lot (42)

ratifying convention a state assembly elected to vote on the Constitution (102)

rebound effect the increase in use of a service that follows from making it cheaper to provide (173)

reception history the record of how a work was read and valued over time (140)

reduction the claim that one science is in principle derivable from another (177)

reference mass a weight whose value has been certified by comparison with a higher standard (121)

refraction the bending of light as it passes from one material into another (26)

registration roll the official list of those entitled to vote (105)

regression discontinuity comparing cases just above and just below an arbitrary cutoff (143)

relativism the position that a judgment of value can be true only relative to a standard (190)

replication an independent repetition of a study to see whether the result holds (146)

reproduction number the average number of new cases that one case produces (66)

reservation wage the lowest pay at which a person will take the work (98)

residence time how long a molecule stays in the air before being taken up elsewhere (68)

resistance the opposition a conductor offers to current (75)

resolutions formal proposals put to a vote (3)

respondents the people who answer a survey (41)

retrograde slope a sea bed that gets deeper inland rather than shallower (70)

revenue settlement the periodic assessment that fixed what each district owed (108)

reverse causation the outcome producing the supposed cause rather than the other way round (93)

rough draft the working manuscript with its crossings-out and insertions still visible (101)

safety factor the ratio between what a structure is built to withstand and what it is expected to carry (128)

salience how noticeable a cost or benefit is at the moment of choosing (95)

sampling frame the list from which the people to be asked are drawn (91)

sanction a penalty applied by other people rather than by law (96)

scansion marking the pattern of stressed and unstressed syllables in a line (134)

scrivener a clerk employed to copy documents by hand (32)

selection effect a pattern produced by how cases entered the data (93)

selective exposure the tendency of people to attend to sources that agree with them already (160)

sensors devices that reported whether the space was occupied (45)

sequencing reading the order of chemical letters along a stretch of DNA (112)

sigma a unit expressing how far two results are apart in terms of their own uncertainties (180)

signal the information that the introduction of a payment conveys about the activity (195)

simile a comparison that announces itself with like or as (83)

sketchbook a composer's working notebook of fragments, trials and rejected versions (138)

skew a distribution with a long tail on one side (94)

soot the black powder left by burning coal (11)

sprinklers ceiling pipes that release water in a fire (6)

stable isotope ratio the proportion of heavy to light atoms in a tissue, which differs by diet (114)

standard candle an object whose true brightness is known, so that its dimness gives its distance (80)

standard deviation a measure of how far the typical case sits from the average (94)

state by state strategy winning the vote one legislature at a time rather than by federal amendment (153)

statistical law a regularity that holds because exceptions are overwhelmingly improbable rather than impossible (174)

statistical significance the judgment that a result is unlikely to have arisen from sampling variation alone (144)

sterling balances debts to India recorded in British currency and held in London (58)

straw poll an informal canvass with no attempt at a representative sample (110)

stress the force carried by each unit of area (78)

strict scrutiny the most demanding standard a court applies before allowing a classification by race (159)

subduction the sliding of one plate down beneath another (69)

- subscription** payment in advance for a year of issues (10)
- substitute** an alternative that is easy to switch to (95)
- superblock** a large site planned as a single unit, with towers set in open ground (189)
- surveillance file** a record compiled by an agency about a person it was watching (107)
- survey data** figures collected by asking employers or workers directly (148)
- survival bias** the distortion caused by studying only what happened to be preserved (136)
- sworn testimony** evidence given under oath and taken down by a clerk (105)
- symbol** an image taken to stand for something beyond itself in a determinate way (183)
- system boundary** the line drawn around whatever is being measured, with everything crossing it counted (123)
- systematic error** an error that pushes every reading the same way (71)
- test case** a prosecution deliberately invited in order to get a ruling (103)
- theory-ladenness** the claim that what counts as a measurement depends on the theory being used (171)
- tide gauge** a fixed instrument recording sea level against a local benchmark (120)
- time of flight** measuring a speed by timing a signal over a known distance (126)
- tonal contrast** the difference between the lightest and darkest areas (87)
- tonic** the home note of a key, where a piece sounds settled (88)
- torsion balance** a beam hung on a thin fiber, which twists by a measurable amount under a tiny force (122)
- traceability** an unbroken chain of comparisons linking an instrument to a national standard (121)
- transfer of power** the official British term for the end of colonial rule (158)
- transmission account** the view that norms are learned in childhood and reproduced largely unexamined (196)
- trophic cascade** a chain of effects running down a food web from a predator to the plants (164)
- trophic level** a step in the chain of who eats whom (64)
- turnips** a root crop lifted for winter feed (17)
- unalienable** incapable of being transferred or surrendered (54)
- undercount** the number of people a census fails to record (147)
- uniformitarianism** the principle that the processes acting now are the ones that shaped the past (169)
- unreliable narrator** a teller whose account the reader has reason to doubt (131)
- urtext** an edition that attempts to present what the composer wrote, stripped of later editorial additions (188)
- veto** return a bill to Congress without signing (2)
- veto point** a place in a political system where one actor can block a decision (152)
- wavefront** the moving line along which a wave has the same phase (76)

wealth what a household owns minus what it owes (99)

weighting adjusting the answers so that the sample matches known population proportions (141)

workers' compensation a schedule of automatic payments replacing the lawsuit (56)

yield gap the difference between what a field produces and what it could produce (167)

yield point the load beyond which a material keeps the shape it is bent into (78)

Appendix C

Where the vocabulary words appear

The two hundred target words of Words in Context, each with the passage in this book that uses it in context.

abolished 60	dormant 118	praised 40
absorbs 26	economy 188	precarious 115
abundant 64	elegiac 138	precedent 109
accelerate 72	emerge 62	predict 49
adapted 11	emit 79	prefer 47
admired 39	empirical 122	prevailed 57
advocated 54	enacted 55	proliferate 117
aesthetic 133	endemic 150	qualify 151
affected 182	enigmatic 131	quiescent 168
aggregate 94	entrenched 105	ratified 51
allocate 92	erode 69	reciprocal 148
allusion 86	established 1	recondite 187
ambivalent 132	evokes 88	recovered 14
ameliorate 106	exact 155	reduce 29
anomalous 129	expand 3	refine 71
appreciate 171	expedient 108	reflects 37
arch 181	express 33	reform 6
arrest 185	factional 110	refractory 178
assume 43	fecund 165	rejected 8
attenuate 113	finite 126	release 13
attribute 124	flag 163	renders 85
austere 89	flows 25	repudiated 101
authority 2	fluctuate 65	resilient 119
bear 197	gross 180	resist 28
behave 46	harbor 166	resolve 172
benefit 48	heterogeneous 147	respond 50

Appendix D

Reading log

Twenty rows of ten. Mark a passage when the three lines at the end of it hold no surprises.

Level 1 — Foundation

	S01	S02	S03	S04	S05	S06	S07	S08	S09	S10
History and Civics	1	2	3	4	5	6	7	8	9	10
Biology and Earth Science	11	12	13	14	15	16	17	18	19	20
Physical Science	21	22	23	24	25	26	27	28	29	30
Humanities	31	32	33	34	35	36	37	38	39	40
Social Science	41	42	43	44	45	46	47	48	49	50

Level 2 — Developing

	S01	S02	S03	S04	S05	S06	S07	S08	S09	S10
History and Civics	51	52	53	54	55	56	57	58	59	60
Biology and Earth Science	61	62	63	64	65	66	67	68	69	70
Physical Science	71	72	73	74	75	76	77	78	79	80
Humanities	81	82	83	84	85	86	87	88	89	90
Social Science	91	92	93	94	95	96	97	98	99	100

Level 3 — Target

	S01	S02	S03	S04	S05	S06	S07	S08	S09	S10
History and Civics	101	102	103	104	105	106	107	108	109	110
Biology and Earth Science	111	112	113	114	115	116	117	118	119	120

Appendix E

Answer key

Two thousand questions in passage order. Each row gives the key, what makes it right, and the wrong answer most likely to attract. The trap line is the one worth reading twice.

1 · Four Days in Philadelphia HIS · S01 · phenomenon

- 1.1 B** central idea · easy Most of the document is a list of particular grievances because Congress was assembling a legal case against the king, which the third paragraph states outright. *Trap: A is true of the text but reports a detail rather than its main idea.*
- 1.2 D** detail · easy The second paragraph states that Congress cut about a quarter of what Jefferson produced after the other committee members left most of the writing to him. *Trap: A reverses the record, since the draft was shortened rather than approved untouched.*
- 1.3 A** evidence · medium The quotation says directly that Congress was assembling a legal case and that such a case requires particulars, which is the claim at issue. *Trap: D quotes the grievances themselves, which show what the case contained rather than that it was a legal case.*
- 1.4 C** inference · medium Congress voted to separate before it had either an army fund or a treasury and then had to build both within the year, so the vote committed it to work it could not yet do. *Trap: A inverts the sequence, since the institutions followed the vote rather than preceding it.*
- 1.5 B** words in context · easy Congress had neither an army fund nor a treasury and then had both, so here the word means brought into being rather than proved. *Trap: A gives the other common sense of the word, as in establishing that something is true.*
- 1.6 A** structure · medium The paragraph opens by noting that the grievances take up most of the page and then supplies the reason, which is that a legal case needs particulars. *Trap: B describes work the second paragraph has already done rather than the third.*
- 1.7 D** cross text · hard Text 2 holds that the premises are offered without proof while the grievances are evidence for a factual claim, so the evidence is what needs the space. *Trap: C uses a real detail, the cut of a quarter, to explain a proportion it did not produce.*
- 1.8 C** transitions · easy Congress lacked both an army fund and a treasury and then built both within the year, so the two sentences stand in contrast. *Trap: D would fit if the second sentence restated the first, but it reports a change instead.*
- 1.9 A** boundaries · easy Both halves are independent clauses, so a semicolon is needed rather than a comma, a colon, or no mark at all. *Trap: B is the comma splice, joining two independent clauses with only a comma.*
- 1.10 C** synthesis · medium Only this choice gives the reason for the proportion, tying the space taken by the grievances to the legal case that required named particulars. *Trap: B repeats two of the notes without explaining the proportion the student set out to explain.*

2 · Three Branches and One Lock HIS · S02 · phenomenon

- 2.1 C** central idea · easy Each branch holds at least one way of stopping the others, those blocks were put in deliberately, and the text calls the resulting slowness a matter of design. *Trap: D names the arrangement readers expect, which the closing sentences reject outright.*
- 2.2 A** detail · easy The text states that no federal dollar may be spent unless Congress has passed an appropriation, which it defines as a vote that releases funds. *Trap: D confuses signing a bill with releasing money, which the text assigns to Congress alone.*

- 2.3 B** evidence · medium The sentence denies directly that the arrangement came about by accident, which is exactly what the claim asserts about intention. *Trap: D reports what readers expect rather than what the drafters intended.*
- 2.4 D** inference · medium A measure all three branches want can move in a week while a measure two want usually fails, so speed follows from how wide the agreement is. *Trap: A converts a condition about three branches into one about the whole public.*
- 2.5 C** words in context · easy The men at the convention wanted governing power to be real but answerable, so the word names power to govern rather than an opinion or a document. *Trap: A gives the sense in which a person is an authority on a subject.*
- 2.6 B** structure · medium The second paragraph supplies the specific blocks: the appropriation, the veto and its override, Senate consent to treaties and appointments, and judicial review. *Trap: C describes the explanation offered in the third paragraph rather than the second.*
- 2.7 A** cross text · hard Text 2 holds that faction cannot be prevented and must instead be slowed, and that each device makes a majority persist beyond one season of opinion. *Trap: C promises the removal of faction, which Text 2 says explicitly cannot be done.*
- 2.8 D** transitions · easy Senate consent and judicial review are two further items in a list of blocks, so the sentence adds to the one before rather than following from it. *Trap: B asserts that judicial review results from Senate consent, which the text never claims.*
- 2.9 B** boundaries · easy Two independent clauses need a comma together with a coordinating conjunction, and the contrast between the veto and the override calls for but. *Trap: A is the comma splice, joining two independent clauses with a comma and no conjunction.*
- 2.10 D** synthesis · medium Only this choice ties the blocking power to the outcome the student wants emphasized, which is the failure of a measure that two branches support. *Trap: C states the blocking power without drawing the consequence the goal asks for.*

3 · A Convention at Seneca Falls HIS · S03 · phenomenon

- 3.1 D** central idea · easy The two chief points of the text are the deliberate borrowing of the 1776 form and the near failure of the single resolution that asked for the vote. *Trap: A reports the setting of the meeting rather than what the meeting did.*
- 3.2 B** detail · easy The text states that eleven resolutions came before the meeting, that ten passed easily, and that the one asking for the vote was argued over. *Trap: A overstates the record, since one of the eleven nearly failed.*
- 3.3 C** evidence · medium The quotation reports that people at the convention itself feared the demand for the vote would make the other complaints look ridiculous. *Trap: A describes hostility from outside the convention rather than from within it.*
- 3.4 A** inference · medium Seventy-two years passed before the vote arrived and only one signer was still alive to use it, so the work outlived nearly all of the people who did it. *Trap: C confuses the demand made in 1848 with the result secured in 1920.*
- 3.5 D** words in context · easy The demand was to extend the right to vote to women, so the word means to widen the group of people who hold it. *Trap: A gives the sense in which a speaker expands on a point already made.*
- 3.6 C** structure · medium The sentence says the form was borrowed on purpose, presenting the echo of 1776 as a chosen argument rather than an accident of style. *Trap: A reads a deliberate borrowing as an admission of having nothing of its own.*
- 3.7 B** cross text · hard Text 2 holds that an amendment settles the rule and nothing else, and that each change needed a second round of enforcement machinery afterward. *Trap: A credits one amendment with work Text 2 assigns to four separate removals.*
- 3.8 A** transitions · easy Ten resolutions passed easily and one nearly failed, so the second sentence stands against the first rather than extending it. *Trap: B asserts that the near failure followed from the easy passage of the others.*

- 3.9 C** boundaries · easy The clause is a supplement naming who Douglass was, so it takes a comma at each end rather than one comma, a semicolon, or no mark at all. *Trap: D opens the supplement with a comma and then never closes it.*
- 3.10 A** synthesis · medium Only this choice supplies the reason the demand was contested, which is the fear among those present that it would discredit the other complaints. *Trap: D restates that the resolution nearly failed without giving the reason the goal asks for.*

4 · A Fourth of July Speech HIS · S04 · phenomenon

- 4.1 A** central idea · easy The speech opens with twenty minutes of praise and then turns, and the text says Douglass held that the country was failing its own words rather than that the words were wrong. *Trap: C states the reading the text calls the part readers miss.*
- 4.2 C** detail · easy The text says that for twenty minutes he praised the men of 1776, called them brave, and said their work deserved the respect of their children. *Trap: A names the question he put after the turn rather than how he began.*
- 4.3 D** evidence · medium The quotation states that Douglass held the Declaration to say exactly what he wanted said, and faulted the country for failing its own words. *Trap: C reports whom he blamed rather than how he treated the documents.*
- 4.4 B** inference · medium He praised the founders for twenty minutes before turning on the holiday, so the opening built the sympathy that the turn then drew on. *Trap: D has the opening announce the turn, but the text says he began mildly.*
- 4.5 A** words in context · easy Douglass argued the contrary of the case readers expect, holding that the country failed its own words rather than that the words were wrong. *Trap: B gives the spatial sense, as in a seat opposite another.*
- 4.6 D** structure · medium The sentence is followed at once by the remark that this is the part readers miss, so it exists to correct an expected misreading. *Trap: A treats a correction aimed at the reader as a concession made to the audience.*
- 4.7 C** cross text · hard Text 2 holds that unalienable rights cannot be transferred, so a document saying so makes slavery void rather than merely wrong. *Trap: A gives the proslavery argument from the existing Constitution, not the antislavery case.*
- 4.8 B** transitions · easy The pamphlet sold widely, and yet the title it now carries is not the one Douglass gave it, so the second sentence runs against the first. *Trap: A makes the misnaming a consequence of the wide sale, which the text does not claim.*
- 4.9 D** boundaries · easy The sentence lists three things Douglass did, so the items take commas between them with the conjunction standing only before the last. *Trap: C adds a conjunction in the middle of a three-item series, which leaves the last item stranded.*
- 4.10 B** synthesis · medium This choice names the occasion and the turn, which is what an audience meeting the speech for the first time needs before anything else. *Trap: C repeats one note without naming the occasion the audience would need.*

5 · What Was Built After 1865 HIS · S05 · phenomenon

- 5.1 B** central idea · easy The text sets what was built in twelve years against the sentence saying that none of it lasted in the form it was built, which is the shape of the whole passage. *Trap: C is close but false, since the text says the amendments stayed in the Constitution, never repealed.*
- 5.2 D** detail · easy The text says the three amendments stayed in the Constitution, never repealed and largely not enforced, for another sixty years. *Trap: B confuses the new state constitutions with the federal amendments they worked around.*
- 5.3 A** evidence · medium The quotation names both halves of the claim: the rules removed most Black voters, and they did it without mentioning race. *Trap: D names where the new rules began rather than how they worked.*

- 5.4 C** inference · medium The amendments remained in force on paper while going unenforced for sixty years, so the words alone did not secure what they promised. *Trap: A overstates the case, since the text says the amendments survived while their enforcement did not.*
- 5.5 B** words in context · easy Northern interest in Reconstruction fell away through the 1870s as other matters took the front page, so the word names a decrease. *Trap: A gives the sense in which a person declines an offer.*
- 5.6 A** structure · medium The sentence follows the remark that a great deal was built in a hurry, and it supplies the reason for the hurry. *Trap: B moves the explanation forward twelve years to the end of Reconstruction.*
- 5.7 D** cross text · hard Text 2 counts national indifference as one of four instruments and says it removed the political cost of leaving enforcement alone. *Trap: A makes one instrument the whole cause, where Text 2 insists the four reinforced each other.*
- 5.8 C** transitions · easy The two sentences give further instances of the same fact, so the second adds to the first rather than qualifying it. *Trap: A sets the Black majority against the officeholding, which the text does not do.*
- 5.9 A** boundaries · easy Both halves are independent clauses, so the coordinating conjunction joining them needs a comma before it. *Trap: D leaves the second clause joined by a comma alone, which is a splice.*
- 5.10 C** synthesis · medium Only this choice sets a measured gain against a measured collapse within eight years, which is what stressing the speed of the undoing requires. *Trap: A gives the gains alone, so nothing in it conveys how quickly they were undone.*

6 · A Locked Door on Washington Place HIS · S06 · phenomenon

- 6.1 C** central idea · easy The text says the building was not especially old and that a set of ordinary decisions killed people, then reports more than thirty laws within three years. *Trap: D takes one of several named causes and makes it the only one.*
- 6.2 A** detail · easy The text says the door was kept locked because the owners wanted to check bags at a single exit to prevent theft. *Trap: D inverts the inspection, which the company turned down rather than obeyed.*
- 6.3 B** evidence · medium The sentence states directly that neither the age of the building nor the width of its stairs was out of the ordinary. *Trap: A names a real limit, but it is a limit of the fire service rather than of the building.*
- 6.4 D** inference · medium The company had been able to decline an inspection, and the new service could enter without warning, so refusal was no longer available to an employer. *Trap: B keeps the power that the new service was created to remove.*
- 6.5 C** words in context · easy What followed the fire was more than thirty statutes within three years, so the word names change made in the law. *Trap: A gives the sense in which a person reforms, which is not what a legislature does.*
- 6.6 B** structure · medium The paragraph sets aside the age of the building and the width of the stairs, then attributes the deaths to a set of ordinary decisions. *Trap: D names the content of the third paragraph rather than the second.*
- 6.7 A** cross text · hard Text 2 reports that no single instrument did much alone and that the sharp falls came where three or four were working together. *Trap: B credits one instrument, where Text 2 insists on the combination.*
- 6.8 D** transitions · easy The first sentence rules out the building as the cause and the second supplies a different one, so the second replaces rather than extends it. *Trap: A makes the ordinary decisions follow from the building being unremarkable.*
- 6.9 B** boundaries · easy Two independent clauses with no conjunction between them need a semicolon rather than a comma, a colon, or no mark at all. *Trap: C joins two independent clauses with a comma alone, which is a splice.*

- 6.10 D** synthesis · medium Only this choice ties the two decisions to the two remedies, which is what showing that the law answered decisions rather than luck requires. *Trap: B reports the volume of legislation without naming what it was answering.*

7 · A Year of Walking in Montgomery HIS · S07 · phenomenon

- 7.1 D** central idea · easy The text stresses that the response was ready within three days and ran for a year, and that what finally ended segregation was a lawsuit. *Trap: C is the reading the text corrects, since it names a lawsuit as what finally ended segregation.*
- 7.2 B** detail · easy The text says a minister of twenty-six was chosen partly because he was new in town and had made no enemies in it. *Trap: C gives the office held by Rosa Parks rather than the reason King was chosen.*
- 7.3 C** evidence · medium Training at a school for organizers in the previous summer shows preparation before the arrest rather than improvisation after it. *Trap: D shows organization after the arrest rather than preparation before it.*
- 7.4 A** inference · medium Black riders were about three quarters of all riders and nearly all of them stayed off, so the company lost most of its custom at once. *Trap: B reverses the arithmetic, since those who stayed off were the majority rather than a minority needing allies.*
- 7.5 D** words in context · easy A whole city held together behind one demand for a year, so the word names acting together rather than a formal merger. *Trap: C treats a shared campaign as the forming of a single organization.*
- 7.6 C** structure · medium The sentence says that what finally ended segregation on the buses was the lawsuit rather than the boycott, which corrects the expected account. *Trap: D names a real consequence rather than the cause the sentence identifies.*
- 7.7 B** cross text · hard Text 2 holds that a ruling needing litigation moves at the speed of litigation, and that the speed is set by how many lawyers exist. *Trap: C borrows the machinery of the 1965 Act and attaches it to a court ruling.*
- 7.8 A** transitions · easy The call went out and the city answered it, so the second sentence reports the outcome of the first. *Trap: B sets the response against the call when in fact it followed from it.*
- 7.9 C** boundaries · easy Two independent clauses need a comma together with a coordinating conjunction standing before the second of them. *Trap: B joins the two clauses with a comma alone, which is a splice.*
- 7.10 A** synthesis · medium Only this choice keeps the length of the boycott and still names the lawsuit as what ended segregation, which is the correction the goal asks for. *Trap: B gives the boycott without the lawsuit, leaving the impression the goal sets out to correct.*

8 · A Handful of Mud at Dandi HIS · S08 · phenomenon

- 8.1 A** central idea · easy The text says the act was useless as trade and perfect as argument, that the march won nothing at the time, and that the law could not be defended in public. *Trap: B gives a premise the text uses rather than the point it makes.*
- 8.2 C** detail · easy The text states that the walk took twenty-four days and covered about two hundred and forty miles. *Trap: A takes the twelve miles walked each day and turns it into a number of days.*
- 8.3 D** evidence · medium The sentence sets the worthlessness of the salt against the force of the gesture, which is exactly the distinction the claim draws. *Trap: D shows the march being imitated rather than being designed as an argument.*
- 8.4 B** inference · medium The text draws the consequence itself: such a government has rejected its own claim to rule by the consent of the governed. *Trap: A reads the arrest as a vindication of the law rather than as a cost to the government.*

- 8.5 A** words in context · easy A government that arrests a man for picking up mud has abandoned its own claim to rule by consent, so the word means given up. *Trap: D softens the sense to mere criticism, which is weaker than what the sentence asserts.*
- 8.6 D** structure · medium The paragraph establishes the monopoly, the tax, and the fact that salt is not a luxury in a hot country, which is why the tax reached the poorest. *Trap: B names material from the third paragraph rather than the first.*
- 8.7 C** cross text · hard Text 2 holds that the arithmetic of empire broke under the cost of two wars, so independence came when holding on stopped paying. *Trap: B credits the march with an effect Text 1 denies it had at the time.*
- 8.8 B** transitions · easy The first sentence concedes that nothing was won and the second names what was achieved anyway, so the two stand in contrast. *Trap: C makes the forced choice follow from the failure rather than stand against it.*
- 8.9 D** boundaries · easy The clause defining the monopoly interrupts the sentence, so it needs a comma at each end rather than one comma, a semicolon, or none. *Trap: A opens the interrupting clause with a comma and never closes it.*
- 8.10 B** synthesis · medium Only this choice holds the failure and the achievement together, which is what explaining why a march without a concession mattered requires. *Trap: D states the failure alone and so leaves the question the goal poses unanswered.*

9 · An Order, a Map and a Suitcase HIS · S09 · phenomenon

- 9.1 B** central idea · easy The text turns on the gap between an order naming no group and a removal that fell almost entirely on people of Japanese descent. *Trap: C reports the much later remedy rather than the subject of the text.*
- 9.2 D** detail · easy The text says the order gave the army power to declare military areas and to restrict who could live in them, and that it named no group. *Trap: A describes what followed in practice rather than what the order granted.*
- 9.3 A** evidence · medium Two reports already in the hands of the government said that no spying or sabotage had occurred, and both were set aside. *Trap: D is a powerful fact about who was removed rather than about the evidence held.*
- 9.4 C** inference · medium The order named nobody, and yet those removed were almost entirely of Japanese descent, so a general instrument produced a particular result. *Trap: A reads a selective outcome as proof that the army went beyond its grant, which the text does not claim.*
- 9.5 B** words in context · easy The army was empowered to say who could live in a declared area, so the word means to place limits on something. *Trap: C gives the physical sense of drawing a thing tight rather than limiting it.*
- 9.6 A** structure · medium The removal was defended as a security measure, and the sentence reports that no charge of spying or sabotage was ever brought. *Trap: D names a consequence that came forty-six years later rather than the work the sentence does.*
- 9.7 D** cross text · hard Text 2 names classification, the withholding of the government's own evidence from examination, as one of the three instruments. *Trap: A names a different instrument of the three, the grant of authority rather than the handling of evidence.*
- 9.8 C** transitions · easy The second sentence adds a further constraint to the first rather than setting itself against it or summarizing it. *Trap: B treats the limit on luggage as a concession against the short notice.*
- 9.9 A** boundaries · easy The sentence lists three fates for the property, so a comma stands before the conjunction introducing the last of them. *Trap: C uses a semicolon where the items are phrases rather than independent clauses.*
- 9.10 C** synthesis · medium Only this choice sets the silence of the wording beside the uniformity of the result, which is the gap the student wants emphasized. *Trap: B reports the scale of the declaration without naming who was removed.*

10 · A Paper for One Cent HIS · S10 · phenomenon

- 10.1 C** central idea · easy The text traces the penny paper from its price to its crowd to its advertising revenue, and then to reporters gathering news in place of friends supplying opinion. *Trap: A describes the papers the Sun displaced rather than the change the text is about.*
- 10.2 A** detail · easy The text says Day hired boys to shout the headlines and that they were paid in bundles of papers, which they then sold at a profit. *Trap: B assumes a commission on each copy, where the text describes a wholesale arrangement.*
- 10.3 B** evidence · medium The quotation moves from the need for a large crowd to the kind of story that gathers one, which is the shaping the claim describes. *Trap: D gives the size of the crowd without naming what was printed to gather it.*
- 10.4 D** inference · medium A subscription paper answers to its subscribers while an advertising paper needs the largest crowd it can gather, so the audience it must please changes. *Trap: B reverses the direction of the change that the two sentences describe.*
- 10.5 C** words in context · easy The word stands in a list with police court reports, fires, accidents and crimes, so it names the ordinary quarrels that fill a cheap paper. *Trap: A reads the word as war, which the surrounding list of everyday incidents rules out.*
- 10.6 B** structure · medium The paragraph begins with the shift to advertising revenue and then draws out what that shift did to what the papers printed. *Trap: A names the content of the second paragraph rather than the third.*
- 10.7 A** cross text · hard Text 2 holds that a reporter has a beat supplying a steady flow from official sources, and that events where no reporter is assigned arrive late or never. *Trap: C contradicts Text 1, which says reporters were sent to exactly those places.*
- 10.8 D** transitions · easy Having hired reporters, the papers then deployed them, so the second sentence reports the next step rather than a contrast. *Trap: A sets the deployment against the hiring, when in fact it followed from it.*
- 10.9 B** boundaries · easy The sentence has one subject and two verbs, so the second verb joins the first with a conjunction and needs no comma. *Trap: D supplies a new subject and joins it with a comma alone, which is a splice.*
- 10.10 D** synthesis · medium Only this choice carries the chain from the source of revenue to the size of the crowd to the kind of story that counted as news. *Trap: C names the change in revenue without saying what it did to the content.*

11 · Moths on a Sooty Wall BIO · S01 · phenomenon

- 11.1 B** central idea · easy The text tracks the dark form rising to nine in ten and falling below five percent, and says what changed was the bark rather than the moths. *Trap: C states the reading the text corrects in its fifth sentence.*
- 11.2 D** detail · easy The text says birds hunt these moths by sight and take whichever form they can see against the bark. *Trap: C moves the hunting to the air at night, where the text places the moths at rest by day.*
- 11.3 A** evidence · medium The clause says a second city supplies a second record, which is what makes the pattern more than one observation. *Trap: D explains where the records came from rather than why two of them matter.*
- 11.4 C** inference · medium The dark form rose when the bark blackened and fell when the lichens returned, so the background was what set the direction. *Trap: A treats the first sighting as a turning point rather than as a curiosity.*
- 11.5 B** words in context · easy The population had come to match one kind of background and swung back when the background changed, which is fitting the surroundings. *Trap: C has an individual moth change color, which the text rules out.*

- 11.6 A** structure · medium Dorset had clean air and stayed pale, which is a comparison that strengthens the claim about soot. *Trap: C names a figure from the city rather than the work the Dorset sentence does.*
- 11.7 D** cross text · hard Text 2 counts time in generations, and the moth generation is one year, so fifty years is fifty rounds of selection. *Trap: C names a condition the text supplies elsewhere rather than the one the half century provides.*
- 11.8 C** transitions · easy The two sentences describe opposite cases, so the second stands against the first rather than following from it. *Trap: A makes the sooty case a consequence of the clean one.*
- 11.9 A** boundaries · easy The clause describing the lichens adds information rather than restricting it, so a comma attaches it to the noun. *Trap: B omits the comma a supplementary clause needs.*
- 11.10 C** synthesis · medium Only this choice brings the rise, the fall, the second city and the control area together, which is what makes the case a test. *Trap: A gives the rise alone, which any number of explanations would fit.*

12 · Peas in a Monastery Garden BIO · S02 · phenomenon

- 12.1 C** central idea · easy The text describes the choice of features, the method and the counts, and ends on the ratio that came out of all seven. *Trap: D reports what happened to the work later rather than what the work found.*
- 12.2 A** detail · easy The text says every plant in the first generation was tall and that the short form had not been diluted or lost. *Trap: C gives the proportions of the second generation rather than the first.*
- 12.3 B** evidence · medium Self-pollination is a property of the plant, and the text says it is what made every cross controlled. *Trap: D names the choice of features, which is a different decision from the choice of organism.*
- 12.4 D** inference · medium A line that always gives the same offspring tells the breeder exactly what went into the cross, which is why true-breeding lines were the starting point. *Trap: C names something the text says the plant does for itself.*
- 12.5 C** words in context · easy What an inherited feature looks like in the next generation is settled by rules of this kind, so the word names determination. *Trap: B softens the sense to reliance, which is weaker than the rule the sentence describes.*
- 12.6 B** structure · medium The sentence stands between the publication and the rediscovery of 1900, and measures the thirty-four years between them. *Trap: D names material that comes much earlier in the text.*
- 12.7 A** cross text · hard Text 2 says every plant in the first generation carries one allele of each, and that the short one shows only when no tall one is present. *Trap: B names a feature of the method rather than the reason the allele survived.*
- 12.8 D** transitions · easy A paper in the journal of a local society would be expected to go unread, so the second sentence follows naturally from the first. *Trap: B sets the neglect against the publication as though it were a surprise.*
- 12.9 B** boundaries · easy Three things Mendel did are listed with one subject, so the middle item takes a comma and no new pronoun. *Trap: C supplies a new subject and joins it with a comma, which splices the sentence.*
- 12.10 D** synthesis · medium Only this choice assembles the four safeguards, which together are the reason the figure can be relied on. *Trap: C names one safeguard and so accounts for only part of the reliability.*

13 · What a Yeast Cell Does BIO · S03 · phenomenon

- 13.1 D** central idea · easy The text sets out the two products, says a baker and a brewer want different halves of one process, and then makes the yield turn on oxygen. *Trap: C reports the long history rather than what the cell is doing.*
- 13.2 B** detail · easy The text says the foam is gas and that the cells give back carbon dioxide and alcohol. *Trap: A names the other product of the process, which stays in the liquid.*
- 13.3 C** evidence · medium The sentence puts the decision in the surrounding liquid rather than in the cell, which is what the claim asserts. *Trap: D names the experiment that measured the difference rather than the absence of choice.*
- 13.4 A** inference · medium Without air the yield falls and the cell must release alcohol, so excluding air trades growth for the product the brewer wants. *Trap: B reverses the arithmetic, since the sealed vessel yields less rather than more.*
- 13.5 D** words in context · easy The cell must get rid of alcohol because the chemistry stops halfway, so the word names the discharge of a by-product. *Trap: C hears the physical sense of letting go rather than of giving off.*
- 13.6 C** structure · medium The paragraph takes the gas for the baker and the alcohol for the brewer, which is one process put to two uses. *Trap: A names the content of the third paragraph rather than the second.*
- 13.7 B** cross text · hard Text 2 gives two units for the first stage and about thirty for the complete path, which is the ratio Text 1 states as a fraction. *Trap: C offers two temperatures from the texts in place of the two energy yields.*
- 13.8 A** transitions · easy The two sentences describe opposite uses of the same products, so the second stands against the first. *Trap: D makes the baking case follow from the brewing case.*
- 13.9 C** boundaries · easy The naming phrase interrupts the sentence, so it needs a comma at each end rather than one comma or none. *Trap: D opens the interrupting phrase with a comma and then fails to close it.*
- 13.10 A** synthesis · medium Only this choice states the principle that covers both trades rather than describing one of them. *Trap: C gives the baking half and leaves the brewing half unexplained.*

14 · Wolves and Willows in Yellowstone BIO · S04 · phenomenon

- 14.1 A** central idea · easy The text runs from the removal of the wolves through the release to the change in the plants, and says plainly that the cause is what is in dispute. *Trap: C gives one of the measured changes rather than the shape of the account.*
- 14.2 C** detail · easy The text says elk numbers on the northern range had fallen by more than half within ten years of the release. *Trap: B keeps the movement of the elk and drops the fall in their numbers.*
- 14.3 D** evidence · medium The sentence draws the line itself, placing the change on one side and the cause on the other. *Trap: C gives one measured change rather than the distinction the claim concerns.*
- 14.4 B** inference · medium The text names both direct hunting and changed behavior, so the decline has two contributing paths. *Trap: A assigns the whole fall to hunting, where the text names a second route as well.*
- 14.5 A** words in context · easy The songbirds that nest in streamside bushes increased along with the willows, so the word names a return in numbers. *Trap: B gives the sense of retrieving a lost object rather than of a population rising.*
- 14.6 D** structure · medium The photographs of the same stretches in 1996 and 2015 are produced to show that the difference is not subtle. *Trap: C names the measurements described in the last sentence rather than the photographs.*

- 14.7 C** cross text · hard Text 2 says leverage runs downward through the chain because each predator represents a large quantity of what it eats. *Trap: D quotes a range from Text 2 rather than the mechanism of leverage.*
- 14.8 B** transitions · easy The second sentence reports a second plant changing in the same direction, so it runs parallel to the first. *Trap: A sets the cottonwoods against the willows rather than beside them.*
- 14.9 D** boundaries · easy The keeping of the counts and the length of the record are each a full clause, so the conjunction between them takes a comma. *Trap: B drops the conjunction and leaves a comma between two clauses.*
- 14.10 B** synthesis · medium Only this choice reports the measured changes and withholds the causal claim, which is exactly what the goal asks for. *Trap: D states the caution without describing the change it applies to.*

15 · Reindeer on St Matthew Island BIO · S05 · phenomenon

- 15.1 B** central idea · easy The text traces twenty-nine animals to six thousand and then to forty-two, and puts the cause in the lichen that had been grazed away. *Trap: C names the winter, which the text says mattered less than what lay under the snow.*
- 15.2 D** detail · easy The text says he counted again in 1963 and found six thousand, which is roughly two hundred times the number put ashore. *Trap: A gives the figure from the count six years earlier.*
- 15.3 A** evidence · medium The quotation names the grazing, the bare ground and the slow regrowth, which together are self-inflicted damage to the food supply. *Trap: B names the winter, which the text treats as the occasion rather than the cause.*
- 15.4 C** inference · medium Thousands of years of undisturbed growth is a stored surplus, which is why the herd could pass the level the island could hold. *Trap: A reverses the point, since the text says lichen regrows over decades.*
- 15.5 B** words in context · easy A population can live on borrowed capital for a while before the bill falls due, so the word names continuing for a period. *Trap: D gives the sense in which a remnant survives a disaster rather than a population continuing.*
- 15.6 A** structure · medium Mainland herds hunted by wolves and by people had held steady for centuries, which is the contrast the island lacked. *Trap: D names a fact from the third paragraph rather than the work of the last sentence.*
- 15.7 D** cross text · hard Text 2 locates the delay in the animal: one born in a good year stays large and fertile, so the herd keeps growing after the lichen has begun to fail. *Trap: A names a property of the food rather than of the animals themselves.*
- 15.8 C** transitions · easy The two counts are given in order, so the second sentence continues a sequence rather than qualifying the first. *Trap: A sets the second count against the first as though it were unexpected.*
- 15.9 A** boundaries · easy The clause describing the lichen adds information about it rather than restricting it, so a comma joins the two. *Trap: B leaves out the comma that a supplementary clause requires.*
- 15.10 C** synthesis · medium Only this choice joins the exhaustion of the lichen to its slow regrowth, which together make the fall sudden and complete. *Trap: D names the damage without the regrowth rate that makes it irreversible.*

16 · The Pump on Broad Street BIO · S06 · phenomenon

- 16.1 C** central idea · easy The text says what the map did was show the disease spread from a single source that people drank from rather than from the air. *Trap: B is the reading the text corrects, since Snow himself said the removal did not end it.*

- 16.2 A** detail · easy The text says workers at the brewery drank beer and water from the brewery own well and that none of them fell ill. *Trap: B gives the explanation for the nearby houses rather than for the brewery.*
- 16.3 B** evidence · medium Chasing down the cases that did not fit is what distinguishes a test from a display of agreeable evidence. *Trap: D names the belief he was arguing against rather than his method.*
- 16.4 D** inference · medium The decline had begun before the removal, so the removal cannot be given the credit for it. *Trap: A turns a limit on what the removal shows into a denial of the whole case.*
- 16.5 C** words in context · easy The disease moved from a single source to the people who drank from it, so the word names transmission. *Trap: B gives the sense in which news spreads rather than a disease.*
- 16.6 B** structure · medium The widow lived three miles away and died after drinking water carried from the pump, which tests the water explanation against distance. *Trap: C names a later event rather than the work this sentence does.*
- 16.7 A** cross text · hard Text 2 says Snow could act on a map because cholera is waterborne and the source stayed in one place, which is what a map can locate. *Trap: D names the property that makes contact tracing work rather than mapping.*
- 16.8 D** transitions · easy The pattern appeared as soon as the marks were made, so the second sentence reports what the marking immediately revealed. *Trap: A sets the pattern against the mapping that produced it.*
- 16.9 B** boundaries · easy The defining clause interrupts the sentence before the measurement, so it takes a comma at each end. *Trap: D opens the interrupting clause and never closes it before the measurement.*
- 16.10 D** synthesis · medium Only this choice states the finding and the limit together, which is the double point the goal asks for. *Trap: C gives the limit alone and so leaves the achievement unstated.*

17 · Why Wheat Follows Clover BIO · S07 · phenomenon

- 17.1 D** central idea · easy The text opens on the difference between the two fields and closes on the nodules and the bacteria inside them that supply the nitrogen. *Trap: B gives a measured consequence of the practice rather than the explanation of it.*
- 17.2 B** detail · easy The text says the clover was cut for hay or eaten by sheep, whose droppings stayed on the land, and that the roots were then turned into the soil. *Trap: A gives the treatment of the turnips rather than of the clover.*
- 17.3 C** evidence · medium The sentence separates the reason for adoption from the understanding of the mechanism, which is exactly what the claim asserts. *Trap: A names part of the explanation rather than the reason for adoption.*
- 17.4 A** inference · medium One crop adds to the soil and the other draws on it, so alternating them is a slow cycle of putting in and taking out. *Trap: C describes what happens to a farmer who grows wheat on wheat instead.*
- 17.5 D** words in context · easy Wheat cannot fix nitrogen and must take what the soil already holds, so the word names drawing on a store. *Trap: A gives the sense in which a fire consumes a building.*
- 17.6 C** structure · medium The paragraph establishes that wheat after clover beats wheat after wheat and says farmers knew it before anyone could say why. *Trap: B names the content of the second paragraph rather than the first.*
- 17.7 B** cross text · hard Text 2 lists the harvest as the leak that removes nitrogen in the grain and takes it away in a truck. *Trap: A names leaching, which is a different one of the three leaks.*

- 17.8 A** transitions · easy The two crops do opposite things to the soil, so the second sentence stands against the first. *Trap: D makes the enrichment by clover a consequence of what wheat cannot do.*
- 17.9 C** boundaries · easy The clause describing clover interrupts the sentence before its verb, so it needs a comma at each end. *Trap: D opens the interruption with a comma and never closes it before the verb.*
- 17.10 A** synthesis · medium Only this choice sets the measured benefit beside the delay in understanding, which is what the goal asks for. *Trap: D gives the date of the understanding without the benefit that preceded it.*

18 · One Instrument on a Volcano BIO · S08 · phenomenon

- 18.1 A** central idea · easy The text says the record does two things at once and then takes the wobble and the climb in turn. *Trap: C reports a comparison from the end of the text rather than its subject.*
- 18.2 C** detail · easy The text says the figure falls through the northern spring and summer when the forests and crops of the northern half are growing and taking it in. *Trap: A gives the reason for the rise in the other half of the year.*
- 18.3 D** evidence · medium The clause gives the reason the climb is undisputed, which is that it is read off an instrument rather than inferred. *Trap: C names corroboration from other stations rather than the character of the reading.*
- 18.4 B** inference · medium One feature has stayed steady while the other has risen every year, so the two are not moving together. *Trap: C assigns both features to plant growth, which the text gives only to the wobble.*
- 18.5 A** words in context · easy The level around which the wobble sits has gone up every year of the record, so the word names a steady upward movement. *Trap: B gives a change of form, which the text assigns to the wobble and denies.*
- 18.6 D** structure · medium The southern half has little plant life and shows almost no wobble, which is what the plant-growth explanation predicts. *Trap: C contradicts the sentence before, which says other stations give the same climb.*
- 18.7 C** cross text · hard Text 2 says a substantial fraction remains in circulation for centuries, which is why no recession shows as a step down in the curve. *Trap: D gives the residence time of a different gas, which is far shorter.*
- 18.8 B** transitions · easy The two halves of the year are given in order, so the second sentence continues the sequence. *Trap: A makes the autumn rise a consequence of the spring fall.*
- 18.9 D** boundaries · easy The clause naming the unit adds information about the figure, so a comma attaches it to the clause before. *Trap: A drops the comma a supplementary clause needs after a measurement.*
- 18.10 B** synthesis · medium Only this choice separates the steady annual swing from the rising level it sits on, which is the distinction a reader needs. *Trap: A names both features without distinguishing them, which is the confusion the goal sets out to prevent.*

19 · A Rift You Can Walk Into BIO · S09 · phenomenon

- 19.1 B** central idea · easy The text opens on the walls of the rift and the rate of separation and explains how new ground forms along the crack. *Trap: A names the second kind of history rather than the subject of the passage.*
- 19.2 D** detail · easy The text gives about an inch a year and then converts it to thirty feet over a thousand years. *Trap: B slows the rate by a factor of a hundred and misstates the fingernail comparison.*

- 19.3 A** evidence · medium Satellite measurement and the age of the rock are two separate routes to the same figure, which the sentence states. *Trap: D explains how new ground forms rather than how the rate was checked.*
- 19.4 C** inference · medium The sentence makes the threat follow from land moving suddenly rather than slowly, which is where the risk lies. *Trap: A assigns the danger to the slow pull the sentence sets against it.*
- 19.5 B** words in context · easy Farms and roads are the things at stake when the land moves suddenly, so the word names being placed in danger. *Trap: C treats inanimate farms and roads as though they could be frightened.*
- 19.6 A** structure · medium The hot region has built up enough rock to stand above the sea, which is the reason the ridge is visible in Iceland. *Trap: B names the depth of the line elsewhere rather than the reason for the exception.*
- 19.7 D** cross text · hard Text 2 assigns ridges, rift valleys and shallow earthquakes to plates moving apart, which is what Text 1 describes. *Trap: B names the third kind of edge, which makes and destroys nothing.*
- 19.8 C** transitions · easy The separation continues during the visit, so the second sentence reports something going on at the same time. *Trap: A sets the movement against the visit rather than placing it alongside.*
- 19.9 A** boundaries · easy The clause defining the crust adds information about the noun before it, so a comma attaches the two. *Trap: B omits the comma that a clause of this kind needs after the noun.*
- 19.10 C** synthesis · medium Only this choice says what makes the place exceptional, which is that a submarine boundary is here above water. *Trap: D gives the depth of the line without the exception that makes Iceland remarkable.*

20 · A Cliff of Ice in West Antarctica BIO · S10 · phenomenon

- 20.1 C** central idea · easy The text rules out warm air, names the warm current reaching the underside, and reports the retreat of the grounding line. *Trap: D gives the reason the glacier is studied rather than what the study found.*
- 20.2 A** detail · easy The text says the ice floats for the last part of its journey and that the line where it lifts off the sea bed is called the grounding line. *Trap: B names the eighty-mile front rather than the line further inland.*
- 20.3 B** evidence · medium Air that stays below freezing most of the year cannot be doing the melting, which is why the text turns to the water. *Trap: D names an effect of the thinning rather than evidence about the air.*
- 20.4 D** inference · medium A difference of two degrees produces melting at tens of meters a year, so a small margin is removing a large quantity of ice. *Trap: B turns a rate of melting into a prediction the text does not make.*
- 20.5 C** words in context · easy The floating ice in front stands between the glacier and the open sea, so the word names protection from what the sea would otherwise do. *Trap: B reads a word about ice and sea as though it concerned people.*
- 20.6 B** structure · medium The next sentence says that is how the melting rate at the grounding line was first measured directly. *Trap: C names a consequence described earlier rather than the work of this sentence.*
- 20.7 A** cross text · hard Text 2 says each retreat on a retrograde slope exposes thicker ice to melting, so the retreat feeds itself. *Trap: B quotes a fact about the air, which neither text makes relevant to the grounding line.*
- 20.8 D** transitions · easy The first sentence denies one picture and the second supplies the one that replaces it. *Trap: A sets the floating ice against the denial rather than offering it as the alternative.*

- 20.9 B** boundaries · easy The phrase defining the cavity is a supplement to the noun before it, so a comma attaches it. *Trap: A puts a semicolon before a phrase that could not stand as a sentence.*
- 20.10 D** synthesis · medium Only this choice puts the quantity, the plug and the observed retreat together, which is what accounts for the attention. *Trap: B names the attention itself rather than any reason for it.*

21 · Eleven Weighings of One Stone PHY · S01 · phenomenon

- 21.1 B** central idea · easy The text shows eleven readings of one unchanged stone and says a result properly gives an average and the spread, which is a best figure and a width. *Trap: C states the course the text says a careful worker does not take.*
- 21.2 D** detail · easy The text says the eleven numbers are kept and their average is taken, which here is 48.211 grams. *Trap: A gives the first of the eleven readings rather than their average.*
- 21.3 A** evidence · medium The quotation says nobody recorded a number wrongly and names the spread as a limit of the arrangement rather than an error of record. *Trap: B reports the spread rather than saying what kind of thing it is.*
- 21.4 C** inference · medium The spread comes from the arrangement rather than from errors of record, so narrowing it means altering the instrument or the conditions around it. *Trap: A would hide the spread rather than reduce it.*
- 21.5 B** words in context · easy The spread is called the honest statement of how well the balance can measure the stone, so the word names finding the size of a quantity. *Trap: C reads the word as an estimate of value rather than of magnitude.*
- 21.6 A** structure · medium The list of the door, the vibration, the oil and the warming room is followed at once by the statement that none of these is a mistake in the ordinary sense. *Trap: C blames the instrument, though the text treats the spread as a limit of the arrangement.*
- 21.7 D** cross text · hard Text 2 names a systematic error that is the same in every reading, which averaging cannot touch and which the eleven readings of Text 1 could not reveal. *Trap: A repeats the practice Text 1 already describes rather than adding anything.*
- 21.8 C** transitions · easy The second sentence gives one of the obvious sources just referred to, so the transition must introduce an example rather than a contrast or a conclusion. *Trap: B sets the opening door against the sentence that promises such sources.*
- 21.9 A** boundaries · easy The clause about the eleven answers is independent, so the conjunction joining it to the clause about the single mass takes a comma before it. *Trap: B leaves the clause about the mass and the clause about the answers unmarked.*
- 21.10 C** synthesis · medium Only this choice joins the differing readings to what a bare figure conceals, which is why one number carries less information than two. *Trap: D repeats the claim to be explained without giving the reason behind it.*

22 · A Hammer and a Feather PHY · S02 · phenomenon

- 22.1 C** central idea · easy The text says the reason is not weight but air, and that on the Moon, with no air to speak of, the hammer and the feather fell and landed together. *Trap: B gives the explanation the text rules out in so many words.*
- 22.2 A** detail · easy The text says a feather has a large surface for its small mass, so the air it must push aside slows it a great deal while the same air barely affects the hammer. *Trap: C names the difference in pull, which the text treats as a separate point.*
- 22.3 B** evidence · medium The quotation announces a second thing and then gives it, the slower fall from five feet, which is the two-part reading the claim describes. *Trap: A reports the first of the two things rather than the presence of a second.*

- 22.4 D** inference · medium The text grants that an instrument could find the difference and credits the drop with making it visible to anyone, so the value lies in the showing. *Trap: A denies the instrument that the same sentence allows.*
- 22.5 C** words in context · easy The sentence says a sensitive instrument can detect the difference without any dropping, so the word names finding it by measurement. *Trap: B goes beyond detection to the explanation the instrument does not give.*
- 22.6 B** structure · medium The sentence says the demonstration fails every time on Earth, which is the puzzle the next two sentences resolve by naming air rather than weight. *Trap: C rejects a result the text treats as genuine.*
- 22.7 A** cross text · hard Text 2 ties the force available for braking to the weight on the tires, so weight matters there in a way the falling demonstration of Text 1 rules out. *Trap: B repeats the explanation Text 1 has already given for the Earth case.*
- 22.8 D** transitions · easy The third sentence draws the consequence of naming air as the cause, so the transition must mark a result rather than a contrast or a restatement. *Trap: C treats a conclusion about removing the air as another way of naming the cause.*
- 22.9 B** boundaries · easy The clause saying they fell and landed together is a complete sentence, so a period separates it from the clause about letting go. *Trap: A splices the clause about the fall onto the clause about letting go with a comma.*
- 22.10 D** synthesis · medium Only this choice names air as the cause and the impossibility of removing it on Earth, which together are why the Moon was needed. *Trap: C gives the condition on the Moon without saying why it could not be had on Earth.*

23 · Water, a Pipe and a Lit House PHY · S03 · phenomenon

- 23.1 D** central idea · easy The text traces energy from the lake to the bulb, says nothing in the chain creates energy, and ends by naming the worst step as the one that sets the efficiency. *Trap: B contradicts the text, which says nothing in that chain creates energy.*
- 23.2 B** detail · easy The text says a good turbine and generator together deliver about nine tenths of the energy that the falling water carries. *Trap: A gives the share an old filament lamp turned into light.*
- 23.3 C** evidence · medium The quotation says in so many words that changing the bulbs saves more than improving the turbines, which locates the saving away from the station. *Trap: B says the station loses little rather than where the saving is to be had.*
- 23.4 A** inference · medium If the chain is limited by its worst step and that step is at the user, then improving an already efficient step changes the total very little. *Trap: B promises an end to losses that occur at every step of the chain.*
- 23.5 D** words in context · easy The bulb converts most of the electrical energy into light and heat, so the word names the change from one form of energy to another. *Trap: B reads the word as movement, though the sentence is about a change of form.*
- 23.6 C** structure · medium The sentence calls the filament lamp the weak link for a century and gives the five percent figure, which the closing rule about the worst step generalizes. *Trap: B moves the large loss to the turbines, which the text says lose little.*
- 23.7 B** cross text · hard Text 2 reports a ceiling fixed by the hot and cold temperatures of a heat engine, which is a kind of limit the water chain in Text 1 never meets. *Trap: C repeats the rule Text 1 closes with rather than adding anything new.*
- 23.8 A** transitions · easy The second sentence says what the steps do in place of creating energy, so the transition must mark a substitution rather than a contrast or an example. *Trap: D reads the general account of the steps as one example among several.*
- 23.9 C** boundaries · easy The clause about what each step does is a complete sentence, so a period separates it from the clause denying that energy is created. *Trap: A splices the clause about the steps onto the clause about creation with a comma.*

23.10 A synthesis · medium Only this choice sets the two figures side by side and names the limiting step, which is what shows where an improvement pays. *Trap: C gives the weak figure alone without the strong one to compare it against.*

24 · A Pump That Grows Hot PHY · S04 · phenomenon

24.1 A central idea · easy The text says the piston does work on the air, that the work goes into the motion of the molecules, and that faster molecules are what a thermometer reports as heat. *Trap: B names a cause the text rules out, since nothing is rubbing hard enough.*

24.2 C detail · easy The text says the base of the pump, nearest the valve, is the hottest part after about thirty strokes. *Trap: A puts the heat at the opposite end from the one the text names.*

24.3 D evidence · medium The quotation reports cooling where the gas expands, which is the reverse of the heating that squeezing produced and so shows the relation running both ways. *Trap: B gives the forward case, the squeezing that warms the air.*

24.4 B inference · medium With the volume fixed, only the pressure is left free, so warming the gas must show itself as a higher pressure rather than as a change of volume. *Trap: A leaves all three quantities unchanged, which the stated relation forbids.*

24.5 A words in context · easy The refrigerator lets the heat transfer to the kitchen through a radiator, so the word names its passage from the gas to the room. *Trap: B reads the word as a change of form rather than a movement of heat.*

24.6 D structure · medium The refrigerator squeezes the gas until it is hot, sheds that heat, and then lets the gas expand inside, which uses the heating and the cooling in turn. *Trap: B denies the relation that the machine is said to use.*

24.7 C cross text · hard Text 2 applies the relation to dry air rising in the atmosphere, which carries the pump and the refrigerator of Text 1 out of the workshop. *Trap: A repeats the very effect Text 1 sets out to explain.*

24.8 B transitions · easy The second sentence names the real source in place of the two the first rules out, so the transition must mark a substitution. *Trap: C treats the real source as one example of the causes just denied.*

24.9 D boundaries · easy The clause about nothing rubbing hard enough is independent, so the conjunction joining it to the clause about burning takes a comma before it. *Trap: B leaves the clause about burning and the clause about rubbing unmarked.*

24.10 B synthesis · medium Only this choice runs the whole chain from the work of the piston to the reading on the thermometer, which is what the goal asks for. *Trap: A names the squeezing without saying how it reaches the thermometer.*

25 · The Fuse and the Kettle PHY · S05 · phenomenon

25.1 B central idea · easy The text says the danger is the wire buried in the plaster and that the breaker is sized to protect that wire and not the kettle. *Trap: C reverses the sentence that names what the breaker protects.*

25.2 D detail · easy The text says the danger is the wire in the plaster, which cannot be inspected and cannot shed its heat, so it warms and ages the insulation around it. *Trap: C reverses the setting of the breaker, which is placed below that current.*

25.3 A evidence · medium The quotation matches voltage to pressure and current to flow in gallons a minute, which is the comparison being used to make the quantities clear. *Trap: B uses resistance to explain the kettle rather than drawing the comparison itself.*

25.4 C inference · medium The margin comes from setting the breaker below the overheating current, so a breaker at that limit would allow the wire to reach it before cutting off. *Trap: A denies the margin that the preceding sentence is built to establish.*

- 25.5 B** words in context · easy The breaker opens the circuit when too much current flows through it, so the word names the passing of current along the wire. *Trap: D names the pressure in the comparison rather than the movement itself.*
- 25.6 A** structure · medium The text matches voltage to pressure, current to flow and resistance to what decides the flow, which puts all three quantities in front of a reader together. *Trap: C turns a comparison into a claim about what electricity is.*
- 25.7 D** cross text · hard Text 2 gives the heating as the current squared times the resistance, which puts a figure on the warming that Text 1 describes only in words. *Trap: B repeats the point Text 1 makes about the buried cable.*
- 25.8 C** transitions · easy The warming follows from a wire that cannot shed its heat, so the transition must mark a consequence rather than a contrast or a restatement. *Trap: D treats the warming as another way of saying the wire is buried.*
- 25.9 A** boundaries · easy The clause about the switch being a circuit breaker is a complete sentence, so a period separates it from the clause saying nothing is broken. *Trap: B splices the clause about the switch onto the clause about nothing being broken.*
- 25.10 C** synthesis · medium Only this choice joins the raised limit to the overheating cable and the fire it can start, which is the danger the goal asks about. *Trap: B names the weakness of the cable without saying what a larger breaker does to it.*

26 · The Bent Straw in a Glass PHY · S06 · phenomenon

- 26.1 C** central idea · easy The text says light crosses the surface more slowly, the beam swings, and the eye has no mechanism for detecting the change of direction. *Trap: B states the thing the ruler is used to rule out.*
- 26.2 A** detail · easy The text says a spoon in oil looks more broken because oil slows light more than water does. *Trap: C names one of the other two things a surface does rather than the slowing.*
- 26.3 B** evidence · medium The quotation says the eye has no mechanism for detecting the change of direction and reports the straw where the light seems to have come from. *Trap: C gives one consequence of the shift rather than the limit of the eye itself.*
- 26.4 D** inference · medium The curve is ground so that the same bending the straw shows happens in a direction the maker has chosen, which makes the lens a use of the effect. *Trap: C promises a correction the text does not claim for the lens.*
- 26.5 C** words in context · easy The text says some light is absorbed by the water, which is why the deep sea is dark, so the word names light taken in rather than sent back. *Trap: D names reflection, which the same sentence treats as the other thing a surface does.*
- 26.6 B** structure · medium The text says the same rule explains a long list of ordinary things and then gives the pool, the spoon, the oil and the spectacle lens in turn. *Trap: C denies the rule in a case the text uses to illustrate it.*
- 26.7 A** cross text · hard Text 2 ties the bending of a wave to its wavelength, which is why sound turns a corner and the light in Text 1 leaves a sharp edge. *Trap: B repeats the fact about water that Text 1 uses to explain the straw.*
- 26.8 D** transitions · easy The second sentence gives the test that establishes the claim just made, so the transition must introduce a reason rather than a contrast or a conclusion. *Trap: B sets the ruler test against the claim that it supports.*
- 26.9 B** boundaries · easy The clause about the break moving with the glass is independent, so the conjunction joining it to the clause about the surface takes a comma. *Trap: A leaves the clause about the break and the clause about the glass unmarked.*
- 26.10 D** synthesis · medium Only this choice joins the swing of the beam to what the eye then does with it, which is the two-part reason the appearance has. *Trap: B names the limit of the eye without saying what happened to the light.*

27 · Steel Wool and a Steel Bar PHY · S07 · phenomenon

- 27.1 D** central idea · easy The text sets the bar against the wool, says what differs is surface, and ends by saying a substance has a level of danger for each state it is divided into. *Trap: B contradicts the text, which says only the rate changes with the shape.*
- 27.2 B** detail · easy The text says a solid bar presents a few square centimeters for every hundred grams and the same mass drawn into fine threads presents several square meters. *Trap: A gives the surface of the solid bar rather than of the threads.*
- 27.3 C** evidence · medium The quotation says in so many words that the chemistry is unchanged by shape and only the rate differs, which is the claim exactly. *Trap: B explains why a thread lights rather than distinguishing rate from chemistry.*
- 27.4 A** inference · medium The three reasons the gate rusts slowly are a small surface, escaping heat and a shielding oxide, and powdering the metal removes the first and the third. *Trap: D reverses the relation, since powder has far more surface than a gate.*
- 27.5 D** words in context · easy A bag of flour on a shelf is called perfectly stable where a mill can explode, so the word names a thing unlikely to react. *Trap: A takes the sense of resting steadily, which has nothing to do with burning.*
- 27.6 C** structure · medium The mill, the silo, the powdered sugar and the powdered coal follow the rule about shape and rate, which extends the steel case to other materials. *Trap: B denies the effect that the whole passage is built to establish.*
- 27.7 B** cross text · hard Text 2 explains that a reaction needs a barrier crossed before it can run, which is what the match supplies and what a thin thread lets the heat sustain. *Trap: C repeats the comparison Text 1 already draws with a rusting gate.*
- 27.8 A** transitions · easy The second sentence answers the puzzle the first sets, so the transition must press forward to the explanation rather than oppose or qualify it. *Trap: C treats the explanation as a concession against the puzzle.*
- 27.9 C** boundaries · easy The clause saying only the rate changes is a complete sentence, so a semicolon separates it from the clause about the chemistry. *Trap: A splices the clause about the rate onto the clause about the chemistry with a comma.*
- 27.10 A** synthesis · medium Only this choice connects the meeting of material and air to the change in rate, which is what makes the same grain a different problem in bulk. *Trap: D states the conclusion to be explained without the reason behind it.*

28 · The Bridge at Dundee PHY · S08 · phenomenon

- 28.1 A** central idea · easy The text says the inquiry found a chain of causes rather than one, and then names the cast iron, the filled holes, the rough bolt holes and the missing wind allowance. *Trap: B reverses the sentence that opens the account of the inquiry.*
- 28.2 C** detail · easy The text says some castings had holes from the foundry that had been filled with a paste of iron filings and wax, which looked sound and carried nothing. *Trap: A describes the bolt holes, which were cast rather than drilled.*
- 28.3 D** evidence · medium The two short sentences say that failing to calculate the wind load was normal before the collapse and abnormal straight after it, which is the change the claim names. *Trap: B reports a warning that went unheeded rather than a change in practice.*
- 28.4 B** inference · medium Cast iron is weak when pulled or struck, and a sideways wind pulls and strikes rather than squeezes, so it acts where the material is weakest. *Trap: A puts the wind in the direction the text says cast iron bears well.*
- 28.5 A** words in context · easy The engineer had never calculated what the structure must resist from the wind, so the word names the load it would have to stand up to. *Trap: D reverses the sense, since the question was what the bridge could withstand.*

- 28.6 D** structure · medium The paragraph names wrought iron and steel, doubled columns and a stated wind load, each of which answers one of the faults the inquiry had found. *Trap: B defends a design the inquiry found at fault in several places.*
- 28.7 C** cross text · hard Text 2 says cast iron has almost no gap between yielding and fracture, which is why the columns in Text 1 could fail without bending first. *Trap: A repeats the property of the material that Text 1 has already given.*
- 28.8 B** transitions · easy The sentence excuses the omission by placing it in its period, so the transition must mark a concession rather than a consequence or a likeness. *Trap: A reads the normality of the omission as following from the omission itself.*
- 28.9 D** boundaries · easy The clause about the castings, the bolt holes and the wind is independent, so the conjunction joining it to the clause about the chain takes a comma. *Trap: B leaves the clause about the chain and the clause about the parts unmarked.*
- 28.10 B** synthesis · medium Only this choice names three separate failures in three separate hands, which is what shows that the blame cannot rest on one of them. *Trap: C gives one link of the chain rather than the several the goal requires.*

29 · The Women Who Painted Dials PHY · S09 · phenomenon

- 29.1 B** central idea · easy The text traces the lip-pointing, the deaths, the lawsuit of 1927 and the rule that a company could be liable for a disease contracted years earlier. *Trap: C contradicts the text, which says the first deaths were put down to other causes.*
- 29.2 D** detail · easy The text says radium behaves chemically much like calcium, so a body builds it into bone, where it sits for the rest of a life. *Trap: B names the usual sites of damage rather than the reason for the uptake.*
- 29.3 A** evidence · medium The quotation names a rule of liability established by the case, which reaches far past the five plaintiffs and their small settlement. *Trap: C describes what the five women got rather than what the case established.*
- 29.4 C** inference · medium Bone holds the radium for the rest of a life and it radiates at close range throughout, so a single intake keeps acting long after it was swallowed. *Trap: A empties the body of a substance the text says stays in the bone.*
- 29.5 B** words in context · easy The factories were made to reduce the time any one worker spent at the bench, so the word names cutting that time down. *Trap: D reverses the sense, since the rule shortened the time at the bench.*
- 29.6 A** structure · medium The sentence follows the account of deaths put down to other causes and says a dentist had seen enough of them by 1924 to write to the state. *Trap: C restores the explanation the preceding sentences have displaced.*
- 29.7 D** cross text · hard Text 2 says alpha particles are stopped by skin and that intensity falls with the square of the distance, which is why a source inside the bone is the dangerous case. *Trap: A repeats what Text 1 already says about radium in the bone.*
- 29.8 C** transitions · easy The second sentence reports the turn from scattered deaths to a pattern someone acted on, so the transition must mark the passage of time to that point. *Trap: A treats the dentist as doing the same thing as the earlier misattribution.*
- 29.9 A** boundaries · easy The clause about shaping each brush with the lips is independent, so the conjunction joining it to the clause about the camel hair takes a comma. *Trap: B leaves the clause about the brushes and the clause about the lips unmarked.*
- 29.10 C** synthesis · medium Only this choice says what the figures measured and why that made them the basis of later limits, which is the reason the goal asks for. *Trap: B names the figures without saying what in them made them useful.*

30 · Eight Minutes of Sunlight PHY · S10 · phenomenon

- 30.1 C** central idea · easy The text says the fixed speed turns every distance into a length of time, and that a view of the night sky must therefore contain many different dates at once. *Trap: B denies the text, which says Andromeda is visible as a faint smudge.*
- 30.2 A** detail · easy The text says the Moon is about four hundred thousand kilometers away, its light reaches an observer in a little over a second, and radio took the same time. *Trap: B reverses the comparison, since the Sun is four hundred times further than the Moon.*
- 30.3 B** evidence · medium The quotation says the times are easier to hold in the head and then contrasts what a distance reports with what a time reports. *Trap: A gives the speed on which the conversion rests rather than the comparison itself.*
- 30.4 D** inference · medium The light has been traveling for two and a half million years, so what reaches the eye tonight left the galaxy that long before. *Trap: A claims the present view that the fixed speed of light rules out.*
- 30.5 C** words in context · easy The text says every view of the night sky must contain many different dates at once, so the word names having them within it. *Trap: A takes the sense of holding something in check, which a view cannot do.*
- 30.6 B** structure · medium The sentence says times are easier to hold in the head and explains what each kind of figure reports, which is why the examples that follow are given in time. *Trap: C denies distances that the text goes on to quote in kilometers.*
- 30.7 A** cross text · hard Text 2 describes parallax and standard candles, which are how a distance is established before Text 1 can turn it into a length of time. *Trap: B repeats the speed that Text 1 opens with rather than adding anything.*
- 30.8 D** transitions · easy The second sentence gives the first case at the new scale, so the transition must introduce an example rather than a contrast or a summary. *Trap: B sets the nearest star against the change of scale it illustrates.*
- 30.9 B** boundaries · easy The clause about what a time tells the reader is a complete sentence, so a period separates it from the clause about what a distance tells. *Trap: A splices the clause about the time onto the clause about the distance with a comma.*
- 30.10 D** synthesis · medium Only this choice states the general reason and gives two of the dates it produces, which is what explains the absence of any present view. *Trap: B gives one of those dates without the general reason behind it.*

31 · Two Proposals, Two Narrators HUM · S01 · phenomenon

- 31.1 B** central idea · easy The text says neither choice is better and then lists what the first person gains and loses against what the outside voice gains and loses. *Trap: C ranks the two positions, which the text explicitly declines to do.*
- 31.2 D** detail · easy The text says what the outside voice cannot do is surprise the reader by not knowing something, after listing what it can do. *Trap: A names one of the freedoms the text grants that voice.*
- 31.3 A** evidence · medium The quotation names a phrase the narrator supplies and says Elizabeth would not have put it that way, which marks it as the voice judging rather than reporting. *Trap: B gives what the narrator reports rather than the comment it adds.*
- 31.4 C** inference · medium The novel reports only what Jane knows and times every discovery to hers, so the reader has access to nothing she lacks. *Trap: B opens a mind the text calls a closed door.*
- 31.5 B** words in context · easy Every novel is said to reveal its world through a particular position, so the word names how the world is presented rather than a secret disclosed. *Trap: A takes the sense of a disclosure, which a whole world is not.*

- 31.6 A** structure · medium The sentence sits between the two examples and the account of what each gains and loses, and it rules out a verdict in favor of either. *Trap: D supplies the ranking that the sentence is there to prevent.*
- 31.7 D** cross text · hard Text 2 names third limited as a standard position alongside the two in Text 1, and a voice that stays outside while borrowing the words of the character it follows. *Trap: A repeats the limit Text 1 has already drawn on the first person.*
- 31.8 C** transitions · easy The second sentence says what is true of each position in place of ranking them, so the transition must mark a substitution rather than a contrast. *Trap: D treats the general statement about both as one example among several.*
- 31.9 A** boundaries · easy The clause about the reader being inside her head is independent, so the conjunction joining it to the clause about Jane telling her story takes a comma. *Trap: B leaves the clause about the story and the clause about the proposal unmarked.*
- 31.10 C** synthesis · medium Only this choice joins the early settling of the position to its hold over everything the book can report, which is why the question comes first. *Trap: B names the trade without saying why it must be identified at the start.*

32 · The Clerk Who Would Prefer Not To HUM · S02 · phenomenon

- 32.1 C** central idea · easy The text says the withholding is the design of the story, that the pressure falls on the narrator instead, and that the reader learns a great deal about the lawyer. *Trap: B accepts as fact what the text calls a rumor in the final paragraph.*
- 32.2 A** detail · easy The text says that last guess is offered in the final paragraph as a rumor rather than a fact. *Trap: B treats a rumor as the account the narrator settles on.*
- 32.3 B** evidence · medium The quotation lists four things the reader learns about the lawyer and says that is where a great deal of the knowledge goes. *Trap: C shows the lawyer guessing about Bartleby rather than what the reader learns of him.*
- 32.4 D** inference · medium The reader has only the repeated sentence and no access to the mind behind it, so a motive is precisely what the design keeps back. *Trap: A takes the rumor at the end for the explanation it is not.*
- 32.5 C** words in context · easy Melville is said to portray a man entirely through what he refuses to do, so the word names building him as a character on the page. *Trap: A takes the sense used of a painter rather than of a writer.*
- 32.6 B** structure · medium The sentence follows the account of what the reader is not given and says the withholding is the design of the story and not a gap in it. *Trap: C calls the story incomplete, which the same sentence denies.*
- 32.7 A** cross text · hard Text 2 lists exposition, action, speech and the report of others as the means available, which is the set from which Melville took only two. *Trap: C repeats the point Text 1 makes about the reader rather than adding to it.*
- 32.8 D** transitions · easy The second sentence adds a further instance of the same mildness, so the transition must mark an addition rather than a contrast or a consequence. *Trap: B treats the repeated answer as another way of saying he does not explain.*
- 32.9 B** boundaries · easy The clause saying he does not explain is independent, so the conjunction joining it to the clause about his not being angry takes a comma. *Trap: A leaves the clause about anger and the clause about explaining unmarked.*
- 32.10 D** synthesis · medium Only this choice joins the repetition, the absence of feeling and the absence of a reason, which together make the refusal the whole portrait. *Trap: B names two of the absences without saying what they amount to.*

33 · A Poem Made of Four Objects HUM · S03 · phenomenon

- 33.1 D** central idea · easy The text argues that poetry should work through things rather than statements about things, and ends by saying a thing on the page can express what a statement about it cannot. *Trap: C credits Williams with inventing a method the text says he did not invent.*
- 33.2 B** detail · easy The text says plainly that Williams did not invent the method, and then says what he did do with it. *Trap: A names the thing the text credits him with doing.*
- 33.3 C** evidence · medium The quotation says the reader is handed the objects and then left to supply the rest, which is the work the claim names. *Trap: A lists what the poem leaves out without saying who makes up the difference.*
- 33.4 A** inference · medium The concrete version is said to work because rain water on red paint can be seen, and the abstract version dies, so the force lies in the visible thing. *Trap: B rests the poem on the one abstract word the text sets aside.*
- 33.5 D** words in context · easy A thing on the page is said to express what a statement about it cannot, so the word names what the object carries across to a reader. *Trap: B gives the sense of a plain statement, which the text contrasts with a thing.*
- 33.6 C** structure · medium The sentence comes after the principle and is followed at once by the substitution of abstractions for objects, which is the test being run. *Trap: D denies a test the sentence is there to announce.*
- 33.7 B** cross text · hard Text 2 says the economy of a figure comes from the reader supplying the detail, so four words can do the work of a paragraph. *Trap: A names a figure from Text 2 that the poem in Text 1 does not use.*
- 33.8 A** transitions · easy The second sentence says what Williams did do in place of inventing the method, so the transition must mark a substitution. *Trap: C makes the teaching follow from the failure to invent.*
- 33.9 C** boundaries · easy The clause saying the poem is now among the most anthologized in English is independent, so the conjunction joining it to the clause about outliving the argument takes a comma. *Trap: A runs the clause about the argument straight into the clause about anthologies.*
- 33.10 A** synthesis · medium Only this choice joins the absence of any named feeling to the connection the reader is left to make, which is the work the goal asks about. *Trap: D names the work without saying what in the poem makes it necessary.*

34 · Fourteen Lines and a Hinge HUM · S04 · phenomenon

- 34.1 A** central idea · easy The text says the interesting part is not the counting but the hinge, and then says that finding the turn is usually enough to find the argument. *Trap: D reverses the sentence that sets the counting aside in favor of the hinge.*
- 34.2 C** detail · easy The text says an Italian sonnet divides eight lines against six and that the turn comes after line eight. *Trap: A gives the place of the turn in the English form instead.*
- 34.3 D** evidence · medium The quotation gives twelve lines of denial followed by a closing pair that says the opposite, which is the pair working against what came before. *Trap: A gives a change of direction that happens before the closing pair.*
- 34.4 B** inference · medium The text says finding the turn is usually enough to find the argument and that the argument is what examiners ask about. *Trap: C turns a reliable route to the argument into a guarantee about rhyme.*
- 34.5 A** words in context · easy Shakespeare is said to have composed a hundred and fifty-four sonnets, so the word names the act of writing them. *Trap: C takes the passive sense in which a thing is composed of parts.*

- 34.6 D** structure · medium The reference follows the claim that the closing pair can confirm or undercut, and it gives an instance in which the pair reverses twelve lines. *Trap: C hardens a pair that can confirm or undercut into one that always confirms.*
- 34.7 C** cross text · hard Text 2 says enjambment, caesura and substitution only work because the underlying pattern is regular enough to be felt. *Trap: D names one of the devices without saying what makes it work.*
- 34.8 B** transitions · easy The second sentence adds a further turn to the one already named, so the transition must mark an addition rather than a contrast. *Trap: A sets the second turn against the first when the text is adding it.*
- 34.9 D** boundaries · easy The clause saying that finding the turn is enough to find the argument is independent, so the conjunction joining it to the clause about the map takes a comma. *Trap: A runs the clause about the map straight into the clause about the turn.*
- 34.10 B** synthesis · medium Only this choice carries the counting through to the turn and the turn through to the argument that is actually asked about. *Trap: C gives the places of the turns without saying what finding one is for.*

35 · A Platform, a Balcony, a Trap HUM · S05 · phenomenon

- 35.1 B** central idea · easy The text lists the trap door, the gallery and the curtained space, then says those arrangements shaped the writing and gives three consequences for the plays. *Trap: D reverses the direction the text gives, in which the building shapes the writing.*
- 35.2 D** detail · easy The text says plays began in the early afternoon because there was no artificial light. *Trap: B names another absence in the building that the text links to something else.*
- 35.3 A** evidence · medium The quotation names the absence of a curtain and of scenery and then says a scene ended with an exit and the next began with an entrance. *Trap: B names a feature that changes what a scene can show rather than how fast it can change.*
- 35.4 C** inference · medium Nothing on the stage could show a place and place was established by being named, so the naming had to be done in the words spoken. *Trap: B rules out the quick movement between Rome and Egypt that the text reports.*
- 35.5 B** words in context · easy The arrangements of the building are said to have shaped the writing, and the text then lists the features of the plays that followed from them. *Trap: D reverses the direction, making the building follow the writing.*
- 35.6 A** structure · medium The sentence saying the building offered a company three useful things is followed at once by the trap door, the gallery and the curtained space. *Trap: C points to the modern copy, which the text reaches only at the end.*
- 35.7 D** cross text · hard Text 2 says a scene had to end with an exit because there was no front curtain, which is why so many scenes finish on a rhyming couplet. *Trap: C reports what happened in later playhouses rather than a consequence in this one.*
- 35.8 C** transitions · easy The second sentence gives what followed from the absence of a curtain and of scenery, so the transition must mark a consequence. *Trap: A sets the two sentences against each other when one follows from the other.*
- 35.9 A** boundaries · easy The clause about the penny and the standing is independent, so the conjunction joining it to the clause about the two thousand people takes a comma. *Trap: B runs the clause about the capacity straight into the clause about the penny.*
- 35.10 C** synthesis · medium Only this choice joins the absence of a curtain to the naming of place and shows that the two together reduce a scene change to an exit. *Trap: A names one condition without saying what it makes possible.*

36 · The First Locked Room HUM · S06 · phenomenon

- 36.1 C** central idea · easy The text says the story introduced a set of parts still in use, and that later writers counted on a reader knowing the pattern rather than merely copying it. *Trap: D makes the later writers copyists, which the text expressly denies.*
- 36.2 A** detail · easy The text says the crowd hears voices on the stairs but cannot agree on what language the second voice was speaking. *Trap: B names a fact the text reports without any disagreement.*
- 36.3 B** evidence · medium The quotation says every clue needed for the explanation has already appeared before the last pages, which is preparation. *Trap: A calls the solution mechanical without saying when the reader saw its parts.*
- 36.4 D** inference · medium The shock is said to depend on the readers knowing the rules, so a reader without them has nothing for the breach to work against. *Trap: B turns a lost effect into an inability to read the story.*
- 36.5 C** words in context · easy The text contrasts not simply imitating the pattern with counting on a reader to know it, so the word names a straight copying of it. *Trap: D makes the word name an advance on the pattern rather than a copy of it.*
- 36.6 B** structure · medium The list follows the sentence saying the story introduced a set of parts still in use, and it names them one by one. *Trap: D pushes a career built on breaking rules into breaking all of them.*
- 36.7 A** cross text · hard Text 2 says a convention creates the possibility of significant deviation, because a rule that everybody knows can be broken on purpose and the breaking will be noticed. *Trap: B names one written rule rather than what knowing a rule makes possible.*
- 36.8 D** transitions · easy The second sentence gives what the later writers did in place of imitating, so the transition must mark a substitution. *Trap: B makes the counting follow from the refusal to imitate.*
- 36.9 B** boundaries · easy The clause saying the key is in the lock is independent, so the conjunction joining it to the clause about the locked door takes a comma. *Trap: A runs the clause about the door straight into the clause about the key.*
- 36.10 D** synthesis · medium Only this choice joins the reader's knowledge of the pattern to the effect a writer gets by breaking it, which is where the pleasure is said to begin. *Trap: C names the career without saying what the readers' knowledge contributes.*

37 · A Dutch Kitchen in 1658 HUM · S07 · phenomenon

- 37.1 D** central idea · easy The text says the pouring of milk is the whole event and then lists the surfaces the painter has recorded one by one, ending with a picture that has held visitors for three hundred years. *Trap: C supplies a drama that the text says is absent.*
- 37.2 B** detail · easy The text says the milk is the only moving thing in the painting and describes it as a thin white thread. *Trap: A names the light, which the text treats as falling rather than moving.*
- 37.3 C** evidence · medium The quotation describes paint laid on so that the crust catches light as real crumbs would, which is one surface recorded for the way it takes light. *Trap: D says the things are painted with care without naming anything about light.*
- 37.4 A** inference · medium The text says the first step is noticing how much is actually there, which sets emptiness down to the viewer rather than to the picture. *Trap: B credits the painter with the emptiness the text says is only apparent.*
- 37.5 D** words in context · easy Each surface is said to reflect light differently and the painter to have recorded each, so the word names what a surface does with light that falls on it. *Trap: C narrows throwing light back to producing a mirror image.*

- 37.6 C** structure · medium The sentence says a later passage asks how a painter arranges a scene, and the text then returns to noticing how much is there. *Trap: D rules out a description that the later passage is said to attempt.*
- 37.7 B** cross text · hard Text 2 says the eye goes to the strongest tonal contrast first, and that Vermeer puts his brightest white on the milk while leaving the wall in a narrow range. *Trap: A names a different compositional device from the three in Text 2.*
- 37.8 A** transitions · easy The second sentence sets the three hundred years of attention against the absence of any event, so the transition must mark a concession. *Trap: B makes the long attention follow from nothing happening.*
- 37.9 C** boundaries · easy The clause about the bread on the table is independent, so the conjunction joining it to the clause about the care taken takes a comma. *Trap: A runs the clause about the care straight into the clause about the bread.*
- 37.10 A** synthesis · medium Only this choice sets the single event beside the number of surfaces recorded, which is what makes the quiet picture full. *Trap: C lists the objects without saying what their recording amounts to.*
- 38 · One Tune, Twelve Ways** HUM · S08 · phenomenon
- 38.1 A** central idea · easy The text says Mozart states the tune plainly, changes it twelve times without quite losing it, and that the pleasure comes from hearing the original survive. *Trap: C credits Mozart with a form the text calls old.*
- 38.2 C** detail · easy The text says the tune itself is eight bars long and uses only a handful of notes. *Trap: A gives the number of variations rather than the length of the tune.*
- 38.3 D** evidence · medium The quotation says that in every case the listener can still follow the original and locates the pleasure in hearing it survive. *Trap: B names one of the changes without saying what survives it.*
- 38.4 B** inference · medium The taking apart is said to work only if everyone in the room remembers the theme, which the plain statement of it supplies. *Trap: A makes the loss of the stated theme a help to the listener.*
- 38.5 A** words in context · easy Beethoven is said to have been inspired to write thirty-three variations, so the word names what set him to writing them. *Trap: D makes the publisher the source of the idea rather than the occasion for it.*
- 38.6 D** structure · medium The reference follows the list of composers who wrote such sets and says jazz musicians work the same way nightly, stating the theme and taking it apart. *Trap: C turns a present-day instance of the procedure into its origin.*
- 38.7 C** cross text · hard Text 2 says the question to ask of a passage is what it has set up and whether it has paid, and that an effect comes from establishing something and then withholding it. *Trap: B names one such effect rather than the condition every one of them needs.*
- 38.8 B** transitions · easy The second sentence gives what Mozart does after stating the tune, so the transition must mark a step in sequence. *Trap: C treats the twelve changes as a restatement of the plain statement.*
- 38.9 D** boundaries · easy The clause about the theme being taken apart is independent, so the conjunction joining it to the clause stating the theme takes a comma. *Trap: A runs the clause about the statement straight into the clause about the taking apart.*
- 38.10 B** synthesis · medium Only this choice joins the plain statement of the tune to the following that the listener is then able to do. *Trap: C names the plain statement without saying what it gives the listener.*

39 · Shopping Under Glass HUM · S09 · phenomenon

- 39.1 B** central idea · easy The text says the idea spread because it solved several problems at once, and then names the rain, the narrow pavements and the shelter a shopper gained. *Trap: D erases the difference the text says matters between an arcade and a mall.*
- 39.2 D** detail · easy The text says the shops were small and the rents high, which suited trades selling expensive light goods such as gloves and watches. *Trap: A reverses both terms the text gives for the goods.*
- 39.3 A** evidence · medium The quotation calls the arcade a public street with a roof and names the doors at both ends that open onto the city. *Trap: B describes the mall rather than what makes the arcade part of the city.*
- 39.4 C** inference · medium The problems named are the rain and the pavements shared with carriages, and the arcade is said to let a shopper walk the whole length dry. *Trap: B shuts in a shopper the text says could look in forty windows.*
- 39.5 B** words in context · easy The arcades are said to have been admired as engineering as much as architecture, so the word names the regard in which the work was held. *Trap: C takes the copying the text reports elsewhere for the regard itself.*
- 39.6 A** structure · medium The sentence follows the claim that the arcade is the ancestor of the mall and is followed by the public street and the single owner set against each other. *Trap: D supplies a verdict on the mall that the text does not give.*
- 39.7 D** cross text · hard Text 2 says active frontage counts doorways in use and that doorways per hundred meters predicts street life better than architectural quality does. *Trap: B names the opposite case rather than what makes the lane work.*
- 39.8 C** transitions · easy The second sentence gives what followed from the small shops and the high rents, so the transition must mark a consequence. *Trap: A sets the trades against the rents when one follows from the other.*
- 39.9 A** boundaries · easy The clause saying they still are is independent, so the conjunction joining it to the clause about the prohibition takes a comma. *Trap: B runs the clause about the prohibition straight into the clause about the present day.*
- 39.10 C** synthesis · medium Only this choice sets the public street open at both ends against the single ownership, which is the difference the notes make available. *Trap: B describes the mall without saying what the arcade is unlike.*

40 · Two Reviews of One Riot HUM · S10 · phenomenon

- 40.1 C** central idea · easy The text calls the disagreement the ordinary condition of criticism, says each critic had a different standard in mind, and tells a reader to find the standard behind a review. *Trap: D picks a winner among the three, which the text does not do.*
- 40.2 A** detail · easy The text says a third critic spent most of his column on the clothes in the audience. *Trap: B gives what the second critic praised rather than the third critic's subject.*
- 40.3 B** evidence · medium The quotation says the three critics sat in the same room for the same length of time, which rules out a difference in what was in front of them. *Trap: D states the disagreement without ruling out a difference in what each saw.*
- 40.4 D** inference · medium The text says a reader who wants to use a review must find the standard behind it, and that the standard is often unstated. *Trap: B settles the matter by force of writing rather than by the standard in use.*
- 40.5 C** words in context · easy The second critic is said to have praised the work as one of rare strength, so the word names approval expressed in print. *Trap: D makes the word name a neutral valuation rather than approval.*
- 40.6 B** structure · medium The three sentences follow the claim that each critic had a different standard in mind and say what each of those standards was. *Trap: C ranks reviews that the text sets side by side without a verdict.*

- 40.7 A** cross text · hard Text 2 says a hidden criterion produces the commonest kind of useless disagreement, in which two people argue while measuring against different things. *Trap: D names a different one of the three failures Text 2 sets out.*
- 40.8 D** transitions · easy The second sentence concedes the shared experience and still calls the disagreement ordinary, so the transition must mark a concession rather than a consequence. *Trap: A makes the ordinariness of the disagreement follow from the shared room.*
- 40.9 B** boundaries · easy The clause saying Nijinsky arranged the dancing is independent, so the conjunction joining it to the clause about the music takes a comma. *Trap: A runs the clause about the music straight into the clause about the dancing.*
- 40.10 D** synthesis · medium Only this choice turns the unstated standard into a step the reader takes before judging between the verdicts. *Trap: C names two of the standards without saying what a reader does with them.*

41 · Forbid, Allow and Twenty Points SOC · S01 · phenomenon

- 41.1 B** central idea · easy The text reports the twenty-point gap, lists a family of similar effects, and says a number from a survey is a number about a particular form of words. *Trap: C pushes the finding past the sentence that denies surveys are useless.*
- 41.2 D** detail · easy The text says about fifty-four percent said yes to forbidding and about seventy-five percent said no to allowing. *Trap: A gives the answer that drew the larger share of the other group.*
- 41.3 A** evidence · medium The quotation says the study has been repeated many times in several countries and reached the same result each time. *Trap: B names the care taken in one study rather than its repetition elsewhere.*
- 41.4 C** inference · medium The text says a number from a survey is a number about a particular form of words, so the wording is what the figure is a figure about. *Trap: D convicts the survey when the text faults only the reporting.*
- 41.5 B** words in context · easy The wording is said to influence the result as much as the subject does, so the word names a share in producing the figure. *Trap: C reverses the sentence, which makes the wording a cause of the result.*
- 41.6 A** structure · medium The sentence follows the statement that the two versions are logically the same question and precedes the two percentages that differ by twenty points. *Trap: D discards an instrument the text goes on to defend.*
- 41.7 D** cross text · hard Text 2 names the instrument as the third kind of failure and says it includes the wording effects from the earlier passage along with order effects. *Trap: A names a different one of the three failures Text 2 sets out.*
- 41.8 C** transitions · easy The second sentence gives the reason the two versions count as the same question, so the transition must mark a ground. *Trap: B makes the reason follow from the claim it supports.*
- 41.9 A** boundaries · easy The clause about the middle option is independent, so the conjunction joining it to the clause about the order of the items takes a comma. *Trap: B runs the clause about the order straight into the clause about the middle option.*
- 41.10 C** synthesis · medium Only this choice names the wording and gives the reason the notes supply, that the number is about the words used. *Trap: D reports the practice without saying what makes it necessary.*

42 · Thirteen Children or Twenty-Five SOC · S02 · phenomenon

- 42.1 C** central idea · easy The text says earlier comparisons were hard to trust, describes the assignment by lot, and ends by saying what the lot made possible was a fair comparison. *Trap: D trusts the comparisons the text says were hard to trust.*

- 42.2 A** detail · easy The text says children were put at random into a small class of thirteen to seventeen or into a regular class of twenty-two to twenty-five. *Trap: B gives the size of a regular class instead.*
- 42.3 B** evidence · medium The quotation says the effect survived the return to ordinary classes and could still be found years later in high school test taking. *Trap: C names where the gap was largest rather than how long it lasted.*
- 42.4 D** inference · medium The wealth and the building could produce the difference, so a comparison that did not control them cannot say which factor acted. *Trap: A credits an unbalanced comparison with the property only the lot supplies.*
- 42.5 C** words in context · easy Earlier studies are said to have compared schools with small classes against schools without them, so the word names placing two sets beside each other. *Trap: B adds a ranking the comparison does not make.*
- 42.6 B** structure · medium The sentence follows the statement that earlier comparisons were hard to trust and names the wealth and the buildings that could have produced the difference. *Trap: D turns a possible confusion into a finding about wealth.*
- 42.7 A** cross text · hard Text 2 says the fatal property of confounders is that the dangerous ones are the ones nobody thought of, which matching cannot equalize. *Trap: B names the known uncertainty randomization carries rather than the failure of matching.*
- 42.8 D** transitions · easy The second sentence gives what the state did because the earlier comparisons could not separate the causes, so the transition must mark a consequence. *Trap: A sets the assignment against the problem that prompted it.*
- 42.9 B** boundaries · easy The clause about the clearest gap is independent, so the conjunction joining it to the clause about the small classes takes a comma. *Trap: A runs the clause about the classes straight into the clause about the gap.*
- 42.10 D** synthesis · medium Only this choice joins the established effect to the expense that kept the decision open, which is what the notes together support. *Trap: B names the cost without saying what it did to the argument.*

43 · Chocolate and the Nobel Prize SOC · S03 · phenomenon

- 43.1 D** central idea · easy The text calls the case a clean example of a pattern that is real, strong, measurable and useless as a guide to action, and then lists the four relations two figures may stand in. *Trap: C accepts a causal story the text says nobody believes.*
- 43.2 B** detail · easy The text says the physician had plotted two figures for twenty-three countries. *Trap: C gives a population figure used elsewhere in the text.*
- 43.3 C** evidence · medium The quotation names the wealth that raises both the chocolate and the laboratories and says it could produce both figures without either touching the other. *Trap: B names a different weakness, the crudeness of the measure.*
- 43.4 A** inference · medium The text says a reader who fails to ask which of the four is in play will assume the first and will be wrong most of the time. *Trap: B calls a mistaken reading a correct one.*
- 43.5 D** words in context · easy The reader in that sentence is said to assume the first of the four relations without asking, so the word names accepting it untested. *Trap: C makes the reader test what the sentence says goes unexamined.*
- 43.6 C** structure · medium The sentence follows the statement that the measures are crude and shows that one prize can put a small population at the head of the table. *Trap: D turns an arithmetic point into a claim about which countries win.*
- 43.7 B** cross text · hard Text 2 names the common cause as its third possibility and says it is what the chocolate and Nobel case shows. *Trap: A names the relation in which the outcome produces the supposed cause.*

- 43.8 A** transitions · easy The second sentence adds further reasons beyond the one just dismissed, so the transition must mark an addition. *Trap: C makes the other explanations follow from the dismissal.*
- 43.9 C** boundaries · easy The clause about China is independent, so the conjunction joining it to the clause about Switzerland takes a comma. *Trap: A runs the clause about Switzerland straight into the clause about China.*
- 43.10 A** synthesis · medium Only this choice joins the four possibilities to the default the asking is meant to prevent. *Trap: C names the default without saying what displaces it.*

44 · The Street With One Rich Man SOC · S04 · phenomenon

- 44.1 A** central idea · easy The text contrasts a mean that describes nobody with a median that does, and says which figure a writer chooses therefore decides what the sentence says. *Trap: D calls a report a lie where the text says neither report is lying.*
- 44.2 C** detail · easy The text says mean household income in the United States runs well above the median, by something like a third. *Trap: A gives the ratio used of the one rich household on the street.*
- 44.3 D** evidence · medium The quotation shows the mean describing a decade of rising incomes while almost every household lost ground. *Trap: B states the property of the mean without showing the two reports diverging.*
- 44.4 B** inference · medium The mean sums and divides and so responds to the largest values, while the median counts positions and does not. *Trap: A swaps the two measures the text has just distinguished.*
- 44.5 A** words in context · easy The sentence contrasts two reports that show opposite trends from the same data over a decade, so the word names which way the figure moved. *Trap: C makes the word name one reading rather than a movement.*
- 44.6 D** structure · medium The sentence follows the mean that describes nobody and names the median, which lands on forty thousand like the eight neighbors. *Trap: B condemns a figure the text calls correct.*
- 44.7 C** cross text · hard Text 2 says the practical rule is to ask for the shape rather than the summary, and that a mean with a standard deviation is the usual pairing. *Trap: B adds a count that neither text treats as the missing piece.*
- 44.8 B** transitions · easy The second sentence drives home the claim that the figure describes nobody, so the transition must mark a confirmation. *Trap: C makes the families follow from the figure being correct.*
- 44.9 D** boundaries · easy The clause about the tenth household is independent, so the conjunction joining it to the clause about the nine takes a comma. *Trap: A runs the clause about the nine households straight into the clause about the tenth.*
- 44.10 B** synthesis · medium Only this choice puts both questions the notes name and supplies the reason they matter, which is the different response to large values. *Trap: D asks the first question without the second or the reason behind it.*

45 · Parking by the Hour in San Francisco SOC · S05 · phenomenon

- 45.1 B** central idea · easy The text says the problem was the hunting rather than a shortage, describes the block-by-block pricing, and reports that search time fell by about forty percent. *Trap: C builds the parking the city decided against.*
- 45.2 D** detail · easy The text says the city reported that the time spent searching for a space dropped by about forty percent in the test areas. *Trap: A gives the size of a price step rather than the fall in search time.*
- 45.3 A** evidence · medium The quotation reports that average rates fell in the test areas and that this surprised people who had expected a revenue grab. *Trap: C describes the method of adjustment rather than its effect on revenue.*

- 45.4 C** inference · medium The text says the policy works by paying attention to the one thing a driver cannot ignore, which a campaign of requests does not touch. *Trap: B returns to the appeal the sentence says would have done nothing.*
- 45.5 B** words in context · easy The price is said to reward whoever is willing to walk two blocks, so the word names the benefit a cheaper block gives that driver. *Trap: A narrows the benefit to a cash payment the scheme does not make.*
- 45.6 A** structure · medium The sentence puts the trouble in the drivers circling rather than in the number of spaces, which is what the pricing then addresses. *Trap: D fails a scheme the text reports as working.*
- 45.7 D** cross text · hard Text 2 calls a parking charge paid at a meter before walking away salient and says salience is the first of the three properties. *Trap: A rests the effect on the size of the sum, which Text 2 calls the least important.*
- 45.8 C** transitions · easy The second sentence gives the opposite case with the opposite adjustment, so the transition must mark a contrast. *Trap: A makes the fall in price follow from the rise.*
- 45.9 A** boundaries · easy The clause about the meters fitted with sensors is independent, so the conjunction joining it to the clause about the method takes a comma. *Trap: B runs the clause about the method straight into the clause about the meters.*
- 45.10 C** synthesis · medium Only this choice joins the method to the measured fall in searching, which is what the request could not deliver. *Trap: B names the failed alternative without the result the price achieved.*

46 · The Card in the Hotel Bathroom SOC · S06 · phenomenon

- 46.1 C** central idea · easy The text reports that reuse rose by roughly a quarter with the card naming what other guests do, and says such a statement is a stronger lever than an appeal to a value. *Trap: D awards the result to the card the study found weakest.*
- 46.2 A** detail · easy The text says reuse rose by roughly a quarter with the second card and that the version naming the room did better still. *Trap: C names the card that was beaten by the one naming the room.*
- 46.3 B** evidence · medium The quotation says the guests did not know that anything was being measured, which rules out a reaction to the study itself. *Trap: C names the safeguard against a difference between cards rather than against awareness.*
- 46.4 D** inference · medium The decision is said to take about four seconds and to be about what a normal guest does, so an argument arrives too late to bear on it. *Trap: A assumes an attention the four seconds rules out.*
- 46.5 C** words in context · easy People are said to behave partly by reading the room, so the word names what they do in the situation rather than any standard of conduct. *Trap: A takes the sense used of a child told to be good.*
- 46.6 B** structure · medium The sentence comes just before the comparison between a statement of what others do and an appeal to a value, and limits what that comparison claims. *Trap: D denies an effect the next sentences report.*
- 46.7 A** cross text · hard Text 2 says a card reporting the descriptive norm provides the information the enforcement machinery needs and cannot otherwise get, since a guest cannot see other rooms. *Trap: B names one part of the machinery rather than what the card contributed.*
- 46.8 D** transitions · easy The second sentence names the consequence of the guests being unaware, so the transition must mark a result. *Trap: C sets the classification against the fact that produces it.*
- 46.9 B** boundaries · easy The clause about the random assignment is independent, so the conjunction joining it to the clause about the identical cards takes a comma. *Trap: A runs the clause about the cards straight into the clause about the assignment.*

46.10 D synthesis · medium Only this choice joins the identical printing cost to the gain the new wording produced, which is the point the goal asks for. *Trap: B names the stronger lever without saying what it cost.*

47 · Houses That Followed the Streetcar SOC · S07 · phenomenon

- 47.1 D** central idea · easy The text traces the widening of the city to the streetcar and then says who moved out was decided by the fare, so the price of the travel decides who may prefer space. *Trap: C rests the sorting on taste, which the text says is not the whole of it.*
- 47.2 B** detail · easy The text says a streetcar held forty people and ran at about eight miles an hour. *Trap: C turns the number of passengers into a speed.*
- 47.3 C** evidence · medium The quotation sets the five-cent fare against a laborer and a clerk and shows the same price being heavy for one and trivial for the other. *Trap: B measures the spread of the city rather than who was able to join it.*
- 47.4 A** inference · medium The limit is given as an hour of travel, so raising the speed from walking to eight miles an hour extends the edge of the city. *Trap: D keeps the old edge after the constraint that fixed it has gone.*
- 47.5 D** words in context · easy People are said to prefer space when they can buy the travel time, so the word names a choice made between space and nearness. *Trap: B takes the sense in which a candidate is preferred to an office.*
- 47.6 C** structure · medium The sentence puts the width of the old city at an hour on foot, which is the constraint that the omnibus, the railway and the streetcar then loosened. *Trap: D makes walking a choice when the sentence makes it a necessity.*
- 47.7 B** cross text · hard Text 2 says bid rent falls as distance rises, that the slope is set by the cost of travel, and that cheaper or faster travel flattens the slope and spreads the city. *Trap: D names the quantity planners calculate rather than the mechanism of the spread.*
- 47.8 A** transitions · easy The second sentence gives the reason the two lived close together, so the transition must mark a ground. *Trap: B sets the reason against the arrangement it explains.*
- 47.9 C** boundaries · easy The clause about the houses in rows is independent, so the conjunction joining it to the clause about the fields takes a comma. *Trap: A runs the clause about the fields straight into the clause about the houses.*
- 47.10 A** synthesis · medium Only this choice puts the one fare against the two wages and draws the sorting from the difference. *Trap: C names one of the two wages without the comparison that produced the pattern.*

48 · Hired by the Half Day SOC · S08 · phenomenon

- 48.1 A** central idea · easy The text says the system suited the companies exactly and that casual hiring moved the risk of irregular arrivals onto the workers. *Trap: D shares a benefit the text assigns to one side.*
- 48.2 C** detail · easy The text says the dockers struck for a guaranteed minimum call of four hours and a rate of sixpence an hour. *Trap: A names a change the text says took until 1967.*
- 48.3 D** evidence · medium The quotation names the daily choosing, the drink the night before and the men who did best being the best known at the gate. *Trap: C names what the arrangement did to the workers rather than to the foreman.*
- 48.4 B** inference · medium The text says casual hiring moved the risk of irregular arrivals onto the workers, so the quiet days cost the company nothing. *Trap: C grants the men the minimum they had to strike for.*

- 48.5 A** words in context · easy The sentence names the side that benefits as the one calling the arrangement flexibility, so the word marks whoever is better off under it. *Trap: C takes the sense in which a payment is a benefit.*
- 48.6 D** structure · medium The sentence follows the account of the foreman choosing faces and being bought a drink, and says the men who did best were the best known to him. *Trap: C makes strength decisive when the sentence makes acquaintance decisive.*
- 48.7 C** cross text · hard Text 2 says the companies ensured each man competed against a crowd for that day only, so no individual could threaten to withdraw. *Trap: A names one of the two limits rather than the thing between them that moved.*
- 48.8 B** transitions · easy The second sentence gives the reason the system suited the companies, so the transition must mark a ground. *Trap: A sets the reason against the claim it supports.*
- 48.9 D** boundaries · easy The clause about the man who went home with nothing is independent, so the conjunction joining it to the clause about the crowd takes a comma. *Trap: A runs the clause about the crowd straight into the clause about the man.*
- 48.10 B** synthesis · medium Only this choice joins the transferred uncertainty to the side that names it, which is what the notes together establish. *Trap: D repeats the usage without saying what the word covers.*

49 · Thirty Years Across One City SOC · S09 · phenomenon

- 49.1 B** central idea · easy The text reports a thirty-year gap inside one city, lists the differences that arrive together, and ends by saying a postal code predicts the length of a life better than most facts about the person. *Trap: D assigns the gap to choices the text says it is not simply about.*
- 49.2 D** detail · easy The text says life expectancy was about ninety years in Streeterville and about sixty in Englewood. *Trap: A moves the higher of the two figures far down.*
- 49.3 A** evidence · medium The quotation says the exact numbers move with the boundaries or the years and that some early figures were revised downward. *Trap: D reports how widely such figures are published rather than how firm they are.*
- 49.4 C** inference · medium The income, the housing, the air and the history are said to arrive together and to be hard to separate, so no one of them acts alone. *Trap: A moves a pattern the text says stays put.*
- 49.5 B** words in context · easy A postal code is said to predict the length of a life better than most facts about the person, so the word names what a figure lets a reader expect. *Trap: C turns a statistical guide into a cause.*
- 49.6 A** structure · medium The list follows the statement that the figures are not about individual choices and is closed by the remark that these things arrive together. *Trap: D picks a cause the next sentence says cannot be separated out.*
- 49.7 D** cross text · hard Text 2 says none of the three quantities captures the experience of being poor, where stigma, insecurity and the cost of credit do damage no distribution figure records. *Trap: A names one of the differences Text 1 already lists.*
- 49.8 C** transitions · easy The second sentence holds the pattern steady against the moving numbers, so the transition must mark a concession. *Trap: A makes the steady pattern follow from the moving figures.*
- 49.9 A** boundaries · easy The clause about the same city government is independent, so the conjunction joining it to the clause about the distance takes a comma. *Trap: B runs the clause about the distance straight into the clause about the government.*
- 49.10 C** synthesis · medium Only this choice separates the unstable figures from the stable pattern, which is what makes care about one pair of numbers reasonable. *Trap: B names one revision without the pattern that survives it.*

50 · A Test That Is Usually Wrong SOC · S10 · phenomenon

- 50.1 C** central idea · easy The text works the arithmetic to about two percent, names the base rate as the figure that gets dropped, and says a positive on a good test for a rare condition is usually a false alarm. *Trap: D reverses the conclusion the arithmetic reaches.*
- 50.2 A** detail · easy The text says most of the sixty answered ninety-five percent and that only about one in six gave an answer near the right one. *Trap: B gives the correct figure rather than the common answer.*
- 50.3 B** evidence · medium The quotation says what goes wrong is the starting point rather than the arithmetic, and names the vivid figure that crowds out the base rate. *Trap: A gives one step of the sums rather than the source of the mistake.*
- 50.4 D** inference · medium The text makes the response depend on the base rate, so a program that leaves it out overvalues the positive results it produces. *Trap: B improves a figure the missing number has nothing to do with.*
- 50.5 C** words in context · easy The sentence asks how a doctor or an official should respond to a positive result, so the word names what is done about it. *Trap: B takes the medical sense in which a patient responds to treatment.*
- 50.6 B** structure · medium The calculation follows the statement that the right answer is about two percent and reaches fifty-one positives of which one is ill. *Trap: D blames a test the text describes as good.*
- 50.7 A** cross text · hard Text 2 defines availability as judging how common something is by how easily examples come to mind, which is what makes the vivid figure crowd out the rare one. *Trap: B names anchoring, which concerns an irrelevant number rather than a vivid one.*
- 50.8 D** transitions · easy The second sentence begins the short calculation the first sentence promises, so the transition must introduce an illustration. *Trap: B makes the calculation follow from its own brevity.*
- 50.9 B** boundaries · easy The clause about the false positives is independent, so the conjunction joining it to the clause about the missed cases takes a comma. *Trap: A runs the clause about the test straight into the clause about the false positives.*
- 50.10 D** synthesis · medium Only this choice joins the condition under which the error bites, a rare thing in a large population, to the result it produces. *Trap: B lists the settings without saying what happens in them.*

51 · The Shape of the Argument HIS · S01 · mechanism

- 51.1 B** central idea · easy The text names the structure outright, as a standard, a record and a remedy, which is the shape of a legal brief rather than of a statement of principle. *Trap: C names what the text says explicitly that the document does not do.*
- 51.2 D** detail · easy The text says everything after the premises is evidence for a factual claim, and that the grievances show this particular government had in fact destroyed those rights. *Trap: A reverses the structure, since the premises come before the grievances and are not them.*
- 51.3 A** evidence · medium The quotation lists three questions the document declines to settle and says it makes no promise about any of them. *Trap: D describes the work the grievances do rather than what the document leaves open.*
- 51.4 C** inference · medium The framers treated the Declaration as settled ground rather than as a plan, so it served them as something assumed rather than something argued. *Trap: A reads settled ground as unfinished work, which is the opposite of what the sentence says.*

- 51.5 B** words in context · medium The machinery was built and then ratified in 1788, so the word names the formal act of approval that put it into force. *Trap: A confuses the ratification debates with the act of ratifying itself.*
- 51.6 A** structure · medium The sentence comes after the premises, the evidence and the answered objection have each been described, and gives the whole arrangement its name. *Trap: B treats a summarizing sentence as an introduction to material already discussed.*
- 51.7 D** cross text · hard Text 2 reports that the grievances take up most of the document, which gives the reasoning a shape on the page that an analysis of its logic alone does not show. *Trap: A restates a point Text 1 has already made rather than adding anything from Text 2.*
- 51.8 C** transitions · medium The sentence adds a second thing the document does, rather than setting itself against the first or restating it. *Trap: A puts the closing off of an objection in opposition to the offering of evidence.*
- 51.9 A** boundaries · easy A colon introduces the list that spells out what the legal brief consists of, which a comma or no mark at all could not do. *Trap: B joins an independent clause to the list with a comma alone, which is a splice.*
- 51.10 C** synthesis · hard Only this choice joins what the document declines to settle with the later document that settled it, which is what the goal requires. *Trap: A repeats a note about the logic without touching the question of government.*
- 52 · Madison on Faction** HIS · S02 · mechanism
- 52.1 C** central idea · easy Madison holds that the causes of faction cannot be removed without removing liberty, so the design aims at the effects, through size and representation. *Trap: D inverts the opening sentence, which says they were not afraid of kings only.*
- 52.2 A** detail · easy The text says factions cannot be prevented because their causes are sown in the nature of man, and that removing them would mean removing liberty. *Trap: B gives one of the remedies Madison offers rather than the reason prevention is impossible.*
- 52.3 B** evidence · medium The sentence says each device slows a majority down and forces it to persist, which is delay rather than prevention. *Trap: A explains why prevention is impossible rather than what the design does instead.*
- 52.4 D** inference · medium A faction in a large country must assemble many groups and is moderated in the assembling, so size makes a majority costlier to build. *Trap: C turns moderation into impossibility, which overstates what Madison claims for size.*
- 52.5 C** words in context · medium Power is delegated to elected members rather than exercised directly, so the word names power handed to others to use. *Trap: B treats delegation as a matter of wording rather than of who exercises the power.*
- 52.6 B** structure · medium The remark concerns only the expectation that election would filter upward, and the two mechanisms it follows are left standing. *Trap: A reads a limited concession as the abandonment of the whole argument.*
- 52.7 A** cross text · hard Text 2 describes a lock held by each branch on part of the work of the others, which is a device of mutual blocking rather than of size or representation. *Trap: B names one instance of the blocking power rather than the mechanism itself.*
- 52.8 D** transitions · medium The impossibility of removing the causes is the reason for turning to the effects, so the second sentence follows from the first. *Trap: A sets the turn to effects against the impossibility, when it follows from it.*
- 52.9 B** boundaries · easy The two halves are independent clauses, so a coordinating conjunction with a comma before it joins them. *Trap: D joins the two clauses with a comma and no conjunction, which is a splice.*

52.10 D synthesis · hard Only this choice gives the reason for the number of obstacles, which is that the causes of faction cannot be removed and only its effects can be slowed. *Trap: A names the mechanisms without explaining why obstacles are needed at all.*

53 · Four Barriers and Four Amendments HIS · S03 · mechanism

53.1 D central idea · easy The text names four barriers coming down at different times and then states the pattern, which is that an amendment settles the rule and settles nothing else. *Trap: C is the reading that the second half of the text sets out to correct.*

53.2 B detail · easy The text says age came last, and that the Twenty-Sixth Amendment of 1971 set the voting age at eighteen. *Trap: A names the fifth barrier, the poll tax, which fell in 1964 and again in 1966.*

53.3 C evidence · medium The Fifteenth Amendment forbade racial denial of the vote in 1870 and was then evaded for ninety years, which is exactly the gap the claim describes. *Trap: A names a difficulty in passing an amendment rather than in enforcing one.*

53.4 A inference · medium Only one of the instruments of exclusion is an explicit rule, so striking that rule leaves literacy tests, registration hours and district lines untouched. *Trap: D promises an end within a generation, where the text reports evasion lasting ninety years.*

53.5 D words in context · medium Campaigners petitioned, marched and picketed for seventy years, so the word names a formal appeal made to those in power. *Trap: B narrows the word to litigation, which is not what a campaign of seventy years did.*

53.6 C structure · medium Literacy tests, residence requirements, registration hours and district lines are given as instruments that survive the removal of the rule they replaced. *Trap: A confuses the instruments of exclusion with the amendments that struck at them.*

53.7 B cross text · hard Text 2 places the demand at Seneca Falls in 1848 and reports that the resolution asking for the vote nearly failed, which a single date in 1920 hides. *Trap: C is true of Text 1 but says nothing about what the date of 1920 conceals.*

53.8 A transitions · medium The text is working through the four barriers in the order they fell, so the second sentence continues a sequence. *Trap: B sets the fall of the racial barrier against the fall of the property barrier.*

53.9 C boundaries · easy Both halves are independent clauses, so the conjunction joining them needs a comma standing before it. *Trap: B joins two independent clauses with a comma and no conjunction, which is a splice.*

53.10 A synthesis · hard Only this choice sets the amendment beside the ninety years of evasion and gives the reason, which is what warning a reader requires. *Trap: B states the amendment alone, which is exactly the impression the goal warns against.*

54 · Two Arguments About Property HIS · S04 · mechanism

54.1 A central idea · easy The text sets a case from rights against a case from order and says such arguments cannot be settled by better evidence, because the parties disagree about what counts as evidence. *Trap: D states the position that the text explicitly denies.*

54.2 C detail · easy The text says Calhoun and others argued from order rather than from rights, holding that every settled society rests on some arrangement of unequal labor. *Trap: A names the ground the antislavery case used rather than the one the defense shifted to.*

54.3 D evidence · medium The quotation says that neither a sale nor a statute can transfer unalienable rights, which makes the arrangement void in law rather than only cruel. *Trap: A gives an argument from the defense of slavery rather than from the case against it.*

- 54.4 B** inference · medium The text says the dispute moved from the pulpit and the pamphlet to the territories and then to the battlefield, and ended in a flat prohibition. *Trap: C offers the very move the text calls one side's argument from history.*
- 54.5 A** words in context · medium Douglass and others put the case against slavery in speeches and pamphlets, so the word names public argument on its behalf. *Trap: B narrows the word to legal representation, which is not what the pamphleteers did.*
- 54.6 D** structure · medium The sentence stands between the case from rights and the case from order, and it names the fact that the second did not meet the first. *Trap: B names material that follows later rather than the work this sentence does.*
- 54.7 C** cross text · hard Text 2 reports twenty minutes of praise followed by the charge that the country was failing its own words, which is the literal application made audible. *Trap: A states the reading that Text 2 calls the part readers miss.*
- 54.8 B** transitions · medium The first sentence says the defense did not meet the argument and the second says what it did in place of that, so the second replaces the first. *Trap: A makes the shift of ground a consequence of the failure to answer.*
- 54.9 D** boundaries · easy A participial phrase describing the argument attaches to the main clause with a comma rather than a semicolon or a colon. *Trap: B uses a semicolon, which would need an independent clause on each side of it.*
- 54.10 B** synthesis · hard Only this choice names the reason argument could not settle the matter, which is that the two sides did not share a standard of evidence. *Trap: A gives one premise without explaining why the dispute could not be settled.*

55 · How the Retreat Was Managed HIS · S05 · mechanism

- 55.1 B** central idea · easy The text names four instruments and then says the combination worked because each part covered a weakness in the others. *Trap: C overstates the courts, which read the amendment narrowly rather than repealing it.*
- 55.2 D** detail · easy The text says none of the new state rules mentioned race, which is what allowed them to survive judicial review for decades. *Trap: B names another of the four instruments rather than the silence in the rules.*
- 55.3 A** evidence · medium The sentence says in so many words that nothing in the Constitution changed while everything around it did. *Trap: D names the state constitutions, which are not the federal Constitution the claim concerns.*
- 55.4 C** inference · medium The text says the combination worked because each part covered a weakness in the others, so any one of them alone would have left that weakness open. *Trap: A reverses the point, since the text insists on the combination rather than on any single instrument.*
- 55.5 B** words in context · medium Southern states enacted new constitutions and statutes between 1890 and 1908, so the word names the making of law. *Trap: A gives the theatrical sense of the word, which a legislature does not use.*
- 55.6 A** structure · medium The paragraph gives the reason the combination worked and then measures it against the fall in Black registration in Louisiana. *Trap: C names the content of the second paragraph rather than the last.*
- 55.7 D** cross text · hard Text 2 reports amendments standing unrepealed and unenforced, which is a puzzle that only an account of the instruments of retreat can answer. *Trap: A assumes a repeal, which both texts deny took place.*
- 55.8 C** transitions · medium The two sentences report things happening alongside one another rather than one following from the other. *Trap: D makes the collapse of prosecutions a consequence of the violence rather than a parallel development.*
- 55.9 A** boundaries · easy Two independent clauses with no conjunction between them take a semicolon rather than a comma, a colon, or no mark at all. *Trap: B sets a comma between two clauses that could each stand alone, which is a splice.*

55.10 C synthesis · hard Only this choice holds the unchanged text beside the political means that drained it, which is what the goal requires. *Trap: A names one instrument and so leaves the political point unmade.*

56 · Four Ways to Make a Factory Safer HIS · S06 · mechanism

56.1 C central idea · easy The text sets out four instruments working in quite different ways and then says no single one did much on its own. *Trap: D singles out one instrument, which the closing sentences explicitly refuse to do.*

56.2 A detail · easy The text says the weakness is cost and coverage, and gives about fifty inspectors for tens of thousands of workplaces as the measure of it. *Trap: B names one of the three doctrines that blocked liability, a different instrument.*

56.3 B evidence · medium The quotation states the mechanism directly: the employer carries the cost of danger and therefore has a reason to spend on preventing it. *Trap: D describes the hours law, which reduces exposure rather than pricing danger.*

56.4 D inference · medium The text distinguishes exposure from hazard and assigns the hours law to the first, so the danger itself is untouched while the time spent near it falls. *Trap: A collapses the distinction the sentence is built on.*

56.5 C words in context · medium A statute imposed a duty such as keeping exits unlocked, so the word names a requirement laid down in law. *Trap: D turns a statutory duty into advice, which an inspector could not enforce.*

56.6 B structure · medium Assumption of risk, the fellow servant rule and contributory fault are given as the three ways nineteenth-century courts blocked an injured worker from recovering. *Trap: A names what followed once compensation became automatic rather than what blocked it.*

56.7 A cross text · hard Text 2 reports laws requiring unlocked exits and limits on hours, and an inspection service with the power to enter without warning. *Trap: C reduces the wave of law to one instrument, which Text 2 does not support.*

56.8 D transitions · medium The two sentences give the two halves of one instrument, the duty and the body that enforces it, so the second takes up its own part. *Trap: A sets the inspectorate against the statute rather than beside it.*

56.9 B boundaries · easy A colon introduces the list that names the three doctrines the clause before has just announced. *Trap: A uses a comma where a colon is needed to present a list that has been announced.*

56.10 D synthesis · hard Only this choice gives the condition the text identifies, which is three or four instruments operating at the same time. *Trap: B names one instrument and so cannot account for the timing of the fall.*

57 · What the 1965 Act Actually Did HIS · S07 · mechanism

57.1 D central idea · easy The text contrasts a ruling enforced by litigation with statutes that created machinery operating without a plaintiff, and ends on exactly that lesson. *Trap: B gives the strongest single measurement rather than the point it is offered to support.*

57.2 B detail · easy The text says Congress used its power over interstate commerce to reach private businesses and attached conditions to federal funding for school districts. *Trap: C names an instrument of the 1965 Act rather than of the 1964 Act.*

57.3 C evidence · medium The sentence ties the pace of a remedy to the means of enforcing it rather than to the force of what the ruling said. *Trap: D measures an outcome without naming what produced it.*

57.4 A inference · medium The text shows change moving quickly only where a mechanism worked without a plaintiff, so the lesson for a drafter is to supply that mechanism. *Trap: D mistakes strong wording for the machinery the text says is decisive.*

- 57.5 D** words in context · medium Change prevailed quickly where a mechanism worked without a plaintiff, so the word names a change that took hold. *Trap: A gives the sense in which an opinion prevails, which is not what the sentence measures.*
- 57.6 C** structure · medium The paragraph presents Brown, which declared segregated schooling unconstitutional and provided no machinery, and measures the result ten years on. *Trap: A names the content of the second paragraph rather than the first.*
- 57.7 B** cross text · hard Text 2 reports that segregation ended by court ruling rather than by the boycott, and only after the campaign had run for a year. *Trap: A denies an effect that Text 2 records in the loss of two thirds of the company's income.*
- 57.8 A** transitions · medium The dependence on litigation is the reason the figure after ten years was so low, so the second sentence reports a consequence. *Trap: D sets the figure against the dependence on lawsuits, when it followed from it.*
- 57.9 C** boundaries · easy Going further and being the clearest case are each a complete clause, so the conjunction between them needs a comma before it. *Trap: D drops the conjunction and joins the clauses with a comma, which is a splice.*
- 57.10 A** synthesis · hard Only this choice names the property that separates the fast remedies from the slow one, which is machinery that needs no plaintiff. *Trap: B describes one statute without stating the principle that explains the difference.*

58 · The Arithmetic of Empire HIS · S08 · mechanism

- 58.1 A** central idea · easy The text builds an arithmetic of surplus and then shows two pressures breaking it, ending on the point at which holding on stopped paying. *Trap: B gives one of the arrangements that made the arithmetic work rather than the conclusion drawn from it.*
- 58.2 C** detail · easy The text says the arrangement had a condition attached, which was that the colony had to produce a surplus over the cost of government. *Trap: D reverses the flow of money, since the railways were paid for from Indian revenue.*
- 58.3 D** evidence · medium The sentence states the reversal in so many words: the colony had become a creditor of the country governing it. *Trap: A describes the ordinary working of the arrangement rather than its reversal.*
- 58.4 B** inference · medium The arrangement required a surplus over the cost of government, so a colony without that margin turns from an asset into a charge. *Trap: D turns a financial condition into a political fact the text places in 1947.*
- 58.5 A** words in context · medium Provincial governments were conceded in 1935 as one of a series of concessions to nationalist demand, so the word names something yielded under pressure. *Trap: B gives the sense in which a speaker concedes a point in argument.*
- 58.6 D** structure · medium The sentence introduces the first of the two things that broke the arithmetic, which is the price of each concession to nationalist demand. *Trap: C names the measurement that follows rather than the pressure this sentence identifies.*
- 58.7 C** cross text · hard Text 2 reports that the march broke a law no one could defend in public, which is precisely what makes consent expensive to claim. *Trap: A borrows the second pressure from Text 1 rather than reading Text 2.*
- 58.8 B** transitions · medium The second sentence restates the debt as a reversal of the relation, so it recasts the first rather than adding to it. *Trap: A sets the reversal against the debt, when the two are the same fact.*
- 58.9 D** boundaries · easy A colon introduces the explanation of what the similarity consists in, which a comma or no mark could not do. *Trap: B leaves a comma to do the work of a colon between two full clauses.*

- 58.10 B** synthesis · hard Only this choice replaces the idea of a gift with the arithmetic that ran out, which is what correcting the impression requires. *Trap: C gives the figure without saying what the figure changed.*

59 · The Machinery of Emergency HIS · S09 · mechanism

- 59.1 B** central idea · easy The text names delegation, the suspension of ordinary procedure and the control of information, and then draws the difficulty the three produce together. *Trap: A reports a date at the end of the text rather than the pattern it sets out.*
- 59.2 D** detail · easy The text says one direction is censorship of what the public learns and the other is classification, the withholding of the government's own evidence. *Trap: B names instruments belonging to the suspension of ordinary procedure instead.*
- 59.3 A** evidence · medium The Court was given the claim of military necessity and withheld the evidence already held against it, which is deference without examination. *Trap: D reports the formal life of the order rather than the position of the courts.*
- 59.4 C** inference · medium The executive holds the facts and the courts defer to it, so a challenger argues without access to the basis of the measure. *Trap: A assumes access to the very reports the text says were withheld.*
- 59.5 B** words in context · medium Dissent is conducted in the dark because the basis of the measure cannot be tested, so the word names objection to the measure itself. *Trap: A reduces political objection to a matter of preference.*
- 59.6 A** structure · medium The sentence is followed at once by the remark that each emergency begins with a stock of instruments inherited from the last one. *Trap: B names the date that follows rather than the reason this sentence supplies.*
- 59.7 D** cross text · hard Text 1 defines delegation as a broad grant that does not specify what will be done, and Text 2 reports an order that named no group at all. *Trap: A gives the use made of the power rather than the character of the grant.*
- 59.8 C** transitions · medium The text is numbering the instruments in order, so the sentence adds the third to the two already given. *Trap: A sets the third instrument against the second rather than beside it.*
- 59.9 A** boundaries · easy Two independent clauses with no conjunction between them need a semicolon rather than a comma, a colon, or nothing at all. *Trap: B sets a comma between the two directions, each of which is a full clause.*
- 59.10 C** synthesis · hard Only this choice joins the withholding of evidence to the deference of the courts, which together make a challenge at the time almost impossible. *Trap: D names the withholding without the deference that makes it decisive.*

60 · How a Story Gets Into the Paper HIS · S10 · mechanism

- 60.1 C** central idea · easy The text sets out the beat and three pressures, insists that none of it requires dishonesty, and concludes that the gaps are predictable from the process. *Trap: A gives one measurable consequence rather than the argument it illustrates.*
- 60.2 A** detail · easy The text says competition rewards whatever rivals do not have, which favors novelty over importance. *Trap: B names the pressure of the deadline rather than of competition.*
- 60.3 B** evidence · medium The sentence states the point about blame directly, which is that the pattern needs no dishonesty to explain it. *Trap: A gives a predicted gap rather than the assurance that no accusation is needed.*
- 60.4 D** inference · medium The text says events need actors, a beginning and a visible change, so a gradual improvement never supplies the day a story requires. *Trap: A reverses the comparison the sentence has just drawn.*

- 60.5 C** words in context · medium A department that is abolished produces a story on the day and then silence, so the word names an ending rather than a change of scale. *Trap: D softens the sense to reorganization, which would leave the work going on.*
- 60.6 B** structure · medium The sentence closes the account of the three pressures by placing the explanation in the production process rather than in anyone's character. *Trap: A has the sentence introduce material it in fact follows.*
- 60.7 A** cross text · hard Text 2 reports that the penny papers hired reporters and sent them to courts, docks and police stations, which is the beat Text 1 describes. *Trap: B names the older practice the penny press displaced.*
- 60.8 D** transitions · medium The text is listing three pressures that operate at the same time, so the second stands alongside the first rather than following from it. *Trap: B makes the pressure of competition a consequence of the deadline.*
- 60.9 B** boundaries · easy The two words joined are single adverbs rather than clauses, so the conjunction needs no mark before it at all. *Trap: C inserts a comma before a conjunction joining two words rather than two clauses.*
- 60.10 D** synthesis · hard Only this choice states the test a reader could apply to any story, which is the absence of the event structure the process rewards. *Trap: C names examples without giving the rule that would let a reader predict others.*

61 · Four Conditions and a Clock BIO · S01 · mechanism

- 61.1 B** central idea · easy The text calls selection an outcome rather than a force and names the four conditions, each of which can be checked, as what makes the mechanism testable. *Trap: C states the first of the two misreadings that the text names and rejects.*
- 61.2 D** detail · easy The text says individuals do not adapt and that what changes across generations is the proportion of each form in the population. *Trap: A asserts what the text explicitly denies, that a pale moth can darken.*
- 61.3 A** evidence · medium The quotation states the point directly: fitness is to the conditions at hand, and the same variant that helps under soot becomes a liability when the soot goes. *Trap: C supports the claim that the mechanism is testable, not the claim about fit.*
- 61.4 C** inference · medium Because the mechanism has no memory, nothing about the earlier advantage persists, and the population fits only the conditions now in front of it. *Trap: B gives the mechanism an aim that the text denies it has.*
- 61.5 B** words in context · medium A variant that lets a population thrive under soot is one that lets it do well and increase there, which is why losing the soot turns it into a liability. *Trap: A reverses the sense, since the variant was the one succeeding under soot.*
- 61.6 A** structure · medium The text turns to the misreadings after setting out the conditions, naming each as a conclusion the mechanism does not support. *Trap: D treats the moths as newly introduced when the text has already used them.*
- 61.7 D** cross text · hard Text 2 supplies the counts that run up and then back down again, turning the conditions of Text 1 into a measured case rather than a derivation. *Trap: A repeats a condition Text 1 has already stated rather than adding anything.*
- 61.8 C** transitions · medium The second sentence gives the reason the first is true, so the transition must introduce a justification rather than a contrast or an added point. *Trap: A sets the explanation against the claim it supports, which reverses the relation.*
- 61.9 A** boundaries · easy The clause about what makes the mechanism testable is independent, so the conjunction joining it to the checking of each condition takes a comma before it. *Trap: B runs the two independent clauses together with no mark at all.*
- 61.10 C** synthesis · hard Only this choice joins the absence of aim to the reversal of the soot variant, which is what shows that fit rather than improvement is what selection produces. *Trap: A restates the four conditions without saying anything about improvement.*

62 · Two Copies and a Shuffle BIO · S02 · mechanism

- 62.1 C** central idea · easy The text derives the three to one ratio from three facts Mendel could not see and then shows that the same derivation predicts breeding behavior and two-feature proportions. *Trap: B contradicts the text, which says the short allele is still there and intact.*
- 62.2 A** detail · easy The text says the derivation predicts that about one third of the tall plants in the second generation will breed true and two thirds will not. *Trap: D names the share that will not breed true rather than the share that will.*
- 62.3 B** evidence · medium The quotation says in so many words that the derivation predicts more than the ratio, which is the claim being supported. *Trap: C gives one of the further predictions rather than the statement that there are more.*
- 62.4 D** inference · medium Four equally likely combinations of which three carry a tall allele give the ratio directly, so it follows from the arithmetic rather than from any observation. *Trap: B credits Mendel with knowledge of chromosomes that the text says he did not have.*
- 62.5 C** words in context · medium The text predicts that two features on different chromosomes will emerge in all four combinations in fixed proportions, so the word names their appearing among the offspring. *Trap: B takes a general sense of the word instead of the one the sentence about offspring requires.*
- 62.6 B** structure · medium The sentence comes after the successful predictions and marks the one case where the derivation fails, adding that the failure is how the first gene maps were drawn. *Trap: C turns a stated limit into the collapse of the whole account.*
- 62.7 A** cross text · hard Text 2 reports about twenty-eight thousand plants grown by hand over seven years, which shows the labor behind a ratio that Text 1 presents as a derivation. *Trap: C repeats a step of the derivation in Text 1 rather than adding anything.*
- 62.8 D** transitions · medium The sentence adds a second prediction of the same derivation, so the transition must signal addition rather than contrast, consequence or restatement. *Trap: A puts the second prediction in opposition to the first, though both follow from one derivation.*
- 62.9 B** boundaries · easy The phrase about the gene and the chromosomes arriving decades later cannot stand as a sentence, so it is attached with a comma rather than a semicolon or a colon. *Trap: A uses a semicolon where what follows cannot stand alone as a sentence.*
- 62.10 D** synthesis · hard Only this choice pairs a prediction made in advance with the test that confirmed it, which is what distinguishes a tested derivation from a story. *Trap: C gives the prediction but stops before the test that makes it a test.*

63 · With Oxygen and Without BIO · S03 · mechanism

- 63.1 D** central idea · easy The text asks how many units of currency one sugar yields and answers that everything turns on oxygen: two units without it and about thirty with it. *Trap: C names a revision to the larger figure rather than the comparison the text is making.*
- 63.2 B** detail · easy The text says yeast disposes of the half-molecules as alcohol while a working human muscle disposes of them as lactate. *Trap: A gives what yeast does with them rather than what a muscle does.*
- 63.3 C** evidence · medium The quotation ties the fifteenfold margin to muscle, nerve and a warm body, which are properties of whole animals rather than of a single cell. *Trap: D explains why the figure is uncertain rather than what the difference makes possible.*
- 63.4 A** inference · medium The fast path nets only two units and cannot sustain the pace, so the sprinter is spending the currency faster than that path can replace it. *Trap: B puts the sprinter on the oxygen path, which is the path that cannot keep up at that speed.*

- 63.5 D** words in context · medium The fast path cannot sustain the pace for twenty minutes, so the word means to keep the pace going rather than to justify it or to raise it. *Trap: A takes a common sense of the word that has nothing to do with a pace.*
- 63.6 C** structure · medium Each of the three sentences names something the difference between two units and thirty explains, which together show the reach of that one comparison. *Trap: B describes the closing sentences of the text rather than the three consequences.*
- 63.7 B** cross text · hard Text 2 reports that a baker wants the carbon dioxide and a brewer the alcohol, so the waste products of the fast path are themselves the point of the process. *Trap: C repeats the comparison Text 1 has already drawn rather than adding to it.*
- 63.8 A** transitions · medium The two sentences set the path without oxygen against the path with it, so the transition must mark a contrast rather than a likeness or a consequence. *Trap: B treats the two paths as alike when the text is distinguishing them.*
- 63.9 C** boundaries · easy The clause about converting the energy in sugar is a complete sentence, so a semicolon must separate it from the clause about not using sugar directly. *Trap: A joins two complete sentences with a comma, which is a splice.*
- 63.10 A** synthesis · hard Only this choice puts the two yields beside the twenty-second limit, which is what shows the shortfall of the fast path as a limit on performance. *Trap: C gives the larger yield alone and so names no limit at all.*

64 · Why Wolves Are Rare BIO · S04 · mechanism

- 64.1 A** central idea · easy The text opens by saying every food web has a shape that follows from one arithmetical fact, and the loss of energy at each transfer is that fact. *Trap: C names a consequence of the arithmetic rather than the arithmetic itself.*
- 64.2 C** detail · easy The text puts the transfer at about ten percent, so a tenth of the energy at one level reaches the next and the biomass falls by roughly a factor of ten. *Trap: B reverses the direction, since biomass falls rather than rises along the chain.*
- 64.3 D** evidence · medium A measured range running from about one percent to over thirty shows that ten percent is a chosen convenience rather than a fixed quantity. *Trap: A describes the loss inside one animal rather than the spread of measured efficiencies.*
- 64.4 B** inference · medium Because the top level needs the largest area for the fewest animals, a small reserve loses the predators first while the levels below it remain. *Trap: C extends the loss to the plants, though the arithmetic bears hardest at the top.*
- 64.5 A** words in context · medium The sentence ranks grass, deer and wolves by how much of each there is, so the word names quantity rather than generosity or nutritional value. *Trap: D reverses the sense, since grass stands at the plentiful end of that ranking.*
- 64.6 D** structure · medium The paragraph says the same arithmetic explains the Yellowstone observations without any appeal to design, and then traces the leverage downward through the chain. *Trap: C names material about the park that this text does not supply.*
- 64.7 C** cross text · hard Text 2 gives numbers at three levels at once, so the leverage Text 1 derives from the arithmetic appears there as a measured change in wolves, elk and beaver. *Trap: D supplies a motive for the release that neither text states.*
- 64.8 B** transitions · medium The sentence picks out one part of the range just named, so the transition must mark a particular case rather than a contrast or a consequence. *Trap: D sets the cold-blooded animals against the range they belong inside.*
- 64.9 D** boundaries · easy The clauses about grass, deer, wolves and what eats wolves form a single series, so commas separate them rather than a semicolon or a colon. *Trap: B leaves the clause about grass and the clause about deer with no mark between them.*

64.10 B synthesis · hard Only this choice carries the tenfold loss up to the level above the wolf, which is what explains the absence rather than merely restating it. *Trap: D repeats the fact to be explained without giving any reason for it.*

65 · The Ceiling and the Overshoot BIO · S05 · mechanism

65.1 B central idea · easy The text presents the two curves, names the textbook flaw as the assumption of an immediate response, and traces the overshoot and crash to the delay. *Trap: C states the textbook picture that the text goes on to correct.*

65.2 D detail · easy The text says such an animal is large, healthy and fertile and goes on breeding for several years on the strength of that start. *Trap: C names the immediate response that the text says real populations do not make.*

65.3 A evidence · medium The quotation says the crash goes below the settling point and gives the reason, which is damage to the resource the ceiling depended on. *Trap: C describes the size of the swings rather than how far below the ceiling the crash goes.*

65.4 C inference · medium The delay means the data describe a stock that has already changed, so a quota drawn from them may exceed what the stock can now support. *Trap: B turns a risk into a certainty that the text does not claim.*

65.5 B words in context · medium The text says such populations do not settle but fluctuate, and that a longer delay makes the swing wilder, so the word names movement up and down. *Trap: C gives the behavior of a population without a delay, which is the opposite case.*

65.6 A structure · medium The sentence comes after both curves have been described and names the assumption that fails, which is what the rest of the text sets out to correct. *Trap: C treats a correction to one curve as the rejection of both.*

65.7 D cross text · hard Text 2 supplies the numbers at each stage, so the delay that Text 1 describes as a mechanism appears there as a measured rise and a measured collapse. *Trap: C contradicts Text 2, where lichen takes decades rather than years to return.*

65.8 C transitions · medium The second sentence sets a limit against the unbounded curve just described, so the transition must mark a contrast with the picture on paper rather than a consequence of it. *Trap: B reads the limit as following from the curve instead of cutting against it.*

65.9 A boundaries · easy The clause about the delay that killed the reindeer is independent, so the conjunction joining it to the late response takes a comma before it. *Trap: B leaves the two complete clauses joined with no mark at all.*

65.10 C synthesis · hard Only this choice joins the lasting effect of a good year to the continued growth after the food begins to fail, which is how the ceiling is passed. *Trap: B names the flawed assumption without saying what the delay actually does.*

66 · Dose, Route and the Number R BIO · S06 · mechanism

66.1 C central idea · easy The text says public health work consists largely of measuring a small number of quantities and then changing one, and names route, dose, reproduction number and incubation. *Trap: A gives one value of one of the four quantities rather than the point about all four.*

66.2 A detail · easy The text says that if the reproduction number is above one the outbreak grows and if it is below one the outbreak dies out, and that nothing else changes that threshold. *Trap: B softens the result to slower growth, though the text says the outbreak ends.*

66.3 B evidence · medium The quotation says outright that the number belongs to a disease in a particular population rather than to the organism, which is exactly the claim. *Trap: C supports a different limit, that early estimates are poor, rather than locality.*

66.4 D inference · medium If cases spread faster than a team can follow them, the team is by definition arriving after the infections it is trying to prevent. *Trap: B promises completeness that the stated speed of spread rules out.*

- 66.5 C** words in context · medium Cases disperse through a population faster than a team can follow, so the word names their scattering widely rather than their weakening or settling. *Trap: A takes the sense of thinning out, though the sentence is about speed of spread.*
- 66.6 B** structure · medium The text says Snow could act because the route was water and the source was fixed, and that an airborne infection with a short incubation offers no equivalent handle. *Trap: C generalizes from one successful map to every outbreak.*
- 66.7 A** cross text · hard Text 2 reports the brewery workers and the widow in Hampstead, so the route that Text 1 names as a quantity was fixed there by chasing exceptions. *Trap: B repeats a fact Text 1 already gives about the route of cholera.*
- 66.8 D** transitions · medium The sentence gives a second thing that follows from the need for more than one organism, so the transition must carry the same reason forward rather than oppose or restate it. *Trap: A sets the cesspit example against the point about dilution that it illustrates.*
- 66.9 B** boundaries · easy The clause about each route suggesting a different intervention is independent, so the conjunction joining it to the list of routes takes a comma before it. *Trap: A leaves the list of routes and the clause about interventions with no mark between them.*
- 66.10 D** synthesis · hard Only this choice pairs the fixed waterborne source that made the map work with the airborne case that offers no equivalent handle, which is what the goal asks for. *Trap: C names the case where mapping fails without saying why the Soho map succeeded.*

67 · Four Steps in the Nitrogen Cycle BIO · S07 · mechanism

- 67.1 D** central idea · easy The text traces the cycle from fixation back to gas and then says a field is not a closed system, naming harvest, leaching and gas losses as the three leaks. *Trap: B reverses the opening claim, which is that nitrogen gas is almost useless in that form.*
- 67.2 B** detail · easy The text says a third group of bacteria completes the circle by turning soil nitrogen back into gas, which returns to the atmosphere. *Trap: A names the bacteria that fix nitrogen rather than those that release it.*
- 67.3 C** evidence · medium The quotation names the balance directly: clover and grazing animals returned roughly what the wheat removed, which is the matching the claim describes. *Trap: B names the industrial source of fixed nitrogen rather than the rotation.*
- 67.4 A** inference · medium Three named leaks each remove a measurable amount, and the text says the rate of depletion in such a field can be estimated. *Trap: B calls the field closed although the text has just said it is not.*
- 67.5 D** words in context · medium A field cropped without return loses nitrogen through harvest, leaching and gas, so to be depleted is to have its supply drawn down. *Trap: C reverses the sense, since the field in question is losing nitrogen rather than gaining it.*
- 67.6 C** structure · medium The sentence follows the statement that very few living things can break the molecule apart, and names fixation as the step every biological use of nitrogen must pass through. *Trap: A names material that comes later, after the cycle has been described.*
- 67.7 B** cross text · hard Text 2 reports a yield advantage of a third or more and a doubling over the century, which puts a number on the balance that Text 1 describes as chemistry. *Trap: A repeats the fixation step that Text 1 has already set out.*
- 67.8 A** transitions · medium The sentence opens the account of the nitrogen moving through plants, animals and bacteria in order, so the transition must mark the first step rather than a contrast. *Trap: D reads the uptake by plants as caused by the movement rather than as its first stage.*

- 67.9 C** boundaries · easy The clause about the field not being a closed system is independent and stands against the clause about the cycle, so it needs a comma and a conjunction. *Trap: A joins the two independent clauses with a comma alone, which is a splice.*
- 67.10 A** synthesis · hard Only this choice sets the three leaks against the closed cycle, which is what the apparent contradiction in the goal requires. *Trap: C names one leak of the three and so does not answer the question about the cycle.*

68 · Why the Gas Holds Heat BIO · S08 · mechanism

- 68.1 A** central idea · easy The text says the mechanism is not a blanket and not a trap but a delay, and explains that what changes is the height from which radiation finally escapes. *Trap: C reverses the stated diminishing effect of each added unit of the gas.*
- 68.2 C** detail · easy The text says what changes is the height in the atmosphere from which the escaping radiation finally gets away, and therefore the surface temperature needed to balance the books. *Trap: B contradicts the text, which insists that energy still leaves the planet and must.*
- 68.3 D** evidence · medium The quotation says each added unit does less than the one before, because the strongest parts of the band are saturated, which is what makes the arithmetic not simple. *Trap: B supports a different point, that energy must still escape, rather than diminishing returns.*
- 68.4 B** inference · medium A warmer atmosphere holds more of a gas that absorbs strongly in the same band, so the first warming brings in a second absorber and is amplified. *Trap: A reverses the feedback, treating added water vapor as a brake rather than an amplifier.*
- 68.5 A** words in context · medium Residence time is how long a molecule may inhabit the air before being taken up elsewhere, so the word measures how long it remains present. *Trap: B takes the usual sense of living somewhere, which a molecule cannot do.*
- 68.6 D** structure · medium The sentence comes after the absorption has been described and rules out two common images, which lets the text name the mechanism as a delay instead. *Trap: C names the historical measurement rather than the correction being made.*
- 68.7 C** cross text · hard Text 2 supplies an hourly measurement of how much of the gas is actually there, which the mechanism in Text 1 explains the consequences of but does not measure. *Trap: D invents a cause for the yearly wobble that Text 2 attributes to growing plants.*
- 68.8 B** transitions · medium The second sentence names what does change in place of what the first says cannot, so the transition must mark a substitution rather than a likeness or a summary. *Trap: C reads the change of height as following from the escape of energy rather than replacing it.*
- 68.9 D** boundaries · easy The clause saying the mechanism is a delay is a complete sentence, so a period separates it from the clause denying the blanket and the trap. *Trap: A splices two complete sentences together with a comma.*
- 68.10 B** synthesis · hard Only this choice joins the long residence of much of the gas to the absence of a step, which is the connection the goal asks for. *Trap: D repeats the fact to be explained without supplying the reason for it.*

69 · What Moving Plates Produce BIO · S09 · mechanism

- 69.1 B** central idea · easy The text says the plates cannot overlap or leave gaps, so everything happens at their edges, and that the three kinds of edge account for nearly every range, volcano and major earthquake. *Trap: D moves the continuing collision to the wrong range, since it is the Himalaya that is rising.*

- 69.2 D** detail · easy The text says that where two plates slide past one another nothing is made or destroyed and the motion is released in earthquakes along a fault. *Trap: B describes a spreading edge rather than one where the plates slide past.*
- 69.3 A** evidence · medium The quotation names both rates at once, the lifting by collision and the wearing down by rain, ice and rivers, which is the contest the claim describes. *Trap: B gives one range still winning the contest rather than the contest itself.*
- 69.4 C** inference · medium Both ranges are worn down by the same agents, so what separates them is that the Himalayan collision continues while the Appalachian one ended long ago. *Trap: B denies the text, which calls the range the remains of something that stood as high.*
- 69.5 B** words in context · medium Rain, ice and rivers erode rock downward against the lifting of collision, so the word names the wearing away of the range over time. *Trap: C reverses the direction, since the eroding works against the lifting.*
- 69.6 A** structure · medium Because the plates can neither overlap nor leave gaps, all the motion must be taken up at their boundaries, which is what the sentence establishes before the three kinds are named. *Trap: B treats the sentence as the naming that only comes afterward.*
- 69.7 D** cross text · hard Text 2 puts a reader inside one of the three kinds of edge, where the torn walls and the measured rate make the spreading boundary of Text 1 a visible place. *Trap: C contradicts both texts, which describe Thingvellir as a place where plates move apart.*
- 69.8 C** transitions · medium The sentence turns from edges where plates move apart to edges where they move together, so the transition must mark the opposition between the two cases. *Trap: D treats the two kinds of edge as alike when they produce opposite results.*
- 69.9 A** boundaries · easy The clause about the motion being released in earthquakes is independent, so the conjunction joining it to the clause about nothing being made takes a comma before it. *Trap: B leaves the two complete clauses about California joined with no mark at all.*
- 69.10 C** synthesis · hard Only this choice derives the list of three from the constraint that the plates can neither overlap nor leave gaps, which is what makes the list complete. *Trap: D gives the three kinds without saying why there can be no fourth.*

70 · Why Warm Water Does the Work BIO · S10 · mechanism

- 70.1 C** central idea · easy The text explains why water rather than air removes the ice and then says the retrograde slope makes each retreat expose thicker ice, so the retreat accelerates. *Trap: B reverses the text, which says the loss happens from below rather than from above.*
- 70.2 A** detail · easy The text says the rock surface deepens as it goes inland, so each retreat of the grounding line puts the front into deeper water where the ice is thicker. *Trap: B describes a slope of the opposite sense, which the text says would stop the retreat.*
- 70.3 B** evidence · medium The quotation names the geometry of the bed as the reason the glacier is studied more closely than ones losing ice faster, which is the claim. *Trap: D names the largest uncertainty in the map rather than the reason for the attention.*
- 70.4 D** inference · medium The rising melt water pulls more warm water into the cavity, so the melting sustains the very circulation that produces it. *Trap: A reverses the described effect, since the melt water draws more warm water in.*
- 70.5 C** words in context · medium The circulation is self-sustaining while the warm water continues to migrate shoreward, so the word names its steady movement rather than a seasonal journey. *Trap: A takes the sense used of animals, which the shoreward flow of water does not share.*

- 70.6 B** structure · medium The opening sentence uses the swimmer to establish that water carries heat far better than air, which is the comparison the rest of the explanation rests on. *Trap: C reverses the point, since the text uses the comparison to rule air out.*
- 70.7 A** cross text · hard Text 2 gives nine miles of retreat between two dated years and a hole drilled to the cavity, so the mechanism of Text 1 is matched there by numbers taken in the field. *Trap: D misreports Text 2, where the drilling measured melting and aircraft mapped the bed.*
- 70.8 D** transitions · medium The second sentence takes the next step, from where the warm water sits to how much of it is pushed onto the shelf, so the transition must carry the sequence forward. *Trap: B treats the step about wind patterns as a restatement of where the water lies.*
- 70.9 B** boundaries · easy The clause about the rock surface deepening inland is a complete sentence, so a period separates it from the clause about the sea bed deciding the outcome. *Trap: A splices the clause about the deepening rock onto the clause about the sea bed with a comma.*
- 70.10 D** synthesis · hard Only this choice combines the carrying power of water with the current that renews itself, which is what makes two degrees enough to matter. *Trap: B names the energy absorbed without saying why a small margin is enough.*

71 · Scatter and Bias PHY · S01 · mechanism

- 71.1 B** central idea · easy The text separates random scatter from a bias that pushes every reading the same way and says averaging repairs the first and is helpless against the second. *Trap: C states exactly what the text denies about a balance that reads high.*
- 71.2 D** detail · easy The text says systematic error is found only by comparison with something independent, such as a second balance, a certified mass or a different method. *Trap: A names the remedy for random error, which the text says cannot touch a bias.*
- 71.3 A** evidence · medium The quotation sets a thousand careful readings against the wrongness of the answer, which separates how tightly a result clusters from whether it is right. *Trap: C gives the gain from repeating rather than the limit of that gain.*
- 71.4 C** inference · medium A bias is found only by comparison with something independent, so two laboratories using the same arrangement could agree and be wrong together. *Trap: A reads agreement as proof of correctness, which the speed of light example contradicts.*
- 71.5 B** words in context · medium Experimenters are said to refine a result by attacking both kinds of error, so the word names improving it by correction. *Trap: A takes the industrial sense of the word, which has nothing to do with a reading.*
- 71.6 A** structure · medium The sentence says the error is present and identical in every reading, including the average, which is why nothing about repetition touches it. *Trap: C extends the limit to averaging in general, though averaging repairs random error.*
- 71.7 D** cross text · hard The sources in Text 2, the air, the bench and the warming metal, all scatter the readings both ways, so it supplies an instance of random error and no bias. *Trap: A repeats the point Text 1 makes about averaging rather than adding anything.*
- 71.8 C** transitions · medium The sentence develops the first half of the claim just made, so the transition must point back to that half rather than set itself against it. *Trap: B treats the shrinking of the random part as a qualification of the repair.*
- 71.9 A** boundaries · easy The clause about systematic error pushing every reading one way is independent, so the conjunction joining it to the clause about scatter takes a comma. *Trap: B leaves the clause about scatter and the clause about pushing unmarked.*
- 71.10 C** synthesis · hard Only this choice reports agreement and shared wrongness together, which is what shows that agreeing results can still be mistaken. *Trap: B names the remedy without showing a case where agreement misled anyone.*

72 · Why a Truck Takes Longer to Stop PHY · S02 · mechanism

- 72.1 C** central idea · easy The text says mass appears on both sides of the problem and largely cancels, and that what does not cancel is speed, whose square sets the braking distance. *Trap: B reverses the outcome of the first two steps of the chain.*
- 72.2 A** detail · easy The text says that in the reaction time the vehicle covers a distance proportional to the speed, not to its square. *Trap: B gives the dependence of the braking part rather than of the reaction part.*
- 72.3 B** evidence · medium The quotation says mass enters the problem twice and cancels, which is the gain in braking force set against the extra energy to be removed. *Trap: A names only the force side of the pair rather than both sides.*
- 72.4 D** inference · medium A longer reaction time lengthens the first part of the distance, and that part is proportional to the speed rather than to its square. *Trap: A moves the effect to the braking part, which the reaction time does not touch.*
- 72.5 C** words in context · medium The text says tires cannot accelerate sideways while already working hard to slow down, so the word names a change of motion sideways rather than a gain in speed. *Trap: B takes the everyday sense, which the word sideways in the same phrase rules out.*
- 72.6 B** structure · medium The sentence comes between the gain in braking force and the extra energy to be removed, and tells a reader that the second cancels the first. *Trap: C denies the friction that the first step is built on.*
- 72.7 A** cross text · hard Text 2 shows two very different masses falling alike once the air is gone, which is the clean version of the canceling that Text 1 derives in two steps. *Trap: B repeats the first step of the chain that Text 1 has already given.*
- 72.8 D** transitions · medium The sentence turns against the advantage just granted to the heavy vehicle, so the transition must mark a concession rather than a likeness or a restatement. *Trap: A treats the undoing of the first step as another instance of it.*
- 72.9 B** boundaries · easy The clause about what does not cancel is independent, so the conjunction joining it to the clause about mass takes a comma before it. *Trap: A leaves the clause about mass and the clause about speed unmarked.*
- 72.10 D** synthesis · hard Only this choice carries the square in the energy through to the distance, which is what explains the fourfold rise the goal asks about. *Trap: C names what must be removed without saying how much of it there is.*

73 · Where the Energy Goes PHY · S03 · mechanism

- 73.1 D** central idea · easy The text says the whole chain multiplies rather than adds and that comparing two technologies by their last step alone is the standard way of getting this wrong. *Trap: B denies the text, which calls the heater close to perfect at its own step.*
- 73.2 B** detail · easy The text says a heat engine cannot convert more than a limited share of its heat into motion and that the limit depends only on the two temperatures. *Trap: A names what the fuel supplies rather than what sets the ceiling.*
- 73.3 C** evidence · medium The quotation names the error directly: judging a technology by its final step is said to be the standard way of getting the comparison wrong. *Trap: B gives the figure for one stage rather than the warning about judging by one.*
- 73.4 A** inference · medium All the electricity becomes heat at the heater, but the station behind it discarded most of the fuel energy, so the two verdicts point in opposite directions. *Trap: C denies the near perfection that the same sentence grants the heater.*
- 73.5 D** words in context · medium The text says modern coal plants yield about forty percent of the fuel energy as electricity, so the word names what the plant delivers. *Trap: A takes the sense of giving way, which a power station does not do.*

- 73.6 C** structure · medium The heater is granted near perfection at its own step and then charged with more than twice the fuel once the station is counted, which is the case the warning rests on. *Trap: B denies the auditing that the opening rule makes possible.*
- 73.7 B** cross text · hard Text 2 puts the weak link in the kitchen rather than in the generating hall, which is the opposite arrangement from the coal station of Text 1. *Trap: C repeats the rule Text 1 states about the chain rather than adding to it.*
- 73.8 A** transitions · medium The second sentence names the unavoidable loss just referred to, so the transition must point to a particular case rather than a contrast or a conclusion. *Trap: C sets the heat engine limit against the claim that the loss is unavoidable.*
- 73.9 C** boundaries · easy The clause saying whatever goes in must come out is a complete sentence, so a period separates it from the clause about the machine being auditable. *Trap: A splices the clause about coming out onto the clause about auditing with a comma.*
- 73.10 A** synthesis · hard Only this choice sets the perfect last step against the fuel spent behind it, which is what shows a single step cannot settle the comparison. *Trap: C gives the flattering step alone and so makes the very mistake in question.*

74 · Three Quantities, One Relation PHY · S04 · mechanism

- 74.1 A** central idea · easy The text states the relation, says fixing any two quantities settles the third, and then works through four cases from a bicycle pump to a mountain slope. *Trap: B reverses the limit, since the text says the relation fails badly for steam.*
- 74.2 C** detail · easy The text says the rate is about ten degrees for every thousand meters of dry ascent, which is why mountain tops are cold. *Trap: D reverses the direction, since the rising air expands and cools.*
- 74.3 D** evidence · medium The quotation names the range where the relation works and the case where it fails badly, which is the boundary the claim describes. *Trap: A states the relation rather than saying where it stops holding.*
- 74.4 B** inference · medium The air loses no heat to anything, so the only account of the drop in temperature is the work it does in pushing the surrounding air aside. *Trap: A supplies a transfer of heat that the sentence rules out.*
- 74.5 A** words in context · medium The sentence says to compress the gas into half the volume so that the pressure doubles, so the word names squeezing it into less room. *Trap: B takes the sense used of a piece of writing rather than of a gas.*
- 74.6 D** structure · medium Each case fixes one of the three quantities and reads off what the others do, which is the instruction the opening relation gives. *Trap: B denies the predictive reach the cases are there to show.*
- 74.7 C** cross text · hard Text 2 explains the heating in terms of work done on fast-moving molecules, which is the account behind the relation that Text 1 only states. *Trap: B repeats the first of the cases that Text 1 works through.*
- 74.8 B** transitions · medium The sentence introduces the last of four cases in a numbered run, so the transition must mark the end of the sequence rather than a contrast. *Trap: D treats the weather case as one instance of the balloon case.*
- 74.9 D** boundaries · easy The clause about the pressure rising is independent, so the conjunction joining it to the instruction about the volume takes a comma before it. *Trap: B leaves the clause about the gas and the clause about the pressure unmarked.*
- 74.10 B** synthesis · hard Only this choice joins the expansion into lower pressure to the measured rate of cooling, which together give the reason the summit is cold. *Trap: C names the rise without saying what the lower pressure does to the air.*

75 · Why the Thin Wire Gets Hot PHY · S05 · mechanism

- 75.1 B** central idea · easy The text derives the heating as the current squared times the resistance and calls the squared term the harsh one, then uses it to explain thin wires and high voltage lines. *Trap: C contradicts the text, which says no practical thickness of copper can do that.*
- 75.2 D** detail · easy The text says a thin wire makes the heating worse twice over, because halving the cross-section roughly doubles the resistance. *Trap: A reverses the effect, since a thinner wire resists more rather than less.*
- 75.3 A** evidence · medium The quotation rules out the one obvious alternative, thicker copper, which is what makes the voltage route the only practical one. *Trap: B gives the reason the heating matters rather than the uniqueness of the remedy.*
- 75.4 C** inference · medium The same power at household voltage needs a far larger current, and the heating rises with its square, so the line loses the power quickly. *Trap: A denies the comparison the text draws between the two voltages.*
- 75.5 B** words in context · medium The text says thick copper conducts well, so the word names how readily the metal carries a current. *Trap: D reverses the sense, since resistance is the opposite of conducting well.*
- 75.6 A** structure · medium The sentence picks out the squared current from the formula just derived, and the thin wire, the overloaded circuit and the transmission line all follow from it. *Trap: C denies the runaway heating that the sentence is there to stress.*
- 75.7 D** cross text · hard Text 2 describes a breaker set below the current at which the cable overheats, which is how the heating derived in Text 1 is kept from reaching the plaster. *Trap: B repeats the relation Text 1 derives rather than adding anything to it.*
- 75.8 C** transitions · medium The second sentence spells out what the squared term means in numbers, so the transition must mark a restatement in plainer terms rather than a contrast. *Trap: B sets the fourfold rise against the claim it is explaining.*
- 75.9 A** boundaries · easy The clause naming the current as the rate of flow is a complete sentence, so a period separates it from the clause naming the voltage. *Trap: B splices the clause about the current onto the clause about the voltage with a comma.*
- 75.10 C** synthesis · hard Only this choice carries the squared term into a number, which is what shows the heating running away rather than rising gently. *Trap: A gives the formula without turning it into the fourfold rise it implies.*

76 · One Rule, Three Effects PHY · S06 · mechanism

- 76.1 C** central idea · easy The text says the three look like three subjects and are one, and that each follows from the rule that every point on a wavefront acts as a source. *Trap: B states the appearance that the opening sentence immediately corrects.*
- 76.2 A** detail · easy The text says the amount of spreading depends on the size of the gap compared with the wavelength, and that this explains a familiar asymmetry. *Trap: B names the quantity that governs reflection rather than diffraction.*
- 76.3 B** evidence · medium The quotation names the diffraction limit rather than the glass as what spreads a star into a disc, which is the claim about workmanship exactly. *Trap: A gives the rule the limit follows from rather than the limit itself.*
- 76.4 D** inference · medium Both cases follow from the same comparison of gap and wavelength, so what separates sound from light is the size of the wavelength rather than a different law. *Trap: B reads the sharp shadow as evidence against the wave account it comes from.*
- 76.5 C** words in context · medium The limit is said to distort the image of a star into a small disc, so the word names the change of shape that the spreading produces. *Trap: A takes the sense used of a claim rather than of an image.*

- 76.6 B** structure · medium Each of the three sentences takes a wavefront meeting a barrier, a slower material or an edge, and reads off reflection, refraction or diffraction in turn. *Trap: C denies the unity that the three sentences are there to establish.*
- 76.7 A** cross text · hard Text 2 reports what refraction does to an observer looking at a straw, which is the human side of the effect that Text 1 derives from the wavefront rule. *Trap: B repeats the derivation of refraction that Text 1 has already given.*
- 76.8 D** transitions · medium The second sentence gives the first half of the asymmetry just announced, so the transition must introduce an example rather than a contrast or a conclusion. *Trap: B sets the case of sound against the comparison that explains it.*
- 76.9 B** boundaries · easy The clause saying the three are one is independent, so the conjunction joining it to the clause about three subjects takes a comma before it. *Trap: A leaves the clause about three subjects and the clause about one unmarked.*
- 76.10 D** synthesis · hard Only this choice states the comparison that governs the spreading and then applies it to both wavelengths, which is what the goal asks for. *Trap: B gives one of the two wavelengths without the comparison that makes it matter.*

77 · Barriers, Rates and Surfaces PHY · S07 · mechanism

- 77.1 D** central idea · easy The text names the activation energy and says that single idea explains the whole set of levers: heat, concentration, surface area and a catalyst. *Trap: C contradicts the text, which says none of these changes the end point.*
- 77.2 B** detail · easy The text says none of the levers change how much sugar will eventually dissolve, which is set by temperature alone. *Trap: A names something that changes the rate rather than the end point.*
- 77.3 C** evidence · medium The quotation names a reaction that would release a great deal of heat and reports that it does not happen for centuries, which is the claim exactly. *Trap: A explains how a reaction is started rather than why it waits.*
- 77.4 A** inference · medium Grinding adds places for collisions rather than easing the climb, so it changes the rate while the activation energy stays where it was. *Trap: B gives the grinding the work the text assigns to a catalyst.*
- 77.5 D** words in context · medium The text compares a sugar cube and the same sugar as powder dissolving at different rates in water, so the word names passing into the liquid. *Trap: B names melting, which needs no liquid to pass into.*
- 77.6 C** structure · medium The cube and the powder are said to dissolve at very different rates and reach the same end point, which is the distinction the text closes on. *Trap: B denies the levers that the sugar case is used to illustrate.*
- 77.7 B** cross text · hard Text 2 reports that the same metal burns or does not according to its surface, which shows the surface lever carrying a case from inert to burning. *Trap: A repeats the lever as Text 1 already states it rather than adding to it.*
- 77.8 A** transitions · medium The sentence opens the list of levers just promised, so the transition must mark the first item rather than a contrast or a conclusion. *Trap: C sets the first lever against the claim that there is a set of them.*
- 77.9 C** boundaries · easy The clause about the paper sitting for centuries is a complete sentence, so a period separates it from the clause about a reaction not happening. *Trap: A splices the clause about the paper onto the clause about the reaction with a comma.*
- 77.10 A** synthesis · hard Only this choice puts the faster rate beside the unchanged amount, which is what shows the two quantities to be separate. *Trap: C names two things that change the rate without saying what they leave alone.*

78 · Four Numbers That Decide a Design PHY · S08 · mechanism

- 78.1 A** central idea · easy The text names stress, the yield point, the ultimate strength and toughness, and says the choice of material is a choice about what kind of failure is acceptable. *Trap: B reverses the text, which says cast iron offers no warning at all.*
- 78.2 C** detail · easy The text says the gap between the yield point and the ultimate strength is where the safety of a structure actually lives. *Trap: A names the first of the four numbers rather than the gap between two of them.*
- 78.3 D** evidence · medium The quotation says a material with almost no gap holds its shape until it shatters and gives no warning, which is the failure the claim describes. *Trap: B describes the opposite case, a material that does give warning.*
- 78.4 B** inference · medium Toughness falls sharply in some steels as the temperature drops, so a trial in warm water says nothing about the condition in which those ships failed. *Trap: A extends a warm water trial to conditions the sister ships never met.*
- 78.5 A** words in context · medium The sentence says a brittle structure under a sudden sideways load can collapse in seconds from an unseen crack, so the word names a sudden fall. *Trap: D names yielding, which the text treats as the opposite kind of failure.*
- 78.6 D** structure · medium The opening sentence says an engineer needs four numbers and that the bridge failed because two of them were not considered, which anchors the list in a case. *Trap: B denies the usefulness the rest of the text sets out to show.*
- 78.7 C** cross text · hard Text 2 reports the thirteen spans in the river and the inquiry that followed, which is the price of the two numbers that Text 1 says were not considered. *Trap: A repeats the property of cast iron that Text 1 has already stated.*
- 78.8 B** transitions · medium The second sentence sets the brittle case against the ductile one just described, so the transition must mark a contrast rather than a likeness or a result. *Trap: A treats the two kinds of material as behaving alike.*
- 78.9 D** boundaries · easy The clause about the structure often being repairable is independent, so the conjunction joining it to the clause about yielding takes a comma. *Trap: B leaves the clause about yielding and the clause about repair unmarked.*
- 78.10 B** synthesis · hard Only this choice names both advantages of a bending material and sets them against the brittle case, which is the comparison the goal needs. *Trap: C gives one advantage without the contrast that makes it decisive.*

79 · Half-Life, Dose and Distance PHY · S09 · mechanism

- 79.1 B** central idea · easy The text names half-life, the kind of radiation and dose, and says no one of the three remedies is available for a source the body has built into bone. *Trap: C reverses the text, which calls an alpha emitter outside the body almost harmless.*
- 79.2 D** detail · easy The text says a technician standing two meters from a source receives a quarter of the dose received at one meter, because intensity falls with the square of distance. *Trap: A halves the dose where the square of the distance quarters it.*
- 79.3 A** evidence · medium The quotation puts the same alpha particles outside the body, where skin stops them, and inside it, where they deposit all their energy in tissue. *Trap: D names what cannot be done about an internal source rather than the contrast itself.*
- 79.4 C** inference · medium The text says that habit moved the paint from outside the body to inside it, which is the move from almost harmless to the worst case. *Trap: B invokes the stopping of alpha particles, which protects only from outside.*
- 79.5 B** words in context · medium The text says a quantity of radium in a body will emit radiation at a nearly constant rate, so the word names giving the radiation off. *Trap: C reverses the direction, since the source sends radiation out rather than taking it in.*

- 79.6 A** structure · medium The sentence follows the sixteen hundred year figure and calls a short half-life a different and often more manageable problem, which marks the long case as the hard one. *Trap: C denies the quantity the sentence is drawing a distinction within.*
- 79.7 D** cross text · hard Text 2 reports the deaths, the jaws and the lawsuit, which is the human cost of the three conditions that Text 1 describes only as quantities. *Trap: A repeats two of the facts that Text 1 supplies about radium.*
- 79.8 C** transitions · medium The second sentence sets the inside case against the outside one just described, so the transition must mark the opposition between them. *Trap: B reads the danger inside the body as following from the safety outside it.*
- 79.9 A** boundaries · easy The clause about the paint crossing to the worst case is a complete sentence, so a period separates it from the clause naming radium an alpha emitter. *Trap: B splices the clause about the paint onto the clause about the emitter with a comma.*
- 79.10 C** synthesis · hard Only this choice names all three remedies and says the internal case removes every one of them, which is what puts it in a class apart. *Trap: B gives one remedy and so leaves the other two unaccounted for.*

80 · The Ladder of Distance PHY · S10 · mechanism

- 80.1 C** central idea · easy The text says no tape reaches a star, that distances come from a ladder of methods each calibrated by the one below, and that every printed figure rests on that chain. *Trap: B contradicts the opening sentence, which denies any direct measurement.*
- 80.2 A** detail · easy The text says the baseline is the width of the orbit of the Earth, about three hundred million kilometers, and that even so the angles are tiny. *Trap: B gives the comparison used for the size of the angle, not the baseline.*
- 80.3 B** evidence · medium The quotation says an error low on the ladder moves every distance above it, which is the reach the claim describes. *Trap: C explains how the upper rungs work rather than how an error travels.*
- 80.4 D** inference · medium The true brightness of such an object is set by nearby examples whose distance comes from geometry, so the candle inherits whatever the geometry is worth. *Trap: A cuts the candle loose from the rung the text says calibrates it.*
- 80.5 C** words in context · medium The text speaks of clusters densely enough populated to be measured another way, so the word names how closely the stars are crowded. *Trap: A takes the sense used of a material rather than of a population.*
- 80.6 B** structure · medium The text calls the lowest steps plain geometry that any surveyor would recognize and says parallax gives a distance by triangulation from a baseline. *Trap: C turns a comparison into a claim that the two fields are one.*
- 80.7 A** cross text · hard Text 2 reads each distance as a length of time, which is what the figures from the ladder in Text 1 become once a reader has them. *Trap: B repeats the lowest rung as Text 1 has already described it.*
- 80.8 D** transitions · medium The sentence names what happens where the geometry runs out, so the transition must mark the boundary rather than a likeness or a restatement. *Trap: B treats the brightness method as another way of stating the reach of parallax.*
- 80.9 B** boundaries · easy The clause about parallax giving a distance by triangulation is a complete sentence, so a period separates it from the clause naming geometry. *Trap: A splices the clause about parallax onto the clause about geometry with a comma.*
- 80.10 D** synthesis · hard Only this choice joins the calibration of each rung to the spread of an error upward, which is what makes the bottom of the ladder decisive. *Trap: B names the lowest steps without saying what depends on them.*

81 · What Each Position Can Report HUM · S01 · mechanism

- 81.1 B** central idea · easy The text defines a narrator by access, names three positions, and then says each position decides what kind of surprise is available. *Trap: D reverses the opening definition, which sets personality aside for access.*
- 81.2 D** detail · easy The text says suspense of the simplest kind, in which the reader fears something the character does not suspect, is almost impossible in strict first person. *Trap: A names the effect the text says works easily in that position.*
- 81.3 A** evidence · medium The quotation names both halves of the claim: conveying the mind from the inside, and withdrawing to judge it in the next clause. *Trap: D says the shift is worth noticing without saying what it lets a writer do.*
- 81.4 C** inference · medium The irony described depends on a voice outside the character, so a novel confined to one mind cannot produce it by that route. *Trap: B denies the first novel the deception the text says it does best.*
- 81.5 B** words in context · medium A writer is said to convey a mind from the inside and then withdraw, so the word names putting that mind before a reader. *Trap: A takes the sense of moving a thing from one place to another.*
- 81.6 A** structure · medium The last sentence gives two questions to put to a sentence, after the text has said that recognizing the shift is a skill worth practicing. *Trap: D denies a detection the sentence is there to make possible.*
- 81.7 D** cross text · hard Text 2 grants the outside voice movement between rooms and years and a judgment on two characters at once, which is what the first person cannot have. *Trap: A names the access the first person is said to keep.*
- 81.8 C** transitions · medium The second sentence pairs a different effect with a different position, so the transition must mark a contrast rather than a consequence. *Trap: A makes the omniscient irony follow from the first-person deception.*
- 81.9 A** boundaries · easy The clause saying almost every modern novel does the same is independent, so the conjunction joining it to the clause about Austen takes a comma. *Trap: B runs the clause about Austen straight into the clause about modern novels.*
- 81.10 C** synthesis · hard Only this choice identifies the tone question with the movement of the voice between the character and the author, which is what the notes say an examiner is after. *Trap: B names the condition of the effect without connecting it to the question asked.*

82 · Four Ways to Build a Motive HUM · S02 · mechanism

- 82.1 C** central idea · easy The text names exposition, action, speech and interiority as the four kinds of evidence, says a writer chooses how much of each to supply, and calls withholding itself a device. *Trap: D hardens a named risk into something that always happens.*
- 82.2 A** detail · easy The text says characters lie, boast and tell themselves stories, so a stated motive is evidence about the speaker rather than about the cause. *Trap: C gives the objection the text raises against exposition instead.*
- 82.3 B** evidence · medium The quotation names the openness, the century of argument and the value an author may prefer to certainty, which is the comparison the claim makes. *Trap: A gives the cost of the settled kind without naming the value of the open kind.*
- 82.4 D** inference · medium The pattern is what lets a reader see a shape without a reason, so a single unrepeatable act leaves the arbitrariness the text names as the risk. *Trap: C gives the quality of a motive supplied by exposition, not of one withheld.*
- 82.5 C** words in context · medium The motive is said to be too subtle to recover, so the word names a signal too faint for a reader to pick up. *Trap: A gives the admiring sense, which the sentence treats as a failure.*

- 82.6 B** structure · medium The reference follows the statement that each kind can be withheld and names a book that supplies action and speech and no interiority at all. *Trap: C puts Melville on the kind of evidence the text says he leaves out.*
- 82.7 A** cross text · hard Text 2 says the weight of the story falls on the narrator instead, and that the reader learns a great deal about the lawyer. *Trap: B treats a rumor in Text 2 as the explanation the lawyer settles on.*
- 82.8 D** transitions · medium The second sentence sets the open kind of motive against the settled kind, so the transition must mark a contrast. *Trap: C treats the open motive as a restatement of the inert one.*
- 82.9 B** boundaries · easy The clause about the reader who is told is independent, so the conjunction joining it to the clause about exposition takes a comma. *Trap: A runs the clause about exposition straight into the clause about the reader.*
- 82.10 D** synthesis · hard Only this choice joins the repetition to the shape the reader sees, which is how the notes say the risk is managed. *Trap: B names the remedy without saying how a pattern does the work.*

83 · Three Moves With Words HUM · S03 · mechanism

- 83.1 D** central idea · easy The text separates the three figures by the operation each performs and then says what all three share is economy. *Trap: C collapses a distinction the text spends three sentences drawing.*
- 83.2 B** detail · easy The text says metonymy names a thing by something associated with it rather than something like it, as when the press means journalists. *Trap: A gives the mark of a simile rather than of metonymy.*
- 83.3 C** evidence · medium The quotation says in so many words that nothing is being compared and then describes the pointing that replaces comparison. *Trap: B describes what a metaphor does rather than what metonymy does not do.*
- 83.4 A** inference · medium The usual advice is said to be a live figure or a plain word and not something halfway, which is exactly where the worn expression falls. *Trap: C makes the dead expression the live figure the advice recommends.*
- 83.5 D** words in context · medium A vivid image is said to make the reader supply the detail, so the word names an image that comes through sharply enough to be filled in. *Trap: A narrows the word to color, which the text does not mention.*
- 83.6 C** structure · medium The reference follows the account of expressions that have stopped working and gives a question a writer can ask: whether the image can be seen. *Trap: D revives a figure the text has just called asleep.*
- 83.7 B** cross text · hard Text 2 says the reader is handed three objects, told that something rests on them, and left to supply the rest. *Trap: D gives the result of removing the images rather than the mechanism itself.*
- 83.8 A** transitions · medium The second sentence spells out what the third operation is, so the transition must mark an explanation of the sentence before it. *Trap: B sets the explanation against the statement it explains.*
- 83.9 C** boundaries · easy The clause about the reader being pointed at a whole is independent, so the conjunction joining it to the clause about comparison takes a comma. *Trap: A runs the clause about comparison straight into the clause about the pointing.*
- 83.10 A** synthesis · hard Only this choice says both what the list hides, three distinct operations, and the one thing it correctly groups, their economy. *Trap: C describes one of the three operations without saying what the list obscures.*

84 · Expectation and the Broken Line HUM · S04 · mechanism

- 84.1 A** central idea · easy The text says a fixed form works by setting up an expectation that can then be used, and that both line devices only work because the pattern is regular enough to be felt. *Trap: C exempts free verse from a mechanism the text says it does not escape.*
- 84.2 C** detail · easy The text says a caesura is a strong break inside a line and does the opposite of enjambment, stopping the voice where the meter says to continue. *Trap: A gives what enjambment does rather than what a caesura does.*
- 84.3 D** evidence · medium The quotation denies that conscious counting is required and offers the dance tune as a parallel, which is the claim exactly. *Trap: A says the pattern must be felt without saying that it need not be counted.*
- 84.4 B** inference · medium The reversed foot is said to fall almost always on the word the poet wants struck, so the break in the pattern locates the emphasis. *Trap: D throws away the regularity that makes the break detectable.*
- 84.5 A** words in context · medium The text sets a lyrical effect against the arithmetic that produces it, so the word names the feeling a reader hears rather than the counting behind it. *Trap: D makes the word name the measuring the sentence contrasts it with.*
- 84.6 D** structure · medium The comparison follows the claim that the effect does not require conscious counting and offers a listener who does not count beats as the parallel. *Trap: C requires the counting the comparison is there to excuse.*
- 84.7 C** cross text · hard Text 2 reports twelve lines listing what the mistress is not, followed by a closing pair that says he loves her all the same, which lands because the reader has been counting. *Trap: B names the pattern itself rather than a use made of it.*
- 84.8 B** transitions · medium The second sentence states a condition that holds for enjambment and for the caesura alike, so the transition must gather both. *Trap: C sets the shared condition against the devices it covers.*
- 84.9 D** boundaries · easy The clause saying the poet counted is independent, so the conjunction joining it to the clause about the reader hearing takes a comma. *Trap: A runs the clause about the feeling straight into the clause about the counting.*
- 84.10 B** synthesis · hard Only this choice states the general point the notes converge on, that the regularity is what any departure from it can work against. *Trap: A gives one instance of the prediction without naming what it is for.*

85 · How a Building Writes a Play HUM · S05 · mechanism

- 85.1 B** central idea · easy The text calls the habits consequences of the building rather than choices of taste, and ends by saying this locates the art in a particular room rather than making the plays less artful. *Trap: D draws the conclusion the last sentences expressly refuse.*
- 85.2 D** detail · easy The text says that because there was no front curtain a scene could not end with a held tableau and had to end with an exit. *Trap: A names a different feature of the stage with a different consequence.*
- 85.3 A** evidence · medium The quotation ties the fate of the aside to the lighting and the staging, disappearing in one arrangement and returning in another. *Trap: D names a modern cost without showing the device following the room.*
- 85.4 C** inference · medium The pattern is said to be what makes holding attention by voice alone possible in the open air, so a small room removes the condition it answers. *Trap: A reverses the difficulty that the open air is said to create.*
- 85.5 B** words in context · medium The verse is said to render holding attention possible, so the word names bringing that state about. *Trap: A takes the sense in which an actor renders a speech.*

- 85.6 A** structure · medium The sentence comes after a list of features traced to the building and refuses the inference that the art is thereby diminished, locating it in a room instead. *Trap: D ranks the stagings, which the text does not do.*
- 85.7 D** cross text · hard Text 2 says the cheapest stood in the open around three sides of the stage in daylight, which is the arrangement Text 1 says lets an actor address the house. *Trap: C names a feature of the platform with a different use.*
- 85.8 C** transitions · medium The second sentence gives what followed from the absence of a curtain, so the transition must mark a consequence. *Trap: A sets the couplets against the condition that produced them.*
- 85.9 A** boundaries · easy The clause about the actor speaking directly is independent, so the conjunction joining it to the clause about the audience takes a comma. *Trap: B runs the clause about the audience straight into the clause about the actor.*
- 85.10 C** synthesis · hard Only this choice names both halves of the difficulty: the line that stops working in the new room and the cost of removing it. *Trap: D names the awkwardness without saying what a production must then decide.*

86 · The Uses of a Rule HUM · S06 · mechanism

- 86.1 C** central idea · easy The text says a convention does two jobs at once, telling a reader how to read and creating the possibility of significant deviation. *Trap: D reverses the sentence saying a reader with no expectations cannot be surprised.*
- 86.2 A** detail · easy The text says the requirement of fair play means that every clue must be shown to the reader before the solution is given. *Trap: B names a different convention the text uses as an example.*
- 86.3 B** evidence · medium The quotation says recognition can be entirely unconscious and that the pattern need only be present, not named. *Trap: A gives an instance of the borrowing without saying what the audience must know.*
- 86.4 D** inference · medium The device is said to have become a standard item, so using it now follows a convention instead of departing from one. *Trap: B keeps a shock the text says the device has lost.*
- 86.5 C** words in context · medium Allusion is said to let a later work lean on an earlier one, and the text adds that the pattern need only be present rather than named. *Trap: B makes the reference explicit when the text says it need not be named.*
- 86.6 B** structure · medium The sentence follows the written rules and is followed by the statement that the scandal only existed because the rule existed. *Trap: D settles an argument the text says is still going.*
- 86.7 A** cross text · hard Text 2 says the 1841 story introduced a set of parts that are still in use and that later writers counted on a reader knowing them. *Trap: B gives a later writer acknowledging the debt rather than the origin itself.*
- 86.8 D** transitions · medium The second sentence names the second of two jobs the convention is said to do at once, so the transition must mark an addition. *Trap: C treats the second job as another way of stating the first.*
- 86.9 B** boundaries · easy The clause about the London club is independent, so the conjunction joining it to the clause about the written conventions takes a comma. *Trap: A runs the clause about the conventions straight into the clause about the club.*
- 86.10 D** synthesis · hard Only this choice puts the two jobs of a rule behind the question the notes name as the useful one. *Trap: B states the drift without turning it into a question to ask.*

87 · Where the Eye Is Sent HUM · S07 · mechanism

- 87.1 D** central idea · easy The text opens by saying a painting is read in an order that the painter decides and then names the three devices that do it. *Trap: C condemns the crowded picture the text expressly declines to condemn.*
- 87.2 B** detail · easy The text says an object cut by the frame reads as continuing beyond it, which pulls the viewer into imagining a room rather than a panel. *Trap: A names a different device from the three the text sets out.*
- 87.3 C** evidence · medium The quotation allows a picture in which the eye wanders and locates failure instead in an eye that drifts without arriving. *Trap: D names a conservator's finding about one picture rather than the test itself.*
- 87.4 A** inference · medium Low contrast is said to mark what the painter decided could wait, so the dimmest area is the last stop in the order rather than the first. *Trap: D calls the reversed route the intended one.*
- 87.5 D** words in context · medium The word is paired with crowded in a sentence about a picture that may still be well composed, so it names a surface loaded with detail. *Trap: C gives the opposite of the loaded surface the sentence describes.*
- 87.6 C** structure · medium The instructions follow the three devices under the announcement of a working method and tell a viewer what to ask and in what order. *Trap: D denies a description the last of the instructions treats as the test.*
- 87.7 B** cross text · hard Text 2 describes the wall as warm where the sun falls and cool in the shadow, a narrow range beside the thickened white of the milk. *Trap: C names a surface that catches light sharply rather than one in a narrow range.*
- 87.8 A** transitions · medium The second sentence gives a second instance of position deciding how something reads, so the transition must mark a parallel. *Trap: B sets the second instance against the first when both make the same point.*
- 87.9 C** boundaries · easy The clause saying the painter decides the order is independent, so the conjunction joining it to the clause about the reading takes a comma. *Trap: A runs the clause about the reading straight into the clause about the painter.*
- 87.10 A** synthesis · hard Only this choice runs the three steps together and ends on the test, which is what turns looking into something a viewer does. *Trap: B gives the first step alone without the path or the test.*

88 · Tension, Delay and Arrival HUM · S08 · mechanism

- 88.1 A** central idea · easy The text says moving away from the home note creates tension and returning releases it, and that almost everything else is management of the distance and the delay. *Trap: D puts the emotion in the notes when the text puts it in the gap.*
- 88.2 C** detail · easy The text says the music arrives at the moment of resolution and goes somewhere else, often to a chord that is close by and wrong. *Trap: A names the setting up of the home note rather than the broken arrival.*
- 88.3 D** evidence · medium The quotation says the emotion sits in the gap rather than in the notes, after naming the establishing and the withholding that make the gap. *Trap: B gives two composers using the device without saying where the feeling sits.*
- 88.4 B** inference · medium The silent beat is said to be loud because a pattern was established, so without one there is no expectation for the silence to break. *Trap: A keeps the loudness the text makes conditional on the pattern.*
- 88.5 A** words in context · medium A piece is said to evoke grief by establishing something and withholding it, so the word names raising the feeling in whoever is listening. *Trap: C makes the music state the feeling the text says it produces by a gap.*
- 88.6 D** structure · medium The sentence says film composers work almost entirely with this mechanism and often with very simple material, and is followed by one held chord doing the work of a page. *Trap: C removes the pattern that the single held chord depends on.*

- 88.7 C** cross text · hard Text 2 says Mozart states the tune plainly first, so that every listener knows exactly what will be worked on. *Trap: D names the taking apart rather than the statement it depends on.*
- 88.8 B** transitions · medium The second sentence gives the opposite movement with the opposite result, so the transition must mark a reversal. *Trap: C makes the release follow from the tension rather than from the return.*
- 88.9 D** boundaries · easy The clause saying the music goes somewhere else is independent, so the conjunction joining it to the clause about the arrival takes a comma. *Trap: A runs the clause about the arrival straight into the clause about the swerve.*
- 88.10 B** synthesis · hard Only this choice states the question and the observation that replaces the verdict, which is what the notes offer a listener. *Trap: D rejects the description as sad without supplying the question to ask instead.*

89 · What Makes a Street Work HUM · S09 · mechanism

- 89.1 B** central idea · easy The text names frontage, width to height and permeability as numbers that predict how a street feels, then says the numbers conflict, which is the whole difficulty. *Trap: D reverses the comparison the counts are said to settle.*
- 89.2 D** detail · easy The text says the third number is permeability, counted as the number of ways out of a block. *Trap: A gives the definition of frontage instead.*
- 89.3 A** evidence · medium The quotation grants the tower its looks and still reports a dead pavement, giving the reason as nothing opening onto it at ground level. *Trap: B names two other conflicts without conceding anything to the building.*
- 89.4 C** inference · medium Permeability is the third number and is counted as the ways out of a block, which a single loop road reduces to one. *Trap: A gives the advantage of the grid to the loop road instead.*
- 89.5 B** words in context · medium The word sits beside handsome in a judgment of how a tower looks from a distance, so it names an unornamented appearance. *Trap: A takes the sense used of a person rather than of a building.*
- 89.6 A** structure · medium The sentence follows the three numbers and introduces the trade-offs between wide roads, large blocks and the set-back tower. *Trap: D discards measures the text goes on to say have been confirmed.*
- 89.7 D** cross text · hard The first number is active frontage, and Text 2 describes a lane lined on both sides with small shops in which a shopper can look in forty windows. *Trap: C gives the length without saying what meets the pavement along it.*
- 89.8 C** transitions · medium The second sentence moves on to the next of the three numbers, so the transition must mark a step in a sequence. *Trap: A sets the second number against the first when the text is listing them.*
- 89.9 A** boundaries · easy The clause about large blocks being cheaper is independent, so the conjunction joining it to the clause about wide roads takes a comma. *Trap: B runs the clause about the roads straight into the clause about the blocks.*
- 89.10 C** synthesis · hard Only this choice joins the tools anyone can carry to the count that is said to beat architectural quality as a predictor. *Trap: B credits one observer without saying what the counting establishes.*

90 · What a Judgment Needs HUM · S10 · mechanism

- 90.1 C** central idea · easy The text divides a judgment into a claim, evidence and a criterion, says each fails in a characteristic way, and that a hidden criterion produces useless disagreement. *Trap: D reverses the effect the text attributes to a hidden standard.*
- 90.2 A** detail · easy The text says a claim fails by being unfalsifiable, as when a reviewer calls a novel important without saying what would make it unimportant. *Trap: B gives the way evidence fails rather than the way a claim fails.*

- 90.3 B** evidence · medium The quotation denies that the questions settle anything and says they move the argument to the one place where it can be conducted. *Trap: A names the harm a hidden standard does without saying what naming one achieves.*
- 90.4 D** inference · medium The text says critics who name their standards can be disagreed with and that those who do not can only be ignored or believed. *Trap: B looks for agreement where the text calls for a stated standard.*
- 90.5 C** words in context · medium The complaint is that the film does not satirize the system it depicts, so the word names mockery aimed at that system. *Trap: A asks only for depiction, which the sentence says the film already gives.*
- 90.6 B** structure · medium The two questions follow the claim that making the criterion explicit changes the argument, and each puts the stated standard itself in question. *Trap: D settles disputes the next sentence says are not settled.*
- 90.7 A** cross text · hard Text 2 reports three critics in the same room whose verdicts differed because one wanted melody, one wanted novelty and one wanted a social occasion. *Trap: C gives one man disagreeing with himself rather than two standards in conflict.*
- 90.8 D** transitions · medium The second sentence names the second of three characteristic failures, so the transition must mark a parallel rather than a consequence. *Trap: B treats a failure of evidence as a restatement of a failure of claim.*
- 90.9 B** boundaries · easy The clause about critics who do not name their standards is independent, so the conjunction joining it to the clause about those who do takes a comma. *Trap: A runs the clause about the named standards straight into the clause about the hidden ones.*
- 90.10 D** synthesis · hard Only this choice names the price and the purchase together, which is the trade the notes set out. *Trap: C reports the convention without saying what it costs or earns.*

91 · Three Ways a Survey Fails SOC · S01 · mechanism

- 91.1 B** central idea · easy The text names the frame, nonresponse and the instrument and says the central point of all three is that a bias of this kind is not removed by a larger sample. *Trap: C credits weighting with correcting what the text says it cannot reach.*
- 91.2 D** detail · easy The text says statisticians correct for nonresponse by weighting and that weighting works only for characteristics that are known and measured. *Trap: A extends weighting to everything about the people who refuse.*
- 91.3 A** evidence · medium The quotation denies that the remaining answerers are a small copy of the rest and then names three ways they differ. *Trap: B describes the frame rather than the people who answer within it.*
- 91.4 C** inference · medium The text says sample size governs only random error and that a large badly framed poll is worse and more confident, so the frame remains the open question. *Trap: A takes the confidence the text calls misplaced.*
- 91.5 B** words in context · medium The text says a bias of this kind is not removed by a larger sample, and contrasts it with the random error that sample size governs. *Trap: C puts the word on the side of the error a larger sample does fix.*
- 91.6 A** structure · medium The sentence follows the claim that a bias is not removed by a larger sample and sets a badly framed poll of fifty thousand against a well framed poll of a thousand. *Trap: D turns one comparison into a rule about every poll.*
- 91.7 D** cross text · hard Text 2 reports about fifty-four percent willing to forbid and about seventy-five percent unwilling to allow, which is a difference made by the wording alone. *Trap: A names the frame, which Text 1 counts as a separate failure.*
- 91.8 C** transitions · medium The second sentence states what follows from a frame that misses part of the population, so the transition must mark a consequence. *Trap: A sets the limit of courtesy against the frame that creates it.*

- 91.9 A** boundaries · easy The clause about the remedies is independent, so the conjunction joining it to the clause about the three ways takes a comma. *Trap: B runs the clause about the three ways straight into the clause about the remedies.*
- 91.10 C** synthesis · hard Only this choice names the three disclosures and says why the usual figure is the least informative of them. *Trap: D lists two of the three without the reason the notes give.*

92 · Why the Lot Matters SOC · S02 · mechanism

- 92.1 C** central idea · easy The text says the dangerous confounders are the ones nobody thought of and that a lottery makes the groups alike on every characteristic at once, including the unmeasured ones. *Trap: D claims a transfer the text says randomization says nothing about.*
- 92.2 A** detail · easy The text says the fatal property of confounders is that the dangerous ones are the ones nobody thought of. *Trap: B puts the dangerous differences on the list that matching uses.*
- 92.3 B** evidence · medium The quotation calls the balancing purely a consequence of chance and adds that the luck involved has a stated size. *Trap: D names a way the design fails rather than the source of its strength.*
- 92.4 D** inference · medium The text says the trial cannot tell whether the state would have found enough good teachers everywhere, which it calls a question about supply. *Trap: A extends a local finding to the whole state.*
- 92.5 C** words in context · medium A lottery is said to allocate people to a treatment and to a control group, so the word names the putting of a person into one group or the other. *Trap: B takes the sense in which money is allocated to a purpose.*
- 92.6 B** structure · medium The sentence follows the statement of what randomization does not do and confines the finding to those schools in those years. *Trap: D faults a design the text uses as its example of a good one.*
- 92.7 A** cross text · hard Text 2 ends by saying that nothing except the class size distinguished the two groups at the start, which is the property Text 1 attributes to the lottery. *Trap: B names the trouble with the comparisons the lottery replaced.*
- 92.8 D** transitions · medium The second sentence gives the reason matching falls short, so the transition must mark a ground. *Trap: B makes the defeat follow from the judgment rather than support it.*
- 92.9 B** boundaries · easy The clause about the two groups being made alike is independent, so the conjunction joining it to the clause about randomization takes a comma. *Trap: A runs the clause about randomization straight into the clause about the groups.*
- 92.10 D** synthesis · hard Only this choice states the internal strength and the external silence together, which is the reach the notes describe. *Trap: A names the balancing without the limit the notes place on it.*

93 · Three Reasons a Pattern Misleads SOC · S03 · mechanism

- 93.1 D** central idea · easy The text says two correlated measurements may stand in any of four relations and that only one of them licenses action, and then names the other three. *Trap: C takes the authority the text reserves for one of the four relations.*
- 93.2 B** detail · easy The text says the planes hit in the engines had not come back to be inspected, so armoring the wings was exactly the wrong conclusion. *Trap: C gives the other selection example the text uses.*
- 93.3 C** evidence · medium The quotation follows the source of variation unrelated to everything else and says that until such a thing is in hand the correlation is only a question. *Trap: B names a weaker aid rather than the condition the claim states.*

- 93.4 A** inference · medium The soldier example turns on who entered the data, so a study of a selected group describes that group rather than the population. *Trap: B credits a selected sample with a population it excludes.*
- 93.5 D** words in context · medium The text speaks of two measurements that correlate and then asks which of four relations holds between them, so the word names only the joint movement. *Trap: A supplies the causation the next sentences treat as one possibility of four.*
- 93.6 C** structure · medium The example follows the naming of reverse causation and shows the sickest patients being sent to the best staffed units. *Trap: D takes the alarming reading the example is there to dissolve.*
- 93.7 B** cross text · hard Text 2 says rich countries eat more chocolate and fund more laboratories, so national wealth could produce both figures without either touching the other. *Trap: A names a weakness in the measure rather than the third thing causing both.*
- 93.8 A** transitions · medium The second sentence takes back part of the help just granted, so the transition must mark a concession. *Trap: B makes the reversal follow from the usefulness of time order.*
- 93.9 C** boundaries · easy The clause about the planes hit in the engines is independent, so the conjunction joining it to the clause about the returning planes takes a comma. *Trap: A runs the clause about the returning planes straight into the clause about the missing ones.*
- 93.10 A** synthesis · hard Only this choice joins the observed damage to the planes absent from the sample, which is what makes the obvious conclusion wrong. *Trap: C credits the solution without saying what was wrong with the data.*

94 · Four Numbers and What They Hide SOC · S04 · mechanism

- 94.1 A** central idea · easy The text names four summary quantities, says each hides something different, and gives the practical rule of asking for the shape rather than the summary. *Trap: D accepts the figure the text calls the worst case.*
- 94.2 C** detail · easy The text says the skew describes whether the distribution has a long tail on one side, which income always does and height never does. *Trap: A gives what the standard deviation describes instead.*
- 94.3 D** evidence · medium The quotation reports four data sets agreeing on every summary quantity named and differing completely in shape. *Trap: B names the remedy rather than the case the claim describes.*
- 94.4 B** inference · medium The two towns share a mean and differ in everything a policy would need, so the mean alone cannot distinguish them. *Trap: D supplies the second figure the case stipulates is missing.*
- 94.5 A** words in context · medium The word qualifies the figure a histogram outperforms, and the text has already defined such figures as sums and divisions over the cases. *Trap: C makes the word name the picture the figure is contrasted with.*
- 94.6 D** structure · medium The comparison follows the two towns and says only the spread shows whether a shared average comes from a uniform middle or from a split. *Trap: C abandons a figure the text keeps and pairs with another.*
- 94.7 C** cross text · hard Text 2 says the mean of four hundred and four thousand describes nobody while the median of forty thousand matches the middle household and its eight neighbors. *Trap: A collapses the two figures the street was built to separate.*
- 94.8 B** transitions · medium The second sentence gives a case of the claim just made, so the transition must mark an example. *Trap: C makes the two towns follow from the claim rather than illustrate it.*

- 94.9 D** boundaries · easy The clause about the median is independent, so the conjunction joining it to the clause about the mean takes a comma. *Trap: A runs the clause about the mean straight into the clause about the median.*
- 94.10 B** synthesis · hard Only this choice names the case the notes call worst and says what makes it so, the absence of the spread and the count. *Trap: C names the better pairing without the case the goal asks about.*

95 · Price, Salience and Substitution SOC · S05 · mechanism

- 95.1 B** central idea · easy The text says the size of the sum is often the least important and names salience, substitution and timing as the three properties that decide the effect. *Trap: C reverses the sentence that demotes the size of the sum.*
- 95.2 D** detail · easy The text says a charge of the same size on gasoline changes very little in the short run because nobody can substitute for the journey to work this week. *Trap: A blames the size, which the text says is the least important property.*
- 95.3 A** evidence · medium The quotation sets a meter charge against the same amount on a tax bill and says identical money produces quite different behavior. *Trap: B gives one case of a charge working rather than a comparison of placements.*
- 95.4 C** inference · medium The text names deposit schemes as working and fines for late payment as often failing, because the cost of the fine arrives after the decision. *Trap: D reverses the comparison the text draws between the two schemes.*
- 95.5 B** words in context · medium The text says an incentive works through salience, substitution and timing, all of which are properties of a cost or benefit attached to a decision. *Trap: C narrows the word to one deferred payment, which the text treats as the weak case.*
- 95.6 A** structure · medium The sentence comes between the announcement of three properties and the naming of the first, and sets the amount of money aside. *Trap: D denies an effect the rest of the text measures.*
- 95.7 D** cross text · hard Text 2 says the price rewards whoever is willing to walk two blocks, so the nearby cheaper block is the alternative a driver could switch to. *Trap: B names the instrument that set the price rather than the alternative itself.*
- 95.8 C** transitions · medium The second sentence sets a charge with no substitute against one with a close substitute, so the transition must mark a contrast. *Trap: A makes the weak effect on gasoline follow from the cloth bag.*
- 95.9 A** boundaries · easy The clause about the size of the sum is independent, so the conjunction joining it to the clause about the three properties takes a comma. *Trap: B runs the clause about the properties straight into the clause about the sum.*
- 95.10 C** synthesis · hard Only this choice gathers the three mismatches the notes name and attaches them to money that is real. *Trap: B states the comparison without the three faults that explain it.*

96 · How a Norm Is Enforced SOC · S06 · mechanism

- 96.1 C** central idea · easy The text lists the four parts of the machinery and then says the strength of a norm depends on visibility more than on agreement. *Trap: D makes the private case strongest where the text says it has no enforcement at all.*
- 96.2 A** detail · easy The text defines a sanction as a penalty applied by other people rather than by law, which may be as small as a look. *Trap: B puts the penalty in the law the definition excludes.*
- 96.3 B** evidence · medium The quotation names the failure case directly: a report that most neighbors do the undesirable thing makes it more common. *Trap: C describes how a norm collapses rather than how a message can cause it.*

- 96.4 D** inference · medium The text says such a norm has no enforcement machinery and survives only as a belief, so belief is all that holds it. *Trap: A supplies the sanction a private rule has no way to apply.*
- 96.5 C** words in context · medium The text opens on an unwritten rule and keeps the word for a rule whose penalties are applied by other people rather than by law. *Trap: B makes the word name a law, which the definition of a sanction excludes.*
- 96.6 B** structure · medium The sentence follows the account of visibility and says the card provides the information the enforcement machinery needs and cannot otherwise get. *Trap: D denies an effect the sentence is explaining.*
- 96.7 A** cross text · hard Text 2 reports a card naming what guests in that room had done, which supplies what a guest cannot see for himself. *Trap: C names the card that reported no behavior at all.*
- 96.8 D** transitions · medium The second sentence gives one case of visibility deciding a norm, so the transition must mark an example. *Trap: B makes the littering follow from the claim rather than illustrate it.*
- 96.9 B** boundaries · easy The clause about the costs being supplied by other people is independent, so the conjunction joining it to the clause about the rule takes a comma. *Trap: A runs the clause about the rule straight into the clause about the costs.*
- 96.10 D** synthesis · hard Only this choice states the mechanism by which the campaign backfires, which is the norm it reports rather than the appeal it makes. *Trap: C names the risk without saying how the harm is done.*

97 · The Trade a Household Makes SOC · S07 · mechanism

- 97.1 D** central idea · easy The text describes bid rent falling with distance, says the slope of that fall is set by the cost of travel, and draws the spreading and tightening of the city from it. *Trap: C reverses the opening fact about land at the center.*
- 97.2 B** detail · easy The text says generalized cost means travel time and money added together as one figure. *Trap: A names the rent the model is about rather than the quantity in the cost.*
- 97.3 C** evidence · medium The quotation says a new road reduces congestion for a while and then fills, because cheaper travel brings more distant land into play. *Trap: B gives another prediction of the model rather than the one about roads.*
- 97.4 A** inference · medium The text pairs dearer or slower travel with a tightening city, which is a steeper fall of bid rent with distance. *Trap: B gives the effect of cheaper travel rather than dearer.*
- 97.5 D** words in context · medium Households are said to differ in how much they perceive travel time to cost them, so the word names their own reckoning of that cost. *Trap: C makes the reckoning exact when the sentence makes it a household judgment.*
- 97.6 C** structure · medium The sentence comes just before the predictions about clustering offices and filling roads and admits the roughness of the account that makes them. *Trap: D discards a model the text goes on to use.*
- 97.7 B** cross text · hard Text 2 says Boston spread from a two-mile city to a ten-mile one between 1870 and 1900 as the new lines opened. *Trap: C names the price that sorted the movers rather than the spreading itself.*
- 97.8 A** transitions · medium The second sentence announces what follows from the slope just described, so the transition must mark a consequence. *Trap: B sets the consequences against the account that produces them.*
- 97.9 C** boundaries · easy The clause about the cost of travel from the edge is independent, so the conjunction joining it to the clause about the land takes a comma. *Trap: A runs the clause about the land straight into the clause about the travel.*

97.10 A synthesis · hard Only this choice names the combined figure and the reason it is the one that matters, which is its hold on the slope. *Trap: B defines the figure without saying what it decides.*

98 · What Sets a Wage SOC · S08 · mechanism

98.1 A central idea · easy The text names a ceiling, a reservation wage as a floor, and bargaining power as what settles the wage between them. *Trap: C grants a scarce skill a strength the text denies it under monopsony.*

98.2 C detail · easy The text says the reservation wage is the lowest pay at which a person will take the work and that it depends on what else is available. *Trap: A gives the ceiling rather than the floor.*

98.3 D evidence · medium The quotation says what changed in 1889 was organization rather than productivity, and names the replacement of many bargains by one. *Trap: B describes the arrangement that was overturned rather than the change itself.*

98.4 B inference · medium The text says bargaining power depends on the alternatives each side has and that such a worker has a weak position however scarce the skill. *Trap: C raises a floor that the lack of alternatives holds down.*

98.5 A words in context · medium The text speaks of a cohort that enters a labor market in a bad year and earns less than neighboring years, so the word names everyone who starts together. *Trap: D reduces a group entering together to one person.*

98.6 D structure · medium The sentence follows the definition of monopsony and says the companies engineered the same position deliberately by hiring at a gate twice a day. *Trap: C lowers an output the text calls productive.*

98.7 C cross text · hard Text 2 says the crowd at the gate was always larger than the number of jobs, which is the competition Text 1 describes. *Trap: B names a consequence of the crowd rather than the crowd itself.*

98.8 B transitions · medium The second sentence confirms the claim by naming a productive trade whose men captured none of it, so the transition must mark a confirmation. *Trap: C makes the profitability follow from the wages sticking.*

98.9 D boundaries · easy The clause saying three of the elements still do the work is independent, so the conjunction joining it to the clause about Smith takes a comma. *Trap: A runs the clause about Smith straight into the clause about the three elements.*

98.10 B synthesis · hard Only this choice supplies the mechanism the notes name, the first job setting the next, alongside the length of the loss. *Trap: C measures the loss without saying what carries it forward.*

99 · Three Different Inequalities SOC · S09 · mechanism

99.1 B central idea · easy The text separates income, wealth and mobility, shows that they behave differently and respond at different speeds, and says any serious argument has to say which of the three it is about. *Trap: C reverses the sentence about surveys the very rich do not answer.*

99.2 D detail · easy The text says mobility depends on schooling, neighborhood, early childhood and the labor market, and that it responds slowest of all. *Trap: B names the quantity that responds over decades rather than slowest.*

99.3 A evidence · medium The quotation names a country reducing income inequality by taxes and transfers while its wealth gaps widen, and dates the case. *Trap: B explains why wealth gaps are large rather than how progress can be reported.*

99.4 C inference · medium The text says the gaps are probably understated because the very rich do not answer, so a published figure is a minimum. *Trap: A reverses the direction of the error the text names.*

- 99.5 B** words in context · medium The word appears among the things that damage the experience of being poor, beside insecurity and the cost of credit, so it names the shame attached to it. *Trap: A takes the physical sense of a mark on the body.*
- 99.6 A** structure · medium The sentence saying the three respond at very different speeds is followed at once by a government reporting progress on income while the wealth gap widens behind it. *Trap: D merges three quantities the text spends its length separating.*
- 99.7 D** cross text · hard Text 2 names the housing, the grocery stores, the air quality and the travel to medical care, which record conditions rather than a distribution. *Trap: A names the headline figure rather than the conditions behind it.*
- 99.8 C** transitions · medium The second sentence sets a slower response against a faster one, so the transition must mark a contrast. *Trap: A makes the slow wealth response follow from the quick income one.*
- 99.9 A** boundaries · easy The clause about wealth as a stock is independent, so the conjunction joining it to the clause about income takes a comma. *Trap: B runs the clause about income straight into the clause about wealth.*
- 99.10 C** synthesis · hard Only this choice names the three harms and says in the same breath that a distribution figure records none of them. *Trap: D states the omission without naming what is omitted.*

100 · Three Errors With Names SOC · S10 · mechanism

- 100.1 C** central idea · easy The text names anchoring, availability and framing and says what makes them useful is that they are systematic, so the mistake can be anticipated and designed around. *Trap: D gives the behavior of a random error, which the text contrasts with these.*
- 100.2 A** detail · easy The text says the anchoring effect survives when the subjects are told that the number is random. *Trap: B removes an error the sentence says persists.*
- 100.3 B** evidence · medium The quotation says the deviations all run the same way for the same reason, which is what lets the mistake be anticipated and designed around. *Trap: D gives one of the three effects rather than the property that makes them manageable.*
- 100.4 D** inference · medium The text says a random error would cancel while these deviate in the same direction, so averaging leaves the bias in place. *Trap: A gives the result that would follow if the errors were random.*
- 100.5 C** words in context · medium The word describes judgments that all miss in the same direction for the same reason, so it names the departure from the correct value. *Trap: A makes the departure aimless when the sentence makes it uniform.*
- 100.6 B** structure · medium The list follows the claim that the mistake can be anticipated and designed around and names three devices that exist for that purpose. *Trap: D settles a question the next sentence says is still open.*
- 100.7 A** cross text · hard Text 2 says the five percent figure is vivid and the one in a thousand figure is not, so the second gets dropped. *Trap: B names a feature of the test rather than the error in reading it.*
- 100.8 D** transitions · medium The second sentence gives a case of the rule just defined, so the transition must mark an example. *Trap: B makes the overestimate follow from the definition rather than illustrate it.*
- 100.9 B** boundaries · easy The clause about the family members being demonstrated is independent, so the conjunction joining it to the clause about the base rate error takes a comma. *Trap: A runs the clause about the error straight into the clause about the family members.*
- 100.10 D** synthesis · hard Only this choice joins the common direction of the errors to the possibility of building something that allows for them. *Trap: C names the remedy without the property that makes it available.*

101 · What the Rough Draft Shows HIS · S01 · evidence

- 101.1 B** central idea · medium The text reads the versions against one another and then states exactly how much the deletion establishes and how much it does not. *Trap: C is the reading the final paragraph refuses, since Virginia planters were themselves participants.*
- 101.2 D** detail · easy The text says Jefferson himself recorded the objection, and adds that he wrote his account decades later when his memory had reasons of its own. *Trap: B names the people who objected rather than the person who recorded it.*
- 101.3 A** evidence · medium The sentence states the limit directly: the removal is established and the reason for it is not. *Trap: C reports the removal itself, which is the fact whose meaning is in question.*
- 101.4 C** inference · medium Objections came from two directions and the drafter was himself implicated, so the removal cannot be assigned a single motive. *Trap: B picks one of the two objections the text reports and treats it as the whole account.*
- 101.5 B** words in context · medium The sentence concerns a moment when the republic might have disowned a principle it had stated, so the word names a refusal to be bound by it. *Trap: A reverses the sense, since restating is the opposite of disowning.*
- 101.6 A** structure · hard The comparison is made in order to name the procedure, and the text says at once that the method is identical. *Trap: B treats an analogy about method as a claim about what kind of document this is.*
- 101.7 D** cross text · hard Text 2 assigns everything after the premises to the evidence, and the deleted passage blamed George III, which is what a grievance does. *Trap: A puts a particular charge among the general premises Text 2 describes.*
- 101.8 C** transitions · medium The sentence adds a second reason for caution rather than restating the first or following from it. *Trap: B makes the planters involvement a consequence of the late recollection.*
- 101.9 A** boundaries · easy A colon introduces the statement of what the manuscript establishes, which the clause before has just announced. *Trap: B replaces the colon with a comma, leaving two full clauses spliced.*
- 101.10 C** synthesis · hard Only this choice states both halves, what the manuscript establishes and what it leaves open, which is what the goal asks for. *Trap: B states the limit so strongly that it denies the manuscript the narrow finding the text grants it.*

102 · Reading the Ratification Debates HIS · S02 · evidence

- 102.1 C** central idea · medium The text names a characteristic defect for each kind of source and then explains that this is why either side of the argument can find support. *Trap: D inverts the opening, which calls the Federalist the least representative source.*
- 102.2 A** detail · easy The text says the essays were written to persuade New York to ratify, by three men with an interest in the outcome. *Trap: D names the use the text says is a misreading of the source.*
- 102.3 B** evidence · medium A reporter who admits improving speeches as he wrote them down establishes that the printed debate is not a transcript. *Trap: A names the defect of a different source, which is partiality rather than alteration.*
- 102.4 D** inference · medium The text says either claim can be supported from the record, so volume alone leaves the disagreement standing. *Trap: C turns a statement about ambiguity into a claim that every source is worthless.*
- 102.5 C** words in context · medium The historian in question wants to show that executive power was taken rather than granted, so the word names a seizure without right. *Trap: A gives the lawful transfer that the word is set against.*

- 102.6 B** structure · hard The comparison is followed at once by the sentence calling the essays first-class evidence of what their authors wanted understood. *Trap: A reads a statement about the kind of source as a verdict on its truth.*
- 102.7 A** cross text · hard Text 1 calls the essays first-class evidence of their authors intentions rather than a neutral description, which is how Federalist 10 should be read. *Trap: C is precisely the use Text 1 compares to reading a campaign pamphlet as policy.*
- 102.8 D** transitions · medium The second sentence grants the source a real value in spite of the limitation just stated, so the two stand in contrast. *Trap: C makes the value of the source follow from its unrepresentativeness.*
- 102.9 B** boundaries · easy The revising and the dating of the revisions are each a complete clause, so the conjunction standing between them takes a comma. *Trap: D drops the conjunction and leaves a comma between two full clauses.*
- 102.10 D** synthesis · hard Only this choice gives the method rather than one instance, which is what advice to a reader requires. *Trap: A names one defective source and so offers no way of handling the rest.*

103 · Signatures, Poll Books and a Trial HIS · S03 · evidence

- 103.1 D** central idea · medium The text takes the four records in turn, says what each measures, and then gives the boundary of each. *Trap: B reports a vivid particular rather than the argument the text is making.*
- 103.2 B** detail · easy The text says a signature count measures organizing capacity rather than opinion, because gathering names shows that somebody could pay for canvassers. *Trap: A gives the reading the sentence explicitly sets aside.*
- 103.3 C** evidence · medium The sentence says the case had been invited on purpose, which is exactly what being arranged means. *Trap: B reports how the trial was conducted rather than that it was sought.*
- 103.4 A** inference · medium Every one of the four records measures something other than belief, so an inference about belief has to be built from proxies. *Trap: D turns a limitation on the records into the absence of evidence altogether.*
- 103.5 D** words in context · medium The women argued that the Fourteenth Amendment already authorized them to register and vote, so the word names a warrant for acting. *Trap: C turns a permission into an obligation, which reverses the sense.*
- 103.6 C** structure · hard The sentence says the coverage survives in the greatest quantity and measures mainly what editors thought readers would enjoy. *Trap: D treats an aside about a further record as the introduction of a fifth category.*
- 103.7 B** cross text · hard Text 2 holds that an amendment settles the rule and nothing else, and that each change needed enforcement machinery it did not yet have. *Trap: C borrows a barrier Text 2 says had already fallen by the Civil War.*
- 103.8 A** transitions · medium The entry in the poll book is the consequence of the act of voting, so the second sentence follows from the first. *Trap: B sets the record against the voting when the record exists because of it.*
- 103.9 C** boundaries · easy The phrase defining the poll book is a supplement to the noun before it, so it attaches with a comma rather than a semicolon. *Trap: B uses a semicolon, which would need a full clause on each side of it.*
- 103.10 A** synthesis · hard Only this choice draws the conclusion from the records, which is what explaining how the fact is known requires. *Trap: C gives the record without the inference the goal asks for.*

104 · Ledgers, Narratives and Manifests HIS · S04 · evidence

- 104.1** **A** central idea · medium The opening sentence states the plan and the rest carries it out, naming a precise distortion for each of the four kinds of source. *Trap: C reverses the text, which calls the interviews the most difficult of all.*
- 104.2** **C** detail · easy The text says the database permits estimates of numbers, routes and mortality, but cannot contain anyone name because people were entered as cargo. *Trap: D names what the manifests do record rather than what they omit.*
- 104.3** **D** evidence · medium The sentence sets precision and interest side by side in one line, which is the distinction the claim draws. *Trap: A names a different difficulty, which is the age and position of the speakers.*
- 104.4** **B** inference · medium The text says the care consists in reading across many interviews rather than quoting one, because of the pressure on each speaker. *Trap: C states the opposite of the practice the text recommends.*
- 104.5** **A** words in context · medium The ledgers were kept by the person applying it, and they record tasks and punishments, so the word names compulsion by force. *Trap: B names the opposite of force, which is what the ledgers do not record.*
- 104.6** **D** structure · hard The sentence comes after the difficulties of age and dependence and names one more, introduced by the transcriber rather than by the speaker. *Trap: C turns a problem of transcription into a claim about the willingness of the speakers.*
- 104.7** **C** cross text · hard Text 2 says the parties disagreed about what counts as evidence, and Text 1 supplies one source written by the enslaved and one by the owner. *Trap: D reaches for a source recorded sixty years after the argument ended.*
- 104.8** **B** transitions · medium A work written to persuade invites a challenge to its accuracy, so the dispute follows naturally from the aim just named. *Trap: C sets the dispute against the purpose, when the one follows from the other.*
- 104.9** **D** boundaries · easy A colon introduces the list that specifies the kind of detail the clause before has announced. *Trap: B uses a comma where a colon is needed to present the specification.*
- 104.10** **B** synthesis · hard Only this choice gives the reason for the practice rather than naming the practice or one of its causes alone. *Trap: C states the rule without the reason the goal asks for.*

105 · Thirteen Volumes of Testimony HIS · S05 · evidence

- 105.1** **B** central idea · medium The text takes testimony and rolls in turn, names the use and the limit of each, and then puts the two together. *Trap: C claims an impartiality the text denies, since witnesses were selected by members with purposes.*
- 105.2** **D** detail · easy The text says a roll records an absence without a reason, so it cannot show why any particular person stopped registering. *Trap: B names something the rolls show plainly rather than something they cannot.*
- 105.3** **A** evidence · medium The sentence describes each side shaping its answers to the purpose of the hearing, which is what understanding that purpose means. *Trap: B names a virtue of the testimony rather than the awareness of its purpose.*
- 105.4** **C** inference · medium The text places firm evidence at the beginning and the end of the period and thin evidence in the decade between them. *Trap: A is true of the account in general but does not describe the shape the sentence has just set out.*
- 105.5** **B** words in context · medium The exclusion had become settled in law by the time the later rolls were kept, so the word names something firmly established. *Trap: A gives the literal military sense from which the figure comes.*
- 105.6** **A** structure · hard The sentence follows the account of testimony, which preserves voices, and introduces a source that supplies numbers and no motive. *Trap: B reads a statement about what a source measures as a ranking of its worth.*

- 105.7 D** cross text · hard Testimony documents the violence and registration rolls document the exclusion written into state law, which are two of the four instruments. *Trap: A names two instruments that neither testimony nor a roll would record.*
- 105.8 C** transitions · medium The sentence adds a second use of the testimony rather than qualifying or restating the first. *Trap: A sets the preservation of voices against the establishing of events.*
- 105.9 A** boundaries · easy A colon introduces the list that specifies who the hundreds of witnesses were. *Trap: B leaves a comma to do the work of a colon before a specifying list.*
- 105.10 C** synthesis · hard Only this choice names the gap between the two records and the reason the rolls cannot fill it, which is what the goal requires. *Trap: D gives the limitation of the rolls without placing the gap it leaves.*

106 · Mortality Tables and Their Gaps HIS · S06 · evidence

- 106.1 C** central idea · medium The text names three defects in turn and then describes how historians handle them, by finding a disinterested series and comparing covered trades with uncovered ones. *Trap: B names the second of the three defects rather than the argument as a whole.*
- 106.2 A** detail · easy The text says accidents were reported by employers to inspectors who could prosecute them, which is the reporting incentive it describes. *Trap: C names the body whose records the text calls disinterested, not the reporter of accidents.*
- 106.3 B** evidence · medium The sentence sets out both readings of a fall in the figures and declines to choose between them without further evidence. *Trap: A states the general condition of the statistics rather than this particular ambiguity.*
- 106.4 D** inference · medium The text calls such a report uninterpretable, so the count alone licenses no claim about the level of risk. *Trap: C names the third defect rather than the one this sentence concerns.*
- 106.5 C** words in context · medium Measures that appeared to improve conditions sometimes only improved the paperwork, so the word names a partial improvement. *Trap: D turns an improvement into an abolition, which is stronger than the word carries.*
- 106.6 B** structure · hard The weaver is an instance of the second defect: the damp shed appears nowhere in a record that notes only the disease. *Trap: C names the remedy described later rather than the defect this sentence illustrates.*
- 106.7 A** cross text · hard Text 2 says insurers inspected and graded plants for their own reasons, so their figures do not depend on an employer choosing to report. *Trap: B names exactly the relationship Text 1 identifies as the source of the distortion.*
- 106.8 D** transitions · medium The contamination follows from the fact that the reporter was the party at risk of prosecution. *Trap: A sets the contamination against the reporting arrangement rather than deriving it from it.*
- 106.9 B** boundaries · easy The examples form a supplement to the noun phrase before them, so a comma attaches them rather than a semicolon. *Trap: A uses a semicolon, which would need an independent clause after it.*
- 106.10 D** synthesis · hard Only this choice states the two tests the text recommends rather than the problem or one half of the remedy. *Trap: A names the ambiguity without supplying any way of resolving it.*

107 · What the Files Turned Out to Hold HIS · S07 · evidence

- 107.1 D** central idea · medium The text opens on documentation created by opponents and closes on the discipline that using it requires, taking each kind of source in turn. *Trap: B reports one striking particular rather than the argument built around it.*

- 107.2 B** detail · easy The text says the figures were collected by the federal government in order to decide which areas the Act would cover, which is why they are careful. *Trap: C borrows a statute that gave researchers access rather than one that shaped the figures.*
- 107.3 C** evidence · medium The lens is what makes the file a record of how a thing was seen rather than of the thing itself. *Trap: B describes the purpose of a summary rather than the character of the record.*
- 107.4 A** inference · medium The payment is what limits the report, so the limitation has to travel with the quotation for the reader to weigh it. *Trap: C throws out a source the text says is usable under discipline.*
- 107.5 D** words in context · medium The summary existed to justify continued attention, so the word names a document that serves one side rather than one that belongs to a party. *Trap: C narrows the word to party membership, which the agency did not have.*
- 107.6 C** structure · hard The sentence says the match is often close on facts and wide apart on meaning, which locates the reliability of the files precisely. *Trap: B names material that comes earlier rather than the work this sentence does.*
- 107.7 B** cross text · hard Text 2 describes machinery that acts without a plaintiff, and Text 1 shows that such machinery had first to be aimed by a count of registration. *Trap: C assigns to the 1965 Act the property Text 2 gives to Brown.*
- 107.8 A** transitions · medium The detail and the distortion are two features of the same record held together, so the second sentence stands alongside the first. *Trap: B makes the distortion a consequence of the detail rather than its companion.*
- 107.9 C** boundaries · easy The clause adds information about the year rather than restricting it, so it attaches with a comma. *Trap: A uses a semicolon before a subordinate clause, which cannot stand alone.*
- 107.10 A** synthesis · hard Only this choice gives both the reading that makes the files usable and the evidence that the reading works. *Trap: D names the practice without the finding that justifies it.*

108 · Whose Numbers Are the Famine Reports HIS · S08 · evidence

- 108.1 A** central idea · medium The text sets out the problem of a single interested producer of data and ends by naming what the series is: neither reliable nor useless. *Trap: D gives the symptom of the problem rather than the conclusion drawn from it.*
- 108.2 C** detail · easy The text defines excess mortality as deaths above the number expected without the event, which requires a baseline that is itself estimated. *Trap: B names one of the checks on the figures rather than what the measure needs.*
- 108.3 D** evidence · medium The clause states the conflict directly: the commission was appointed by the government whose policy it was examining. *Trap: C names a source the text calls disinterested rather than the interested body.*
- 108.4 B** inference · medium The text says the figures differ according to the baseline chosen, so the spread comes from the assumption rather than from the counting. *Trap: C treats uncertainty about magnitude as doubt about the event.*
- 108.5 A** words in context · medium The sentence concerns what is available when collecting new data is not open as a course, so the word names a practical option. *Trap: D gives the pejorative sense, which does not fit a sentence about what a historian may do.*
- 108.6 D** structure · hard The sentence follows the announcement that three practices help and supplies the first of them, a comparison that works like a natural experiment. *Trap: C states the opposite of what the sentence is doing, which is offering a check.*
- 108.7 C** cross text · hard Text 2 makes land revenue the tax that funded most of the administration, and Text 1 says the revenue settlement required measuring land, crops and people. *Trap: B names a record from the end of the period rather than the purpose behind the series.*

- 108.8 B** transitions · medium The second sentence adds a second difficulty to the first rather than replacing or restating it. *Trap: A presents the measurement problem as a substitute for the conflict of interest.*
- 108.9 D** boundaries · easy Reliable and useless are each asserted in a full clause, so the conjunction that balances them needs a comma before it. *Trap: A omits the comma that two full clauses require before the conjunction.*
- 108.10 B** synthesis · hard Only this choice states both the limitation and the way of working with it, which is what the goal asks for. *Trap: C offers one of the checks without the principle that makes it necessary.*

109 · Two Reports That Were Not Shown HIS · S09 · evidence

- 109.1 B** central idea · medium The text sets the two reports against the argument made in court and then traces the correction that followed in the 1980s. *Trap: D gives one document from the sequence rather than the shape of the whole.*
- 109.2 D** detail · easy The text says Ringle reported in January 1942 that the number of genuinely dangerous individuals was small and already known. *Trap: A gives the finding of the Munson report rather than the Ringle report.*
- 109.3 A** evidence · medium The clause says in one breath that the dissent was correct and that its author had nothing to prove it with. *Trap: C names a document that existed but was not before the dissenting justices.*
- 109.4 C** inference · medium The dissents were correct and unproved at once, which is the possibility the sentence has just described. *Trap: A reverses the point, since the dissents were written in the 1940s without the files.*
- 109.5 B** words in context · medium The sentence concerns something set in 1944 and not overruled until 2018, which is a ruling that governs later decisions. *Trap: C names the coram nobis procedure described in the sentence before.*
- 109.6 A** structure · hard The closing sentences say the documents explain something otherwise puzzling, which is how the dissents read as though their authors knew what was missing. *Trap: C names an earlier consequence rather than the puzzle these sentences solve.*
- 109.7 D** cross text · hard Text 2 lists the withholding of the government own evidence as one of three standard instruments, which makes the suppression a pattern rather than a lapse. *Trap: A names a different instrument of the three, which concerns the grant of power.*
- 109.8 C** transitions · medium The argument in court and the withholding of the reports were going on together, so the second sentence runs alongside the first. *Trap: D presents the argument as a replacement for the reports rather than as what happened while they were held back.*
- 109.9 A** boundaries · easy The phrase defining the petitions is a supplement to the noun before it, so a comma attaches it. *Trap: C uses a semicolon, which would need an independent clause after it.*
- 109.10 C** synthesis · hard Only this choice joins the correctness of the dissents to the fact that they were reached without the documents, which is why they repay reading. *Trap: B quotes the dissent without saying what makes the quotation remarkable.*

110 · Two Million Replies and a Wrong Answer HIS · S10 · evidence

- 110.1 C** central idea · medium The text gives the failure, states that size was not the cause, and then names the frame error and the nonresponse bias that were. *Trap: D reports the contrast case rather than the lesson the text draws from it.*
- 110.2 A** detail · easy The text names telephone directories, automobile registrations and the magazine own subscription lists as the three sources of the addresses. *Trap: B describes the quota sampling used by Gallup rather than the Digest frame.*

- 110.3 B** evidence · medium The sentence says the two errors pushed the same way and gives the size of the resulting mistake. *Trap: D states a general lesson rather than the behavior of these two errors.*
- 110.4 D** inference · medium The bias lay in who chose to reply, so adding more of the same mailing multiplies the distortion instead of diluting it. *Trap: C treats a systematic bias as though it were random error, which averaging would shrink.*
- 110.5 C** words in context · medium The sentence describes a self-selected online sample whose enthusiasm belongs to one side and is reported as though it spoke for everyone. *Trap: B hears the arithmetical word inside it rather than the political sense the sentence needs.*
- 110.6 B** structure · hard Gallup predicted the wrong answer in advance and in print, which can only be done from the design rather than from the result. *Trap: C treats a point about foresight as an introduction to the next sentence.*
- 110.7 A** cross text · hard A frame error is a defect in what the instrument can reach at all, and the beat system is exactly that: places with no reporter never enter the sample. *Trap: C names a defect of selection among events reached rather than of reach itself.*
- 110.8 D** transitions · medium The nonresponse is a second and separate defect laid on the frame error, so the sentence adds rather than follows. *Trap: C makes the low response rate a consequence of the sources of the addresses.*
- 110.9 B** boundaries · easy The phrase describing the margin is a supplement to the clause before it, so it attaches with a comma. *Trap: C uses a semicolon, which would need a full clause on the far side of it.*
- 110.10 D** synthesis · hard Only this choice sets the two samples against each other and names both defects, which is what the warning requires. *Trap: C gives the successful poll without the comparison that carries the point.*

111 · Forty Years of Beaks BIO · S01 · evidence

- 111.1 B** central idea · medium The text says what the study provides that no laboratory can is a measured rate of change in a wild population, with the agent identified and inheritance established separately. *Trap: C claims for a laboratory exactly what the text says a laboratory cannot provide.*
- 111.2 D** detail · easy The text says the exceptional wet year of 1983 reversed the conditions, small seeds became abundant, and the trait moved back. *Trap: A reverses the direction of the change that the wet year produced.*
- 111.3 A** evidence · medium The quotation ties the individual marking to following lineages and establishing heritability, which is a separate determination from the measured change in the trait. *Trap: C describes the selective episode rather than how inheritance was established.*
- 111.4 C** inference · medium The text names the narrowness of the case and says the work cannot settle whether the same rates hold elsewhere, so a general rate must come from somewhere else. *Trap: A generalizes from a case whose limits the text has just set out.*
- 111.5 B** words in context · medium The text asks about traits that are not viable to measure in the field, so the word names what can practically be done rather than what can survive. *Trap: A takes the biological sense of the word, which the phrase about measurement rules out.*
- 111.6 A** structure · hard The sentence follows the statement of what no laboratory can provide and opens the list of narrow conditions that bound the result. *Trap: C turns a statement of scope into a retraction of the finding.*
- 111.7 D** cross text · hard Text 2 names variation, heritability, differential reproduction and time as the conditions to be checked, which is the frame the island measurements fill in one by one. *Trap: A repeats a detail of method that Text 1 has already supplied.*

- 111.8 C** transitions · medium The sentence picks out which seeds failed and which birds survived within the die-off just reported, so the transition must mark a particular detail of it. *Trap: B sets the detail of the die-off against the die-off itself.*
- 111.9 A** boundaries · easy A colon introduces the catching, banding, weighing and measuring that spell out what the exhaustive method was, which a comma alone could not do. *Trap: B joins the clause about every finch to the claim with a comma alone.*
- 111.10 C** synthesis · hard Only this choice puts the measurement, the natural selective episode and the separate finding about inheritance together, which is what no laboratory supplies. *Trap: A describes the labor without saying what the measurements established.*

112 · From Linkage Maps to Sequence BIO · S02 · evidence

- 112.1 C** central idea · medium The text opens by saying three generations of method have been used and that each resolves something the previous one could not, then traces linkage maps, physical mapping and sequencing. *Trap: B states the error the text names, since a sequence gives letters and not function.*
- 112.2 A** detail · easy The text says physical mapping located genes on visible chromosomes and that this gave an actual position rather than a relative order. *Trap: D names what the linkage map itself supplied rather than what physical mapping added.*
- 112.3 B** evidence · medium Breeding experiments are the method of 1913, and the text says establishing function still requires them, so the oldest approach remains in use. *Trap: D shows sequencing correcting the old maps rather than the old method still working.*
- 112.4 D** inference · medium The text says a correlation between a variant and a trait is not an explanation of it, so sequencing leaves the question of function still open. *Trap: A commits the characteristic error of the sequencing era that the text names.*
- 112.5 C** words in context · medium The phrase names the methods of 1913, which were the first of their kind, so the word marks them as early rather than as fading or obscure. *Trap: B reverses the sense, since the text says those methods are still in use.*
- 112.6 B** structure · hard The comparison follows the statement that a correlation is not an explanation, and gives the point a familiar form by setting a word position against a meaning. *Trap: C turns a limit on what a sequence shows into a claim that it shows nothing.*
- 112.7 A** cross text · hard Text 2 shows why linked features do not assort independently, which is the failure of the ratio that the linkage map of Text 1 was built to exploit. *Trap: B repeats the logic of the linkage map that Text 1 has already given.*
- 112.8 D** transitions · medium The sentence names the next generation in a numbered series, so the transition must mark succession rather than contrast, restatement or consequence. *Trap: C reads sequencing as caused by physical mapping rather than as following it.*
- 112.9 B** boundaries · easy The clause about most of the sequence not coding for protein is independent, so the conjunction joining it to the clause about the letters takes a comma before it. *Trap: A leaves the two complete clauses about the sequence joined with no mark at all.*
- 112.10 D** synthesis · hard Only this choice joins the silence of the letters to the methods that are still needed, which is what shows why the sequence alone settles nothing. *Trap: B names the error without saying what work would correct it.*

113 · Poisons, Labels and Broken Cells BIO · S03 · evidence

- 113.1 D** central idea · medium The text says nobody has watched the process and that three tactics did most of the work, then names the limits of all three. *Trap: B contradicts the opening sentence of the text.*

- 113.2 B** detail · easy The text says the substances that accumulate are the ones immediately before the block, so the order of steps can be deduced from what piles up behind each poison. *Trap: A names what the isotope label shows rather than what the inhibitor shows.*
- 113.3 C** evidence · medium The quotation says the organelle has been cut off from everything it was connected to, which is the reason its behavior inside the cell cannot be assumed. *Trap: A describes how the organelle was obtained rather than the doubt about it.*
- 113.4 A** inference · medium Each tactic has a different weakness, so a conclusion that all three support does not rest on the flaw of any one of them. *Trap: C turns the stated limits into a verdict that the methods establish nothing.*
- 113.5 D** words in context · medium The sentence warns that a poison may attenuate several steps rather than one, so the word names a partial weakening rather than a complete block. *Trap: B makes the effect total, which is what the warning is distinguishing it from.*
- 113.6 C** structure · hard The three sentences come in the same order as the three tactics and give each one its own failure, which is what the phrase about naming the limits announces. *Trap: B reads a list of weaknesses as the abandonment of the result.*
- 113.7 B** cross text · hard Text 2 gives the yields the pathway was traced in order to count, so the indirect tactics of Text 1 appear there as a settled piece of bookkeeping. *Trap: A repeats a result that Text 1 already reports from the spinning experiments.*
- 113.8 A** transitions · medium The second sentence draws a conclusion from what accumulates behind the block, so the transition must mark a consequence rather than a contrast or an example. *Trap: C sets the conclusion against the observation it follows from.*
- 113.9 C** boundaries · easy The clause saying the pathway was established by indirect means is a complete sentence, so a period separates it from the clause about nobody watching. *Trap: A splices the clause about indirect means onto the clause about nobody watching with a comma.*
- 113.10 A** synthesis · hard Only this choice pairs the different questions the tactics answer with the fact that each can fail, which is what makes one of them insufficient. *Trap: D names the weaknesses without saying what the other tactics supplied.*

114 · Fences and Isotope Ratios BIO · S04 · evidence

- 114.1 A** central idea · medium The text says the obvious experiment is impossible, names the enclosure and the isotope ratio as ways around it, and then names what each cannot do. *Trap: B reverses the text, which says the reintroduction was performed without a control.*
- 114.2 C** detail · easy The text says the difference in willow growth separates browsing from water, soil and weather, because those act on both sets of plots equally. *Trap: A names the very thing an enclosure changes rather than what it holds constant.*
- 114.3 D** evidence · medium The quotation says the scale required is one that no funder will pay for and no regulator will allow, which is why the clean design is unavailable. *Trap: B names a limit of the enclosure rather than the reason the clean design cannot be run.*
- 114.4 B** inference · medium Without a control area there is nothing to compare the park against, and the text says that single fact is why the dispute has never been settled on the evidence. *Trap: A credits the enclosures with settling a question the text says they cannot reach.*
- 114.5 A** words in context · medium The sentence describes someone who wishes to perturb a system and watch, which is the deliberate disturbance that an experiment makes. *Trap: B takes the sense of being troubled, which a system cannot be.*

- 114.6 D** structure · hard The opening sentence says the obvious test would mean removing a predator and waiting, which is the difficulty the enclosure and the isotope ratio are introduced to get around. *Trap: B hardens a practical difficulty into the impossibility of any test.*
- 114.7 C** cross text · hard Text 2 derives the leverage of a few animals from the tenfold loss at each step, which is why the claim that Text 1 struggles to test is worth testing. *Trap: B repeats a property of the isotope method that Text 1 has already given.*
- 114.8 B** transitions · medium The sentence adds a second limitation of the same kind, so the transition must mark likeness rather than contrast, consequence or summary. *Trap: A sets the second limitation against the first, though both point the same way.*
- 114.9 D** boundaries · easy The clause about baseline ratios varying with geology is independent, so the conjunction joining it to the clause about diet takes a comma before it. *Trap: B leaves the clause about diet and the clause about geology with no mark between them.*
- 114.10 B** synthesis · hard Only this choice joins the limits of both methods to the missing control, which together are why the evidence cannot decide the question. *Trap: D names the design that cannot be run without saying what was run instead.*
- 115 · Ninety Years of Fur Returns** BIO · S05 · evidence
- 115.1 B** central idea · medium The text presents the fur returns, names the several things they depend on, and describes the corrections and the second proxy that make the cycle believable. *Trap: C reverses the definition, since a fur return is the number of pelts bought.*
- 115.2 D** detail · easy The text calls the tree ring records a second and entirely separate proxy and says their agreement is the strongest argument that the pattern is real. *Trap: B names one of the corrections rather than the independent confirmation.*
- 115.3 A** evidence · medium The quotation names two different quantities that the same figure reflects, animal numbers and trapper numbers, which is what makes the return a proxy for several things. *Trap: D names a way of checking the record rather than what the record mixes together.*
- 115.4 C** inference · medium Because the returns also move with prices, effort and post locations, a rhythm in them could come from commerce, so the pattern needs an independent check. *Trap: A settles against the cycle where the text only withholds judgment.*
- 115.5 B** words in context · medium The text says a cyclic population is permanently precarious even when its average is healthy, so the word names a standing risk rather than a small average. *Trap: C reads the word as a statement about size, though the sentence allows a healthy average.*
- 115.6 A** structure · hard The list follows the definition of a proxy and names five other influences on the same figure, which is why ecologists had to separate the signal from the record. *Trap: C blames the bookkeeping, though the text treats the accounts as sound.*
- 115.7 D** cross text · hard Text 2 derives repeated swings from a delayed response to shortage, which supplies a reason for the ten-year rhythm that Text 1 can only report. *Trap: A repeats the independent check that Text 1 has already described.*
- 115.8 C** transitions · medium The second sentence gives one of the corrections just referred to in general, so the transition must introduce an example rather than a contrast or a conclusion. *Trap: B sets a method of correcting against the work of correcting it belongs to.*
- 115.9 A** boundaries · easy A colon introduces the striking thing the series shows, which a comma alone cannot do between two independent clauses. *Trap: B joins the clause about the cycle to the announcement with a comma alone.*

115.10 C synthesis · hard Only this choice names what the returns are contaminated by and why an unrelated proxy settles the question, which is what the goal asks for. *Trap: D reports the agreement without saying why an independent measure was required.*

116 · The Rules and the Exceptions BIO · S06 · evidence

116.1 C central idea · medium The text says a postulate is useful precisely because it can fail, and then shows each of the four conditions failing in an instructive way. *Trap: D reverses the finding, since Marshall displaced stress in favor of a bacterium.*

116.2 A detail · easy The text says the second condition breaks on organisms that cannot be grown outside a living cell, which includes every virus and several bacteria. *Trap: B names what breaks the first condition rather than the second.*

116.3 B evidence · medium The quotation names the substitutes used where the original steps cannot be taken, which is what treating the conditions as a standard rather than a test means in practice. *Trap: C gives one case in which a missing step was supplied rather than the general practice.*

116.4 D inference · medium If the third condition cannot ethically be met, a claim about a human-only disease has to be supported by the substitutes the text goes on to name. *Trap: B treats an unmeetable condition as a bar to any conclusion at all.*

116.5 C words in context · medium The organism that causes diphtheria is said to be ubiquitous in some populations with no disease at all, so the word reports how widely it is found. *Trap: D reverses the sense, since the point is that the organism is found throughout.*

116.6 B structure · hard The sentence says a condition laid down in advance is useful precisely because it can fail, which is what makes the three breakages that follow informative. *Trap: C reads the usefulness of failure as a complaint about the conditions.*

116.7 A cross text · hard Text 2 moves past the question of which organism causes a disease to the numbers that govern its spread, which is the work that begins where Text 1 ends. *Trap: B repeats the first of the conditions that Text 1 has already set out.*

116.8 D transitions · medium The sentence gives one way the standard has been approached in practice, so the transition must introduce an example rather than a contrast or a summary. *Trap: C sets the volunteer case against the practice it illustrates.*

116.9 B boundaries · easy The clause about isolating the organism and growing it in pure culture is independent, so the conjunction joining it to the clause about every case takes a comma. *Trap: A leaves the clause about every case and the clause about culture with no mark between them.*

116.10 D synthesis · hard Only this choice connects the usefulness of a failure to the substitutes it calls for, which is what makes a failed condition worth keeping. *Trap: C names the replacements without saying why the original conditions remain useful.*

117 · The Same Field Since 1843 BIO · S07 · evidence

117.1 D central idea · medium The text says a long-term experiment answers questions a three-year trial cannot, names the slow processes it makes visible, and adds the value of the archive. *Trap: B contradicts the text, which says the treatments have barely changed.*

117.2 B detail · easy The text says soil and grain samples have been stored since the beginning, in sealed jars, and can be analyzed by methods that did not exist when they were collected. *Trap: D names the records kept rather than the physical material stored.*

117.3 C evidence · medium The quotation ends by saying that nobody in 1843 could have intended those measurements, which is exactly the unintended yield the claim describes. *Trap: B names a slow process the design did aim at rather than an unintended result.*

- 117.4 A** inference · medium A rare event is caught only by an experiment that happens to be running at the time, so a short trial is seldom in place when one occurs. *Trap: C reverses the comparison, since the long experiment is the one that catches them.*
- 117.5 D** words in context · medium The sentence says weed populations proliferate and then shift in composition, so the word names the growth in number that comes before the change in kind. *Trap: A takes the shift in composition that the sentence names separately.*
- 117.6 C** structure · hard The text calls the archive the second, less obvious value, and then lists measurements made from the stored jars by methods that did not yet exist. *Trap: B denies the record that the text says was kept at every harvest.*
- 117.7 B** cross text · hard Text 2 names the three leaks that drain a cropped field, which is why a strip receiving nothing holds at a low yield instead of failing altogether. *Trap: A repeats the figure that Text 1 has already given for that strip.*
- 117.8 A** transitions · medium The unchanged treatments, the fixed plots and the unbroken record are what make the claim about the longest experiment true, so the transition marks a consequence. *Trap: C sets the conclusion against the three facts that support it.*
- 117.9 C** boundaries · easy A colon introduces the list of slow processes that the sentence has just announced, which neither a comma nor a bare run of phrases can do. *Trap: A uses a comma where the list needs the mark that announces it.*
- 117.10 A** synthesis · hard Only this choice joins the later methods to the questions the design never asked, which is what makes the archive worth as much as the yield record. *Trap: C names two of those later measurements without saying what made them possible.*

118 · Three Proxies, One Picture BIO · S08 · evidence

- 118.1 A** central idea · medium The text introduces three proxies, gives each one its own weakness, and says the agreement between methods with unrelated weaknesses is the real argument. *Trap: D reverses the text, which says the error bars widen as they go back.*
- 118.2 C** detail · easy The text says the air trapped in the bubbles is a physical sample of the atmosphere of the year the snow fell, and that the carbon dioxide is measured directly. *Trap: A names the strength of the tree ring record rather than of the core.*
- 118.3 D** evidence · medium The quotation names the weakness of the calibration step itself, that a relation established in the overlap may fail outside it, which is the challenge the claim describes. *Trap: A names a weakness of one proxy rather than of the step that joins them.*
- 118.4 B** inference · medium Because the three weaknesses are unrelated, a result that all three give cannot be produced by any single one of them. *Trap: C turns independence from one flaw into freedom from all uncertainty.*
- 118.5 A** words in context · medium The core lay dormant in a freezer for twenty years before anyone thought to measure its bubbles, so the word reports that it sat unused. *Trap: B takes the literal cold of the freezer rather than the idleness the sentence reports.*
- 118.6 D** structure · hard Each sentence gives a weakness peculiar to one proxy, which is what lets the text claim later that the agreement between methods with unrelated weaknesses is the real argument. *Trap: B reads a list of weaknesses as the collapse of the reconstruction.*
- 118.7 C** cross text · hard Text 2 explains what a concentration of the gas does to the energy leaving the planet, which is the reason a record of earlier concentrations is worth reconstructing. *Trap: A repeats a strength of the ice core that Text 1 has already named.*

- 118.8 B** transitions · medium The sentence attaches a drawback to the very step just praised, so the transition must hold the two together rather than treat one as an example or a consequence. *Trap: C reads the criticism as following from the extension rather than accompanying it.*
- 118.9 D** boundaries · easy The clause saying everything earlier has to be reconstructed is a complete sentence, so a period separates it from the clause about when the record begins. *Trap: A splices the two complete sentences together with a comma.*
- 118.10 B** synthesis · hard Only this choice names the independence of the weaknesses and draws the conclusion from it, which is what makes the agreement stronger than any single record. *Trap: A gives the strength of one proxy without touching the argument from agreement.*

119 · How the Age Was Settled BIO · S09 · evidence

- 119.1 B** central idea · medium The text says a radioactive element decays at a rate nothing in geology alters, and that the remaining problem was solved by dating meteorites rather than terrestrial rock. *Trap: C states the difficulty the text names, since the surface has been melted and recycled.*
- 119.2 D** detail · easy The text says the remaining problem was that the oldest rock is younger than the Earth, since the surface has been melted, buried and recycled continuously. *Trap: C names one of the tests of a closed system rather than the reason for the choice.*
- 119.3 A** evidence · medium The quotation says that where two methods disagree the rock has been disturbed and the disagreement is itself the evidence, which is the claim exactly. *Trap: D names the other precaution geologists take rather than what a disagreement shows.*
- 119.4 C** inference · medium The method assumes that nothing relevant has entered or escaped since the sample formed, so a mineral that exchanged lead would break that assumption. *Trap: D claims agreement between chains, which the text uses as the sign of an undisturbed rock.*
- 119.5 B** words in context · medium The sentence says geologists prefer minerals physically resilient enough to survive heating, so the word names durability rather than recovery or abundance. *Trap: A takes the sense of bouncing back, which a crystal surviving heat does not do.*
- 119.6 A** structure · hard The sentence comes after the age has been settled and names the closed system as something that has to be checked, which the two tests that follow then do. *Trap: C turns a condition to be verified into a rejection of the whole method.*
- 119.7 D** cross text · hard Text 2 names the moving plates and the wearing down of ranges, which is the machinery behind the recycling that forced Text 1 to look at meteorites instead. *Trap: A repeats the difficulty Text 1 has already stated rather than explaining it.*
- 119.8 C** transitions · medium The sentence gives the second of the two tests just announced, so the transition must number it rather than set it against the first or derive it from the first. *Trap: D reads the choice of mineral as following from the comparison of decay chains.*
- 119.9 A** boundaries · easy The clause about estimates ranging over two orders of magnitude is independent, so the conjunction joining it to the clause about dating a rock takes a comma. *Trap: B leaves the clause about dating and the clause about the estimates with no mark between them.*
- 119.10 C** synthesis · hard Only this choice joins the common origin and the undisturbed history to the recycling that destroyed the terrestrial record, which is the whole argument. *Trap: D gives the shared origin without the undisturbed history that makes the clock readable.*

120 · Weighing an Ice Sheet BIO · S10 · evidence

- 120.1** C central idea · medium The text describes gravimetry and the tide gauge, says the two methods fail in opposite directions, and names that as the reason they are used together. *Trap: B reverses the text, which says a gauge measures the sea where it stands.*
- 120.2** A detail · easy The text says gauges measure the sea where they stand and the land they are bolted to may itself be rising or sinking, so each record must be corrected for ground movement. *Trap: C names a limit of gravimetry rather than a correction a gauge needs.*
- 120.3** B evidence · medium The quotation states the reason outright: the two methods fail in opposite directions, and that is why both are used. *Trap: C names a third series rather than the reason the first two are paired.*
- 120.4** D inference · medium The method gives how much mass was lost but not where the water ended up, so the figure names a quantity and leaves its destination open. *Trap: B treats a global mass figure as the local reading that a gauge supplies.*
- 120.5** C words in context · medium The sentence describes planning that aims to mitigate a rise, so the word names the work of reducing its effect rather than measuring or hastening it. *Trap: D reverses the purpose, since the planning is meant to blunt the rise.*
- 120.6** B structure · hard The paragraph opens by calling the second instrument older and simpler, and describes what it measures, which prepares the comparison of how the two methods fail. *Trap: C turns a comparison of two methods into a case against one of them.*
- 120.7** A cross text · hard Text 2 gives the warm water and the sloping bed that remove the ice, which is what the hundreds of gigatons a year in Text 1 are a measurement of. *Trap: B repeats a limit of gravimetry that Text 1 has already named.*
- 120.8** D transitions · medium The correction follows from the fact that the land may move, so the transition must mark a consequence rather than a contrast or an example. *Trap: C sets the correction against the reason the correction is needed.*
- 120.9** B boundaries · easy The clause about the gauge operating in harbors since the nineteenth century is a complete sentence, so a period separates it from the clause calling the instrument simpler. *Trap: A splices the clause about the harbors onto the clause about the simpler instrument with a comma.*
- 120.10** D synthesis · hard Only this choice names the two quantities that planning needs and says that no one series supplies both, which is why all three are used. *Trap: A gives one method and one gap without naming what the other series supply.*

121 · The Chain Back to a Standard PHY · S01 · evidence

- 121.1** B central idea · medium The text says a reading means nothing by itself and that traceability, an unbroken chain of comparisons back to a national standard, is what makes it mean something. *Trap: C denies the opening sentence of the text.*
- 121.2** D detail · easy The text says a certificate states the value of the mass and its uncertainty, and that anyone calibrating an instrument against it inherits both. *Trap: A names part of the standard rather than what the certificate reports.*
- 121.3** A evidence · medium The quotation reports the official kilogram and its copies drifting apart with no way to say which had moved, which is the weakness of an object as a definition. *Trap: D praises the replacement rather than naming the fault in the old scheme.*
- 121.4** C inference · medium Each link adds uncertainty and the user inherits what the certificate states, so a reading carries the accumulated uncertainty of everything above it. *Trap: A discards the inherited uncertainty that the same sentence hands over.*

- 121.5 B** words in context · medium The sentence speaks of calibrating an instrument against a certified reference mass, so the word names setting it by a known standard. *Trap: D promises exactness where the certificate supplies an uncertainty.*
- 121.6 A** structure · hard The cylinder sat at the top of the chain, and the text reports the official kilogram and its copies drifting apart with nobody able to say which had changed. *Trap: C discards the whole arrangement over a fault in one of its parts.*
- 121.7 D** cross text · hard Text 2 says a systematic error is found only by comparison with something independent, which is exactly what each link of the chain in Text 1 supplies. *Trap: B repeats a feature of the chain that Text 1 has already stated.*
- 121.8 C** transitions · medium The second sentence names the ways masses change that the first refers to in general, so the transition must point to particulars. *Trap: B sets the contamination against the claim that masses change.*
- 121.9 A** boundaries · easy The clause about what gives the reading meaning is independent, so the conjunction joining it to the clause about meaning nothing takes a comma. *Trap: B leaves the clause about the reading and the clause about the chain unmarked.*
- 121.10 C** synthesis · hard Only this choice joins the drift and the impossibility of attributing it to the change of definition, which is the reason the goal asks for. *Trap: D reports the drift without saying why it forced a new definition.*

122 · Weighing the World With a Wire PHY · S02 · evidence

- 122.1 C** central idea · medium The text calls the whole experiment a study in the control of error and then lists the shutters, the telescope, the timed oscillation and the reversal of the spheres. *Trap: A contradicts the text, which says he did not report the constant.*
- 122.2 A** detail · easy The text says the apparatus was enclosed in a shuttered room and Cavendish observed through a telescope from outside so that his body heat would not set up air currents. *Trap: C names a separate step of the method rather than the reason for the telescope.*
- 122.3 B** evidence · medium The quotation says published values still disagree by more than their uncertainties, which means the trouble persists in the modern apparatus as well. *Trap: D reports how long his figure stood rather than the state of the measurement now.*
- 122.4 D** inference · medium The reversal removes a bias that is the same in both positions, so one that acts in a single direction is not canceled by the procedure. *Trap: A grants the reversal a power the text limits to a constant bias.*
- 122.5 C** words in context · medium The text speaks of the empirical difficulty Cavendish faced, that the force is tiny and everything in the room pulls, so the word names a difficulty of measuring. *Trap: B reads the word as a comment on precision rather than on the kind of difficulty.*
- 122.6 B** structure · hard The sentence comes before the shutters, the telescope, the timing and the reversal, each of which is one of the controls it promises. *Trap: C denies a figure the text says stood for a century.*
- 122.7 A** cross text · hard Text 2 works with the weight pressing a tire onto a road, which is the same pull that Text 1 has to shield from air currents to detect at all. *Trap: B repeats the apparatus that Text 1 has already described.*
- 122.8 D** transitions · medium The title follows from his not treating the constant as his subject, so the transition must mark a consequence rather than a contrast or an example. *Trap: B sets the title against the omission that explains it.*
- 122.9 B** boundaries · easy The clause about the large spheres being brought up is a complete sentence, so a period separates it from the clause about the small ones. *Trap: A splices the clause about the large spheres onto the clause about the beam.*

122.10 D synthesis · hard Only this choice joins the difficulty of the measurement to the present disagreement among published figures, which together answer the goal. *Trap: C names the difficulty without reporting what it still does to the numbers.*

123 · Where to Draw the Boundary PHY · S03 · evidence

123.1 D central idea · medium The text says a figure cannot be stated until somebody chooses a boundary, gives three figures for one motor, and says none of them is wrong. *Trap: B denies the text, which says not one of those numbers is wrong.*

123.2 B detail · easy The text says its weakness is that the result depends on assumptions that are not themselves measurable, such as how long the product lasts. *Trap: A denies the reach that the definition of the method claims.*

123.3 C evidence · medium The quotation says a difference that looks negligible in a summary can turn out to be the whole argument once the assumptions are printed. *Trap: A shows the boundary changing a number rather than a small choice deciding an argument.*

123.4 A inference · medium The debt is repaid over a number of miles that depends on everything inside the boundary, so a comparison means nothing until that distance is declared. *Trap: C denies the dependence on the boundary that the whole text establishes.*

123.5 D words in context · medium The text says a difference that looks negligible in the summary can turn out to be the whole argument, so the word names one that appears too small to matter. *Trap: B reads the word as a deliberate omission rather than an apparent smallness.*

123.6 C structure · hard The terminals, the station fence and the coal mine each give a different number for the same motor doing the same work, and the text says not one is wrong. *Trap: B denies the measurement that each of the three boundaries supplies.*

123.7 B cross text · hard Text 2 shows the efficiencies of the stages multiplying rather than adding, which is why the figure falls so sharply as the boundary widens in Text 1. *Trap: A repeats the comparison Text 1 draws between two of its own boundaries.*

123.8 A transitions · medium The second sentence says what the three figures do in place of being wrong, so the transition must mark a substitution rather than a likeness. *Trap: C treats the general account of the figures as one example among others.*

123.9 C boundaries · easy The clause about the coal mine is a complete sentence, so a period separates it from the clause about the power station fence. *Trap: A splices the clause about the mine onto the clause about the fence with a comma.*

123.10 A synthesis · hard Only this choice names the unmeasurable assumptions and the freedom two teams have in setting them, which is what opens the gap the goal asks about. *Trap: C names the dependence without saying which assumptions two teams could differ over.*

124 · A Paddle Wheel and a Thermometer PHY · S04 · evidence

124.1 A central idea · medium The text calls the conception absurdly simple, says the difficulty was entirely in the precision, and reports that the work left one quantity where there had been two. *Trap: B contradicts the text, which says the rise was a fraction of a degree.*

124.2 C detail · easy The text says he repeated the experiment with mercury instead of water, by forcing water through tubes, and by compressing air, and obtained close figures by three unrelated routes. *Trap: B names parts of the original apparatus rather than the later routes.*

124.3 D evidence · medium The quotation says that afterward there was one quantity in one unit with one bookkeeping rule, which is the change in counting that the claim names. *Trap: C reports how accurate the figure was rather than what it altered.*

- 124.4 B** inference · medium The older account needed a store of heat to be pressed out of something, and stirring water supplies no such store, so the account has nothing left to draw on. *Trap: A reads the stirred water as evidence for the view it undermines.*
- 124.5 A** words in context · medium Heat produced by rubbing had to be attributed to something being squeezed out, so the word names assigning it a source. *Trap: B takes the sense used of an author rather than of a cause.*
- 124.6 D** structure · hard The paragraph reports that heat had been treated as a substance and that afterward there was one quantity, energy, with a single bookkeeping rule. *Trap: C names the apparatus rather than the change in the account of heat.*
- 124.7 C** cross text · hard Text 2 has rising air cooling because it does work on the air around it, which is the same equivalence that Text 1 measures running the other way. *Trap: A repeats the conclusion Text 1 sets out to establish.*
- 124.8 B** transitions · medium The special thermometers follow from the smallness of the rise, so the transition must mark a consequence rather than a contrast or a concession. *Trap: A sets the thermometers against the smallness that called for them.*
- 124.9 D** boundaries · easy The clause about Joule measuring the rise is independent, so the conjunction joining it to the clause about the warming takes a comma before it. *Trap: B leaves the clause about the warming and the clause about the measuring unmarked.*
- 124.10 B** synthesis · hard Only this choice says the agreement among unrelated arrangements is what frees the figure from the particular apparatus that produced it. *Trap: C lists two of the routes without saying what their agreement establishes.*

125 · Fifty Hertz as a Signal PHY · S05 · evidence

- 125.1 B** central idea · medium The text says a grid can store nothing worth mentioning, that the frequency falls when demand exceeds supply, and that the number is a continuous readout of the balance. *Trap: C denies the opening sentence about what a grid can store.*
- 125.2 D** detail · easy The text says the rate at which the frequency moves is governed by inertia, the stored rotational energy of the large spinning machines. *Trap: A names what a control room acts on rather than what sets the rate.*
- 125.3 A** evidence · medium The quotation says a measurement kept for the sake of the lights doubles as a clock that nobody designed, which is the unintended use the claim names. *Trap: D reports an objection to that use rather than the use itself.*
- 125.4 C** inference · medium If the frequency can move faster than an operator can respond, the correction has to be made by something that does not wait for a person. *Trap: B turns a need for faster reserves into an impossibility.*
- 125.5 B** words in context · medium Fast automatic reserves are said to have become a salient part of system design, so the word names a part that now stands out as central. *Trap: D reverses the sense, since the reserves have come to the front of the design.*
- 125.6 A** structure · hard The paragraph follows the account of balancing a grid and describes dating an audio file against the archive, which is a use the measurement was not kept for. *Trap: C states the objection that only the closing sentence raises.*
- 125.7 D** cross text · hard Text 2 accounts for the losses in the lines that carry the power, which is the part of the system that the frequency in Text 1 says nothing about. *Trap: A repeats the central fact Text 1 is built on rather than adding to it.*
- 125.8 C** transitions · medium The second sentence sets the electronic grid against the forgiving one just described, so the transition must mark the opposition between them. *Trap: A treats the two kinds of grid as behaving alike.*
- 125.9 A** boundaries · easy The clause about generation matching consumption is independent, so the conjunction joining it to the clause about storage takes a comma before it. *Trap: B leaves the clause about storage and the clause about generation unmarked.*

125.10 C synthesis · hard Only this choice runs from the missing stored motion to the speed of the change and on to the kind of reserve a design now needs. *Trap: B names the governing quantity without saying what a change in it requires.*

126 · From a Toothed Wheel to a Definition PHY · S06 · evidence

126.1 C central idea · medium The text traces the measurement from Romer to Michelson and then says the problem was dissolved in 1983 by making the speed exact and the meter depend on it. *Trap: B denies the text, which says the question of measuring it does not arise.*

126.2 A detail · easy The text says the limit was no longer the timing but the distance, because the length of a long baseline could not be measured as precisely as the time. *Trap: B names the thing the text says had stopped being the limit.*

126.3 B evidence · medium The quotation says the problem was dissolved rather than solved, which is exactly the difference between a decision and a measurement. *Trap: C describes what laboratories do now rather than how the trouble was removed.*

126.4 D inference · medium Once the speed is exact by definition, a length is obtained by timing light, so improving a length means improving the timing rather than the speed. *Trap: A tries to refine a quantity the text says is now fixed by definition.*

126.5 C words in context · medium Romer concluded that light has a finite speed because the eclipses ran late, so the word marks the speed as limited rather than instantaneous. *Trap: D reads the word as a claim about measurability, which the text says came later.*

126.6 B structure · hard The sentence names the baseline as the new bottleneck, and the next sentence says that is why the problem was dissolved rather than solved. *Trap: C denies measurements the text traces across three centuries.*

126.7 A cross text · hard Text 2 explains what a beam does at a surface and at an edge, which is the behavior of the light that Text 1 only times from one end of its path to the other. *Trap: B repeats the method that Text 1 has already described.*

126.8 D transitions · medium The dissolving of the problem follows from the baseline being the weaker measurement, so the transition must mark a consequence rather than a contrast. *Trap: B sets the new definition against the difficulty that produced it.*

126.9 B boundaries · easy The clause about Romer arguing it from the eclipses is independent, so the conjunction joining it to the clause about the time takes a comma. *Trap: A leaves the clause about the time and the clause about Romer unmarked.*

126.10 D synthesis · hard Only this choice joins the failing baseline to the decision that made the speed exact, which is why the measurement is no longer attempted. *Trap: B names the bottleneck without saying what was done about it.*

127 · Gaps That Were Filled PHY · S07 · evidence

127.1 D central idea · medium The text says the holes and the predictions are what made the table more than a filing system, and that a table able to be wrong does different work. *Trap: B states the thing the text contrasts his table with.*

127.2 B detail · easy The text says he gave estimates for atomic weight, density, the formula of the oxide and the appearance of the metal. *Trap: A names the ordering principle that only arrived decades later.*

127.3 C evidence · medium The quotation sets a table that can be wrong against one that merely files, which is what being capable of a test amounts to. *Trap: D shows the table producing wrong claims rather than the capacity that makes testing possible.*

127.4 A inference · medium Each hole came with estimated properties, so the gap carried a statement that an isolated element could either match or fail to match. *Trap: C reads the holes as a failure of the arrangement that produced them.*

- 127.5 D** words in context · medium The text says electrons occupy discrete shells with room for fixed numbers, so the word names shells that are separate and can be counted. *Trap: A takes the similar-sounding word about tact rather than the one about separateness.*
- 127.6 C** structure · hard The paragraph follows the three filled gaps and names the misplaced elements, the missing explanation and the predictions that came to nothing. *Trap: B discards the predictions that the preceding paragraph reports as confirmed.*
- 127.7 B** cross text · hard Text 2 works with the reactions whose similarities put the elements in columns, which is the behavior the table in Text 1 arranges without explaining. *Trap: A repeats the principle of the arrangement as Text 1 already states it.*
- 127.8 A** transitions · medium The second sentence reports what actually happened in place of the mere filing system just entertained, so the transition must mark that turn. *Trap: C reads the holes as following from the possibility just raised.*
- 127.9 C** boundaries · easy The clause about predicting the properties is a complete sentence, so a period separates it from the clause about the filing clerk. *Trap: A splices the clause about the prediction onto the clause about the clerk with a comma.*
- 127.10 A** synthesis · hard Only this choice names the gaps, the predicted properties and the possibility of refutation together, which is what lifts the table above a filing system. *Trap: C gives one confirmation without the structure that made it a test.*

128 · How a Safety Factor Is Chosen PHY · S08 · evidence

- 128.1 A** central idea · medium The text explains how the factor is built and then says its inherent limit is that it handles only the hazards that have been listed. *Trap: B contradicts the text, which says engineers do not design to the average.*
- 128.2 C** detail · easy The text says those failures were not corrected by raising the factor but by adding the missing load case and the missing material property to the codes. *Trap: A names the remedy the text explicitly says was not the one used.*
- 128.3 D** evidence · medium The quotation says a factor of two gives no protection against an unconsidered load, which is the blindness the claim describes. *Trap: C reports when codes change rather than what a margin cannot do.*
- 128.4 B** inference · medium The text says the old factor was adequate once the missing case and property were added, so the shortfall lay in the list rather than in the margin. *Trap: A blames the size of the factor, which the text says needed no change.*
- 128.5 A** words in context · medium The text calls it the inherent limit of the method, so the word marks the limit as belonging to the method itself rather than to a particular code. *Trap: D reverses the sense, since the limit is not something a revision takes away.*
- 128.6 D** structure · hard The text says the factor is not a single allowance for ignorance and then names variability, the laboratory specimen, the loads, workmanship and consequences. *Trap: B denies the coverage that the list is there to set out.*
- 128.7 C** cross text · hard Text 2 distinguishes a material that sags and warns from one that shatters, which decides what the margin in Text 1 is actually buying. *Trap: A repeats one item from the list that Text 1 has already given.*
- 128.8 B** transitions · medium The second sentence says what the factor does cover in place of the single allowance just denied, so the transition must mark a substitution. *Trap: D treats the whole list as one example among others.*
- 128.9 D** boundaries · easy The clause about a hundred cubes breaking over a range is independent, so the conjunction joining it to the clause about one strength takes a comma. *Trap: B leaves the clause about one strength and the clause about the cubes unmarked.*
- 128.10 B** synthesis · hard Only this choice joins the limit of a margin to the role a failure plays in completing the list, which is the sequence the goal asks about. *Trap: C names the limit without saying how the missing item comes to light.*

129 · What Carbon Dating Can Date PHY · S09 · evidence

- 129.1 B** central idea · medium The text explains the decay, then says four conditions have to hold before a date means anything, and works through each of them in turn. *Trap: C reverses the example, since the method dates the death of the tree.*
- 129.2 D** detail · easy The text says the sample must not be contaminated and that a trace of modern carbon makes an old sample look much younger. *Trap: B reverses the direction of the error that contamination produces.*
- 129.3 A** evidence · medium The quotation says the curve doubles back in some periods, so one measurement can answer to two or three possible calendar ranges. *Trap: B describes how the curve is built rather than what it does to a single reading.*
- 129.4 C** inference · medium The clock stops when the tree dies, so a beam cut long before the house was built carries the earlier date rather than the later one. *Trap: A credits the method with a date it cannot reach from a reused timber.*
- 129.5 B** words in context · medium The text says an anomalous result is more often a contaminated sample than a surprise, so the word names a figure that does not fit the rest. *Trap: D fixes the direction, though such a result could fall either way.*
- 129.6 A** structure · hard The text says four conditions have to hold before a date means anything and then names the organic sample, the contamination, the age limit and the atmosphere. *Trap: C turns a list of conditions into a case against the method.*
- 129.7 D** cross text · hard Text 2 treats decay inside living tissue as a hazard rather than a clock, which is the other thing the same process does. *Trap: B repeats the contamination condition that Text 1 has already set out.*
- 129.8 C** transitions · medium The sentence reports how the difficulty just named is dealt with, so the transition must mark the turn to practice rather than a contrast. *Trap: B sets the curve against the problem it is used to solve.*
- 129.9 A** boundaries · easy The clause about the intake stopping at death is a complete sentence, so a period separates it from the clause about the living organism. *Trap: B splices the clause about death onto the clause about the living organism.*
- 129.10 C** synthesis · hard Only this choice joins the shape of the curve to the several ranges one reading allows, which is what a bare figure conceals. *Trap: B names the conversion without saying why it yields more than one answer.*

130 · A Rule Found in a Pile of Plates PHY · S10 · evidence

- 130.1 C** central idea · medium The text says she worked through thousands of plates, that the common distance of the cloud is what made the relation visible there, and that it became the most useful tool for distance. *Trap: B denies the point that the relation was visible there and nowhere else.*
- 130.2 A** detail · easy The text says all the stars lay in the same cloud and so at roughly the same distance, which turned differences in apparent brightness into differences in real output. *Trap: C invents a property of the periods that the text does not report.*
- 130.3 B** evidence · medium The quotation runs the whole procedure, from timing a cycle to the true brightness and on to the distance, which is the conversion the claim names. *Trap: C states the relation without the steps that turn it into a distance.*
- 130.4 D** inference · medium The common distance of the cloud is what let apparent brightness stand for real output, and a survey of the whole sky would lose that condition. *Trap: A reverses the advantage the single cloud is said to supply.*
- 130.5 C** words in context · medium Different calibrations of the law are said to converge within a few percent, so the word names figures coming close to one another in value. *Trap: D reverses the sense, since the calibrations are drawing together.*

- 130.6 B** structure · hard The sentence says the common distance turned apparent brightness into real output, and the next sentence says that is what made the relation visible there and nowhere else. *Trap: C confines the relation itself, though the text calls it the most useful tool anywhere.*
- 130.7 A** cross text · hard Text 2 puts standard candles on a rung above the geometry that calibrates them, which is where the relation of Text 1 does its work. *Trap: C repeats the procedure that Text 1 has already described.*
- 130.8 D** transitions · medium The sentence moves from the first noticing to the exact statement, so the transition must mark the passage of time rather than a contrast. *Trap: C treats the precise statement as another way of putting the first observation.*
- 130.9 B** boundaries · easy The clause about what the women were called is independent, so the conjunction joining it to the clause about the hourly pay takes a comma. *Trap: A leaves the clause about the pay and the clause about the name unmarked.*
- 130.10 D** synthesis · hard Only this choice joins the shared distance to the reading of apparent brightness as real output, which is the condition the place supplied. *Trap: B names the shared cloud without saying what the shared distance makes possible.*
- 131 · Proving a Narrator Unreliable** HUM · S01 · evidence
- 131.1 B** central idea · medium The text says the claim has to be argued from the page, names three kinds of evidence, and ranks them from the weakest to the strongest. *Trap: C takes the kind of evidence the text calls a response rather than a proof.*
- 131.2 D** detail · easy The text calls the third and strongest kind a discrepancy between what the narrator reports and how other characters respond. *Trap: B names the second kind, internal contradiction, rather than the strongest.*
- 131.3 A** evidence · medium The quotation calls the errors too systematic to be accidents of composition, which is the deliberateness the claim asserts. *Trap: B defines the category the errors belong to without calling them deliberate.*
- 131.4 C** inference · medium The only apparent confirmation is said to come through the governess herself, so both readings are built on the same single source. *Trap: A supplies a witness the text says James withheld.*
- 131.5 B** words in context · medium The sentence applies the word to a text whose question the honest conclusion calls undecidable on the available evidence. *Trap: C narrows the word to a cipher rather than an unsettled meaning.*
- 131.6 A** structure · hard The last sentence calls the record of revision a useful document about how such arguments are made, turning changes of mind into material. *Trap: D settles a question the text calls undecidable.*
- 131.7 D** cross text · hard Text 2 says a first-person narrator reports only what one character perceives, remembers or guesses, and that deception works easily inside such a mind. *Trap: C names an effect of a position the first person does not occupy.*
- 131.8 C** transitions · medium The second sentence moves from the first kind of evidence to the second, so the transition must mark a step in the ranking. *Trap: A sets the second kind against the first when the text is listing them in order.*
- 131.9 A** boundaries · easy The clause saying they differ in strength is independent, so the conjunction joining it to the clause about the three kinds takes a comma. *Trap: B runs the clause about the three kinds straight into the clause about their strength.*
- 131.10 C** synthesis · hard Only this choice joins the deliberate withholding to the conclusion the text calls honest, which is that the question cannot be decided. *Trap: B names the withholding without saying what follows from it.*

132 · The Chapter Austen Canceled HUM · S02 · evidence

- 132.1 C** central idea · medium The text says having both chapters lets a reader see a decision being made, and that what critics usually assert about writers can here be shown. *Trap: D claims an intention the text says no later statement supplies.*
- 132.2 A** detail · easy The text says the canceled chapter handles the same reconciliation through an awkward interview arranged by a third party. *Trap: B gives the method of the published version instead.*
- 132.3 B** evidence · medium The quotation names the change in the man himself, from one who explains himself to one who is overheard. *Trap: D says the comparison is possible without saying what it shows.*
- 132.4 D** inference · medium The text limits what the manuscript establishes to the existence and rejection of the alternative, and says no later statement of intention survives. *Trap: B calls for a document the text says does not exist.*
- 132.5 C** words in context · medium The word describes a writer whom the draft shows holding both versions, with the draft recording the division but not its reason. *Trap: D gives the settled state that a surviving alternative rules out.*
- 132.6 B** structure · hard The sentence is followed by the undated pages, the inferred order, the absent statement of intention and the family editing, which are the gaps it announces. *Trap: D discards a comparison the text goes on to call firm.*
- 132.7 A** cross text · hard Text 2 calls a motive given by exposition settled and inert and one built from action and silence open, which is the exchange the revision makes. *Trap: C moves the revision toward the direct statement it replaces.*
- 132.8 D** transitions · medium The second sentence sets the revision against the draft it replaced, so the transition must mark a contrast. *Trap: C treats the enacted scene as a restatement of the reported one.*
- 132.9 B** boundaries · easy The clause about the method is independent, so the conjunction joining it to the clause about the emotional content takes a comma. *Trap: A runs the clause about the content straight into the clause about the method.*
- 132.10 D** synthesis · hard Only this choice joins the surviving alternative to the difference between a documented choice and the usual assertion about a writer. *Trap: C names what critics usually do without saying what the pages add.*

133 · Counting the Images HUM · S03 · evidence

- 133.1 D** central idea · medium The text says counting establishes presence, distribution and comparison but cannot establish aesthetic effect, and that the two methods have to be used together. *Trap: C replaces reading with counting when the text pairs them.*
- 133.2 B** detail · easy The text says some results confirmed what readers had felt, and that Hamlet does carry an unusual density of images of sickness and rot. *Trap: D gives the criticism made of the categories rather than a confirmed result.*
- 133.3 C** evidence · medium The quotation grants the count its forty occurrences and denies it any showing of how those occurrences work on a reader. *Trap: B gives what an index can establish rather than what it leaves open.*
- 133.4 A** inference · medium Counting is said to establish presence, distribution and comparison and to be unable to show aesthetic effect, which is what weight in a scene is. *Trap: B treats a confirmed density as a demonstration of effect.*
- 133.5 D** words in context · medium The text glosses the term in the next sentences as whether the occurrences work on a reader and whether a placed image carries more weight. *Trap: B attaches the word to the counting it is set against.*
- 133.6 C** structure · hard The sixteen years of family labor sit between the medieval concordances and the statement that the computer made the method cheap. *Trap: D prefers the hand method, which the text only dates.*

- 133.7 B** cross text · hard Text 2 says a vivid image makes the reader supply the detail, so that four words do the work of a paragraph. *Trap: C offers the counting that Text 1 has already set aside.*
- 133.8 A** transitions · medium The second sentence sets the corrected impressions against the confirmed ones, so the transition must mark a contrast. *Trap: B makes the corrections follow from the confirmations.*
- 133.9 C** boundaries · easy The clause saying that is the current practice is independent, so the conjunction joining it to the clause about the two methods takes a comma. *Trap: A runs the clause about the methods straight into the clause about the practice.*
- 133.10 A** synthesis · hard Only this choice joins the cheapness to the division of labor, in which the count finds the place and the reading says what is there. *Trap: C gives the reason without saying what the counting is for.*

134 · What Scansion Can Prove HUM · S04 · evidence

- 134.1 A** central idea · medium The text says the counting establishes the order of the plays, lists the limits strictly, and ends by saying what scansion buys is a chronology. *Trap: C grants the method a discrimination the text says it cannot make.*
- 134.2 C** detail · easy The text says the proportion of feminine endings rises from under ten percent in the early plays to over thirty in the late ones. *Trap: A stops the rise well short of the figure the text gives.*
- 134.3 D** evidence · medium The quotation says the order agrees with external evidence wherever such evidence exists and calls that agreement the test of the method. *Trap: C names a limit of the method rather than the check on it.*
- 134.4 B** inference · medium A late revision carries the late features the counting measures, so the curve puts the play where its style sits rather than where its writing began. *Trap: A puts the play where it was written rather than where its style falls.*
- 134.5 A** words in context · medium The word is set against an emphatic early style in a sentence that refuses to rank them, so it names restraint rather than a fault. *Trap: D gives the opposite quality, the one the sentence contrasts it with.*
- 134.6 D** structure · hard The sentence is followed by the dating of a style rather than a manuscript, the inability to separate collaboration from development, and the silence on quality. *Trap: C discards a chronology the text goes on to call what scansion buys.*
- 134.7 C** cross text · hard Text 2 says enjambment runs a sentence past the end of a line without a pause, setting the grammar against the rhythm and producing a small suspension. *Trap: A describes the caesura, which is the opposite device.*
- 134.8 B** transitions · medium The second sentence sets a solid result against the appearance of inconsequence, so the transition must mark a concession. *Trap: A makes the result follow from the low opinion of the skill.*
- 134.9 D** boundaries · easy The clause about the play revised late is independent, so the conjunction joining it to the clause about dating a style takes a comma. *Trap: A runs the clause about the style straight into the clause about the revision.*
- 134.10 B** synthesis · hard Only this choice joins the counting to the chronology and the chronology to the arguments the text says depend on it. *Trap: D names the chronology without saying what rests on it.*

135 · What the Promptbook Records HUM · S05 · evidence

- 135.1 B** central idea · medium The text calls the promptbook the most useful document, lists its gaps, and concludes that the record is good enough to establish what was done and almost never how it felt. *Trap: C trusts documents the text calls unreliable in the ordinary ways.*

- 135.2 D** detail · easy The text says photographs from the later nineteenth century show poses rather than performances, because the exposures were too long for movement. *Trap: B names something the promptbook records rather than the photographs.*
- 135.3 A** evidence · medium The quotation reports a third of the lines removed, scenes rearranged and endings changed as routine, which puts the performance at a distance from the print. *Trap: B names what a promptbook describes rather than the gap between print and stage.*
- 135.4 C** inference · medium The promptbook is said to carry no notation for delivery, and reviews, letters and memoirs are the documents the text offers to fill some of that space. *Trap: A returns to the document the text says is silent on delivery.*
- 135.5 B** words in context · medium The word marks the printed text a reader is likely to know, against the shorter versions the promptbooks show were actually performed. *Trap: C gives the acting version the canonical text is contrasted with.*
- 135.6 A** structure · hard The sentence follows the account of a third of the lines removed and turns that proportion into an hour of performance. *Trap: D denies a restoration the previous sentence records.*
- 135.7 D** cross text · hard Text 2 says cutting an aside, or lighting a soliloquy as private thought, changes the relationship the line was written for. *Trap: C names a condition of the writing rather than a cost of removing a line.*
- 135.8 C** transitions · medium The second sentence adds a second gap to the one just named, so the transition must mark an addition rather than a contrast. *Trap: B makes the silence on delivery follow from the planning.*
- 135.9 A** boundaries · easy The clause saying a performance is an event is independent, so the conjunction joining it to the clause about the printed play takes a comma. *Trap: B runs the clause about the text straight into the clause about the event.*
- 135.10 C** synthesis · hard Only this choice states both halves of the reach: the staging the documents fix and the delivery for which no notation exists. *Trap: A lists what one document carries without saying what the record leaves out.*

136 · Tracing Where a Form Began HUM · S06 · evidence

- 136.1 C** central idea · medium The text tests the usual account against bibliography, names survival bias as the hazard throughout, and ends by calling any such history a history of surviving instances. *Trap: D takes the record for the thing, which the text says historians refuse to do.*
- 136.2 A** detail · easy The text says circulating library catalogues from the eighteenth century show what was actually borrowed, a different question from what was printed. *Trap: C names what newspaper digitization has done rather than what the catalogues show.*
- 136.3 B** evidence · medium The quotation names the pattern of a first instance, a gap and a rush of imitation and says it can be seen in the dates. *Trap: D reports a correction to the dates rather than the pattern they show.*
- 136.4 D** inference · medium The text draws exactly this conclusion, that such a claim means the device first appears in the novels we still have. *Trap: A claims a completeness the record is said to lack.*
- 136.5 C** words in context · medium The word describes the imitations that follow the first instance within twenty years, so it names work taken from a model. *Trap: B treats the word as a verdict when the text uses it to mark descent.*
- 136.6 B** structure · hard The sentence follows the account the sources support and introduces the badly surviving cheap print that limits what the record can show. *Trap: D discards a method the text goes on to use with a stated correction.*

- 136.7 A** cross text · hard Text 2 says a convention tells a reader how to read and creates the possibility of significant deviation, and that every successful breach becomes the next convention. *Trap: B gives one later codification rather than what the imitations established.*
- 136.8 D** transitions · medium The second sentence sets a standing hazard against the support the sources give, so the transition must mark a concession. *Trap: A makes the bias follow from the support the sources provide.*
- 136.9 B** boundaries · easy The clause saying trade records survive is independent, so the conjunction joining it to the clause about the catalogues takes a comma. *Trap: A runs the clause about the catalogues straight into the clause about trade records.*
- 136.10 D** synthesis · hard Only this choice joins the bias in what survives to the standing provisionality of any claim about a first appearance. *Trap: C gives one revision without saying why more should be expected.*

137 · Under the Varnish HUM · S07 · evidence

- 137.1 D** central idea · medium The text says each technique supports a different kind of claim, then says they can show date and consistency of materials and cannot show that a particular hand made a brushstroke. *Trap: C gives the laboratory the one finding the text says it cannot deliver.*
- 137.2 B** detail · easy The text says dendrochronology dates a wooden panel by matching its ring pattern against a regional record and gives the earliest year it could have been painted on. *Trap: C names what pigment analysis identifies rather than what the rings give.*
- 137.3 C** evidence · medium The quotation names a date for one pigment, draws the consequence for any picture containing it, and says a great many attributions were settled by that fact. *Trap: B names the technique that attributes rather than the fact that settles a date.*
- 137.4 A** inference · medium The forger who satisfies all three techniques shows that passing them leaves the question of the hand unsettled. *Trap: B treats consistency with a date as proof of authorship.*
- 137.5 D** words in context · medium The word marks an attribution that rests on regard for a name rather than on any of the three kinds of physical evidence. *Trap: A gives the measured quality the sentence says such an attribution lacks.*
- 137.6 C** structure · hard The sentence follows the statement that the methods cannot show which hand made a brushstroke and gives the case in which all three are defeated at once. *Trap: D reverses the point of a sentence about methods being beaten.*
- 137.7 B** cross text · hard Text 2 says conservators can sometimes show that an artist moved a figure to improve the order in which the picture is read. *Trap: D names a different thing a laboratory finding can establish.*
- 137.8 A** transitions · medium The second sentence sets a limit against what the techniques can do, so the transition must mark a concession rather than a consequence. *Trap: B makes the limit follow from the findings the techniques deliver.*
- 137.9 C** boundaries · easy The clause saying physical objects can be examined is independent, so the conjunction joining it to the clause about the painting takes a comma. *Trap: A runs the clause about the painting straight into the clause about examination.*
- 137.10 A** synthesis · hard Only this choice joins the publication of the evidence to the revisions the text says the reports make possible against themselves. *Trap: C counts the reversals without saying what the reports contribute to them.*

138 · Eight Thousand Pages of Sketches HUM · S08 · evidence

- 138.1** A central idea · medium The text shows melodies worked for months against the idea of whole inspiration, then names the limits: a sketch shows what was tried, dating is not always decisive, and none of it records sound. *Trap: C credits the papers with the sound the text says they do not record.*
- 138.2** C detail · easy The text says a theme from the Ninth Symphony appears in one of the notebooks fully twelve years before the work itself was written. *Trap: B stretches the gap well past the figure the text gives.*
- 138.3** D evidence · medium The quotation shows the melodies arriving in rough forms and then being worked for months, which is the opposite of arriving whole. *Trap: A counts the pages without saying what they show about composition.*
- 138.4** B inference · medium The text states the limit directly: a sketch records the trial and not the ground on which it was set aside. *Trap: C sends the scholar to a document that settles a different question.*
- 138.5** A words in context · medium The word is set against a brisk tempo in the next century, so it names a pace heavy enough to sound like mourning. *Trap: C gives the tempo the sentence contrasts it with.*
- 138.6** D structure · hard The sentence follows the editor choosing between score and printed edition and reports an argument the text calls unresolved. *Trap: C settles a tempo the sentence says is still argued.*
- 138.7** C cross text · hard Text 2 says almost everything is management of the distance and the delay between leaving the home note and returning, and that the question is whether a passage has paid. *Trap: B names one piece of the machinery rather than the timing a performer controls.*
- 138.8** B transitions · medium The second sentence gives what follows from the two documents disagreeing, so the transition must mark a consequence. *Trap: A sets the editorial choice against the disagreement that forces it.*
- 138.9** D boundaries · easy The clause about the eight thousand surviving pages is independent, so the conjunction joining it to the clause about the kept papers takes a comma. *Trap: A runs the clause about the papers straight into the clause about their number.*
- 138.10** B synthesis · hard Only this choice joins the unwritten and lost conventions to the change in pace that the notes themselves do not record. *Trap: C states the change without saying what allowed it.*

139 · Booth Walked Every Street HUM · S09 · evidence

- 139.1** B central idea · medium The text sets seventeen volumes of description against sensors and transport cards and says in so many words that the modern city is measured better and described worse. *Trap: D makes the sensors a replacement for a record the text says they lack.*
- 139.2** D detail · easy The text says the maps colored street plans house by house with seven classes, from the wealthy to the lowest class Booth labeled. *Trap: A gives the number of volumes of notes rather than of classes.*
- 139.3** A evidence · medium The quotation names the mixing of income with moral judgment and the middle-class observers walking streets they did not live in. *Trap: C reports how well the classifications still hold rather than what they assumed.*
- 139.4** C inference · medium The modern series are said to be silent outside their one measure, and the notebooks are the only record the text credits with such remarks. *Trap: A asks a counter for a judgment the text says it cannot carry.*
- 139.5** B words in context · medium The word appears among an investigator remarks about how a street looks, beside quiet and respectable, and describes its decoration. *Trap: C gives the opposite of the fanciful decoration the word records.*

- 139.6 A** structure · hard The sentence saying measurement today is cheaper, narrower and continuous introduces the sensors and cards that the notebooks are then set against. *Trap: D retires maps the text says historians still use.*
- 139.7 D** cross text · hard Text 2 counts active frontage as doorways and windows in use and reports that doorways per hundred meters predicts street life. *Trap: A asks for the judgment the text says only the notebooks carry.*
- 139.8 C** transitions · medium The second sentence gives one of the modern series as an instance of the new measurement, so the transition must mark an example. *Trap: B makes the sensors follow from the description rather than illustrate it.*
- 139.9 A** boundaries · easy The clause saying they carry their period inside them is independent, so the conjunction joining it to the clause about the first measurement takes a comma. *Trap: B runs the clause about the measurement straight into the clause about the period.*
- 139.10 C** synthesis · hard Only this choice says what each record answers and draws the conclusion that an account of a street requires the pair. *Trap: B names the trade without saying what a historian does about it.*
- 140 · Reputations That Moved** HUM · S10 · evidence
- 140.1 C** central idea · medium The text says what the record establishes is that standards are historical objects with datable origins, which rules out the claim that a standard is simply self-evident. *Trap: D draws the inference the text expressly refuses.*
- 140.2 A** detail · easy The text says that in both cases the texts had not changed and the criteria had. *Trap: B reverses the two terms the text sets side by side.*
- 140.3 B** evidence · medium The quotation denies both inferences in turn: that a change shows one version wrong, and that a rise shows the critics right. *Trap: D names the burden on one kind of claim rather than the limit on inference.*
- 140.4 D** inference · medium The text says such a claim is made impossible by the datable origins and that anyone making it has to explain the record of its absence. *Trap: A enlists a record the text says tells against the claim.*
- 140.5 C** words in context · medium The word names what raised Donne from low regard after 1920, so it marks a piece of writing that argued a case hard. *Trap: A makes the word neutral when the text credits it with moving a reputation.*
- 140.6 B** structure · hard The misspelling sits beside the novel being out of print and gives the size of the obscurity that the campaign of the 1920s reversed. *Trap: D supplies a verdict the text does not offer.*
- 140.7 A** cross text · hard Text 2 names the criterion as the standard a work is judged against and the part most often left out, which is what Text 1 says changed. *Trap: B names a different one of the three parts Text 2 sets out.*
- 140.8 D** transitions · medium The second sentence sets what did change against what did not, so the transition must mark a contrast. *Trap: C treats the change in criteria as a restatement of the unchanged texts.*
- 140.9 B** boundaries · easy The clause about the confirmed stories is independent, so the conjunction joining it to the clause about the databases takes a comma. *Trap: A runs the clause about the databases straight into the clause about the confirmations.*
- 140.10 D** synthesis · hard Only this choice joins the unchanged texts and the moving criteria to the conclusion that the record dates the standards. *Trap: C names the object of the evidence without saying what it establishes.*

141 · How a Modern Poll Is Built SOC · S01 · evidence

- 141.1 B** central idea · medium The text sets out four stages and says the reported margin describes only the first two, making no allowance for the frame, the nonresponse or the wording. *Trap: C credits the margin with coverage the text denies it.*
- 141.2 D** detail · easy The text says the aim of the second stage is a probability sample, meaning one in which every member of the population has a known chance of being chosen. *Trap: B gives the third stage, weighting, rather than the second.*
- 141.3 A** evidence · medium The quotation names weighting as the place judgment enters and gives the characteristic whose weight firms had underrated. *Trap: C describes what the known chance licenses rather than where judgment is exercised.*
- 141.4 C** inference · medium The margin is said to assume a right frame, so a frame that misses people leaves an error the reported figure does not count. *Trap: A expects the margin to grow when the text says it takes no account of the fault.*
- 141.5 B** words in context · medium A methodical firm is said to publish all four stages and its weighting targets, so the word names a practice carried out and disclosed in order. *Trap: C gives the quality the text sets against carefulness.*
- 141.6 A** structure · hard The remark follows the statement that the pollster must decide which characteristics matter and names one whose weight firms had got wrong. *Trap: D discards a stage the text treats as necessary.*
- 141.7 D** cross text · hard Text 2 says statisticians correct for nonresponse by weighting and that weighting works only for characteristics that are known and measured. *Trap: A names a different failure that weighting is not addressed to.*
- 141.8 C** transitions · medium The second sentence spells out what the margin leaves out, so the transition must mark a specification of the claim before it. *Trap: B sets the omission against the claim it details.*
- 141.9 A** boundaries · easy The clause about the reader judging the result is independent, so the conjunction joining it to the clause about the four stages takes a comma. *Trap: B runs the clause about the stages straight into the clause about the reader.*
- 141.10 C** synthesis · hard Only this choice ties the disclosure of the stages and the weights to the possibility of checking a poll, which is what the notes together give. *Trap: B names the rule without saying what the disclosure buys a reader.*

142 · Two Lotteries and a Preschool SOC · S02 · evidence

- 142.1 C** central idea · medium The text says both studies support causal claims because of the lottery and are limited by the same thing, each telling us about one program in one place at one time. *Trap: D settles nationally what the text calls a slender base.*
- 142.2 A** detail · easy The text says a hundred and twenty-three poor children in Ypsilanti were assigned by lot to a preschool program or to nothing. *Trap: B gives the number of Oregon coverage places instead.*
- 142.3 B** evidence · medium The quotation calls the length of the tracking the crucial design choice and then reports the outcomes that appeared by age forty. *Trap: D gives the early reading that the longer follow-up overturned.*
- 142.4 D** inference · medium The text calls a hundred and twenty-three children in a single town in the 1960s a slender base for a national argument. *Trap: B enlists later trials the text says found smaller effects.*
- 142.5 C** words in context · medium The text says both studies support causal claims because of the lottery, so the word marks a claim about one thing producing another. *Trap: D gives a claim about correlation rather than production.*
- 142.6 B** structure · hard The sentence follows the gains in care, bills and mental health and reports the measured result the text calls the most argued-over part of the study. *Trap: D generalizes one null result into a verdict on coverage.*

- 142.7 A** cross text · hard Text 2 says randomization says nothing about whether the result transfers to another population, another scale or another decade. *Trap: B names the weakness of the alternative design rather than the limit of this one.*
- 142.8 D** transitions · medium The second sentence overturns the early reading of failure, so the transition must mark a concession rather than a consequence. *Trap: A makes the design choice follow from the faded differences.*
- 142.9 B** boundaries · easy The clause about the children being followed ever since is independent, so the conjunction joining it to the clause about the study takes a comma. *Trap: A runs the clause about the study straight into the clause about the children.*
- 142.10 D** synthesis · hard Only this choice states the practice the notes name, which is to say the base is narrow while still using what the lottery licensed. *Trap: B names the narrowness without the use the notes keep alongside it.*

143 · When Chance Does the Assigning SOC · S03 · evidence

- 143.1 D** central idea · medium The text names three kinds of natural experiment and then says each rests on an assumption that has to be defended rather than assumed, giving the test for each. *Trap: C removes the assumptions the second half of the text sets out.*
- 143.2 B** detail · easy The text says discontinuities assume that nobody manipulated the score, which can be tested by looking for a suspicious bunching of scores just above the line. *Trap: A gives the test of a different kind of natural experiment.*
- 143.3 C** evidence · medium The quotation grants the randomness of the numbers, denies it of service, and names the effect of being more likely to serve as what is measured. *Trap: B describes a different design rather than what the draft comparison captures.*
- 143.4 A** inference · medium The design rests on the two sides remaining similar in every respect but the law, which movement in response to the policy destroys. *Trap: B makes the movement a help when the text makes it the failure.*
- 143.5 D** words in context · medium The comparison is said to isolate the effect of service from everything that would otherwise confound it, so the word names a mingling with the cause under study. *Trap: B takes the sense in which a difficulty confounds a person.*
- 143.6 C** structure · hard The sentence follows the naming of the discontinuity and gives the pair of applicants whose only difference is the award. *Trap: D repeats a feature of the cutoff rather than naming what the comparison exploits.*
- 143.7 B** cross text · hard Text 2 says the strongest ordinary tool is a source of variation unrelated to everything else and that until one is in hand a correlation is only a question. *Trap: A names a weaker aid Text 2 grants only a little weight.*
- 143.8 A** transitions · medium The second sentence gives what the randomness of the numbers makes possible, so the transition must mark a consequence. *Trap: B sets the comparison against the lottery that permits it.*
- 143.9 C** boundaries · easy The clause about the three kinds of situation is independent, so the conjunction joining it to the clause about the accidental lottery takes a comma. *Trap: A runs the clause about the accident straight into the clause about the three kinds.*
- 143.10 A** synthesis · hard Only this choice names the thing common to the three cases the notes list, which is the assumption a reader has to see defended. *Trap: C names one test without the general question behind it.*

144 · What a Margin of Error Says SOC · S04 · evidence

- 144.1 A** central idea · medium The text says a confidence interval is a statement about a procedure rather than a number, and then names three misuses that follow from the confusion. *Trap: D takes the first of the misuses as the truth.*

- 144.2 C** detail · easy The text says that if twenty subgroups are examined and one shows a significant difference, that is what twenty tests produce by chance about once in every set. *Trap: B names the remedy rather than the effect.*
- 144.3 D** evidence · medium The quotation says a trivial difference becomes significant in a large study and an important one stays invisible in a small one. *Trap: C explains what the interval means rather than what the sample size does.*
- 144.4 B** inference · medium The text says one significant result in twenty is what chance produces, so a headline built on it reports exactly what was expected without any effect. *Trap: A credits the headline with the declaration the text says closes that door.*
- 144.5 A** words in context · medium The text speaks of reading a result that is marginal as though significance were a property of the world, so the word names a result that only just qualifies. *Trap: C turns a borderline result into a worthless one.*
- 144.6 D** structure · hard The sentence follows the denial that the interval gives a probability about the truth and says almost every newspaper sentence says exactly that. *Trap: C endorses the reading the sentence is there to reject.*
- 144.7 C** cross text · hard Text 2 calls a single figure with no spread and no sample size the worst case and also the most common way a statistic arrives in public. *Trap: B names the pairing Text 2 recommends rather than the figure that lacks it.*
- 144.8 B** transitions · medium The second sentence sets the common practice against the correct reading, so the transition must mark a concession. *Trap: A makes the newspaper usage follow from the correct statement.*
- 144.9 D** boundaries · easy The clause denying that it is a statement about a number is independent, so the conjunction joining it to the clause about the procedure takes a comma. *Trap: A runs the clause about the procedure straight into the clause about the number.*
- 144.10 B** synthesis · hard Only this choice names all three of the things the notes say a reader must have in order to judge a reported figure. *Trap: D gives one of the three and leaves the other two out.*

145 · Measuring What a Price Did SOC · S05 · evidence

- 145.1 B** central idea · medium The text says something else always changed in the same period and gives difference in differences, in which an eight-point fall beside a two-point fall yields six. *Trap: C credits the before-and-after figure with the effect it does not isolate.*
- 145.2 D** detail · easy The text says a fall of eight percent where the rates changed and two percent where they did not gives an estimate of six points. *Trap: A gives the raw fall rather than the difference between the two areas.*
- 145.3 A** evidence · medium The quotation calls elasticities dangerous because they are not constants and shows the same good behaving differently over a year and over a week. *Trap: C names the test of the design rather than the behavior of the elasticity.*
- 145.4 C** inference · medium The text says spillover makes a real effect look larger than it is, which is what a comparison district filling with displaced drivers produces. *Trap: A reverses the direction in which spillover is said to bend an estimate.*
- 145.5 B** words in context · medium The text speaks of a latent change already under way in one area and not the other, so the word names a movement present but unobserved. *Trap: A takes the sense of a delay rather than of something hidden.*
- 145.6 A** structure · hard The sentence follows the claim that a city measuring its own change has not measured the effect and lists what else moved in the same period. *Trap: D denies an effect the rest of the text sets out to measure.*
- 145.7 D** cross text · hard Text 2 says the effect of a price depends on what else is available, and that a charge on gasoline changes little because nobody can substitute for the journey. *Trap: A names a different one of the three properties.*

- 145.8 C** transitions · medium The second sentence sets a danger against the advantage just granted, so the transition must mark a concession. *Trap: A makes the danger follow from the advantage.*
- 145.9 A** boundaries · easy The clause about the usual candidates is independent, so the conjunction joining it to the clause about the period takes a comma. *Trap: B runs the clause about the period straight into the clause about the candidates.*
- 145.10 C** synthesis · hard Only this choice names the assumption and the check the notes pair with it, and keeps the limited strength the notes assign to that check. *Trap: B names the check without the assumption it is a check on.*
- 146 · Three Lines on a Card** SOC · S06 · evidence
- 146.1 C** central idea · medium The text gives the original figures, reports replications from near zero to above the original, and says what survives is not a constant but a mechanism. *Trap: D fixes a rate the replications are said to move.*
- 146.2 A** detail · easy The text says about a quarter of participants never conformed at all and around three quarters conformed at least once. *Trap: B gives the share of responses that went along with the majority.*
- 146.3 B** evidence · medium The quotation reports conformity falling sharply when the answer could be written privately, which puts the pressure in the speaking aloud. *Trap: D gives the headline rate rather than the condition that changes it.*
- 146.4 D** inference · medium The text says conformity collapsed when one confederate gave the correct answer, so a single ally removes most of the pressure. *Trap: A reverses the effect the variation produced.*
- 146.5 C** words in context · medium The text speaks of the normative cost of disagreeing being visible, so the word names a price exacted by the expectations of the people present. *Trap: B puts the cost in a written rule rather than in the room.*
- 146.6 B** structure · hard The sentence follows the remark that the figures are often reported loosely and introduces the three precise shares. *Trap: D rejects figures the sentence is there to state exactly.*
- 146.7 A** cross text · hard Text 2 says there must be observation for a breach to be seen at all and that the strength of a norm depends on visibility more than on agreement. *Trap: B names a different one of the four parts of the machinery.*
- 146.8 D** transitions · medium The second sentence supplies the first of the exact figures just promised, so the transition must mark a specification. *Trap: B makes the figure follow from the loose reporting rather than replace it.*
- 146.9 B** boundaries · easy The clause saying all seven were confederates is independent, so the conjunction joining it to the clause about the answers takes a comma. *Trap: A runs the clause about the answers straight into the clause about the confederates.*
- 146.10 D** synthesis · hard Only this choice keeps the mechanism and attaches its varying size to the people present, which is what the notes together establish. *Trap: B gives one replication without what the set of them leaves standing.*
- 147 · Reading a Census Carefully** SOC · S07 · evidence
- 147.1 D** central idea · medium The text names the undercount, the boundary change and the changing questions, then says a comparison across decades is a piece of work rather than a lookup. *Trap: C discards data the text calls the best that exists.*
- 147.2 B** detail · easy The text says young men, renters, recent migrants and children in complex households are missed at several times the average rate. *Trap: D names the third complication rather than the people the undercount misses.*

- 147.3 C** evidence · medium The quotation says the undercount changes the apparent composition of a place and not merely its size, which is the distortion the claim names. *Trap: D gives the third complication rather than the effect of the undercount.*
- 147.4 A** inference · medium The two tables may cover different ground, so a difference between them can come from the boundary rather than from the neighborhood. *Trap: C assumes a constancy the third complication denies.*
- 147.5 D** words in context · medium The word describes a category that may appear as three separate categories in the next census, so it names one label covering unlike cases. *Trap: A gives the opposite of the mixture the sentence describes.*
- 147.6 C** structure · hard The sentence follows the account of categories rewritten repeatedly and says a series apparently running for a century is in places a series of different questions. *Trap: D criticizes changes the text says were usually made for good reasons.*
- 147.7 B** cross text · hard Text 2 says cheaper or faster travel flattens the slope of bid rent and spreads the city, bringing more distant land into use. *Trap: D names the shape of the curve rather than what pushes development outward.*
- 147.8 A** transitions · medium The second sentence gives the reason the one percent stops sounding negligible, so the transition must mark a ground. *Trap: B sets the reason against the claim it supports.*
- 147.9 C** boundaries · easy The clause about tracts being merged is independent, so the conjunction joining it to the clause about their splitting takes a comma. *Trap: A runs the clause about the splitting straight into the clause about the merging.*
- 147.10 A** synthesis · hard Only this choice names the error the notes converge on, which is treating the words at the top of a column as fixed. *Trap: C names one of the three complications without the error they produce.*

148 · Two Sides of One State Line SOC · S08 · evidence

- 148.1 A** central idea · medium The text says the two teams were disagreeing about measurement rather than about theory, and then names a weakness in each kind of data. *Trap: C settles a question the text says neither paper settled.*
- 148.2 C** detail · easy The text says the two obtained payroll records, meaning employment figures taken from the administrative accounts of firms. *Trap: A gives the method of the other team.*
- 148.3 D** evidence · medium The quotation names a weakness of the survey and then a weakness of the payroll record, one after the other. *Trap: C explains why the dispute could be judged rather than what each source lacks.*
- 148.4 B** inference · medium The text says payroll data covers only the firms that supply it and notes who helped assemble the sample, which is what the other side raised. *Trap: A clears a sample the text says was challenged on exactly that ground.*
- 148.5 A** words in context · medium The text speaks of the reciprocal checking of methods that the exchange forced, so the word names each side testing the other. *Trap: C makes the checking one-sided, which the exchange was not.*
- 148.6 D** structure · hard The sentence follows the survey result of no fall in employment and states what the standard prediction had been. *Trap: C convicts a model the text leaves standing and under argument.*
- 148.7 C** cross text · hard Text 2 says bargaining power depends on how many alternatives each side has, which is a feature of the local labor market. *Trap: D names the floor rather than what moves between the floor and the ceiling.*
- 148.8 B** transitions · medium The second sentence names the particular response just announced in general terms, so the transition must mark a specification. *Trap: D sets the response against the sentence that introduces it.*

- 148.9 D** boundaries · easy The clause saying both improved the field is independent, so the conjunction joining it to the clause about the matter takes a comma. *Trap: A runs the clause about the matter straight into the clause about the field.*
- 148.10 B** synthesis · hard Only this choice names both of the lasting results the notes give, the checking practice and the body of later work. *Trap: D names one legacy and leaves the other out.*

149 · One Number for a Distribution SOC · S09 · evidence

- 149.1 B** central idea · medium The text calls the convenience of one number its defect, shows the same value coming from different distributions, and says a report giving a Gini alone gives the least informative summary. *Trap: C denies the multiplicity the text builds its case on.*
- 149.2 D** detail · easy The text says the Palma ratio compares the top tenth with the bottom four tenths, on the argument that the middle half changes little. *Trap: A gives the percentile ratio rather than the Palma.*
- 149.3 A** evidence · medium The quotation sets two differently shaped distributions side by side and says they can share the same coefficient. *Trap: C names a different limitation of the measure rather than the sharing of a value.*
- 149.4 C** inference · medium The measure is said to be least sensitive at the ends, so a change concentrated at the very top registers only weakly in it. *Trap: A expects a sharp movement where the text reports least sensitivity.*
- 149.5 B** words in context · medium The text says policies reducing one disparity will not touch the other, after describing two different gaps in a distribution. *Trap: C makes the word name the measure rather than what it measures.*
- 149.6 A** structure · hard The sentence follows the three alternatives and says serious work reports more than one, calling a Gini alone the least informative summary. *Trap: D bans a measure the text keeps as one of several.*
- 149.7 D** cross text · hard Text 2 says any serious argument about inequality has to say which of income, wealth and mobility it is about, and that a good many never do. *Trap: B repeats a limitation Text 1 has already given.*
- 149.8 C** transitions · medium The second sentence gives the reason the convenience is also a defect, so the transition must mark a ground. *Trap: B sets the shared coefficient against the defect it demonstrates.*
- 149.9 A** boundaries · easy The clause saying that is easy to interpret is independent, so the conjunction joining it to the clause about the percentile ratio takes a comma. *Trap: B runs the clause about the ratio straight into the clause about interpretation.*
- 149.10 C** synthesis · hard Only this choice joins the two blind spots the notes name to the practice of reporting more than one measure. *Trap: B names one blind spot without the practice it argues for.*

150 · Which Results Held Up SOC · S10 · evidence

- 150.1 C** central idea · medium The text separates the surviving effects from the ones that did not, names the two mechanisms and the remedies, and ends on the strongest effects being real and smaller than advertised. *Trap: D discards a field the text says measured itself successfully.*
- 150.2 A** detail · easy The text says registered reports go further because a journal accepts the study on its design before any results exist. *Trap: B gives preregistration, which the registered report goes beyond.*
- 150.3 B** evidence · medium The quotation lists the choices available to a researcher and says they can produce a significant result from noise without any dishonesty. *Trap: D names the other mechanism rather than the one the claim describes.*

- 150.4 D** inference · medium Acceptance on the design before any results exist removes the incentive to produce a positive finding, so a null result is published on the same terms. *Trap: A leaves the null result where publication bias would have put it.*
- 150.5 C** words in context · medium The text says the number of available choices was large enough to make the problem endemic, so the word names a fault running through the whole literature. *Trap: B narrows a general condition to a single location.*
- 150.6 B** structure · hard The last sentence says economics, medicine and political science have since run versions of the same exercise with much the same result. *Trap: D dismisses an exercise the text calls a measurement of the field.*
- 150.7 A** cross text · hard Text 2 defines anchoring as the pull of an irrelevant number on a later estimate and reports that it survives even when the number is known to be random. *Trap: C names framing, which Text 1 lists as a separate survivor.*
- 150.8 D** transitions · medium The second sentence gives the first of the procedural remedies just announced, so the transition must mark an example. *Trap: B sets the remedy against the sentence that introduces it.*
- 150.9 B** boundaries · easy The clause about the studies being analyzed after the fact is independent, so the conjunction joining it to the clause about the literature takes a comma. *Trap: A runs the clause about the literature straight into the clause about the analysis.*
- 150.10 D** synthesis · hard Only this choice names who did the measuring and what it established, which is the reading the notes support. *Trap: B reports the confirmation without the self-examination that produced it.*

151 · One Sentence, Two Readings HIS · S01 · dispute

- 151.1 B** central idea · medium The text sets out both readings, says what each must concede, and ends by saying the dispute could not be settled from the text and was settled by amendment. *Trap: C states the opposite of the sentence calling the second reading not a careless one.*
- 151.2 D** detail · medium The text says the first reading must explain why no signer acted on the principle, and that the honest version concedes the words outran their authors. *Trap: A names one of the things the second reading has to account for.*
- 151.3 A** evidence · hard The clause grants the second reading, the one the author does not adopt, the standing of a careful argument. *Trap: D reports how the matter ended rather than how the author regards the losing side.*
- 151.4 C** inference · medium The text says the text alone could not settle it and that an amendment did, which is a political act rather than an interpretive one. *Trap: D is contradicted by the last sentence, which says no court has overruled Taney.*
- 151.5 B** words in context · medium Each side has to concede something it would rather not, which is what qualifying a claim means here. *Trap: A gives the sense in which a person qualifies as a doctor.*
- 151.6 A** structure · hard The sentence supplies the name for the second reading and ends by saying it is not a careless reading, which is a refusal to dismiss it. *Trap: C treats a definition of a general position as a report of the particular holding.*
- 151.7 D** cross text · hard Text 2 insists that a deletion establishes the removal and not the reason, so the evidence constrains the second reading without defeating it. *Trap: C treats a recollection written decades later as a contemporaneous record.*
- 151.8 C** transitions · hard The sentence turns from the first reading to the obligations of the second, so it takes up the other side in its turn. *Trap: A makes the second obligation follow from the first rather than balance it.*

151.9 A boundaries · easy The participial phrase stating what the holding was attaches to the clause about 1857 with a comma. *Trap: C puts a semicolon before a phrase that cannot stand as a sentence on its own.*

151.10 C synthesis · hard Only this choice joins the failure of interpretation to the political remedy, which is what explaining the need for an amendment requires. *Trap: D states the remedy without the deadlock that made it necessary.*

152 · Protection or Paralysis HIS · S02 · dispute

152.1 C central idea · medium The text presents both readings of the same design, says the evidence is ambiguous because each side counts differently, and reports how far comparative work goes. *Trap: D defines a term the critics use rather than stating the argument of the text.*

152.2 A detail · medium The text says the comparative finding is that fewer veto points mean faster legislation in both directions, passing reforms both sides feared and wanted. *Trap: B gives the conclusion a defender would like rather than the finding reported.*

152.3 B evidence · hard The clause says each side must bring a prior judgment to its own list, which is why counting cannot decide between them. *Trap: D reports a limit on the comparative data rather than the reason the two lists cannot be compiled neutrally.*

152.4 D inference · medium Each list requires a prior view of what government ought to have done, so the quarrel carries a judgment inside it and not only a count. *Trap: B promises a resolution the text says the data cannot deliver.*

152.5 C words in context · medium A majority with a bad idea meets institutions that can block it, so the word names being halted rather than being verified. *Trap: A gives the sense in which a figure is checked against a record.*

152.6 B structure · hard The finding gives each side something it did not want, which is why the text calls it uncomfortable for everyone. *Trap: A says the measures disagree, where the text says they broadly agree.*

152.7 A cross text · hard Text 2 calls the essays first-class evidence of their authors intentions rather than a neutral description of the document. *Trap: B is precisely the use Text 2 compares to reading a campaign pamphlet as policy.*

152.8 D transitions · hard The second sentence supplies the ground for the first by listing the points that make the count large. *Trap: A sets the list against the claim it supports.*

152.9 B boundaries · easy The phrase defining gridlock is a supplement to the noun it follows, so a comma joins it to the clause. *Trap: C uses a semicolon where the material after it is a phrase rather than a clause.*

152.10 D synthesis · hard Only this choice sets the two lists beside the judgment each one presupposes, which is the reason counting cannot decide. *Trap: B gives one half of the comparison and so cannot carry the point.*

153 · The Movement Argued With Itself HIS · S03 · dispute

153.1 D central idea · medium The text sets out both strategies, gives the evidence each can claim, and ends by saying the two worked on different audiences at once. *Trap: C picks one wing where the text declines to award the outcome to either.*

153.2 B detail · medium The text says the state wing argued that a federal amendment required three quarters of the states and could be blocked by a minority of them. *Trap: A states the opposite of the objection the other wing raised to state campaigns.*

153.3 C evidence · hard The clause says the answer is settled afterward by whoever writes the account, which places it outside the evidence itself. *Trap: D illustrates the consequence of that fact rather than stating it.*

- 153.4 A** inference · medium The same outcome follows both the lobbying and the picketing, so the order of events supports each reading equally. *Trap: C turns an inability to distinguish two causes into the absence of both.*
- 153.5 D** words in context · medium The picketing made the issue impossible to postpone any longer, so the word names a setting aside rather than a bringing forward. *Trap: A gives the opposite parliamentary sense, in which tabling introduces a matter.*
- 153.6 C** structure · hard The sentence lifts the suffrage quarrel into a statement about movements in general, which the next sentence then illustrates. *Trap: A names the illustration that follows rather than the generalization itself.*
- 153.7 B** cross text · hard Text 2 says newspaper coverage measures mainly what editors thought their readers would enjoy, so publicity records editorial judgment. *Trap: C borrows the measure Text 2 assigns to petitions and membership rolls.*
- 153.8 A** transitions · hard The division among historians follows from the fact that both claims remain available, so the second sentence states a consequence. *Trap: B sets the division among historians against the availability of both claims.*
- 153.9 C** boundaries · easy Building the operation and the working of it are each a full clause, so the conjunction between them takes a comma before it. *Trap: B joins the two clauses with a comma and no conjunction at all.*
- 153.10 A** synthesis · hard Only this choice gives both the overlap in causes and the partiality of the sources, which together keep the disagreement alive. *Trap: D names the rival histories without the overlapping causation that makes them hard to adjudicate.*

154 · Suasion or Politics HIS · S04 · dispute

- 154.1 A** central idea · medium The text gives both strategies, states that the outcome does not decide the question, and shows how each account can accommodate the war. *Trap: C awards the argument to one wing where the text explicitly declines to.*
- 154.2 C** detail · medium The text says Garrison held that the Constitution gave slavery a sanction no reformer should accept, and that he burned a copy in public. *Trap: A names the remedy of the opposing wing rather than Garrison position.*
- 154.3 D** evidence · hard The sentence states the mismatch directly: the war was fought by a government pledged not to abolish, which neither wing had proposed. *Trap: C names the political success of one wing rather than the mismatch with the war.*
- 154.4 B** inference · medium The text says the evidence is compatible with both and that each requires the other to be in the story. *Trap: A gives one of the two readings as though the text had chosen it.*
- 154.5 A** words in context · medium Garrison objected that the Constitution gave slavery an approval no reformer should accept, so the word names authorization rather than punishment. *Trap: B gives the opposite sense, in which a sanction is imposed against something.*
- 154.6 D** structure · hard The platform proposed only to stop the extension of slavery, which limits what the electoral victory can be said to have achieved. *Trap: B treats the date as the point of a sentence about the content of the platform.*
- 154.7 C** cross text · hard Text 2 says the narratives supply the inside view and were written to persuade, often with an abolitionist editor involved. *Trap: B names the source written by the party Garrison was arguing against.*
- 154.8 B** transitions · hard The second sentence states the conclusion the political wing drew from the premise in the first. *Trap: A sets the practical route against the failure of moral argument rather than deriving it from that failure.*
- 154.9 D** boundaries · easy Three things Garrison did are listed, so the last item takes a comma before the conjunction that introduces it. *Trap: B drops the comma that the third item of a series requires.*

154.10 B synthesis · hard Only this choice names the mismatch with both strategies and the way each can still claim a part, which is why the result decides nothing. *Trap: D asserts the compatibility without saying what makes it possible.*

155 · Failed or Defeated HIS · S05 · dispute

155.1 B central idea · medium The text contrasts failed with defeated and then states explicitly that the shift came because the evidence base grew rather than from changed sentiment. *Trap: D names one piece of the evidence rather than the argument about historiography.*

155.2 D detail · medium The text says the Dunning account was written from official sources, white newspapers and the papers of the men who had overthrown the governments. *Trap: A names the sources whose addition made that account unsustainable.*

155.3 A evidence · hard The sentence announces that the disagreement is partly about which question is before the historian, which is what the claim asserts. *Trap: C names one of the evidential complaints rather than the difference in the question.*

155.4 C inference · medium Defeat and failure call for different evidence, so changing the word changes what the account must be built from. *Trap: B treats a change of claim as a change of tone.*

155.5 B words in context · medium The dispute concerns how the question is put, so the word names precision in the wording rather than severity or extraction. *Trap: C hears the verb to exact a payment rather than the adjective the sentence uses.*

155.6 A structure · hard The sentence denies that the change came from sympathy and so clears the way for the explanation that the sources widened. *Trap: B states the explanation the sentence exists to reject.*

155.7 D cross text · hard Text 2 sets out exactly those two sources and shows what each establishes, which is the evidence Text 1 says had been left out. *Trap: A names the sources the earlier account already relied on.*

155.8 C transitions · hard The second sentence adds a second ground of the argument rather than illustrating or summarizing the first. *Trap: D makes the question about the question follow from the complaint about evidence.*

155.9 A boundaries · easy The textbooks clause and the sources clause are each complete, so the conjunction between them needs a comma before it. *Trap: B omits the comma that two full clauses require before a conjunction.*

155.10 C synthesis · hard Only this choice names the mechanism of the replacement and rules out the explanation the text rejects. *Trap: D gives the rejected explanation alone, with nothing in its place.*

156 · Wages or Jobs HIS · S06 · dispute

156.1 C central idea · medium The text gives both readings, reports that comparative work supports a modest version of one, and says the residue is a question about values. *Trap: D states one of the two readings as though it were the conclusion.*

156.2 A detail · medium The second sentence says the argument turns almost entirely on the counterfactual and then defines it. *Trap: B names a term the text defines in passing rather than the hinge of the dispute.*

156.3 B evidence · hard The clause grants the finding and then names the question it leaves open, which is exactly the shape the claim describes. *Trap: D gives the second reading argument rather than the standing of the evidence.*

156.4 D inference · medium The text says a modest effect leaves room for argument about cost, so the finding does not compel either side to concede. *Trap: C contradicts the opening, which says both sides argue from the same series.*

- 156.5 C** words in context · medium The comparative evidence narrows the disagreement without ending it, so the word names a moderating of its force. *Trap: A gives the metallurgical sense from which the figure comes.*
- 156.6 B** structure · hard The second reading accepts the fall in deaths and attributes much of it to changes that were arriving anyway, which is a rival cause for an agreed fact. *Trap: D names material that comes later rather than the work this sentence does.*
- 156.7 A** cross text · hard Text 1 locates the losses in the smallest firms, where it says records are worst, and Text 2 names poor employment figures as a standing defect. *Trap: D names a defect that bears on accident counts rather than on employment.*
- 156.8 D** transitions · hard The deadlock in the first sentence is qualified rather than extended by the second, so the two stand in contrast. *Trap: A makes the comparative evidence a consequence of the deadlock.*
- 156.9 B** boundaries · easy The phrase defining the compliance cost is a supplement to the noun before it, so a comma attaches it. *Trap: C uses a semicolon where the material after it is a phrase and not a clause.*
- 156.10 D** synthesis · hard Only this choice names both the finding and the question it leaves standing, which is why the studies settle less than they might. *Trap: B reports half of the finding and none of what it fails to settle.*
- 157 · Law or Pressure** HIS · S07 · dispute
- 157.1 D** central idea · medium The text gives both accounts their evidence and then shows that the strategists themselves treated neither as sufficient. *Trap: C awards the argument to one side where the text keeps the dispute open.*
- 157.2 B** detail · medium The text says King wrote from a jail cell that the moderate who preferred order to justice was a greater obstacle than the intransigent opponent. *Trap: C gives an argument from the legal account rather than what King wrote.*
- 157.3 C** evidence · hard The sentence says in so many words that King made the other case too and that this is what makes him useful. *Trap: D gives one half of the mutual-insufficiency point rather than the remark about King.*
- 157.4 A** inference · medium Each strategy is shown failing without the other, which is what mutual dependence means. *Trap: C treats complements as alternatives, which the sentence has just ruled out.*
- 157.5 D** words in context · medium The word describes the opponent against whom the moderate is said to be a greater obstacle, so it names a refusal to yield. *Trap: C borrows the description of the moderate rather than of the opponent.*
- 157.6 C** structure · hard The sentence puts King in the meetings at the Department of Justice as well as in the jail cell, which is the point about a witness for both sides. *Trap: B names a different claim in the text rather than the work of this sentence.*
- 157.7 B** cross text · hard Text 2 distinguishes what a hostile observer recorded from what the movement itself produced, and minutes belong to the second kind. *Trap: A describes the surveillance file, which Text 2 treats as a record of observation.*
- 157.8 A** transitions · hard The second sentence adds a further point to the same case rather than qualifying or restating it. *Trap: B sets the registration evidence against the legal account it supports.*
- 157.9 C** boundaries · easy Two parallel clauses introduced by that are joined, so the conjunction between them takes a comma before it. *Trap: D replaces the conjunction with a comma and a new subject, which splices the sentence.*
- 157.10 A** synthesis · hard Only this choice states the symmetry that keeps both accounts alive rather than offering the evidence of one of them. *Trap: D supplies evidence for one account and so cannot explain why both survive.*

158 · Granted or Taken HIS · S08 · dispute

- 158.1 A** central idea · medium The text calls that the most defensible reading and says it gives each side the half of the story it claims and neither side the whole. *Trap: D states one side of the dispute as though the text had simply adopted it.*
- 158.2 C** detail · medium The first sentence says the official phrase is one containing an argument, which the rest of the paragraph then sets out. *Trap: B treats the phrase as a description of the statute rather than as a claim.*
- 158.3 D** evidence · hard The sentence states the pattern of timing itself, which is the test the text calls the best available. *Trap: C reports who made the argument rather than the timing that supports it.*
- 158.4 B** inference · medium The text says the nationalist account is favored and complicated at once, since the choice of a negotiated exit still needs explaining. *Trap: A turns a complication into a refutation, which the text does not.*
- 158.5 A** words in context · medium The sentence denies that the British yielded gracefully and says they ran out of means, so the word names giving way. *Trap: D softens the sense to the withdrawal of a charge rather than of a position.*
- 158.6 D** structure · hard The closing sentences say both accounts pass over the partition and that neither narrative sits easily beside it. *Trap: B treats a criticism of both accounts as support for one of them.*
- 158.7 C** cross text · hard Text 2 says almost all the surviving material was produced by the administration for its own purposes, which is exactly the condition that produces such language. *Trap: B names a check on the record rather than a reason for its tone.*
- 158.8 B** transitions · hard The second sentence gives a particular case of the general claim made in the first. *Trap: A sets the example against the claim it illustrates.*
- 158.9 D** boundaries · easy The phrase naming the occasion attaches directly to the verb, so no mark belongs between them. *Trap: A inserts a comma between a verb phrase and the phrase that completes it.*
- 158.10 B** synthesis · hard Only this choice holds the nationalist half and the official half together, which is what the goal asks for. *Trap: C states the nationalist half alone and leaves the other unexplained.*

159 · Three Dissents and a Vacated Case HIS · S09 · dispute

- 159.1 B** central idea · medium The text takes the majority seriously, sets out three dissents, says Jackson was the one history vindicated, and then names what was not replaced. *Trap: C gives the sharpest particular in the text rather than its argument.*
- 159.2 D** detail · medium The text says Roberts held that the case was not about curfew but about imprisonment for refusing to leave home. *Trap: B gives the substance of the Murphy dissent rather than the Roberts one.*
- 159.3 A** evidence · hard The sentence states the omission directly: deference was criticized and never replaced by a rule that could be used. *Trap: C reports the strongest of the corrections rather than what the corrections failed to do.*
- 159.4 C** inference · medium The text calls it a conciliatory formula rather than a constraint, because the same opinion that announced it approved the classification before it. *Trap: A claims for the standard exactly what the text says nobody has produced.*
- 159.5 B** words in context · medium The formula is contrasted with a constraint, so the word names something offered to soften rather than to bind. *Trap: D is close but names obscurity rather than the appeasement the contrast requires.*
- 159.6 A** structure · hard The sentence concedes that deference cannot simply be discarded, which is what makes the majority position worth reading on its own terms. *Trap: C treats a concession to the majority as an introduction to the dissents.*

- 159.7 D** cross text · hard Text 2 shows the Court reasoning without the reports in the government possession, which is exactly the practical incapacity Jackson described. *Trap: C names a different dissent rather than evidence for the Jackson position.*
- 159.8 C** transitions · hard The second sentence marks the difficulty as weighty rather than replacing or restating the first. *Trap: A presents the absence of a rule as a substitute for deference.*
- 159.9 A** boundaries · easy Two prepositional phrases are joined, not two clauses, so the conjunction takes no mark before it. *Trap: B inserts a comma before a conjunction joining two phrases rather than two clauses.*
- 159.10 C** synthesis · hard Only this choice sets the corrections beside the gap they left, which is the double point the goal asks for. *Trap: B reports the strongest correction without the omission that followed it.*

160 · Who Follows Whom HIS · S10 · dispute

- 160.1 C** central idea · medium The text gives both accounts, describes the designs that separate them, and ends on the two-directional conclusion with its two timescales. *Trap: B picks one account where the text says neither simple version survives.*
- 160.2 A** detail · medium The text says both accounts are supported by correlations and neither is established by them, since the two series move together either way. *Trap: C names one of the findings rather than the reason correlation is uninformative.*
- 160.3 B** evidence · hard An accident of contract is a change in coverage with no connection to what readers already thought, which is the design the claim describes. *Trap: C names a finding of that research rather than the condition it requires.*
- 160.4 D** inference · medium The design works because the change in coverage has no origin in opinion, which is exactly what a correlation cannot establish. *Trap: B assigns the result to one account where the text reports effects supporting both.*
- 160.5 C** words in context · medium An editor who loses readers by leading them must pull back, so the word names a cutting back rather than a digging in. *Trap: A hears the trench inside the word and reverses its sense.*
- 160.6 B** structure · hard Each item is a case in which coverage changed for a reason unconnected to opinion, which is what the research needs. *Trap: A confuses the designs with the results they produced.*
- 160.7 A** cross text · hard Text 2 defines a frame error as a defect in whom the instrument reaches at all, and the persuadable are by hypothesis outside the reach of the coverage. *Trap: B names the other of the two errors in Text 2, which concerns who replies rather than who is reached.*
- 160.8 D** transitions · hard Both findings come out of the same body of work and stand alongside each other rather than one following from the other. *Trap: A makes the market finding a consequence of the influence finding.*
- 160.9 B** boundaries · easy The failure and the survival are each a full clause, so the conjunction between them takes a comma before it. *Trap: C omits the comma that two independent clauses require before a conjunction.*
- 160.10 D** synthesis · hard Only this choice names the two timescales that let both accounts hold at once, which is the explanation the goal asks for. *Trap: D gives one direction of influence and leaves the other unaccounted for.*

161 · Selection or Drift BIO · S01 · dispute

- 161.1 B** central idea · medium The text says the argument is worth understanding as a dispute about defaults, since nobody denied either process and the question was which to assume without evidence. *Trap: C contradicts the text, which says nobody denied that drift happens.*

- 161.2 D** detail · medium The text says the settlement went mostly to the neutralists at the molecular level and mostly to the selectionists at the level of visible traits. *Trap: C denies a settlement the text says sequencing data largely produced.*
- 161.3 A** evidence · hard The quotation names the outcome as a test a researcher can apply to any gene rather than a position either camp won, which is the claim exactly. *Trap: D gives one half of the settlement rather than the procedure it leaves behind.*
- 161.4 C** inference · medium A steady rate follows from change by chance alone, so the clock depends on the absence of selection rather than on its presence. *Trap: A requires the very process that the steady rate rules out.*
- 161.5 B** words in context · medium Neutralists held that a novel feature should be presumed accidental until an advantage is shown, so the word marks the feature as newly arisen. *Trap: C adds a verdict about usefulness that the word itself does not carry.*
- 161.6 A** structure · hard The sentence comes between the evidence and the two positions, and it tells a reader that what follows is a disagreement about where the burden of proof lies. *Trap: C denies both processes, though the text says nobody denied either.*
- 161.7 D** cross text · hard Text 2 identifies the agent and measures the response, which is the demonstration that neutralists demand before an advantage may be assumed. *Trap: B repeats a definition Text 1 has already given rather than adding anything.*
- 161.8 C** transitions · hard The second sentence replaces the denial just ruled out with the real question, so the transition must mark a substitution rather than a likeness or a consequence. *Trap: D reads the question about defaults as following from the agreement about both processes.*
- 161.9 A** boundaries · easy A colon introduces the arithmetic that the sentence has just announced, which a comma between two independent clauses cannot do. *Trap: B joins the clause about the rate to the announcement with a comma alone.*
- 161.10 C** synthesis · hard Only this choice explains that the comparison removes the need for an assumption, which is what makes it a settlement of a dispute about defaults. *Trap: B names who won without saying what replaced the assumption.*

162 · What Heritability Does Not Mean BIO · S02 · dispute

- 162.1 C** central idea · medium The text defines heritability as a proportion of variation within one population and says twice that it is not a statement about an individual or about how much a trait can change. *Trap: B states the inference the text says nothing in the number supports.*
- 162.2 A** detail · medium The text says height is highly heritable and also rose by several inches in two generations, which demonstrates that the number says nothing about the effect of changing the environment. *Trap: C denies the heritability that the example depends on.*
- 162.3 B** evidence · hard The quotation says both readings make testable predictions and both have been partly confirmed, which is what makes them live positions rather than postures. *Trap: C reports the state of the gap rather than the standing of the two readings.*
- 162.4 D** inference · medium The text gives an example in each direction, a plastic trait that is heritable and a stubborn trait that is not, so neither quantity fixes the other. *Trap: C turns independence into opposition, which the two examples rule out.*
- 162.5 C** words in context · medium The sentence says a highly plastic trait can still be heritable, so the word names a trait that conditions can readily change. *Trap: B reverses the sense, since the example turns on a trait that does change.*
- 162.6 B** structure · hard The text says two readings persist, gives each one, and adds that both make testable predictions and have been partly borne out, which marks the question as live. *Trap: C reads a disagreement about one gap as a verdict against the measure.*

- 162.7 A** cross text · hard Text 2 says a sequence gives letters and not function, which is why adding up identified variants need not account for the variation a trait shows. *Trap: B repeats the definition Text 1 opens with rather than adding to it.*
- 162.8 D** transitions · hard The survival of two readings follows from a gap that has shrunk without disappearing, so the transition must mark a consequence rather than a contrast or a restatement. *Trap: C treats the two readings as another way of saying the gap is open.*
- 162.9 B** boundaries · easy The clause about how much a trait can be changed is independent, so the conjunction joining it to the clause about an individual takes a comma before it. *Trap: A leaves the clause about an individual and the clause about change with no mark between them.*
- 162.10 D** synthesis · hard Only this choice joins what the number measures to the case of a trait that is both heritable and changed, which is the point the goal needs. *Trap: C states one half of the independence without the measured example that shows it.*

163 · Machine or Colony BIO · S03 · dispute

- 163.1 D** central idea · medium The text lists the evidence that persuaded the field about mitochondria and chloroplasts and then says what remains disputed is how far the colonial picture should be pushed. *Trap: B reverses the text, which calls the factory picture historically false.*
- 163.2 B** detail · medium The text says both organelles make their own ribosomes, which resemble bacterial ribosomes closely enough to be shut down by antibiotics that act on bacteria. *Trap: A reverses the text, which says the organelles divide on a schedule of their own.*
- 163.3 C** evidence · hard A drug that shuts down the organelle ribosomes and leaves the rest of the cell alone is a direct test, which is the kind of evidence that admits little argument. *Trap: B names the later claims the evidence does not support rather than the ones it does.*
- 163.4 A** inference · medium An ordinary compartment is made by the cell for a purpose, so its timing would follow the cell rather than a schedule of its own. *Trap: B gives the organelle a feature that marks it as a former bacterium.*
- 163.5 D** words in context · medium The text says the evidence does not flag the later cases as strongly, so the word names how clearly the evidence indicates them. *Trap: A takes the other common sense of the word, that of tiring, which cannot apply to evidence.*
- 163.6 C** structure · hard The five features come after the sentence about evidence that admits little argument and before the turn to what remains disputed, so they carry the settled part of the case. *Trap: A names the open question rather than the evidence for the settled one.*
- 163.7 B** cross text · hard Text 2 reports how the oxygen-dependent steps were located in the isolated particles, which is how anyone knew what the structure under dispute actually does. *Trap: D credits the spinning work with a finding that Text 1 attributes to other evidence.*
- 163.8 A** transitions · hard The second sentence supplies the history that makes the picture false, so the transition must press the point further rather than concede or oppose it. *Trap: B treats the history as a qualification of the falsity it establishes.*
- 163.9 C** boundaries · easy The clause about the evidence that persuaded the field is a complete sentence, so a period separates it from the clause about the rejected paper. *Trap: A splices the clause about the evidence onto the clause about the journals with a comma.*
- 163.10 A** synthesis · hard Only this choice links the separate ancestry of the organelle to the unusual inheritance of its diseases, which is the practical consequence the goal asks for. *Trap: D reports the oddity without naming what in the organelle produces it.*

164 · Did the Wolves Do It BIO · S04 · dispute

- 164.1 A** central idea · medium The text says the telling has outrun the evidence, lists the other changes over the same years, and ends with a narrower position that keeps the wolves as one cause among several. *Trap: B overshoots the correction, since the text calls the wolves one cause of a real change.*
- 164.2 C** detail · medium The text says recovery was patchy rather than general and that the strongest recovery occurred where the water table was high enough to support it. *Trap: D reverses the exclosure result, where willows grew only when water was available.*
- 164.3 D** evidence · hard The quotation says other things changed over the same twenty years and names the design confounded, which is exactly the inability the claim describes. *Trap: A lists the chain of changes rather than the reason their causes cannot be separated.*
- 164.4 B** inference · medium The willows grew only where the fence and the water were both present, so removing the browsing does nothing on its own in a dry site. *Trap: A generalizes a result the exclosures obtained only where water was available.*
- 164.5 A** words in context · medium The sentence suggests that hydrology may stem the effect as much as browsing does, so the word names a check on the effect rather than its source. *Trap: B takes the other common sense of the word, which would reverse the direction.*
- 164.6 D** structure · hard The paragraph comes after the specific objections and keeps the wolves as one cause among several while dropping the claim that they rewrote the rivers. *Trap: B denies the narrowing that the paragraph performs.*
- 164.7 C** cross text · hard Text 2 names what each method can and cannot reach and reports the missing control, which explains why the dispute in Text 1 had to be settled on judgment. *Trap: A repeats one of the objections Text 1 has already raised.*
- 164.8 B** transitions · hard The sentence sets a problem against the measurement just reported, so the transition must concede the measurements and then raise the objection. *Trap: C reads the confounding as a result of the measuring rather than a problem with it.*
- 164.9 D** boundaries · easy The clause about the strongest recovery and the water table is independent, so the conjunction joining it to the clause about patchiness takes a comma before it. *Trap: B leaves the clause about patchiness and the clause about the water table unmarked.*
- 164.10 B** synthesis · hard Only this choice puts the measured links beside the missing control, which is what makes the case a lesson about inference rather than about wolves. *Trap: C gives the conclusion reached without the reasoning that forced it.*

165 · Food, Predators, or Both BIO · S05 · dispute

- 165.1 B** central idea · medium The text says the two treatments together raised density about elevenfold, far more than their effects added, and calls that interaction the finding neither camp had predicted. *Trap: C gives the joint result to one treatment alone, which doubled density by itself.*
- 165.2 D** detail · medium The text says food alone roughly doubled hare density and predator exclusion alone roughly doubled it, with the large increase coming only from the two together. *Trap: A gives the result of the two treatments together rather than of exclusion alone.*
- 165.3 A** evidence · hard The quotation says a correlation cannot reveal an interaction and that both single-cause theories were insufficient, which is why the series could not decide between them. *Trap: B shows both theories fitting the series rather than why a correlation cannot choose.*

- 165.4 C** inference · medium If the two pressures reinforce each other, a treatment applied alone cannot produce the joint effect, so a single-factor measurement falls short of it. *Trap: B claims a prediction that the text says neither camp was able to make.*
- 165.5 B** words in context · medium The sentence says a fecund season under both conditions produces an explosion, so the word describes a season of heavy breeding. *Trap: D reverses the sense, since the season in question has food in abundance.*
- 165.6 A** structure · hard The text gives the food account and the predator account, says both fit the series, and then describes the experiment that was run to choose between them. *Trap: C denies both pressures, though each roughly doubled density on its own.*
- 165.7 D** cross text · hard Text 2 describes the corrections and the second proxy that establish the cycle, which is the pattern the experiment in Text 1 was built to explain. *Trap: A repeats the point Text 1 makes about the series rather than adding to it.*
- 165.8 C** transitions · hard The sentence reports the resolution of the impasse just described, so the transition must mark the outcome rather than a likeness or a restatement. *Trap: B treats the experiment as another way of stating the impasse.*
- 165.9 A** boundaries · easy The clause saying neither camp had predicted the interaction is independent, so the conjunction joining it to the clause naming the finding takes a comma. *Trap: B leaves the clause about the finding and the clause about the camps unmarked.*
- 165.10 C** synthesis · hard Only this choice reports both single-factor doublings and the much larger joint result, which together show each theory right and each one short. *Trap: B gives the joint result alone and so leaves both theories unjudged.*

166 · The Germ or the Ground BIO · S06 · dispute

- 166.1 C** central idea · medium The text grants the germ theorists their victory and then says the organism is necessary while the condition of the person largely decides who dies of it. *Trap: B denies a victory the text explicitly grants on the question they were answering.*
- 166.2 A** detail · medium The text says his formula required the germ and the ground, meaning the state of the soil, the water table and the local conditions. *Trap: B names the modern figures about who dies rather than his own term.*
- 166.3 B** evidence · hard The quotation says the question of allocation is not settled by the biology, which is exactly the claim that the live dispute is about where money goes. *Trap: A gives one of the figures about who falls ill rather than the question of spending.*
- 166.4 D** inference · medium If the condition of the person largely decides who dies, a program aimed at the organism alone misses the factor that settles most of the mortality. *Trap: A promises an outcome the text attributes to interrupting the route, not to every case.*
- 166.5 C** words in context · medium The text says most people who harbor the tuberculosis bacterium never develop the disease, so the word names carrying the organism rather than falling ill of it. *Trap: D confuses carrying the organism with the outcome the sentence denies.*
- 166.6 B** structure · hard The text says the germ theorists won the century and were right about the question they were answering, which leaves open the question of who among the infected dies. *Trap: C reads a concession to one side as the abandonment of the other.*
- 166.7 A** cross text · hard Text 2 reports that the first of the conditions breaks on the asymptomatic carrier, which is the observation Pettenkofer was pressing in Text 1. *Trap: B repeats his own formula as Text 1 already states it.*
- 166.8 D** transitions · hard The sentence sets the figures that favor the other side against the victory just granted, so the transition must mark a concession rather than a consequence. *Trap: B reads the figures as following from the victory of the germ theorists.*

- 166.9 B** boundaries · easy The clause about the condition of the person is independent, so the conjunction joining it to the clause about the organism takes a comma before it. *Trap: A leaves the clause about the organism and the clause about the person unmarked.*
- 166.10 D** synthesis · hard Only this choice says that both sides are supported, which is what leaves the decision to be made on grounds other than the biology. *Trap: A gives the case for one side without saying why that does not settle it.*

167 · The Bargain of Fixed Nitrogen BIO · S07 · dispute

- 167.1 D** central idea · medium The text sets the gains against the measured costs and ends by saying the two sides agree on the figures and disagree about what to do with a technology of that kind. *Trap: C reverses the closing sentence, which says fertilizer use has gone on rising.*
- 167.2 B** detail · medium The text says perhaps half the nitrogen applied to a field never reaches the crop, and that it leaves in water and air. *Trap: A gives the share of world energy the process consumes rather than the share lost.*
- 167.3 C** evidence · hard The quotation says neither position disputes the figures and that the disagreement is about what to do, which is the distinction the claim draws. *Trap: D names one practical response rather than the nature of the disagreement.*
- 167.4 A** inference · medium The losses are the share that never reaches the crop, so reducing them returns more of the same application to the plant rather than to the water and the air. *Trap: C treats an engineering improvement as a settlement of the disagreement about action.*
- 167.5 D** words in context · medium The sentence sets a system that must husband its soil against one that buys fertility by the ton, so the word names careful and sparing use. *Trap: B names the opposite practice that the same sentence contrasts with it.*
- 167.6 C** structure · hard The sentence follows the account of the yields and says the costs are also measurable, which is what makes the argument a real one rather than a slogan. *Trap: B denies the yields that the preceding sentences report.*
- 167.7 B** cross text · hard Text 2 describes strips under manure and under measured minerals in the same field for a hundred and eighty years, which is the comparison the second position appeals to. *Trap: A repeats a figure Text 1 has already given about the losses.*
- 167.8 A** transitions · hard The second sentence gives the figures that justify the claim just made, so the transition must introduce a reason rather than a contrast or a conclusion. *Trap: C sets the yield figures against the claim they support.*
- 167.9 C** boundaries · easy A relative pronoun attaches the clause about what makes the argument real, where a second independent clause joined by a comma would splice two sentences. *Trap: A joins two complete sentences about the costs with a comma alone.*
- 167.10 A** synthesis · hard Only this choice puts the dependence and the waste in the same sentence, which is what makes the technology impossible to abandon and impossible to leave as it is. *Trap: C gives the waste alone and so names no reason the process cannot be dropped.*

168 · Separating a Signal From Noise BIO · S08 · dispute

- 168.1 A** central idea · medium The text says the question that matters is attribution, names fingerprinting as the method, and then locates the serious objections in magnitude rather than in attribution. *Trap: B contradicts the text, which calls that objection not a trivial one.*
- 168.2 C** detail · medium The text says greenhouse warming predicts that the lower atmosphere warms while the upper stratosphere cools, and that no increase in solar output can produce that combination. *Trap: D names what solar warming does predict rather than what it cannot.*

- 168.3 D** evidence · hard The quotation says in so many words that each pattern was an independent test that could have failed, which is the point the claim makes about the method. *Trap: C gives one of the tests rather than the statement that they could have failed.*
- 168.4 B** inference · medium The text sorts arguments by whether they concern the existence of the mechanism or the magnitude of the response, so that distinction is what a reader has to apply. *Trap: A treats the settled question as open, which is the error the sentence warns against.*
- 168.5 A** words in context · medium The isotopic shift is called not a quiescent coincidence but a direct trace of origin, so the word marks something inert rather than something caused. *Trap: C reads the word as a comment on the dispute rather than on the coincidence.*
- 168.6 D** structure · hard The sentence comes after the text says the answer to the objection is not a louder assertion, and names the search for a pattern that only one cause produces. *Trap: B denies the attribution that the following sentences then establish.*
- 168.7 C** cross text · hard Text 2 explains how the earlier part of the record was reconstructed, which is the series that the fingerprinting in Text 1 is applied to. *Trap: B repeats the point Text 1 makes about its own tests rather than adding to it.*
- 168.8 B** transitions · hard The sentence puts a method in place of the assertion just ruled out, so the transition must mark a substitution rather than a likeness or a consequence. *Trap: C reads the method as following from the objection rather than replacing the assertion.*
- 168.9 D** boundaries · easy The clause naming the method as fingerprinting is independent, so the conjunction joining it to the clause calling the answer a method takes a comma. *Trap: B leaves the clause about a method and the clause naming it unmarked.*
- 168.10 B** synthesis · hard Only this choice separates the question the patterns answer from the question still open, which is what the goal asks a reader to tell apart. *Trap: D names the open uncertainty without saying what has already been settled.*

169 · The Floods That Were Not Allowed BIO · S09 · dispute

- 169.1 B** central idea · medium The text says the rule told geologists where to look and then told them not to believe what they found, and that it remains the correct default. *Trap: C contradicts the text, which calls the rule the correct default still.*
- 169.2 D** detail · medium The text says they rejected it not because they had a better account but because a single enormous flood was exactly what the discipline had spent a century getting rid of. *Trap: B denies the text, which says they had no better account to offer.*
- 169.3 A** evidence · hard The quotation says the deciding evidence came from elsewhere and names the ice-dammed lake in Montana, which is not part of the scabland surface at all. *Trap: B lists the features of the landscape that failed to persuade anyone.*
- 169.4 C** inference · medium The rule performed well in identifying a landscape it could not explain and badly in judging the explanation, so its value stops at the discovery. *Trap: B credits the default with reliability the episode shows it does not have.*
- 169.5 B** words in context · medium The discipline had spent a century getting rid of such explanations, so the word reports the passing of time in that work rather than exhaustion or payment. *Trap: C takes the financial sense, which the century of effort does not involve.*
- 169.6 A** structure · hard The paragraph says the rule defeated an earlier tradition and gave geologists a disciplined method, which is the standard the scablands then put under pressure. *Trap: C states the tradition the rule defeated rather than the rule itself.*
- 169.7 D** cross text · hard Text 2 treats a conflict between two methods as information about the sample, which is the opposite of the reflex that Text 1 reports in the scabland dispute. *Trap: A repeats the verdict Text 1 reaches rather than adding anything from Text 2.*

- 169.8 C** transitions · hard The sentence reports an outcome that runs against the rejection just explained, so the transition must mark the turn rather than a consequence or a restatement. *Trap: A reads his being right as following from the rejection of his argument.*
- 169.9 A** boundaries · easy A colon introduces the explanation of what a default is for, which a comma between two independent clauses cannot do. *Trap: B joins the clause about the rule to the announcement with a comma alone.*
- 169.10 C** synthesis · hard Only this choice makes the rule correct in general and wrong in the one case, which is the shape of the failure the goal asks about. *Trap: D affirms the rule without saying how it produced the mistaken judgment.*

170 · Whether It Can Be Stopped BIO · S10 · dispute

- 170.1 C** central idea · medium The text separates the two claims, calls the first widely accepted physics and the second a possibility that has not been demonstrated, and says they are often reported as one. *Trap: B denies the separation the whole text is built to make.*
- 170.2 A** detail · medium The text defines the first claim as the self-sustaining retreat of a glacier grounded below sea level on a slope that deepens inland. *Trap: B gives the definition of the second claim rather than the first.*
- 170.3 B** evidence · hard The quotation faults the model on the choice of its parameters and the uncertainty of the record they were fitted to, which is a technical objection. *Trap: A names the dispute about the first claim rather than the objections to the second.*
- 170.4 D** inference · medium The absence of observation and the availability of an account without the mechanism leave it unsupported, and the text says it also cannot be excluded. *Trap: A hardens an undemonstrated mechanism into one the evidence rules out.*
- 170.5 C** words in context · medium The planner faces a distribution with a long inimical tail, so the word names the harm the far outcomes would do rather than how likely they are. *Trap: A reads the word as a statement of probability, which the tail already supplies.*
- 170.6 B** structure · hard The opening sentence says two claims are often run together and should be separated, which is what the two halves of the text then do in turn. *Trap: C denies the separation that the sentence calls for.*
- 170.7 A** cross text · hard Text 2 describes the instruments that weigh the ice sheet, which is where the evidence about whether the retreat has begun actually comes from. *Trap: B repeats the physical limit that Text 1 has already given.*
- 170.8 D** transitions · hard The sentence sets an open question against the accepted physics just described, so the transition must mark a concession rather than a consequence or a restatement. *Trap: A reads the debate as following from the acceptance of the physics.*
- 170.9 B** boundaries · easy A colon introduces the physics that the sentence has just called straightforward, which a comma between two independent clauses cannot do. *Trap: A joins the clause about the exposed ice to the announcement with a comma alone.*
- 170.10 D** synthesis · hard Only this choice states the effect in both directions at once, which is what the goal asks for and what joining the two claims produces. *Trap: B gives the weakness of the second claim without naming the cost to the first.*

171 · No Measurement Without a Theory PHY · S01 · dispute

- 171.1 B** central idea · medium The text calls the weak version uncontroversial and useful and says the strong version has a problem, since measurements regularly overturn the theories that licensed them. *Trap: C denies the opening sentence, which says the reading is not quite a fact.*

- 171.2 D** detail · medium The text says scientists manage theory-ladenness by making the assumptions explicit and testing them separately, which is what a calibration chain does. *Trap: A reverses the remedy, since agreement between two instruments is the evidence sought.*
- 171.3 A** evidence · hard The quotation reports a measurement made in search of antenna noise that destroyed the prevailing model, which is a measurement overturning the theory around it. *Trap: C states the strong version rather than the history that counts against it.*
- 171.4 C** inference · medium The protection comes from agreement between instruments resting on different theories, so a single method leaves the worry about distortion standing. *Trap: A claims a freedom from theory that the first paragraph rules out.*
- 171.5 B** words in context · medium The working resolution is said to appreciate the point without accepting the conclusion, so the word names granting the point its weight. *Trap: D reverses the sense, since the point is granted and only the conclusion refused.*
- 171.6 A** structure · hard The sentence says the point is appreciated and the conclusion not accepted, which divides the weak version from the strong one for the rest of the text. *Trap: C grants the version the text has just said has a problem.*
- 171.7 D** cross text · hard Text 2 sets out the certified masses, the recorded uncertainties and the national standard, which is the chain that Text 1 names as the remedy without describing. *Trap: B repeats the test Text 1 has already proposed rather than adding to it.*
- 171.8 C** transitions · hard The second sentence sets the strong version against the weak one just approved, so the transition must mark the opposition between them. *Trap: A treats the two versions as standing in the same position.*
- 171.9 A** boundaries · easy The clause saying the reading is not quite a fact is independent, so the conjunction joining it to the clause about how it looks takes a comma. *Trap: B leaves the clause about the look and the clause about the fact unmarked.*
- 171.10 C** synthesis · hard Only this choice explains why an agreement across different frameworks is evidence, which is what makes the convergence worth seeking. *Trap: D names where the worry survives without saying what settles it elsewhere.*

172 · Wrong or Incomplete PHY · S02 · dispute

- 172.1 C** central idea · medium The text says holding the two statements together requires a distinction between a theory that has been refuted and one placed inside a larger one as a limiting case. *Trap: B states the view the closing sentences of the text rule out.*
- 172.2 A** detail · medium The text says general relativity predicted the figure exactly, from a theory built for quite different reasons, and that is why it was accepted rather than merely admired. *Trap: B names one of the sixty years of attempts rather than the theory that succeeded.*
- 172.3 B** evidence · hard The quotation says relativity is itself expected to fail where quantum effects matter, which is the boundary the claim attributes to the newer theory. *Trap: A gives the charge against the older theory rather than the limit on the newer one.*
- 172.4 D** inference · medium Usefulness inside a domain is said not to make a theory safe, so the question of how far it extends stays open however well it performs within it. *Trap: A takes success inside a boundary as evidence for what lies beyond it.*
- 172.5 C** words in context · medium Astronomers tried for sixty years to resolve a discrepancy of forty-three seconds of arc, so the word names explaining it away. *Trap: D takes the optical sense of the word rather than the one about a discrepancy.*
- 172.6 B** structure · hard The text asks whether Newton was mistaken and then gives one account on which he was and another on which the equations hold within a stated domain. *Trap: C denies a prediction the text says was exact.*

- 172.7 A** cross text · hard Text 2 reports that the constant in the law is still the least precisely known, which bears on how sharply any boundary could be located by measurement. *Trap: B repeats the account that Text 1 attributes to working physicists.*
- 172.8 D** transitions · hard The sentence gives the second of two opposed accounts, so the transition must mark the turn from one side of the question to the other. *Trap: B reads the second account as following from the first rather than opposing it.*
- 172.9 B** boundaries · easy The clause about flying spacecraft is independent, so the conjunction joining it to the clause about the successful theory takes a comma before it. *Trap: A leaves the clause about the theory and the clause about spacecraft unmarked.*
- 172.10 D** synthesis · hard Only this choice joins the long failure to patch the residual with the exact prediction from an unrelated theory, which is what made the small figure decisive. *Trap: B reports the failed attempts without the success that followed them.*

173 · Whether Efficiency Saves Anything PHY · S03 · dispute

- 173.1 D** central idea · medium The text says the weak form is undisputed and the strong form is contested, and that the evidence does not support the strong form as a general rule. *Trap: B reverses the text, which says rebound is small where a service is saturated.*
- 173.2 B** detail · medium The text says the historical examples share a feature, that the service was far from saturated, so demand had room to grow. *Trap: A names the opposite condition, under which the text says rebound is small.*
- 173.3 C** evidence · hard The quotation names a saturated service where rebound is small, which shows the lighting result turning on a condition that does not always hold. *Trap: A gives the lighting figure itself rather than the limit on generalizing from it.*
- 173.4 A** inference · medium Complete rebound is tied to services with room to grow, so a saturated service leaves the demand side little scope to take the saving back. *Trap: B transfers the lighting outcome to the case the text says behaves otherwise.*
- 173.5 D** words in context · medium The policy conclusion is said to be commensurate with the detail rather than with the slogan, so the word names a conclusion scaled to the evidence. *Trap: A takes the strict arithmetical sense rather than the one about proportion.*
- 173.6 C** structure · hard The example of a saturated service follows the account of complete rebound and shows the same mechanism producing almost no take-back. *Trap: B denies the saving that the same sentence allows for saturated services.*
- 173.7 B** cross text · hard Text 2 shows the figure itself moving with the boundary chosen, so the saving under dispute in Text 1 is not a fixed quantity to begin with. *Trap: C repeats the measured range that Text 1 has already given.*
- 173.8 A** transitions · hard The sentence opens the account of the two forms just announced, so the transition must mark the first of them rather than a contrast. *Trap: C sets the weak form against the sentence that promised it.*
- 173.9 C** boundaries · easy The clause about the share of income is independent, so it joins the clause about the price with a comma and a conjunction rather than a comma alone. *Trap: A splices the clause about the share onto the clause about the price with a comma.*
- 173.10 A** synthesis · hard Only this choice states both halves of the condition, the saturated case and the unsaturated one, which is what makes the answer depend on the service. *Trap: D gives one half of the condition and so settles only one kind of case.*

174 · A Law of Nature or of Counting PHY · S04 · dispute

- 174.1 A** central idea · medium The text says the statistical reading is now standard, that the mechanics forbid nothing, and that brief genuine decreases have been measured in small systems. *Trap: B reverses the mechanics, which the text says work equally well run backward.*

- 174.2 C** detail · medium The text says the number of arrangements in which the gas is spread out exceeds the number in which it is collected by an enormous factor. *Trap: A appeals to a prohibition the text says the equations do not contain.*
- 174.3 D** evidence · hard The quotation reports measured decreases in entropy of exactly the kind the strict reading forbids, which is a contradiction by measurement. *Trap: B shows the mechanics permitting the exception rather than an experiment finding one.*
- 174.4 B** inference · medium A statistical law leaves small systems unconstrained in principle, so a device at cellular scale meets the very fluctuations the strict reading would rule out. *Trap: C turns a limit on the strict reading into exemption from the law.*
- 174.5 A** words in context · medium The text says the inexorable character of the law is a property of large numbers, so the word names a regularity that cannot be withstood at that scale. *Trap: D reverses the sense, since the word marks what admits no exception.*
- 174.6 D** structure · hard The sentence follows the admission that nothing forbids the gas collecting and gives the ratio of arrangements, which is why the permitted case never occurs. *Trap: B turns the improbability of the exception into its imminence.*
- 174.7 C** cross text · hard Text 2 reports the work that made heat and energy one quantity in one unit, which is the bookkeeping the second law then constrains. *Trap: B repeats the point about the mechanics that Text 1 uses to argue its case.*
- 174.8 B** transitions · hard The sentence gives the second of two opposed accounts, so the transition must mark the turn from one to the other rather than a likeness. *Trap: C reads the statistical account as following from the first rather than opposing it.*
- 174.9 D** boundaries · easy The clause about what kind of law it is is independent, so the conjunction joining it to the clause about the reliability takes a comma. *Trap: B leaves the clause about reliability and the clause about the argument unmarked.*
- 174.10 B** synthesis · hard Only this choice carries the statistical reading down to the scale where the fluctuations are as large as the effect a designer wants. *Trap: C reports the measurements without saying what they mean for a design.*

175 · Big Grid or Small PHY · S05 · dispute

- 175.1 B** central idea · medium The text draws two opposite lessons from one event and says they are not fully reconcilable, because the same connection that shares reserves also shares faults. *Trap: C reverses the text, which says each piece did what it was designed to do.*
- 175.2 D** detail · medium The text defines islanding as the deliberate separation of parts of a network so that each can run alone, with local generation and storage. *Trap: A names a step in the cascade rather than the remedy proposed.*
- 175.3 A** evidence · hard The quotation says the two are not fully reconcilable and gives the reason, that one connection carries both the reserves and the faults. *Trap: D reports the record since the event rather than the tension between the lessons.*
- 175.4 C** inference · medium The connection that lets a disturbance be absorbed is the same one that carries it, so a gain against one failure mode is a loss against the other. *Trap: A claims a remedy for both modes, which the text says are not reconcilable.*
- 175.5 B** words in context · medium The argument is said to have produced a marked increase in transmission investment, so the word names an increase large enough to notice. *Trap: A takes the sense of writing something down rather than of size.*
- 175.6 A** structure · hard The sentence says each piece did what it was designed to do and calls that the defining feature of a cascading failure. *Trap: C blames the design, though the text says the equipment performed as intended.*
- 175.7 D** cross text · hard Text 2 describes the frequency as a continuous readout of the balance, which is the instrument an operator would watch while a disturbance spreads. *Trap: A repeats the point Text 1 makes about tight connection rather than adding to it.*

- 175.8 C** transitions · hard The sentence turns from the first lesson and its consequences to the second, so the transition must hand the floor over rather than draw a consequence. *Trap: B reads the second lesson as following from the standards the first produced.*
- 175.9 A** boundaries · easy The clause about the defining feature is independent, so the conjunction joining it to the clause about the equipment takes a comma before it. *Trap: B leaves the clause about the equipment and the clause about the feature unmarked.*
- 175.10 C** synthesis · hard Only this choice puts the support for both remedies beside the single connection that carries both, which is what leaves a choice rather than a sum. *Trap: D reports that both are supported without naming what forces a choice.*

176 · What the Two Slits Settled PHY · S06 · dispute

- 176.1 C** central idea · medium The text says what the experiment settled is narrower than usually claimed: neither picture applies to the thing described, and the mathematics predicts every result without either. *Trap: B states the formula the text calls a sentence rather than a claim.*
- 176.2 A** detail · medium The text says that putting a detector at the slits to find out which one each particle went through makes the pattern disappear. *Trap: B reverses the behavior, since each arrival is a single point either way.*
- 176.3 B** evidence · hard The quotation says the pattern appears although no two particles were present together, which rules out their interfering with each other. *Trap: A gives the old reading of the pattern rather than the result that rules out meeting.*
- 176.4 D** inference · medium The text calls the formula a sentence rather than a claim, so repeating it leaves the content of the result unstated. *Trap: A credits the formula with the finding the text says it does not carry.*
- 176.5 C** words in context · medium The two bodies of evidence are said to have compounded the difficulty rather than resolving it, so the word names making the trouble worse. *Trap: D reverses the sense, since the sentence contrasts it with resolving.*
- 176.6 B** structure · hard The sentence says what the experiment settled is narrower than usually said, and the two sentences after it give the narrower version in place of the familiar one. *Trap: C empties the result, though the text gives a precise statement of it.*
- 176.7 A** cross text · hard Text 2 measures and then defines a speed, which is a quantity the two-slit dispute in Text 1 never touches and neither picture is required to supply. *Trap: B repeats the evidence Text 1 uses to set up its difficulty.*
- 176.8 D** transitions · hard The second sentence reports behavior of the opposite kind from the first, so the transition must mark the surprise rather than a likeness or a consequence. *Trap: B reads the wave pattern as following from the single points rather than opposing them.*
- 176.9 B** boundaries · easy The clause about the points building up the pattern is a complete sentence, so a period separates it from the clause about a single arrival. *Trap: A splices the clause about the pattern onto the clause about the arrival with a comma.*
- 176.10 D** synthesis · hard Only this choice names the absence of any partner for the interference, which is what the one-at-a-time arrangement established. *Trap: B reports the pattern without saying what its appearance ruled out.*

177 · Whether Chemistry Is Physics PHY · S07 · dispute

- 177.1 D** central idea · medium The text sets the reductionist against the advocate of emergence and says the disagreement is partly about the word reducible, with a practical edge about funding. *Trap: B contradicts the text, which says the derivation has been carried out for small systems.*

- 177.2 B** detail · medium The text says the computational cost of an exact solution grows so fast with the number of electrons that a molecule of forty atoms is beyond any possible computer. *Trap: C names how the errors of an approximation are handled rather than the cost.*
- 177.3 C** evidence · hard The quotation reports a computation from first principles more accurate than the measurement it is checked against, which is a successful derivation. *Trap: A names the rules that are not derived rather than the case where derivation works.*
- 177.4 A** inference · medium The text says such rules are not derived and could not be, and that practical errors are controlled by comparison with measurement. *Trap: B supplies a derivation the same sentence says is impossible.*
- 177.5 D** words in context · medium The text defines degenerate orbitals as states that share the same energy, so the word marks them as equal in energy rather than decayed. *Trap: A takes the everyday sense of the word, which has nothing to do with energy.*
- 177.6 C** structure · hard The sentence comes after the hydrogen computation and before the account of growing cost, and says the difficulty is scale and not principle in the usual sense. *Trap: B denies the correctness that the reductionist position rests on.*
- 177.7 B** cross text · hard Text 2 reports a working arrangement that predicted elements for fifty years before the shells explained it, which is the emergence case put historically. *Trap: A repeats one of the successes Text 1 credits to the derivation.*
- 177.8 A** transitions · hard The second sentence gives one of the small systems just referred to, so the transition must introduce an example rather than a contrast or a conclusion. *Trap: C sets the hydrogen computation against the claim that it supports.*
- 177.9 C** boundaries · easy The clause about a difficulty of principle is independent, so it joins the clause about scale with a comma and a conjunction rather than a comma alone. *Trap: A splices the clause about principle onto the clause about scale with a comma.*
- 177.10 A** synthesis · hard Only this choice names the success and the failure together and says the dispute is about how to read them, which is why the facts are shared. *Trap: C gives the failure alone and so supports only one of the two readings.*

178 · Two Inquiries, One Bridge PHY · S08 · dispute

- 178.1 A** central idea · medium The text says both accounts are usually correct and answer different questions, and that the dispute matters because they imply different remedies and liabilities. *Trap: B denies the text, which says both accounts are usually correct.*
- 178.2 C** detail · medium The text says the organizational account is generally the more useful for preventing the next failure, because the component will not recur and the decision process will. *Trap: A chooses the account the text says addresses what will not happen again.*
- 178.3 D** evidence · hard The quotation names cost, litigation and intractability as the consequences of one finding, which are reasons to prefer the other that have nothing to do with evidence. *Trap: B says both accounts are correct rather than why one is chosen.*
- 178.4 B** inference · medium If the remit shapes which kind of finding appears, the scope of the inquiry is part of what a reader has to know before weighing its conclusion. *Trap: A takes a finding shaped by the remit as the complete explanation.*
- 178.5 A** words in context · medium An organizational finding is called refractory to engineering solutions, so the word names a problem that does not give way to the remedy offered. *Trap: B takes the sense used of a furnace lining rather than of a problem.*
- 178.6 D** structure · hard The text says the technical account identifies what broke and the organizational account explains why the broken thing was allowed to be in that condition. *Trap: B denies accounts the text says are usually both correct.*

- 178.7 C** cross text · hard Text 2 says a margin covers only the listed hazards, which locates the technical gap that the organizational account in Text 1 then has to explain. *Trap: B repeats the work Text 1 assigns to the second account.*
- 178.8 B** transitions · hard The sentence takes the first of the two accounts just referred to, so the transition must open the pair rather than set itself against them. *Trap: C sets the technical account against the claim that both are correct.*
- 178.9 D** boundaries · easy The clause about the organizational account is independent, so the conjunction joining it to the clause about what broke takes a comma before it. *Trap: B leaves the two clauses about the accounts with no mark between them.*
- 178.10 B** synthesis · hard Only this choice names the three costs of the organizational finding and the narrowing that follows, which is what the resistance consists of. *Trap: C names the implication without the costs that make it unwelcome.*

179 · Whether Small Doses Matter PHY · S09 · dispute

- 179.1 B** central idea · medium The text says the argument is entirely about the shape of the curve at the bottom and that the honest position is that the question is not currently decidable. *Trap: C denies the opening sentence, which says the high dose effects are not in dispute.*
- 179.2 D** detail · medium The text says distinguishing the curves at the doses in question would require a study of millions of people with exposure measured individually. *Trap: A names the mechanism cited for the linear assumption rather than the study needed.*
- 179.3 A** evidence · hard The quotation sets the cost of assuming no threshold against the harm risked by assuming one, which is the asymmetry the text says keeps the dispute alive. *Trap: D reports what the largest study allows rather than the costs on each side.*
- 179.4 C** inference · medium With the decisive study out of reach, the text says both sides argue from mechanism and from the shape of data collected elsewhere. *Trap: D claims the measurement the preceding sentence says cannot be made.*
- 179.5 B** words in context · medium The text speaks of harm that would never be sensible to detect afterward, so the word names what could be perceived rather than what is wise. *Trap: A takes the common sense of the word, which cannot apply to a harm.*
- 179.6 A** structure · hard The text says the high dose effects are not in dispute and the survivor studies underlie every regulation, before turning to the bottom of the curve. *Trap: C denies the agreement the first sentence establishes.*
- 179.7 D** cross text · hard Text 2 insists that a figure be given with the range the curve allows, which is the practice the dose dispute in Text 1 cannot yet supply. *Trap: B repeats the obstacle Text 1 has already named.*
- 179.8 C** transitions · hard The second sentence supplies the reason the question cannot be decided, so the transition must introduce a justification rather than a contrast. *Trap: B sets the size of the needed study against the claim it supports.*
- 179.9 A** boundaries · easy The clause about the survivor studies is independent, so the conjunction joining it to the clause about the high doses takes a comma before it. *Trap: B leaves the clause about the doses and the clause about the studies unmarked.*
- 179.10 C** synthesis · hard Only this choice joins the undecidability to the comparison of the two errors, which is the ground the text gives for the choice. *Trap: B names one cost without the harm it is being weighed against.*

180 · Two Good Numbers That Disagree PHY · S10 · dispute

- 180.1 C** central idea · medium The text reports two refined and independently checked methods giving about seventy-three and about sixty-seven, and calls the gap about five sigma. *Trap: B reverses the text, which says they have been disagreeing for more than a decade.*

- 180.2** **A** detail · medium The text says one resolution is an unidentified systematic error in the ladder, most likely in the calibration of the pulsating stars. *Trap: B names the second of the three resolutions rather than the first.*
- 180.3** **B** evidence · hard The quotation says the gap has survived every improvement and adds that this is roughly what a real effect does, which is the claim itself. *Trap: A reports the care taken rather than the behavior of the gap under improvement.*
- 180.4** **D** inference · medium The bet was on a hidden error in the ladder, and a gap that persists through every improvement is evidence against that explanation rather than for it. *Trap: A reads the survival of the gap as support for the bet it undermines.*
- 180.5** **C** words in context · medium The gross agreement between two independent methods is said to conceal a disagreement, so the word marks the agreement as broad rather than close. *Trap: A takes the everyday sense of the word, which has no place in a measurement.*
- 180.6** **B** structure · hard The text says three resolutions are possible, names an error in the ladder, an error in the model and an incomplete cosmology, and then reports where the betting has gone. *Trap: C denies measurements the text calls refined and independently checked.*
- 180.7** **A** cross text · hard Text 2 explains how the brightness of a pulsating star is fixed, which is the step Text 1 names as the most likely home of a hidden error. *Trap: B repeats the method of the ladder as Text 1 already describes it.*
- 180.8** **D** transitions · hard The sentence reports the gap that survives all the care just described, so the transition must mark the surprise rather than a likeness or a summary. *Trap: B treats the two figures as an instance of the checking just reported.*
- 180.9** **B** boundaries · easy The clause about the checking by rival teams is independent, so the conjunction joining it to the clause about the refinement takes a comma. *Trap: A leaves the clause about refinement and the clause about checking unmarked.*
- 180.10** **D** synthesis · hard Only this choice joins the care taken in both methods to the size of the gap in units of its own uncertainty, which is what makes it serious. *Trap: B names the checking without the size of the gap that survived it.*

181 · Whose Judgment Is It HUM · S01 · dispute

- 181.1** **B** central idea · medium The text names three candidates for a judgment, says collapsing them reads a book as its own opposite, and then requires that irony be marked somewhere in the text. *Trap: C licenses the reading the textual discipline is there to control.*
- 181.2** **D** detail · medium The text says the usefulness of the implied author is that it can be derived from the text alone, by asking what values would make the arrangement coherent. *Trap: A sends a reader to the letters the text treats as a separate level.*
- 181.3** **A** evidence · hard The quotation names the circularity and says critics have used the move to rescue admired writers from positions those writers plainly held. *Trap: B gives the strength claimed for the tool rather than the abuse of it.*
- 181.4** **C** inference · medium The discipline requires a mark in the text, so a reading with no such mark comes from the critic and not from the page. *Trap: B asserts the very marking whose absence the sentence specifies.*
- 181.5** **B** words in context · medium The word is paired with ironic in a sentence about what such a sentence commits anybody to, so it names a tone that says one thing and means another. *Trap: D gives the sincerity the pairing with irony rules out.*
- 181.6** **A** structure · hard The sentence follows the three candidates and says that a reader who collapses them will read the book as its own opposite. *Trap: D accepts the endorsement the sentence is there to deny.*

- 181.7 D** cross text · hard Text 2 calls the strongest kind of evidence a discrepancy between what the narrator reports and how other characters respond. *Trap: A names the weakest kind, which Text 2 calls a response rather than a proof.*
- 181.8 C** transitions · hard The second sentence raises an objection against the strength just claimed, so the transition must mark a turn to the other side. *Trap: A makes the objection follow from the usefulness it opposes.*
- 181.9 A** boundaries · easy The clause about the reader seeing the narrator being wrong is independent, so the conjunction joining it to the clause about the narrator takes a comma. *Trap: B runs the clause about the narrator straight into the clause about the reader.*
- 181.10 C** synthesis · hard Only this choice names the marks the text requires and makes them the condition on which a reading rests. *Trap: D states the default without naming what would displace it.*

182 · Psychology or Function HUM · S02 · dispute

- 182.1 C** central idea · medium The text sets the formalist account against the humanist reply and ends by saying both positions are held by serious people and the disagreement is about what literary study is for. *Trap: B settles a dispute the text says remains open.*
- 182.2 A** detail · medium The text says the characters could be reduced to seven roles and names them one by one. *Trap: B gives the number of tales analyzed rather than of roles.*
- 182.3 B** evidence · hard The quotation names the function described and then the eight hundred pages the description leaves out, which is the claim exactly. *Trap: C gives a second objection rather than the one about length.*
- 182.4 D** inference · medium The revising is called a psychological labor, so an account that reduces personality to decoration has nothing to say about why it is undertaken. *Trap: C puts the formalist position on the humanist side of the dispute.*
- 182.5 C** words in context · medium The humanist objection is that an account unable to say why anyone would be affected by a novel has explained the wrong thing, so the word names being moved. *Trap: A takes the sense in which a manner is affected.*
- 182.6 B** structure · hard The two sentences follow the humanist claim that formalism fails for novels and supply a reader-side and a writer-side reason for it. *Trap: D grants the formalist account what the sentences are offered against.*
- 182.7 A** cross text · hard Text 2 reports both the canceled interview and the published overheard scene, and says the pair lets a reader see a decision being made. *Trap: B names a limit on the evidence rather than the revision it documents.*
- 182.8 D** transitions · hard The second sentence answers the formalist finding with a limit on it, so the transition must mark a concession rather than a consequence. *Trap: A makes the reply follow from the finding it disputes.*
- 182.9 B** boundaries · easy The clause about the novelists revising is independent, so the conjunction joining it to the clause about the readers arguing takes a comma. *Trap: A runs the clause about the readers straight into the clause about the novelists.*
- 182.10 D** synthesis · hard Only this choice joins the formalist rejoinder to the conclusion that the experimental support settles neither side. *Trap: A reports the support without the objection that blunts it.*

183 · Meaning or Mood HUM · S03 · dispute

- 183.1 D** central idea · medium The text states the strong and the deflationary accounts, then calls the best current position that they are about different images and that the skill lies in telling which kind is on the page. *Trap: C universalizes the strong claim the text restricts to some images.*

- 183.2 B** detail · medium The text says what constrains a symbolic reading in practice is pattern and consistency: an image that recurs and is placed at the turns of the plot. *Trap: A names the constraint the intentional fallacy is said to remove.*
- 183.3 C** evidence · hard The quotation locates the fog in the reader as an effect and says it requires no translation, which is the account the claim describes. *Trap: A gives the objection to the strong claim rather than the alternative to it.*
- 183.4 A** inference · medium The constraints are recurrence, placement and treatment by other elements, none of which a single passing image satisfies. *Trap: B makes the weakest case the strongest one.*
- 183.5 D** words in context · medium The word qualifies a reading that converts an experience into a proposition, so it names an interpretation built up at length. *Trap: B takes the sense in which a person is involved rather than a reading.*
- 183.6 C** structure · hard The sentence gives the usual critical answer to the writers and is followed at once by the statement that it removes one constraint without supplying another. *Trap: D settles a dispute the next sentence says is unresolved.*
- 183.7 B** cross text · hard Text 2 says a concordance lists every occurrence with its context and that counting establishes presence, distribution and comparison. *Trap: C names what Text 2 says counting leaves untouched.*
- 183.8 A** transitions · hard The second sentence takes back part of the credit just given, so the transition must mark a concession rather than a consequence. *Trap: B makes the missing constraint follow from the answer being good.*
- 183.9 C** boundaries · easy The clause saying that is an effect in the reader is independent, so the conjunction joining it to the clause about the fog takes a comma. *Trap: A runs the clause about the fog straight into the clause about the effect.*
- 183.10 A** synthesis · hard Only this choice names both kinds of image and turns the difference into the judgment the notes say a reader must make. *Trap: C gives one of the two accounts without the decision between them.*

184 · Does Free Verse Have Form HUM · S04 · dispute

- 184.1 A** central idea · medium The text reports the objection, gives the two-part defense, and then states the narrowed claim both sides now accept: that the form is established inside each poem rather than inherited. *Trap: C stops at the objection the rest of the text answers.*
- 184.2 C** detail · medium The text says free verse substitutes the length of the breath, the repetition of a grammatical shape, parallel clauses and cadence for meter. *Trap: B reverses the direction, since the pattern must be learned from the poem.*
- 184.3 D** evidence · hard The quotation reports that readers hear the breaks and that rearranging the lines does demonstrable damage, which is the empirical half of the defense. *Trap: A states the objection the claim is set against.*
- 184.4 B** inference · medium The pattern is said to be learnable only from the poem, so an imported expectation is not the one the poem set up. *Trap: A makes an outside expectation a help when the text makes it a hindrance.*
- 184.5 A** words in context · medium The phrase describes an irregularity a metrical poet introduces on purpose, set against the inherited regularity around it. *Trap: D makes the irregularity accidental when the word marks it as intended.*
- 184.6 D** structure · hard The sentence saying the strongest version concedes both points is followed by the narrowed claim and then by the statement that both sides now accept something like it. *Trap: C drops an objection the sentence keeps in a narrower form.*
- 184.7 C** cross text · hard Text 2 says three measurable metrical features change steadily across the career and that counting them gives a curve. *Trap: D names a limit on what the counting can date rather than the measuring.*

- 184.8 B** transitions · hard The second sentence supplies the reason the objection deserves to be taken seriously, so the transition must mark a ground. *Trap: A sets the reason against the judgment it supports.*
- 184.9 D** boundaries · easy The clause about the first part is independent, so the conjunction joining it to the clause about the two parts takes a comma. *Trap: A runs the clause about the defense straight into the clause about its first part.*
- 184.10 B** synthesis · hard Only this choice turns the absence of an inherited pattern into the reason the failures are worse, which is what the notes support. *Trap: C names the reader burden without the poet risk the goal asks about.*

185 · The Play or the Production HUM · S05 · dispute

- 185.1 B** central idea · medium The text sets the two accounts against each other and says practice has landed on programs describing what was done, adaptations labeled as such, and the arguments moved to particular cases. *Trap: C adopts one side of a dispute the text says labeling has settled.*
- 185.2 D** detail · medium The text says that on the stage-centered account a play is a score for performance, incomplete until performed, and that a reader holds the instructions. *Trap: B names what directors' theater makes primary rather than what a play is.*
- 185.3 A** evidence · hard The quotation grants that staging is creative before it makes its demand, which is the concession the claim names. *Trap: B reports where practice has landed rather than what the reply gives up.*
- 185.4 C** inference · medium The demand is only that a production which reverses the text say so, so a label meets exactly the condition the reply sets. *Trap: A turns a labeling requirement into a ban on free staging.*
- 185.5 B** words in context · medium The word is used of a production that held an audience which already knew the play, so it names the catching of attention. *Trap: A takes the legal sense, which the theatrical context rules out.*
- 185.6 A** structure · hard The reference comes from the defenders of free staging and points out that the Victorians cut a third while nobody now calls that fidelity. *Trap: D condemns the cutting that the reference is used to excuse.*
- 185.7 D** cross text · hard Text 2 says the promptbook is a working copy marked up for one production and that such books show precisely what was removed and when it came back. *Trap: B names documents Text 2 calls unreliable in the ordinary ways.*
- 185.8 C** transitions · hard The second sentence turns from the defense to the answer it receives, so the transition must mark a concession rather than a consequence. *Trap: A makes the reply follow from the defense it opposes.*
- 185.9 A** boundaries · easy The clause about the century of argument is independent, so the conjunction joining it to the clause about the two states takes a comma. *Trap: B runs the clause about the two states straight into the clause about the argument.*
- 185.10 C** synthesis · hard Only this choice joins the labeling to the case the reply worries about, a viewer who has seen the play without encountering it. *Trap: B reports the practice without naming what it guards against.*

186 · Limit or Licence HUM · S06 · dispute

- 186.1 C** central idea · medium The text calls the surviving position unexciting and states it: a genre is a set of constraints, constraints make significant choices possible, and quality is a separate question from kind. *Trap: D makes resemblance decide a verdict the text says it cannot decide.*
- 186.2 A** detail · medium The text says pastiche is open imitation of a style without deceit or mockery and is only legible where the style is familiar enough to be recognized. *Trap: D supplies the deceit the definition excludes.*

- 186.3 B** evidence · hard The quotation gives one novel that supports the critics and another that supports the defenders, both drawn from the same genre. *Trap: A answers the critics rather than showing the evidence cutting both ways.*
- 186.4 D** inference · medium The expectation is called the resource, so a form without recognition leaves a writer nothing to bend. *Trap: B credits a precise breach to a writer with no known rule to break.*
- 186.5 C** words in context · medium The text glosses the word as open imitation of a style without deceit or mockery, legible only where the style is familiar. *Trap: A supplies the mockery the gloss rules out.*
- 186.6 B** structure · hard The two sentences follow the claim that the observation is true of everything and name two admired forms whose members resemble one another. *Trap: D grants the charge the sentences are offered to defuse.*
- 186.7 A** cross text · hard Text 2 names the pattern of a first instance, a gap and then a rush of derivative work as what one would expect if a form were being established. *Trap: D names the tool that records the pattern rather than the pattern itself.*
- 186.8 D** transitions · hard The second sentence gives one admired form as a case of the resemblance just claimed to be universal, so the transition must mark an example. *Trap: B makes the sonnets follow from the claim rather than illustrate it.*
- 186.9 B** boundaries · easy The clause saying that supports the critics is independent, so the conjunction joining it to the clause about the competent novel takes a comma. *Trap: A runs the clause about the novel straight into the clause about the critics.*
- 186.10 D** synthesis · hard Only this choice states both halves of the surviving position, the use of the constraints and the independence of quality from kind. *Trap: C names the value of constraints without separating quality from kind.*

187 · Reading With Period Eyes HUM · S07 · dispute

- 187.1 D** central idea · medium The text sets iconography against the formal alternative, offers the period eye as a middle term, and ends by saying the camps differ in what counts as a legitimate inference. *Trap: C denies a code the text says the objection does not dispute.*
- 187.2 B** detail · medium The text says the period eye means the habits of seeing a viewer of the time brought to a work, including skills unrelated to art such as gauging volumes. *Trap: A gives the definition of iconography instead.*
- 187.3 C** evidence · hard The quotation names the multiplicity of meanings in the emblem books and says it lets a determined scholar find a reading for anything. *Trap: A counts the surviving sources without naming the trouble they cause.*
- 187.4 A** inference · medium The period eye has to be reconstructed from evidence about schooling, commerce and devotion, which an audience that left no record does not supply. *Trap: C supplies the very evidence the case stipulates is missing.*
- 187.5 D** words in context · medium The word describes the reading a determined scholar can find for anything once the emblem books supply several meanings, so it marks a reading reached by a stretch. *Trap: C makes the reading accessible when the sentence makes it remote.*
- 187.6 C** structure · hard The sentence follows the statement that the code is being applied too freely and says the dog may signify fidelity and may also be a dog. *Trap: D takes away a signification the sentence keeps as one of two options.*
- 187.7 B** cross text · hard Text 2 says the techniques can show that a panel is of the right date and that the materials are consistent, while leaving the hand unsettled. *Trap: A names the finding Text 2 says the laboratory cannot deliver.*

- 187.8 A** transitions · hard The second sentence supplies what the objection is in place of what it is not, so the transition must mark a correction. *Trap: D adds the second clause when the sentence replaces the first.*
- 187.9 C** boundaries · easy The clause saying it may also be a dog is independent, so the conjunction joining it to the clause about fidelity takes a comma. *Trap: A runs the clause about fidelity straight into the clause about the dog itself.*
- 187.10 A** synthesis · hard Only this choice joins the reframed question to the kind of evidence that answers it, which is what the reframing buys. *Trap: D names the shift without saying what evidence it calls for.*

188 · The Score or the Sound HUM · S08 · dispute

- 188.1 A** central idea · medium The text lists the objections, says the answer has largely been to drop the strongest claim, and reports the defensible position that the sources are evidence about choices the music assumes. *Trap: C keeps the claim the text says few practitioners now make.*
- 188.2 C** detail · medium The text says composers frequently wrote for forces they considered inadequate and that several said so in letters. *Trap: A names a different objection the text makes about the written sources.*
- 188.3 D** evidence · hard The quotation reports the inadequate forces and the letters and then draws exactly the conclusion the claim states. *Trap: A names a different weakness, the absence of recordings, rather than the compromise.*
- 188.4 B** inference · medium Knowing the instruments and the treatises is said to add options, so leaving them aside subtracts them. *Trap: A gives the claim the movement is said to have abandoned.*
- 188.5 A** words in context · medium The phrase names what distinguishes the recordings, alongside smaller forces, faster tempos and less vibrato, so it marks how the sound is apportioned. *Trap: B takes the monetary sense, which the list of musical features rules out.*
- 188.6 D** structure · hard The sentence follows the three objections and introduces what practitioners now argue instead of authenticity. *Trap: C dismisses objections the text says have held up.*
- 188.7 C** cross text · hard Text 2 says the autograph score often differs from the first printed edition and that an editor has to choose where they disagree. *Trap: A names a source whose silence concerns reasons rather than performance.*
- 188.8 B** transitions · hard The second sentence gives the first of the objections just announced, so the transition must open a list of instances. *Trap: A sets the objection against the sentence that introduces it.*
- 188.9 D** boundaries · easy The clause about the acoustic conditions is independent, so the conjunction joining it to the clause about the audience takes a comma. *Trap: A runs the clause about the audience straight into the clause about the acoustics.*
- 188.10 B** synthesis · hard Only this choice joins the modest version of the claim to the change in mainstream practice that followed without a concession. *Trap: D reports the change without saying what brought it about.*

189 · The Block or the Tower HUM · S09 · dispute

- 189.1 B** central idea · medium The text says both doctrines produced disasters and successes and that the variable which best predicts success in the studies is whether residents have security, maintenance and some control. *Trap: D makes the form decisive when the studies put it second.*
- 189.2 D** detail · medium The text says her claim was that short blocks, many doorways, mixed uses and people on the pavement are destroyed by the design. *Trap: A names a cause the text raises later and attributes to management.*

- 189.3 A** evidence · hard The quotation names two places where the form succeeds and attributes the difference to management, maintenance and tenure rather than to the form. *Trap: C gives a failure of the other doctrine rather than the same form doing both.*
- 189.4 C** inference · medium The text contrasts demolished projects whose budgets were cut with maintained buildings of the same kind still standing, which puts the difference in the upkeep. *Trap: D condemns a form the text says works where it is maintained.*
- 189.5 B** words in context · medium The word is set against specific about behavior in the same sentence, so it names a book that says little on the first subject. *Trap: C gives the fullness the sentence reserves for the other subject.*
- 189.6 A** structure · hard The sentence introduces the successes and failures of both doctrines and is followed by Vienna and Singapore on one side and gentrification on the other. *Trap: D hands a verdict to one side when the sentence withholds it from both.*
- 189.7 D** cross text · hard Text 2 says measurement today is cheaper, narrower and continuous, and names footfall counts from sensors and mobile data and journeys from transport cards. *Trap: A describes the nineteenth-century survey rather than present-day measurement.*
- 189.8 C** transitions · hard The second sentence supplies the reason the proposal was not foolish, so the transition must mark a ground for what precedes it. *Trap: A sets the slums against the proposal they motivated.*
- 189.9 A** boundaries · easy The clause saying it is specific about behavior is independent, so the conjunction joining it to the clause about architecture takes a comma. *Trap: B runs the clause about architecture straight into the clause about behavior.*
- 189.10 C** synthesis · hard Only this choice names the variable the studies favor and says why a finding about upkeep answers to neither side of the design dispute. *Trap: B gives one success of one doctrine without the variable behind it.*

190 · Can a Judgment Be True HUM · S10 · dispute

- 190.1 C** central idea · medium The text sets relativism against the Humean appeal to convergence, gives each a hard case, and calls the most defensible position the one that separates craft from value. *Trap: D hardens convergence into a settlement the text denies it can give.*
- 190.2 A** detail · medium The text says Hume observed that the verdicts of people with wide experience of an art form converge more than the verdicts of beginners. *Trap: B gives the definition of the ideal critic rather than the observation behind it.*
- 190.3 B** evidence · hard The quotation names the reversals of informed opinion as the burden on the Humean side and calls them numerous enough to be embarrassing. *Trap: C gives the burden on the other side of the dispute.*
- 190.4 D** inference · medium The text names the routine settling of technical disagreements as the thing a relativist owes an account of. *Trap: B answers the burden the text puts on the other position.*
- 190.5 C** words in context · medium The word describes a literature about verdicts that converged and later reversed, so it names a tone that treats those reversals with dry mockery. *Trap: A makes the literature impartial when the word marks it as amused.*
- 190.6 B** structure · hard The sentence is followed at once by what the relativist has to explain and then by what the Humean has to explain away. *Trap: D fails positions the text says are both defended in detail.*
- 190.7 A** cross text · hard Text 2 reports two writers whose standing changed while the texts did not, and says what changed was the criteria. *Trap: B names the convergence the opposing tradition appeals to.*

- 190.8 D** transitions · hard The second sentence states the matching burden on the other side, so the transition must mark a parallel rather than a consequence. *Trap: B treats the second burden as a restatement of the first.*
- 190.9 B** boundaries · easy The clause about the claim that looks hard to defend is independent, so the conjunction joining it to the clause about the changing standards takes a comma. *Trap: A runs the clause about the standards straight into the clause about the claim.*
- 190.10 D** synthesis · hard Only this choice joins the settleable half of criticism to the conclusion that the practice is worth continuing while the other half stays open. *Trap: B names the unsetttable half without saying what still holds.*

191 · Whether Polling Can Be Repaired SOC · S01 · dispute

- 191.1 B** central idea · medium The text calls differential nonresponse a structural problem that more interviews cannot fix and says the appropriate response is to widen the stated uncertainty. *Trap: C offers the remedy the text says cannot work.*
- 191.2 D** detail · medium The text says weighting on recalled past vote helps and introduces its own error, because recall is unreliable and drifts toward the winner. *Trap: C names the cost of registration-based sampling instead.*
- 191.3 A** evidence · hard The quotation denies that any weighting on demographics can repair the sample and gives the reason, that the missing people are absent in a way tied to how they vote. *Trap: B states the first diagnosis, which weighting was supposed to fix.*
- 191.4 C** inference · medium The missing people are said to be absent in a way that correlates with their vote, so adding interviews from the same frame reproduces the gap. *Trap: A expects size to cure a fault the text calls structural.*
- 191.5 B** words in context · medium The text says the structural problem cannot be fixed by obtaining more interviews, so the word names the acquiring of them. *Trap: A takes the sense in which a custom obtains in a place.*
- 191.6 A** structure · hard The sentence follows the adoption of weighting on education and says the correction was not enough in 2020, with the error running the same way again. *Trap: D denies a factor the first diagnosis is said to have identified.*
- 191.7 D** cross text · hard Text 2 says a reported margin is a statement about sampling variation under the assumption that the frame is right and the weights are right. *Trap: A names what the known chance permits rather than what the margin leaves out.*
- 191.8 C** transitions · hard The second sentence states what the first diagnosis says, so the transition must mark a specification. *Trap: B sets the content of the diagnosis against its description.*
- 191.9 A** boundaries · easy The clause about the error running the same way is independent, so the conjunction joining it to the clause about the correction takes a comma. *Trap: B runs the clause about the correction straight into the clause about the error.*
- 191.10 C** synthesis · hard Only this choice holds the three parts of the position the notes give: the instrument kept, the fault named, and the uncertainty widened. *Trap: D names the fault without the instrument or the remedy.*

192 · Gold Standard or Narrow Tool SOC · S02 · dispute

- 192.1 C** central idea · medium The text reports the objection about transfer and the defense, and says most practitioners now hold that a trial is the best instrument for a narrow question and the hierarchy was always a slogan. *Trap: D prefers the evidence the text says trials have repeatedly destroyed.*
- 192.2 A** detail · medium The text says transferring a trial result requires knowledge the trial does not supply, and that knowing which features matter requires a mechanism. *Trap: B offers a second trial where the text calls for a mechanism.*

- 192.3 B** evidence · hard The quotation concedes the point about transfer in one sentence and names what trials alone settle in the next. *Trap: A gives the objection rather than the answer to it.*
- 192.4 D** inference · medium The text says that without the mechanistic knowledge the basis for applying a finding anywhere else is tenuous. *Trap: A credits the planner with the mechanism the case stipulates is absent.*
- 192.5 C** words in context · medium The word describes the basis for applying a finding elsewhere without knowing which features matter, so it names a support that is thin. *Trap: D gives the opposite of the weakness the sentence names.*
- 192.6 B** structure · hard The sentence follows the claim that trials settle whether the effect exists and names the record of treatments that mechanism endorsed and trials destroyed. *Trap: D restores a hierarchy the next sentence calls a slogan.*
- 192.7 A** cross text · hard Text 2 calls a hundred and twenty-three children in a single town in the 1960s a slender base for a national argument. *Trap: B names the larger of the two studies, whose size is not the limitation at issue.*
- 192.8 D** transitions · hard The second sentence supplies the deworming district as an instance of the claim about transfer, so the transition must mark an example. *Trap: B makes the deworming case follow from the claim rather than illustrate it.*
- 192.9 B** boundaries · easy The clause saying they are expensive is independent, so the conjunction joining it to the clause about the response takes a comma. *Trap: A runs the clause about the response straight into the clause about the cost.*
- 192.10 D** synthesis · hard Only this choice names the program the notes call what makes a finding usable, which is repetition with the mechanism examined in each place. *Trap: B names the requirement without the program that meets it.*

193 · Fisher, Hill and the Cigarette SOC · S03 · dispute

- 193.1 D** central idea · medium The text says what the episode establishes is that observational evidence can carry a causal claim, provided many independent lines are brought rather than one correlation. *Trap: C stops at the objection the answer took fifteen years to meet.*
- 193.2 B** detail · medium The text says Fisher proposed the constitutional hypothesis, that a third factor and in this case an inherited disposition might cause both. *Trap: C names the design that later addressed his hypothesis.*
- 193.3 C** evidence · hard The quotation runs through the size, the consistency, the dose response, the reversibility and the tissue evidence in one sentence. *Trap: D names two of the later lines rather than the completeness of the agreement.*
- 193.4 A** inference · medium The list includes a dose response and what happens when the exposure is removed, which are exactly the rise with consumption and the fall after quitting. *Trap: B names two other items on the same list.*
- 193.5 D** words in context · medium The text calls a sound objection from a serious opponent the most useful thing a field can be given, so the word names an objection without a defect in it. *Trap: C gives the opposite of the quality the sentence praises.*
- 193.6 C** structure · hard The sentence says the objection was answered rather than dismissed and puts fifteen years on the work of answering it. *Trap: D leaves unanswered an objection the sentence says was met.*
- 193.7 B** cross text · hard Text 2 defines a natural experiment as a situation in which something outside the researchers has allocated people almost at random, and calls it the main instrument of the field. *Trap: A names the method Text 1 supplies rather than the substitute Text 2 describes.*

- 193.8** **A** transitions · hard The second sentence begins the evidence that bears out the claim of complete agreement, so the transition must mark a confirmation. *Trap: C makes the twentyfold risk follow from the agreement rather than support it.*
- 193.9** **C** boundaries · easy The clause saying it is still taught is independent, so the conjunction joining it to the clause about the objection takes a comma. *Trap: A runs the clause about the objection straight into the clause about the teaching.*
- 193.10** **A** synthesis · hard Only this choice joins the objection to the work it forced, which is what the notes say a serious opponent gives a field. *Trap: C names one of the answering studies without the objection that prompted it.*

194 · The Average Patient SOC · S04 · dispute

- 194.1** **A** central idea · medium The text sets the case against the average beside the practical defense of it and says the position that has emerged is not a choice but a sequence. *Trap: C prefers a prediction the text says performs badly in tests.*
- 194.2** **C** detail · medium The text defines median survival as the time by which half of patients have died. *Trap: B gives the mean rather than the middle value.*
- 194.3** **D** evidence · hard The quotation names a drug with large opposite effects, calls the net figure correct, and says it is useless for the decision in front of a doctor. *Trap: A praises the essay rather than giving the case it makes.*
- 194.4** **B** inference · medium The modest net benefit is said to come from saving one in ten and killing one in twenty, which the single figure conceals. *Trap: A credits the net figure with the individual knowledge it lacks.*
- 194.5** **A** words in context · medium The text speaks of the want of good individual-level evidence as a real limitation, so the word names an absence rather than a desire. *Trap: B takes the commoner modern sense of a wish.*
- 194.6** **D** structure · hard The sentence lists the location of the median, the long right tail and his own circumstances, which together gave him reason to expect the tail. *Trap: C blames the doctors, whom the text does not mention at all.*
- 194.7** **C** cross text · hard Text 2 says that if twenty subgroups are examined and one shows a significant difference, that is what twenty tests produce by chance about once in every set. *Trap: A names a different misuse of significance.*
- 194.8** **B** transitions · hard The second sentence gives the reason the defense is strong, so the transition must mark a ground. *Trap: D sets the reason against the claim it supports.*
- 194.9** **D** boundaries · easy The clause saying he read the sentence correctly is independent, so the conjunction joining it to the clause about his training takes a comma. *Trap: A runs the clause about the training straight into the clause about the reading.*
- 194.10** **B** synthesis · hard Only this choice puts the three steps of the sequence in the order the notes give them. *Trap: D gives the last step without the two that precede it.*

195 · When Paying Makes Things Worse SOC · S05 · dispute

- 195.1** **B** central idea · medium The text calls the honest reading narrower than either slogan: crowding out is real, documented in a modest number of settings, and dependent on what the payment signals. *Trap: C reverses the sentence saying most incentives work in the ordinary direction.*
- 195.2** **D** detail · medium The text says lateness increased substantially and permanently and did not fall back when the fine was removed. *Trap: A restores a level the text says did not return.*
- 195.3** **A** evidence · hard The quotation names the conversion of an obligation into a price and says the obligation did not return once the twenty minutes could be bought. *Trap: B reports the intervention without the change in meaning it produced.*

- 195.4 C** inference · medium The text says a payment reading as recognition leaves the motive in place while one reading as a transaction displaces it. *Trap: B builds in the conversion the design is meant to avoid.*
- 195.5 B** words in context · medium The text speaks of the pernicious cases sharing a feature, and those are the cases in which a payment destroyed a meaning, so the word marks harm done. *Trap: D gives the opposite of the harm the word names.*
- 195.6 A** structure · hard The sentence follows the argument from Titmuss and reports the objection that the argument confused two claims and that both systems could coexist. *Trap: D settles a dispute the next sentence says the data could not.*
- 195.7 D** cross text · hard Text 2 says the remedy is to compare the change in a treated place with the change in an untreated one over the same period. *Trap: A names the quantity usually reported rather than the comparison the design needs.*
- 195.8 C** transitions · hard The second sentence limits the scope of the effect just granted, so the transition must mark a concession. *Trap: A makes the ordinary cases follow from the crowding out.*
- 195.9 A** boundaries · easy The clause about the dispute becoming the standard case is independent, so the conjunction joining it to the clause about the data takes a comma. *Trap: B runs the clause about the data straight into the clause about the dispute.*
- 195.10 C** synthesis · hard Only this choice names the replaced meaning and the difficulty of restoring it, which is the shared feature the notes identify. *Trap: B gives one instance without the feature the cases share.*

196 · Chosen or Inherited SOC · S06 · dispute

- 196.1 C** central idea · medium The text says both mechanisms exist and that the observed speed of change is the evidence that identifies which one is operating. *Trap: D forces a choice the text says the evidence does not require.*
- 196.2 A** detail · medium The text says smoking indoors became unacceptable in many countries within about fifteen years, as did seat belt use. *Trap: B gives the pace the text assigns to transmitted norms.*
- 196.3 B** evidence · hard The quotation reports rules persisting for generations after migration and stable differences between communities with identical economic conditions. *Trap: D gives the behavior of the other kind of norm.*
- 196.4 D** inference · medium The text makes the speed of change the evidence that identifies the mechanism, and the fast case is the equilibrium one. *Trap: B gives the signature of the transmitted kind.*
- 196.5 C** words in context · medium The word describes communities whose differences from their neighbors stay large and stable, so it names a group that keeps to itself. *Trap: A takes the literal geographical sense.*
- 196.6 B** structure · hard The sentence saying the distinguishing prediction concerns speed is followed by the fast cases and then the generational ones. *Trap: D merges two predictions the sentence is there to separate.*
- 196.7 A** cross text · hard Text 2 says conformity collapsed when one confederate gave the correct answer and that the size of the effect depends on who is in the room. *Trap: B denies the variation Text 2 reports across countries and decades.*
- 196.8 D** transitions · hard The second sentence bears out the prediction just made, so the transition must mark a confirmation. *Trap: A sets the cases against the prediction they satisfy.*
- 196.9 B** boundaries · easy The clause saying they make different predictions is independent, so the conjunction joining it to the clause about the two accounts takes a comma. *Trap: A runs the clause about the accounts straight into the clause about the predictions.*

196.10 D synthesis · hard Only this choice states the practical consequence the notes name, that a policy aimed at one mechanism leaves the other untouched. *Trap: C names the diagnostic without the consequence for policy.*

197 · Does Building Lower Rents SOC · S07 · dispute

197.1 D central idea · medium The text says supply does reduce rents at the scale of a region, that it does not protect the people nearest the construction, and that the two facts are not in conflict. *Trap: C sets in conflict two findings the text says agree.*

197.2 B detail · medium The text says filtering is the process by which new expensive housing frees older cheaper housing for others. *Trap: A gives induced demand rather than filtering.*

197.3 C evidence · hard The quotation sets the block-level finding that supports the skeptics beside the metropolitan finding that supports the textbook. *Trap: D names the fairness problem rather than the difference in scale.*

197.4 A inference · medium The chains are said to reach down the distribution only over years, and a displaced tenant is not compensated by a later regional fall. *Trap: B reverses the regional effect the text reports.*

197.5 D words in context · medium The dispute is said to be about who bears the costs and over what period, so the word names whoever ends up paying them. *Trap: A takes the physical sense of carrying a load.*

197.6 C structure · hard The sentence names filtering and the chains of vacancies, which link the local rise to the regional fall the two literatures report. *Trap: D denies a rise the text treats as observed.*

197.7 B cross text · hard Text 2 says tracts are split as they grow and merged as they shrink, so a comparison of the same neighborhood may cover different ground. *Trap: A names the third complication rather than the one about areas.*

197.8 A transitions · hard The second sentence gives the first of the two bodies of evidence just announced, so the transition must mark an example. *Trap: C makes the block-level finding follow from the claim rather than illustrate it.*

197.9 C boundaries · easy The clause about the scales is independent, so the conjunction joining it to the clause about the two claims takes a comma. *Trap: A runs the clause about the claims straight into the clause about the scales.*

197.10 A synthesis · hard Only this choice holds the regional gain and the timing together, which is what turns the question into one about compensation. *Trap: C names the gap in protection without the gain it sits beside.*

198 · Thirty Years of Estimates SOC · S08 · dispute

198.1 A central idea · medium The text says the simple textbook prediction was wrong about the range actually legislated and that nobody has established the upper boundary. *Trap: C denies a cost the text says everyone agrees a very high minimum carries.*

198.2 C detail · medium The text says meta-analysis revealed that the literature had a funnel plot consistent with small null results going unpublished. *Trap: A names the first of the three changes rather than the third.*

198.3 D evidence · hard The quotation names the location of the turn as the thing argued about and says it depends on the local wage distribution. *Trap: B supplies the theory for the small effects rather than the open question.*

198.4 B inference · medium The text says the argument is about where the turn comes, which depends on the local wage distribution and cannot be answered in general. *Trap: D asks for a general answer the text says is unavailable.*

- 198.5 A** words in context · medium The text says the new comparisons can discriminate between a job lost and a job that simply pays more, so the word names the drawing of a distinction. *Trap: B takes the social sense of unequal treatment.*
- 198.6 D** structure · hard The sentence follows the account of what is still disputed and says monopsony explains why small increases may not cost jobs. *Trap: C reverses the position of the employer the sentence describes.*
- 198.7 C** cross text · hard Text 2 says the exchange drove a generation of work using administrative data, borders and hundreds of separate minimum wage changes. *Trap: B names one detail of the dispute rather than the dispute itself.*
- 198.8 B** transitions · hard The second sentence bears out the claim about the length of the argument, so the transition must mark a confirmation. *Trap: A sets the second sentence against the claim it supports.*
- 198.9 D** boundaries · easy The clause about the central finding is independent, so the conjunction joining it to the clause about the hundreds of estimates takes a comma. *Trap: A runs the clause about the estimates straight into the clause about the finding.*
- 198.10 B** synthesis · hard Only this choice states all three parts of the standing the notes give: what is settled, what is open, and what is still coming in. *Trap: C names the open part without the settled part or the new evidence.*
- 199 · Inequality or Poverty** SOC · S09 · dispute
- 199.1 B** central idea · medium The text names absolute poverty and inequality as two different targets, calls the evidence mixed, and says the two targets sometimes conflict in policy. *Trap: C settles a dispute the text calls undecided.*
- 199.2 D** detail · medium The text says correlations between inequality and poor health across countries are real and shrink substantially when income levels are controlled for. *Trap: A removes a correlation the text says is real.*
- 199.3 A** evidence · hard The quotation names two specific mechanisms, the buying of rules and the price of positional goods, where the claim asks for named mechanisms. *Trap: C grades one mechanism rather than naming any.*
- 199.4 C** inference · medium The text says anyone who declines to choose between the two targets is not facing the arithmetic, given that growth has moved them in opposite directions. *Trap: A assumes the two measures agree, which the same sentence denies.*
- 199.5 B** words in context · medium The word qualifies a concern that one side calls envy with a theory attached, so it marks a stated motive the speaker doubts. *Trap: D treats the concern as established when the word casts doubt on it.*
- 199.6 A** structure · hard The sentence says the empirical question is whether the mechanisms are large and that the evidence is mixed in a way that does not favor either side decisively. *Trap: D takes one side of a dispute the sentence leaves open.*
- 199.7 D** cross text · hard Text 2 says the Palma ratio compares the top tenth with the bottom four tenths, on the argument that the middle half changes little. *Trap: B names the Gini, which Text 2 calls least sensitive at the ends.*
- 199.8 C** transitions · hard The second sentence states the opposing position, so the transition must mark a contrast. *Trap: A makes the second position follow from the first.*
- 199.9 A** boundaries · easy The clause saying they are not the same target is independent, so the conjunction joining it to the clause about the two targets takes a comma. *Trap: B runs the clause about the targets straight into the clause about their difference.*
- 199.10 C** synthesis · hard Only this choice gives the fact that makes the choice unavoidable, which is one process moving the two measures the other way. *Trap: D states the verdict without the fact that forces it.*

200 · Irrational or Economical SOC · S10 · dispute

- 200.1** C central idea · medium The text says the two camps have converged on practice while continuing to disagree about what the practice shows, and calls that convergence the most useful product of the argument. *Trap: D reverses the comparison the text draws between the two remedies.*
- 200.2** A detail · medium The text says doctors who fail the base rate problem in percentages mostly succeed when it is posed as counts out of a thousand. *Trap: B gives the presentation in which they fail.*
- 200.3** B evidence · hard The quotation reports simple rules beating complex models and says in so many words that this is not what a defect account predicts. *Trap: D names the practical lesson rather than a result that embarrasses the first reading.*
- 200.4** D inference · medium The errors are said to shrink when the problem is put in the frequencies of experience, so a percentage format manufactures part of the failure. *Trap: A credits the artificial format with the ordinary setting the text contrasts it with.*
- 200.5** C words in context · medium The text calls the evidence about remedies the most telling, so the word names evidence that weighs most in the argument. *Trap: D reverses the force the word gives the evidence.*
- 200.6** B structure · hard The sentence is followed by anchoring resisting the adaptive account and framing surviving the frequency presentation, one difficulty for each side. *Trap: D hands the argument to a side the text says has not won it.*
- 200.7** A cross text · hard Text 2 says anchoring survived robustly, while loss aversion survived with its size disputed and several taught results did not survive at all. *Trap: C gives the status Text 2 assigns to loss aversion.*
- 200.8** D transitions · hard The second sentence gives the first piece of the support just announced, so the transition must mark an example. *Trap: B sets the support against the sentence that introduces it.*
- 200.9** B boundaries · easy The clause about the reading chosen is independent, so the conjunction joining it to the clause about the two ways takes a comma. *Trap: A runs the clause about the two readings straight into the clause about the choice.*
- 200.10** D synthesis · hard Only this choice names the product the notes point to, a common practice arrived at without a theoretical concession. *Trap: B names the agreement of two people without what it amounted to.*
